Subject: Election Training-All Hands

Julie, Brian, and I have worked out the following training schedule. This training is important for all hands because questions will come in before and after election day, as well as on election day.

Except for Wednesday, October 27, all training sessions will be held in EAC's big meeting room from 11:30 AM - 12:30 PM. The time and location of the October 27 will be announced later, once we have figured out where we can hold it.

Wednesday, October 20
Election Fraud, Voting Rights Issues, HAVA Administrative Complaint Procedures - Julie Thompson

Friday, October 22
NVRA Fail-safe Voting Provisions, Voter ID Requirements, Provisional Voting - Peggy Sims

Wednesday, October 27
Voter Assistance, Access for Disabled Voters, HAVA Voter Information Postings, Other Polling Place Issues (Campaigning, Exit Polling, Poll Hours, Time Off to Vote) - Peggy Sims

Friday, October 29
Reporting and Certifying Election Results, Contested Elections & Recounts, Electoral College - Brian Hancock

Please feel free to bring your lunch and your questions.
Hey-

Forgot to cc you all on this.

Thanks

K

Karen Lynn-Dyson
Director, Help America Vote College Program
U.S. Election Assistance Commission
1225 New York Avenue, NW Suite 1100
Washington, DC 20005
tel:202-566-3123

Commissioners-

As was discussed during our session on February 17, 2005, please review and provide your approval, disapproval or amendments to the following items by Friday, February, 25, 2005:

1. The attached Scope of Work which outlines the tasks related to contract work around projects relating to voluntary guidance on provisional voting and voter identification procedures.

2. The proposal will be advertised beginning February 28, 2005.

3. The deadline for submitting proposals will be March 14, 2005.

4. Proposal review will be completed by EAC staff by March 17, 2005.

5. Staff will recommend a contractor to the Commissioners on March 18, 2005.

6. Commissioners will be asked for their decisions no later than Tuesday, March 22, 2005.
Thank you for your help and attention to this matter.

K
Karen Lynn-Dyson
Research Director
U.S. Election Assistance Commission

February 14, 2005

PROVIDING EAC ASSISTANCE IN DEVELOPING VOLUNTARY GUIDANCE ON PROVISONAL VOTING AND VOTER IDENTIFICATION PROCEDURES

0.0 Contract Title: Assistance to the U.S. Election Assistance Commission in the Development of Guidance on Provisional Voting and Voter Identification Procedures

1.0 Background: Sec. 302(a) of HAVA requires that all States allow the casting of provisional ballots in instances where a voter declares their eligibility to vote but their name does not appear on the official list of eligible voters, or an election official asserts that a voter is not eligible to vote. This section describes several requirements for implementation of provisional voting, but the States have considerable latitude in specifying how to carry out these requirements. The EAC seeks to examine how provisional voting was implemented in the 2004 general election and to prepare guidance for the States on this topic for the 2006 Federal elections.

HAVA Sec. 303(b) mandates that first time voters who register by mail are required to show proof of identity before being allowed to cast a ballot. The law prescribes certain requirements concerning this section, but also leaves considerable discretion to the States for its implementation. The EAC seeks to examine how these voter identification requirements were implemented in the 2004 general election and to prepare guidance for the States on this topic for the 2006 elections.

One of the remedies for a voter not having an acceptable proof of identity is to allow the voter to cast a provisional ballot, either at the polling place or by mail. This linkage between these two HAVA sections provides a rationale for conducting research on these topics in parallel. However, it is anticipated that two separate guidance documents will result.

2.0 Objective: The objective of this contract is for EAC to obtain assistance with the collection, analysis and interpretation of information regarding HAVA provisional voting and voter identification requirements for the purpose of drafting guidance on these topics for promulgation to the States in time for implementation for the 2006 Federal elections. The anticipated outcome of this activity is the generation of concrete policy recommendations to be issued as voluntary guidance for States.

3.0 Scope: In general the Contractor shall be responsible for all research and analysis activities, including the conduct of public hearings for fact finding and public comment purposes. However, in light of the urgent need to get this work underway, the EAC has scheduled a public hearing on February 23, 2005, on the topic of provisional voting.
An initial framework for provisional voting policy has been set by the court decisions rendered on the election procedures utilized in the 2004 election. The 6th Circuit decision, in particular, has drawn some boundaries which must be given due regard in the course of considering future policy alternatives for provisional voting.

Notice of public meetings and hearings is required to be published in the Federal Register. The Contractor shall be responsible for preparing the notice documents, and the EAC will submit the notices and cover the cost of publication. In addition, draft guidance documents must be published in the Federal Register to obtain public comment prior to their adoption. Again, the Contractor will work with the EAC to prepare the draft documents for publication, which the EAC will submit and cover the cost of publication. Comments received will be provided to the Contractor for analysis and incorporation into the final guidance documents, as appropriate.

4.0 Specific Tasks

For ease of reference, following task 4.3 the remaining tasks are listed separately under the headings of Provisional Voting and Voter Identification Requirements. It is understood that the work on these two topics will be conducted essentially concurrently, with Voter Identification activities starting approximately one month after Provisional Voting:

4.1 Prepare a project work plan. The Contractor shall prepare and deliver a brief Project Plan not later than 10 days after contract award. This plan shall describe how the Contractor will accomplish each of the project tasks, including a timeline indicating major milestones. A single document will be prepared to include both provisional voting and voter identification tasks. The Plan shall be presented at a project kickoff meeting with the EAC Project Manager.

4.2 Submit monthly progress reports. The Contractor shall submit a monthly progress report within 2 weeks of the end of each month. This report shall provide a brief summary of activities performed and indicate progress against the timeline provided in the Project Plan. Any issues that could adversely affect schedule should be identified for resolution. Budget status should also be provided.

4.3 Conduct periodic briefings for the EAC. The Contractor shall periodically meet with the EAC Project Manager and the lead Commissioner for this work to discuss research findings and progress. The Project Plan should make allowance for this activity. The number and frequency of briefings will be determined by the Contractor Project Manager and the EAC Project Manager as the work progresses. The Contractor may also be required to periodically brief the full Commission on their work.

Provisional Voting

4.4 Collect and analyze State legislation, administrative procedures, and court cases. An understanding of the disparities and similarities of how provisional
voting was implemented around the country will provide a baseline for the consideration of future approaches. Seventeen States never had provisional voting before HAVA was enacted, while many other States did. A State-by-State compendium of the legislation, procedures, and litigation reviewed shall be delivered along with the analysis results.

4.5 Recommend alternative approaches for future implementation of provisional voting. The Contractor shall conduct a literature review to identify other research results and data available on this topic. The EAC Election Day Survey, for example, contained several questions on provisional voting. The EAC will make these survey data available to the Contractor. Based on their analysis of available research and the results of Task 4.5, the Contractor shall diagnose the problems and challenges of provisional voting implementation and hypothesize alternative approaches.

The Contractor shall assess the efficacy of these alternatives in relation to the following inter-related policy objectives: (1) enabling the maximum number of eligible voters to cast ballots that will be counted; (2) providing procedural simplicity for voters, poll workers, and election officials; (3) minimizing opportunity for voter fraud; and (4) maintaining a reasonable workload for election officials and poll workers. Additional policy considerations may be identified in the course of this research effort. The Contractor shall document and brief these alternatives to the Commission.

4.6 Prepare preliminary draft guidance document. Based on the feedback received from the Commission, the Contractor shall prepare a draft guidance document for review and comment by the EAC Board of Advisors. EAC will convene a Board of Advisors meeting or teleconference for the discussion of this document. The Contractor shall provide the document in advance and participate in the Board meeting to answer questions and record comments.

4.7 Revise draft guidance for publication in the Federal Register. The Contractor shall revise the guidance document as appropriate to reflect the comments of the EAC and the Board of Advisors and provide the draft guidance for publication in the Federal Register by the EAC.

4.8 Arrange one public hearing for receiving public comment on draft guidance. This hearing should be scheduled 30 days after the initial publication date. The Contractor shall select the location in consultation with the EAC. No speakers will be required. EAC will handle publicity for the meeting.

4.9 Prepare final guidance document for EAC adoption. Review all comments received in response to Federal Register publication and at public hearing and revise guidance document as appropriate. Provide final version to EAC for adoption.
Voter Identification Requirements

4.10 Collect and analyze State legislation, administrative procedures, and court cases. It is assumed that the collection of information for analysis of voter identification requirements will be performed concurrently with the research for Task 4.5. An understanding of the disparities and similarities of how voter identification requirements were implemented around the country will provide a baseline for the consideration of future approaches. A State-by-State compendium of the legislation, procedures, and litigation reviewed shall be delivered along with the analysis results.

4.11 Convene a half day public hearing on the topic of voter identification requirements. The Contractor shall be responsible for all aspects of planning and conducting this hearing in consultation with the EAC. The Contractor shall identify three panels of three to four speakers each. The Contractor shall arrange for speaker attendance to include travel and per diem expenses. The EAC will provide publicity for the hearing. The Contractor shall prepare a document summarizing the proceedings and containing all testimony provided.

4.12 Recommend alternative approaches for future implementation of HAVA voter identification requirements. The Contractor shall conduct a literature review to identify other research results and data available on this topic. Based on their analysis of available research and the results of Task 5.11, the Contractor shall diagnose the problems and challenges of voter identification and hypothesize alternative approaches. The Contractor shall coordinate with the EAC to identify appropriate policy objectives by which to assess these alternatives. The Contractor shall document and brief these alternatives to the Commission.

4.13 Prepare preliminary draft guidance document. Based on the feedback received from the Commission, the Contractor shall prepare a draft guidance document for review and comment by the EAC Board of Advisors. EAC will convene a Board meeting or teleconference for the discussion of this document. The Contractor shall provide the document in advance and participate in the Board meeting to answer questions and record comments.

4.14 Revise draft guidance for publication in the Federal Register. The Contractor shall revise the guidance document as appropriate to reflect the comments of the EAC and the Board of Advisors and provide the draft guidance for publication in the Federal Register by the EAC.

4.15 Arrange one public hearing for receiving public comment on the draft guidance. This hearing should be scheduled 30 days after the initial publication date. The Contractor shall select the location in consultation with the EAC. No speakers will be required. EAC will handle publicity for the hearing.

4.16 Prepare final guidance document for EAC adoption. Review all comments received in response to Federal Register publication and at public hearing and revise guidance document as appropriate. Provide final version to EAC for adoption.
Contract Type: The contract type will be Time and Materials with a ceiling of

6.0 Place of performance. The principal place of performance will be the Contractor’s place of business. Meetings and occasional work efforts may be performed at the EAC offices.

7.0 Period of Performance. The period of performance is from date of award until October 28, 2005.

8.0 Schedule of Deliverables:
- Project plan – 10 days after contract award
- Progress reports – monthly
- Briefings – as required
- Analysis report on provisional voting - TBD
- Alternatives report on provisional voting – TBD
- Preliminary draft guidance on provisional voting - TBD
- Draft guidance on provisional voting for publication – 8/2005
- Public hearing on draft guidance – 30 days after publication
- Final guidance on provisional voting for EAC adoption – 9/2005
- Analysis report on voter identification requirements – TBD
- Public hearing on voter identification requirements – TBD
- Summary of voter identification requirements hearing - TBD
- Alternatives report on voter identification requirements - TBD
- Preliminary draft guidance on voter identification requirements - TBD
- Draft guidance on voter identification requirements for publication – 9/2005
- Public hearing on draft guidance – 30 days after publication
- Final guidance on voter identification requirements to EAC for adoption – 10/2005

REMAINING STANDARD CONTRACT TERMS TO BE PROVIDED.
I understand that the Commissioners will consider this latest draft of the research plan at next Tuesday's meeting.

Enclosed please find the latest version in which approximately $2.5 million in funds are appropriated. As always, this is a draft, working document from which to deliberate.

Subject RE: Peer Review Group

Tom-

Had a very good review and discussion of the PRG at this morning’s Commissioner meeting.

Also, the Commissioners have marked their calendars for a conference call with the Eagleton/Moritz team on July 12 at 9:30 AM.

Several concerns were raised about the composition of the PRG and, after some discussion, I indicated that Eagleton will provide the EAC with a revised participant list, and with a more detailed description of the PRG’s mission, goals, objectives, workplan and timelines for accomplishing its work.

The Vice Chair is concerned that there is not sufficient conservative representation on the PRG. I would suggest the team do more research to identify well-recognized conservative academics to put on the Group.

Further, the Commissioners recommend a tiered process in which the PRG will prepare a “dispassionate” analysis of the issues and draw some tentative conclusions. This analysis and these conclusions will then be vetted with a defined/select group of local election officials, and then, with a defined/select group of advocacy organizations.

It was also suggested that a final round of focus group meetings be held with a cross-section of these election officials, advocates and academics for an overall interactive reaction to the analysis and recommendations.

Hope this helps clarify concerns; I look forward to sharing your revisions to the PRG with them.

Subject: Re: Peer Review Group

Tom-

I will be back to you early next week with EAC's feedback on this.

Our initial reaction is that the group needs to include some local and/or state-level election officials, who have first-hand experience with these issues.

We will get you additional names and reactions by mid-week next week.

Thanks
K

Karen Lynn-Dyson
Research Manager

Karen,

As you probably recall, one of the features of our proposal was the creation of a Peer Review Group to look over our findings, conclusions and draft reports before we prepare final drafts for the EAC's review. The EAC asked that before recruiting members of the PRG we submit names for EAC's review. The aim, course, is to assemble a panel that is experienced, informed, and
balanced.

Attached is a list of potential PRG members drawn from academia, the law, and non-profit organizations with interests in this area. Please look it over.

We may conclude that the PRG should also include two or three former government officials now in academia or related fields. We have a conference call with our partners at Moritz planned for tomorrow or Friday to decide a) if former officials should be included in the PRG and b) if so, who they should be. I’ll keep you informed of our thinking as it develops.

Tom
If available, Tom and the Commissioners will want to be in attendance at the conference call with Eagleton at 9:30 am on Tuesday.

If available, Tom, Brian and Carol Paquette will attend a Thursday July 14, 10:30 AM meeting with Kim Brace for an update on the UOCAVA Survey.

Thanks

Subject Eagleton Institute June 2005 Progress Report

Ms. Dyson,

Attached please find the June 2005 Progress Report for the project entitled, “Contract to Provide Research Assistance to the EAC for the Development of Voluntary Guidance on Provisional Voting and Voter Identification Procedures.” If you have any questions regarding any part of this document please direct them to Tom O’Neill at [redacted] or (908)794-1030.

The financial reporting for this project is performed by the Division of Grant and Contract Accounting at Rutgers University. A copy of this report was not made available to us in an electronic format. Hard copies of the Progress Report and Financial Report have been Fedex'ed to you this afternoon and should arrive to your attention tomorrow morning. Please let me know if you do not receive this package by tomorrow afternoon.

Thank you for your time, have a great evening.

Best,
Lauren Vincelli

Contract to Provide Research Assistance to The EAC
For the Development of Voluntary Guidance on Provisional Voting and Voter Identification Procedures

MONTHLY PROGRESS REPORT
JUNE 2005

For
UNITED STATES ELECTION ASSISTANCE COMMISSION
1225 New York Avenue N.W., Suite - 1100
Washington, DC 20005

July 14, 2005

Prepared by:
Eagleton Institute of Politics
Rutgers, The State University of New Jersey
191 Ryders Lane
New Brunswick, NJ 08901-8557
INTRODUCTION

This report describes our progress from the start of the project on May 26 through June 30, 2005. It includes brief descriptions of key tasks; progress made; challenges encountered or anticipated; milestones reached; and projections for work to be completed in the coming month.

The objective of the contract is to assist the EAC in the collection, analysis and interpretation of information regarding HAVA provisional voting and voter identification requirements on which to base policy recommendations as guidance for the states in the conduct of the 2006 elections. The work has begun well, thanks to the clarity of the EAC's expectations and the strong collaboration by the scholars and staff at the Eagleton Institute of Politics at Rutgers, The State University of New Jersey, and the Moritz College of Law at the Ohio State University.

The document report is divided into 4 sections that cover: Provisional Voting, Voter Identification Requirements, Project Management, and the Financial Report. Each section references the specific tasks described in paragraph 3 of the contract.

Please direct any questions or comments about this report to Tom O'Neill at: tom_oneill@verizon.net or (908) 794-1030.
Tasks 3.4 – 3.9 in our contract relate to provisional voting. Work on the first of these must be complete before proceeding to later tasks. The work plan provides for two months to complete Task 3.4. Work on this task is on schedule.

Task 3.4: Collect and analyze state legislation, administrative procedures, and court cases. Understand the disparities and similarities of how provisional voting was implemented around the country.

LEGISLATION, REGULATIONS, AND LITIGATION

The research team at the Moritz College of Law has the lead responsibility for the collection and analysis of legislation, administrative procedures and litigation. When complete, this information will constitute the compendium of legislation, administrative regulations, and case law called for under this task. It also will provide a base of understanding for the analysis of states’ actual experience with provisional voting in 2004, for which the Eagleton team has lead responsibility.

Description: The Moritz team includes faculty, an executive administrator, a reference librarian, and several research assistants. It began immediately to compile statutes, case law and administrative procedures regarding Provisional Voting. The team has created a 50 state chart to summarize information on provisional voting. Categories for which state statutes and administrative procedures are being reviewed include:

- When did the state create a system compliant with the HAVA provisional ballot requirements?
- Who may be eligible to cast a provisional ballot? and
- What is the process for discovering whether your provisional ballot was counted in the election?

Progress: Initial research for 27 states, including the collection of provisional voting statutes is complete. This phase of the work is on schedule for completion by August 1. By the beginning of the week of July 11, Moritz’s full time research assistant will move from voter identification research to gathering and organizing case law on provisional voting.

Challenges: Identifying the relevant statutes has been challenging; states use different terminology to codify provisional voting issues. Many states have scattered election law provisions throughout their codes. This variation from state to state makes creating a snapshot view across states a challenge. The team is meeting this challenge, and the work is on schedule.
PREPARATION FOR AND EXPERIENCE WITH PROVISIONAL VOTING

The Eagleton team is constructing a narrative description for each state of the 50 states and the District of Columbia. It is also surveying a stratified random sample of county election officials to improve its understanding of actual practice in administering provisional voting.

**Description:** To construct the narratives, a researcher is examining newspaper accounts, state websites, and reports from third-party organizations to determine what information is publicly available about these issues during the 2004 election. To organize the information derived from this examination, we are creating an information system that will make it possible to catalog the basic information about the states (i.e. whether a state was new to provisional voting, the percentage of provisional votes counted, the method of notifying voters if their vote was counted, etc.) and combine it with Moritz’s collection and analysis of statutes, regulations and litigation. The information system will make it possible to provide answers to such topics of particular interest listed in the contract as: How did preparation for provisional voting vary between states that had some form of provisional voting and those that did not?” and “How did litigation affect implementation?”

**Progress:** The researcher in this area has identified sources of information for every state and the collection process is well underway. Verified database entries for 24 states are complete, as are two state narrative summaries. This phase of the research is on schedule for completion by the end of July.

**Challenges:** A key challenge is determining just what states actually did in practice to verify and count provisional ballots. A second challenge has been determining the variations in policy within individual states. We are still wrestling with resolving this challenge, but the work is on schedule.

**Work Plan:** By the end of the July, the compilation of statutes, administrative regulations, and litigation will be complete and ready to be combined with the state-by-state narrative compiled by Eagleton. That will form the basis for the analysis and recommendation of alternative approaches for provisional voting required under Task 3.5.

SURVEY OF COUNTY ELECTION OFFICIALS

This survey will help the research team understand more about such key topics of interest as:

- “How did the experience of provisional voting vary between states that previously had some form of provisional voting and those where provisional voting was new in 2004?”

- “Did state and local processes provide for consistent counting of provisional ballots?”

- “Did local officials have a clear understanding of how to implement provisional voting?”

The survey results will supplement the information on these topics from the compilation of statutes, regulations and cases and from the narrative we are constructing for each state.
Description: The Center for Public Interest Polling (CPIP) at Eagleton is conducting a national survey of county election officials to measure several aspects of provisional voting. The survey is designed to determine the following factors related to provisional voting at the county level:

- The content and quality of instructions provided to county officials by the states
- The steps taken by county officials to pass information on to poll workers;
- Differences in experience between states new to provisional voting and those that had some form of provisional ballot before HAVA; and
- Recommendations to improve and/or reduce the need for provisional voting

Progress: The survey instrument is complete. CPIP has compiled a list of election officials at the county level and at the municipal or regional level for states that do not assign the election responsibility to counties. It was forwarded to the call center, Schulman, Ronca & Bucuvalas Inc. (SRBI) the week of July 5, 2005. A sample will be drawn the week of July 12. Human Subjects Approval from Rutgers University was granted July 12. Pre-notification letters will be sent to election officials around July 12-13, 2005. The EAC has reviewed a draft of this letter, which we have now revised to make clear that the survey will increase our understanding of the provisional voting process, but is not being conducted on behalf of the EAC.

Challenges: We made special efforts to expedite Human Subject Approval to meet the schedule in the work plan. In the absence of an existing, reliable database of local election officials, we had to create one especially for this project. In order to provide a valid comparison between the states new to provisional voting with those that previously had some form of provisional ballot we doubled the sample size from 200 to 400. This increase will require an increase in the budget for the survey from $15,000 to about $24,000. We intend to reallocate costs within the existing budget to make this improvement possible, and will submit a letter describing the reallocation to the EAC in mid-July.

The sample has been, and will continue to represent the biggest challenge in this survey. Compiling the sample required substantial coordination and research to determine the accuracy of the identity and contact information for potential respondents. The difficulty in determining the appropriate contact is attributed to variation in county election officials' titles, jurisdiction types, and state and county election structures across the country. In addition to the potential pitfalls of reaching the appropriate county official, another factor in actually making contact with this special population will be dependent upon the hours that they keep, and may be hindered by the summer season.

Work Plan: This questionnaire will be pre-tested by July 15, and will field July 18 through August 5, 2005. This is somewhat later than projected in the revised work plan, but the information will arrive in time to be considered in drafting the analysis and alternatives document required under Task 3.5.
VOTER IDENTIFICATION REQUIREMENTS

The contract lists 7 tasks (3.10 – 3.16) related to Voter Identification Requirements. During the reporting period, we have made substantial progress in the first two tasks, which constitute the information-gathering phase of the work on Voter ID. The research of Voter ID requirements is proceeding concurrently with our work on the experience of provisional voting.

**Task 3.10: Legislation, regulations, and litigation**

The research team at the Moritz College of Law has the lead responsibility for the collection and analysis of legislation, administrative procedures and litigation. When complete, this information will constitute the compendium of legislation, administrative regulations, and case law called for under this task.

**Description:** A team of Election Law@Moritz faculty, executive administrator, a reference librarian, and several research assistants is compiling statutes on Voter Identification, and providing a summarized analysis of this research.

**Progress:** The Moritz team has created a 50-state chart to record data on voter identification. Categories for which state statutes and administrative regulations are being reviewed include: "Who is required to present ID", "Types of ID required", and "Consequences of having no ID". We have completed the initial research for 45 states and have collected the voter identification statutes for those states. An Election Law@Moritz Fellow is conducting an academic literature review on voter identification. This literature review will help shape the analytical framework that will guide us when the compendium of statutes and administrative regulations is complete.

**Challenges:** Identifying the relevant statutes has been challenging because of the different terminology used from state to state to codify voter identification issues, and because many states have scattered election law provisions throughout their codes. This variety from state to state makes creating a snap-shot view across states a challenge.

**Projections:** At the current rate, a draft of the voter identification chart should be complete on schedule, by the end of July. Work on the literature review will continue into August, but will be available to inform the analysis of alternative approaches for voter identification called for by Task 3.12 of the contract.

**SUPPLEMENTS TO LEGAL ANALYSIS**

To supplement the legal analysis, the Eagleton team is undertaking two research efforts: First, compiling information on the debate over voter in the states; and second, estimating the effect on turnout of voter ID requirements. Tracking the continuing political debate over voter identification reveals that the relatively narrow HAVA requirements for voter identification have apparently sparked in many states a broader concern with more rigorous identification requirements for all voters. We are following these developments both in...
monitor possible secondary effects of HAVA on voter ID, and to provide a rich collection of alternative approaches for consideration.

Individual narratives for the states with significant activity in voter ID will provide a resource for understanding the wide range of experience in the 2004 election. The narratives will include an appraisal of the prevalence and nature of vote fraud, a focus of the concern with increasing the rigor of voter ID requirements. This work is on schedule to be completed by the end of July. The next key milestones will be the completion of the state database and drafting the first narratives.

VOTER ID AND TURNOUT ANALYSIS

The second supplemental analysis will provide objective information on a contentious feature of the debate over voter ID in the states: the effects of more rigorous voter ID regimes on voter turnout and the relationship between the voter ID regime and vote fraud. As part of this effort, Eagleton is undertaking a statistical analysis to gauge the effect of a state’s voter ID regime on turnout, especially turnout by minority and elderly voters.

**Description:** We are creating a database and gathering statistics on the effects of state-level voter identification requirements on voter turnout at the county-level in the 2004 election. Analysis on the county-level will enable us to estimate the influence of ID requirements on various age groups, races, ethnicities and gender groups. We are compiling data from both the 2000 and 2004 Presidential elections to measure the effect that changes in ID requirements may have had on voter turnout through two national election cycles.

**Progress:** The structure of the database is complete. It contains demographic information from the Census, and turnout data from various sources. The researcher assigned to this task is devising the syntax that will be required to run the statistics when the dataset is complete. The methodology for this part of the study is complete, and the actual data collection will soon be finished.

**Projection:** We are waiting for the Census Bureau to release the 2004 County Demographic Estimates. We have ordered and await the arrival of 2 datasets that contain voter turnout and voter registration numbers on the county-level for both the 2000 and 2004 elections. Once these two sources of information are received, the researcher will insert this information into the existing database, clean up the dataset, and begin to run the statistics. By that point, the researcher will have separated the states into various ID-requirement groupings that have been determined by the team, which will require coordination with several other parts of the study. This work is on schedule. By the end of July, the researcher should have county-level and state-level statistics on the impact of each ID system upon turnout, analyzed through various demographic features on the county-level.
**Task 3.11 Public meeting on Voter Identification Requirements**

**Description:** We are working closely with EAC staff, particularly the General Counsel, to plan a half day public meeting on Voter ID requirements. Presentations at the meeting will form an important part of the information we are compiling about Voter ID requirements and the strengths and shortcomings of a range of alternative approaches.

**Progress:** We have recommended a focus on the debate over Voter ID now underway in the states. To provide a vivid picture of the debate, we have recommended that one panel include legislators on opposite sides of the issue from two different states. Our research identified Mississippi and Wisconsin as two states to focus on, and we have recommended specific legislators from each. We have discussed with staff adding a researcher to the panel to put the debate in Wisconsin and Mississippi in either a national or historic context. We also recommended two researchers from contrasting points of view, to address the effects of Voter ID provisions under HAVA and broader provisions that are now the subject of national debate. EAC staff recommended a panel of two state election directors to address the interaction of Voter ID with HAVA. We are awaiting a decision on our recommendations from EAC staff. We have no reason not to believe that the work is on schedule to be completed in time to organize a productive meeting on July 28.

**Challenges:** The date and location of this hearing has been changed twice since the beginning of the project. It was originally scheduled to take place in late June, but was rescheduled for July to allow the June hearing to focus on voting machine technology. The regular meeting was rescheduled for July 26 in Minneapolis, and was recently changed to July 28 in Pasadena. The changes in the scheduling of the July meeting have complicated our choice of panelists. More seriously, the changes mean that information from the hearing will not be available as early in the research process as contemplated in the contract. This timeframe will now require the team to summarize the hearing events at the same time that we are drafting the analysis and alternatives paper in early August.

Additionally, while our contract states that the “Contractor shall be responsible for all aspects of planning and conducting this hearing in consultation with the EAC,” we have been asked only to make recommendations of topics and panelists, and the arrangements for the organization of the hearing are in other hands. This lack of clarity has caused some confusion and has delayed invitations to panelists. Thanks to frequent communication with members of the EAC, the process now seems to be working smoothly.

**Projection:** We believe the work is on schedule for completion in time to recruit the panelists for the July 28 hearing. Preparation of the hearing summary will likely be delayed because of the need to complete the analysis and alternatives paper.
PROJECT MANAGEMENT

Immediately after announcement of the award of the contract, Eagleton and Moritz began supplementing the core group that had prepared the proposal to building a highly qualified team to undertake the work. That team was in place by mid June, just a few weeks after the contract award.

As described in the proposal, the direction of the project is the responsibility of a five-person committee of faculty and staff from Eagleton and Moritz, chaired by Dr. Ruth Mandel, Director of the Eagleton Institute of Politics. Project Director Thomas O'Neill, a consultant to Eagleton, reports to this team and provides day-to-day guidance and coordination for the research. A weekly meeting of all the researchers engaged in the project if the primary means of coordinating the work. We have recently added an internal website to facilitate the review and revision of written materials.

Task 3.1 Update the Work Plan

The first task was completed on time with the submission of a detailed work plan and timeline. EAC staff requested that the work plan be supplemented with a Gantt chart created on MS Project, and we submitted that a few days later.

PEER REVIEW GROUP

Description: A feature of our proposal was the creation of a Peer Review Group (PRG). The EAC indicated at our first meeting in May that it would review our recommendations for members of the PRG. Our initial vision of the PRG was a small group of scholars and representatives of advocacy organizations that would comment on the research design, review drafts of our analyses and reports, and, in general, identify areas of the research that should be strengthened and help us improve the breadth, depth and clarity of reports based on that research.

Progress: Upon reflection, the project team agreed that the PRG should not include representatives of advocacy groups. We concluded, as representatives they would feel obligated to act as advocates for positions already taken by their groups. While advocacy organizations should be consulted as stakeholders during the course of our work, they were unlikely to achieve the goals we had in mind for the PRG as a source of advice on research design, methodology, and analysis. We submitted a revised list of potential members, substantially comprised of academics, to EAC for review.

The EAC responded with suggestions concerning both the balance of the PRG’s membership and the creation of additional committees to review our work. We answered with an analysis of the cost and time involved adopting the EAC’s suggestions as well as with suggestions for a balanced selection of academics for the Peer Review Group. We have not received response on this correspondence from the EAC, and the recruitment of the group is on hold.
Challenges: Communications on this issue with the EAC have not been clear or timely. The PRG should be in place now to comment on our research design while there is still time to refine it. While we are confident in the quality of our work, the wisdom and perspective of the outstanding candidates we have proposed for membership would strengthen the analysis and reports of our work.

Projections: We have effectively brought these challenges to the attention of EAC staff and look forward to a resolution speedy enough to allow recruitment of the PRG’s members before the end of the month. If we meet that goal, the work of the PRG will be about 2 weeks behind the milestones indicated in the work plan.

COORDINATION AND INFORMATION MANAGEMENT

Collecting and merging information and data from myriad sources is a demanding requirement of this research. We have developed two principal mechanisms to facilitate the analysis of the material collected or created in the project: an information system and a website for easy access to drafts and reports.

INFORMATION SYSTEM

Description: The statutory data and reports prepared by the Moritz College of Law will be merged with the political and procedural data and analysis prepared by the Eagleton Institute of Politics to provide a cohesive final product to the EAC, which will include a compendium of case law and statutes regarding provisional voting and voter identification.

Progress: The Moritz team has provided Eagleton staff with samples of the work that they are performing. An Eagleton staff member will be reviewing the content and formats of data from all supporting research and (re-)formatting once the work has been completed. The researchers and staff at Eagleton have created a shared folder on the Institute’s server for the safe storage of work and access for those staff members. All of this work is being reviewed by the project team to ensure that a broad survey is being performed.

Challenges: There are no evident challenges to this task at this time.

Projections: By the end of July 2005, much of the above referenced research will have been completed with respective materials and charts near completion. At that time, staff at Eagleton will review, combine and format all documents and materials in preparation for our final reporting to the EAC.

INTRANET

Description: A trial Intranet for the project became available during the week of June 26. The Intranet will facilitate the exchange of information and collaboration among project participants.

Progress: After meetings with staff members of Rutgers University Computer Services (RUCS) and subsequent submission of a proposal by RUCS for technical support and hosting of the Intranet and the evaluation of alternative commercial services, the project team decided at its June 28th meeting to publish the Intranet through www.intranets.com.
one of the leading commercial services. This decision was based on lower costs and earlier publication schedules than offered under the RUCS proposal. The Intranet services were evaluated during a free trial period, which demonstrated the ease of design and navigation of the proposed service.

Challenges: There are no immediate challenges to completion of this task by the timeframe specified below.

Projections: Design, testing and publication of initial content of the Intranet service is continuing, with all participants expected to be provided access by July 8, 2005.

**FINANCIAL REPORT**

The financial reporting for this project is supervised and prepared by the Division of Grant and Contract Accounting (DGCA) at Rutgers. Financial reporting on grant accounts is limited to actual expenses that have been incurred during the reporting period. Given that the report reflects the first month of the project, several procedures for payment of subcontractors on the project were initiated. Expenses related to those members of the team are not reflected in this report because they have not yet been incurred.

Our contact at DGCA is: Constance Bornheimer, (732) 932-0165, EXT. 2235.

A detail of expenses incurred from project inception through June 30, 2005, is attached.
Job-

I write to see if you might be available to come to Washington on Monday, August 1 to meet with several EAC staff and Commissioners to discuss the voter fraud/voter intimidation project and your possible work as a consultant on the project.

I'd like to schedule this 1-2 hour meeting for sometime between 1 and 3 in the afternoon.

Might you be available to come to Washington for this?

Regards-

Karen Lynn-Dyson

- Title II Requirements Payments Update (Vice Chairman Degregorio & Commissioner Martinez)
- Statewide Voter Registration List Guidance (Juliet Thompson)

Presentations

Progress Report on Voter Identification Study
- Tom O’Neill, Eagleton Institute, and Dan Tokaji, Moritz College of Law

The Interaction of Voter Identification with HAVA
- Brook Thompson, Coordinator of Elections (Tennessee) -- Interaction between voter ID and provisional voting (TN had voter ID prior to HAVA but no provisional voting prior to HAVA)

Commissioners’ Closing Remarks

Adjournment
U.S. Election Assistance Commission
Public Hearing Agenda
Thursday, July 28, 2005
1:00 P.M. – 5:00 P.M.

Public Hearing on the EAC's Proposed Voluntary Voting System Guidelines

Call to Order (Chair Hillman) (1:00)

Pledge of Allegiance (Chair Hillman) (1:01)

Roll Call (1:03)

Adoption of Agenda (Chair Hillman) (1:05)

Presentations on Proposed Voluntary Voting System Guidelines (1:07)

Introduction of Proposed Voluntary Voting System Guidelines (Carol Paquette) (1:10 - 1:20)

Panel 1: State Election Officials (1:20 – 2:30)
- Brad Clark, Assistant Secretary of State, Elections, CA
- Ann McGeehan, Director of Elections, TX
- Linda Lamone, President, National Association of State Election Directors

Break (2:30 - 2:40)

Panel 2: The Academic Community (2:40 – 3:40)
- Thad Hall, Ph.D., Assistant Professor, Political Science, University of Utah
- Ted Selker, Ph.D., Associate Professor, Massachusetts Institute of Technology, Media and Arts Technology Laboratory
- David Dill, Professor of Computer Science, Stanford University

Break (3:40 - 3:50)
Panel 3: Use of Wireless Technology in Voting (3:50 – 4:20)

- Stephen Berger, TEM Consulting & Chair of IEEE Standard Coordinating Committee 38

Break (4:20 – 4:30)

Public Comment Period (4:30 – 5:00)

This time period will be reserved for public participation. Pursuant to the public notice for this hearing, members of the public or organizations who have previously contacted the EAC will be given three minutes of hearing time for comment. All such groups and persons have pre-registered and been contacted regarding their participation. Comments will be strictly limited to three minutes to ensure the fullest participation possible.

Commissioners’ Closing Remarks

Adjournment
Hi All-

Well, I have the unhappy task of trying to identify a date and time when we might schedule a series of conference calls with the consultants we've identified as possible candidates to work on the voter fraud/intimidation project.

Since August is impossible and horrible in terms of everyone being in the same place, I thought it might be easier to try and schedule three calls—one hour each in duration—in which the Commissioners could talk to these candidates.

I'd like to "start the bidding" for the week of August 15.

Actually, I happen to know that all of the candidates could be available August 22 or 23 at some point in the day.

Let me know if your folks could be available by phone at any of these days and times.

Thanks

K

Tom-

I will be in touch shortly with possible dates in very late August or early September, when EAC staff might be available to meet with Eagleton to discuss the project's research results and next steps.

In the meantime, I thought it was important to follow up on the issues Vice Chair DeGregorio raised while we were in Pasadena.

To be certain that I have the latest information, could you send to me the final list of the Eagleton/Moritz Peer Review Group and the list of organizations that Eagleton will be contacting for input?

Regards-

Karen

Washington, DC 20005
tel:202-566-3123

Karen,

Thanks for the email. No need to resend the original email from Washington. I received that shortly after you sent it. That email let us know that EAC would not need the research on ballot design that Tom Wilkey suggested we undertake and that you asked us to submit a proposal for. But the ballot-design issue was only one of the two topics raised by my email to you. The other question concerned a date to meet with EAC staff to discuss the forthcoming draft of our Analysis and Alternatives paper and an outline for the Preliminary Guidance Document. From our conversation yesterday, I understand that August 26, the date suggested, will not work because of the EAC’s travel schedule. Please let me know if August 30, 31 or September 1 are possible for a meeting between the project team and EAC in Washington. The meeting would require perhaps 2 hours.

Tom O'Neill
To: Karen Lynn-Dyson/EAC/GOV@EAC
From: Tom O'Neill
Subject: RE: Meeting with EAC

I'd like to propose the Eagleton/Moritz meeting for September 6 at 1:00 PM at the EAC's offices.

If that date works, please be certain to reply to all on this e-mail, as I will be out of the office.

"Tom O'Neill" <tom_oneill@verizon.net>
Ms. Dyson,

Attached please find the July 2005 Progress Report for the project entitled, “Contract to Provide Research Assistance to the EAC for the Development of Voluntary Guidance on Provisional Voting and Voter Identification Procedures.” If you have any questions regarding any part of this document please contact Tom O’Neill at [redacted] or (908)794-1030.

The financial reporting for this project is performed by the Division of Grant and Contract Accounting at Rutgers University. A copy of this report was not made available to us in an electronic format. Hard copies of the Progress Report and Financial Report have been Fedex’ed to you this afternoon and should arrive to your attention tomorrow morning. Please let me know if you do not receive this package by tomorrow afternoon.

Thank you for your time, have a great evening.

Best,
Lauren Vincelli
Contract to Provide Research Assistance to The EAC
For the Development of Voluntary Guidance on
Provisional Voting and Voter Identification Procedures

MONTHLY PROGRESS REPORT
JULY 2005

For
UNITED STATES ELECTION ASSISTANCE COMMISSION
1225 New York Avenue N.W., Suite - 1100
Washington, DC 20005

August 15, 2005

Prepared by:
Eagleton Institute of Politics
Rutgers, The State University of New Jersey
191 Ryders Lane
New Brunswick, NJ 08901-8557
INTRODUCTION

This report describes our progress from July 1 through July 31, 2005. It includes brief descriptions of key tasks; progress made; challenges encountered or anticipated; milestones reached; and projections for work to be completed in the coming month.

The effort this month continued to focus on research for the analysis and alternatives paper, including the compilation of Provisional Voting statutes, regulations, and litigation from the 50 states. We also prepared and delivered testimony at the EAC’s regular monthly meeting in Pasadena on July 28.

The data collection, analysis, and compilation are all on schedule. Because of delays in agreeing on the composition of the Peer Review Group with EAC, however, the actual completion and submission of the analysis and alternatives paper to the EAC will most likely be delayed about a week beyond the target date in the work plan. We are scheduled to discuss the draft paper and guidance document prior to submission, with the EAC on September 6, and the final draft cannot be completed until several days after that date.

The document report is divided into 4 sections that cover: Provisional Voting, Voter Identification Requirements, Project Management, and the Financial Report. Each section references the specific tasks described in paragraph 3 of the contract.

Please direct any questions or comments about this report to Tom O’Neill at: tom_oneill@verizon.net or (908) 794-1030.
Tasks 3.4 – 3.9 in our contract relate to provisional voting. Work on the first of these must be complete before proceeding to later tasks. Task 3.4 was completed this month.

Task 3.4: Collect and analyze state legislation, administrative procedures, and court cases. Understand the disparities and similarities of how provisional voting was implemented around the country.

LEGISLATION, REGULATIONS, AND LITIGATION

The research team at the Moritz College of Law has the lead responsibility for the collection and analysis of legislation, administrative procedures and litigation. This information constitutes the compendium of legislation, administrative regulations, and case law called for under this task. It also will provide a base of understanding for the analysis of states’ actual experience with provisional voting in 2004, for which the Eagleton team has lead responsibility.

Description: The Moritz team has created a 50-state chart to summarize information on provisional voting, compiled statutes, case law and administrative procedures regarding Provisional Voting.

Progress: The 50-state (plus District of Columbia) chart created to collect data on provisional voting is complete. We have collected the statutes for all states. State by state summaries of provisional voting have been written for 47 states and D.C. A memorandum summarizing provisional voting litigation is complete. The collection of the documents associated with the litigation is nearing completion.

Challenges: The variety in the form of provisional voting legislation from state to state makes creating a snap-shot view across states a challenge.

Work Plan: The remaining 3 state summaries of provisional voting will be completed by August 8. Analysis of all the information, data, and survey results concerning provisional voting data will be performed in August.

PREPARATION FOR AND EXPERIENCE WITH PROVISIONAL VOTING

The Eagleton team has researched and compiled a narrative of each state’s experience with provisional voting in 2004. At the end of July the survey of 400 local election officials was nearing its end, and – as of this writing – is now complete with an analysis and report in draft form. We will rely on the survey results to improve our understanding of actual practice in administering provisional voting, including the steps local officials took to prepare for the election.
PROVISIONAL VOTING NARRATIVES

Description: To construct the narratives, a researcher examined newspaper accounts, state websites, and reports from third-party organizations to gather information on the experience with provisional voting in the 2004 election. To organize the information derived from this examination, we created an information system that catalogues information about the states (i.e. whether a state was new to provisional voting, the percentage of provisional votes counted, the method of notifying voters if their vote was counted, etc.) and combined it with Moritz's collection and analysis of statutes, regulations and litigation.

Progress: The state-by-state database is complete, as is a first draft of all state narratives. This work has been shared with the larger team and is being reviewed currently in preparation for constructing analysis and recommendation of alternative approaches for provisional voting required under Task 3.5.

Work Plan: In the next month, revisions of the narratives will be complete. In addition to this research, we will expand upon vote fraud research and examine further the relationship between instances of vote fraud and ensuing election reforms.

SURVEY OF COUNTY ELECTION OFFICIALS

Description: The Center for Public Interest Polling (CPIP) at Eagleton conducted a national survey of county election officials to measure several aspects of provisional voting. The survey was designed to determine the following factors related to provisional voting at the county (or equivalent election jurisdiction) level:

- The content and quality of instructions provided to county officials by the states;
- The steps taken by county officials to pass information on to poll workers;
- Differences in experience between states new to provisional voting and those that had some form of provisional ballot before HAVA; and
- Recommendations to improve and/or reduce the need for provisional voting.

Progress: The fielding and initial analysis of the survey results are complete.

Work Plan: The information derived from the survey will be considered in drafting the analysis and alternatives document required under Task 3.5.
VOTER IDENTIFICATION REQUIREMENTS

The contract lists 7 tasks (3.10 – 3.16) related to Voter Identification Requirements. During the reporting period, we have completed tasks 3.10 and 3.11. The research on Voter ID requirements is proceeding concurrently with our work on the experience of provisional voting.

Task 3.10: Legislation, regulations, and litigation

The research team at the Moritz College of Law has the lead responsibility for the collection and analysis of legislation, administrative procedures and litigation with regard to Voter Identification Requirements. When complete, this information will constitute the compendium of legislation, administrative regulations, and case law called for under this task.

Description: The Moritz team has compiled statutes on Voter Identification, and will provide a summarized analysis of this research to the project team for review.

Progress: The chart created to collect data on voter identification is complete and is now being reviewed. Voter identification statutes are being collected.

Challenges: Identifying the relevant statutes has been challenging because of the different terminology used from state to state to codify voter identification issues, and because many states have scattered election law provisions throughout their codes. This variety from state to state makes creating a snap-shot view across states a challenge.

Work Plan: Review of the voter identification chart, the collection of the voter identification statutes, and the writing of the state by state summaries will be completed by the end of August.

SUPPLEMENTS TO LEGAL ANALYSIS

To supplement the legal analysis, the Eagleton team is undertaking two research efforts: First, compiling information on the debate over voter ID in the states; and second, estimating the effect on turnout of voter ID requirements. Tracking the continuing political debate over voter identification reveals that the relatively narrow HAVA requirements for voter identification have apparently sparked in many states a broader concern with more rigorous identification requirements for all voters. We are following these developments both to monitor possible secondary effects of HAVA on voter ID, and to provide a rich collection of alternative approaches for consideration.

Individual narratives for the states with significant activity in voter ID will provide a resource for understanding the wide range of experience in the 2004 election. The narratives will include an appraisal of the prevalence and nature of vote fraud, a focus of the concern.
with increasing the rigor of voter ID requirements. The next key milestones will be the completion of the state database and drafting the first narratives.

**VOTER ID AND TURNOUT ANALYSIS**

The second supplemental analysis will provide objective information on a contentious feature of the debate over voter ID in the states: the effects of more rigorous voter ID regimes on voter turnout and the relationship between the voter ID regime and vote fraud. As part of this effort, Eagleton is undertaking a statistical analysis to gauge the effect of a state's voter ID regime on turnout, especially turnout by minority and elderly voters.

**Description:** We are creating a database and gathering statistics on the effects of state-level voter identification requirements on voter turnout at the county-level in the 2004 election.

**Progress:** The collection of data for the Voter ID-Turnout analysis is complete. The assembled database contains population demographic data, voter registration data and voter turnout data from all 50 states, 3,113 Counties, and the District of Columbia. It also contains exit poll data from the 50 states, providing demographic data of voter turnout. The analysis of that data is well underway.

**Challenges:** The initial methodology that was devised to investigate the questions involved in this part of the study proved insufficient, as the necessary data was unobtainable (the Census Bureau has not yet released their 2004 data). After re-developing an appropriate methodology, the necessary data has been assembled, we have resumed the analysis of this data.

**Projection:** The analysis of the impact that voter identification requirements have upon voter turnout should be completed around mid-August.

---

**Task 3.11 Public meeting on Voter Identification Requirements**

**Description:** In early July, we continued our efforts to identify specific Voter ID topics or issues and panelists who could shed light on them. We recommended a focus on the debate over Voter ID now underway in the states. To provide a vivid picture of the debate, we recommended that one panel include specific legislators on opposite sides of the issue from two different states, Mississippi and Wisconsin. We also discussed adding a researcher to the panel in order to place the debate in a national or historical context. We also recommended a panel of two academic researchers with contrasting points of view, to address the effects of Voter ID provisions under HAVA. In response to our suggestions, EAC staff recommended a panel of two state election directors to address the interaction of Voter ID with HAVA.

By mid-July, the EAC had decided which topics and speakers should be invited, however most of those speakers proved unable to attend.
Progress: Tom O’Neill and Dan Tokaji attended the EAC Public Meeting held in Pasadena on July 28. Their presentations at the meeting described the progress of the research and our developing perspective on how to assess the quality of the provisional voting process in the states and identify possible steps for improvement.

Challenges: The changes in the scheduling of the July meeting delayed and ultimately made it impossible to assemble a panel, from which we could derive substantive insight into voter identification issues as they are playing out in the states. Additionally, due to the date of the hearing, the information from the hearing was not available as early in the research process as contemplated in the contract.

Projection: Preparation of the hearing summary will likely be delayed, due to the team’s focus on preparation of the analysis and alternatives paper.

PROJECT MANAGEMENT

PEER REVIEW GROUP

Description: A feature of our proposal was the creation of a Peer Review Group (PRG). The EAC indicated at our first meeting in May that it would review our recommendations for members of the PRG. Our initial vision of the PRG was a small group of scholars and representatives of advocacy organizations that would comment on the research design, review drafts of our analyses and reports, and, in general, identify areas of the research that should be strengthened and help us improve the breadth, depth and clarity of reports based on that research.

Progress: Upon reflection, the project team agreed that the PRG should not include representatives of advocacy groups. We concluded that as representatives they would feel obligated to act as advocates for positions already taken by their groups. While advocacy organizations might be consulted as stakeholders during the course of our work, they were unlikely to achieve the goals we had in mind for the PRG as a source of advice on research design, methodology, and analysis. We submitted a revised list of potential members, substantially comprised of academics, to the EAC for review.

The EAC responded with suggestions concerning both the balance of the PRG’s membership and the creation of additional committees to review our work. We provided an analysis of the cost and time involved in adopting the EAC’s suggestions as well as with suggestions for a balanced selection of academics for the Peer Review Group. In the end, the EAC determined that Eagleton should appoint a balanced Peer Review Group of its own choosing. Initial phone calls were made to all members of that group by the end of July, and written invitations and descriptions of the process have gone to all possible members who had indicated their interest in serving.

Challenges: Communications on this issue with the EAC were not clear or timely. The purpose of the PRG is to review our work, and to comment on our research design, which is well underway. We had planned to have the PRG in place early enough in the project to enable them to provide feedback, including the research design. While we are
confident in the quality of our work, the experience and perspective of the Peer Review Group will strengthen our analysis and recommendations as we find a way to receive its critique in the more limited time now available. The delay in creating the Peer Review Group will result in a delay in the completion of the final draft of the analysis and alternatives paper and in the preliminary guidance document.

**Projections:** The work of the PRG will be about 2 weeks behind the milestones indicated in the work plan.

**COORDINATION AND INFORMATION MANAGEMENT**

Collecting and merging information and data from myriad sources is a demanding requirement of this research. We have developed two principal mechanisms to facilitate the analysis of the material collected or created in the project: an information system and an internal website for easy access to drafts and reports.

**INFORMATION SYSTEM**

**Description:** The statutory data and reports prepared by the Moritz College of Law will be merged with the political and procedural data and analysis prepared by the Eagleton Institute of Politics to provide a cohesive final product to the EAC, which will include a compendium of case law and statutes regarding provisional voting and voter identification.

**Progress:** The Moritz team has provided Eagleton staff with all completed work. An Eagleton staff member reviews the content and formats of data from all supporting research and will (re-)format once the work has been completed for the compendium and reports submitted to the EAC. The researchers and staff at Eagleton have created a shared folder on the Institute's server for the safe storage of work and access for those staff members. All of this work is being reviewed by the project team to ensure that a broad survey is being performed.

**Projections:** By the end of July 2005, much of the above referenced research has been completed. The entire project team has begun the process of reviewing all work, and will combine and format all documents and materials in preparation for our final reporting to the EAC.

**INTRANET**

**Description:** All project team members have signed on to the Intranet site. The Intranet facilitates the exchange of information and collaboration among project participants.

**Progress:** Project team members regularly post drafts, completed materials and spreadsheets online for internal review. The intranet has been extremely helpful to team members and serves as an internal website with announcements and important documents readily available to all team members.
**FINANCIAL REPORT**

The financial reporting for this project is supervised and prepared by the Division of Grant and Contract Accounting (DGCA) at Rutgers. Financial reporting on grant accounts is limited to actual expenses that have been incurred during the reporting period. Our contact at DGCA is: Constance Bornheimer, (732) 932-0165, EXT. 2235.

A detail of expenses incurred from project inception through June 30, 2005, is attached.
Commissioners-

As mentioned in this morning's meeting, Eagleton/Moritz project staff are scheduled to come to Washington in early September to brief EAC staff on the project's progress to date.

Let me know if you would like to attend or if you will send someone in your place.

Regards-

Karen Lynn-Dyson
Research Manager
U.S. Election Assistance Commission

Mr. O'Neill,

Just a quick note to remind you that your meeting with EAC is confirmed for September 6 at 1 p.m. in Washington. The purpose of this meeting will be to review the draft of your analysis and alternatives paper with EAC and discuss the outline and direction of the Preliminary Guidance Document.

Regards,

Nicole K. Mortellito
Assistant to the Executive Director - Thomas R. Wilkey

Subject Re: Peer Review Group

Tom-

Thank you for sharing this list of your Peer Review Group members, to-date. I will share this list with the Commissioners and will be certain to let your know of their feedback, if any.

I will also be back in touch regarding Eagleton’s research around voter fraud and the research project EAC will be undertaking, this fall, around voting fraud and voter intimidation. The EAC is presently in the process of finalizing a work and staff plan for this project and once it is completed, I will be certain to brief you on it.

In the meantime, EAC staff and several of the Commissioners looks forward to meeting with the Eagleton/Moritz team on September 6 at 1:30 PM.

Regards-

"Tom Oneill" <tom_oneill@verizon.net>

Karen,

Attached is a report on the status of recruitment of members of the Peer Review Group. We extended 9 invitations. We have four confirmed members, one reluctant turn-down, one who has yet to respond to an initial inquiry, and are awaiting confirmation from 3 others who initially agreed. Please let me know if you need additional information.

Tom O’Neill

Subject: Re: Fw: AZ DOJ response

Thanks-- we had, and it's good coverage. The AP had a piece as well-- this can be seen as a victory. Has the CHC come out officially on these ID issues? It is my opinion that the movements are being made in state legs. that will apply AZ type laws elsewhere. We obviously have good communications with House Admin and Senate Rules, as well as Whip Hoyer's office, but increased communications with Hill member offices would be helpful, if you have any suggestions.

AP Article:

Feds revise stance on Arizona voter ID requirement

Wednesday, August 31, 2005 7:43 PM PDT

PHOENIX (AP) - Arizona voters may be able to obtain at least a provisional ballot at polling places even if they don't show required identification despite the ID requirement in a ballot measure approved by voters last year. Whether that provisional ballot gets counted is another question.

The U.S. Justice Department in January signed off on election-law changes made by Proposition 200 itself. And a top department official in April signaled that the state would not run afoul of federal law if it put into place procedures to implement the ballot measure's voter ID mandate.

However, a different department official on Thursday wrote the state, saying it was "necessary to clarify our earlier interpretation in order to ensure an accurate representation of the Justice Department's views."

Acting Assistant Attorney General Bradley J. Schlozman's letter to a state official said the federal Help America Vote Act of 2002 requires that a person claiming to be an eligible voter and willing to sign a statement to that effect be given at least a provisional ballot.

However, HAVA leaves it up to states to decide whether a person who casts a provisional ballot is actually eligible to vote and therefore whether a provisional ballot should be counted, Schlozman wrote. Therefore, the state is free to
prohibit the counting of a provisional unless the voter produces proper identification on or after election day, Schlozman added.

Schlozman ended his letter by apologizing "for any confusion generated by our earlier response."

The revised federal position runs counter to polling-place rules which Republican Secretary of State Jan Brewer and other top state officials adopted after months of legal and political wrangling among themselves and with lawmakers after Democratic Gov. Janet Napolitano vetoed two voter-ID bills passed by the Republican-led Legislature.

Reacting to Schlozman's letter, Brewer said she's willing to revise the election rules, now waiting for Justice Department clearance under the Voting Rights Act, to let voters get a provisional ballot even without ID at the polls but not to count that ballot counted unless the voter later shows ID to election officials within a certain number of days.

"If they don't, it doesn't get counted. It's on their back," Brewer said.

In vetoing the bills, Napolitano had argued that HAVA entitled voters to cast provisional ballots and a top gubernatorial adviser said Thursday that the revised Justice Department position supports the governor's view.

"I think they've seen the light," said Napolitano general counsel Tim Nelson.

The Arizona Republic

Federal official upends Prop. 200 voter ID rule

Robbie Sherwood
The Arizona Republic
Sept. 2, 2005 12:00 AM

Arizonans who show up to the polls without identification must be given a provisional ballot, a top federal Justice Department official warned Thursday.

That opinion dealt a blow to Arizona's requirement that voters must show identification in order to cast a ballot at the polls, and throws into question rules approved under Proposition 200 to combat voter fraud.

Acting Assistant Attorney General Bradley Schlozman wrote to Secretary of State Jan Brewer Thursday and told her that a voter who shows up to the polls without identification must be given a provisional ballot.

That legal opinion contradicts a key portion of Brewer's much-delayed plan to carry out Proposition 200's voter-identification requirement, which was sent to the Justice Department for approval in early August. That plan, which Attorney General Terry Goddard and Gov. Janet Napolitano also signed off on, said any voter unable to produce proper identification would be turned away and not be allowed to cast a provisional ballot.

Provisional, or contested, ballots are put into sealed envelopes and verified later. They are counted only if the signature on the ballot envelope matches the signature on a person's voter registration.

While the letter said voters must be given provisional ballots whether or not they have identification, it added that state officials can still decide whether to count the ballots. It did not say that state election officials had to count the ballots.

Brewer said she had not seen the letter, but said she would comply with the department's interpretation of the law.
Brewer did not believe the letter meant that the Justice Department would reject Arizona's voter-identification plan. The plan is still under review for compliance with the Voting Rights Act and election officials hope to have the new rules in place before local elections in November.

"My gut instinct is, if that's what DOJ says, then we will give provisional ballots," Brewer said. "But we will also (give voters) three or five days to return to the county elections director with ID before we count those votes. The people said they wanted ID at the polls with Prop. 200. So those votes won't be counted until they bring back their identification. Simple."

Not so simple, said Pima County Recorder F. Ann Rodriguez, one of Brewer's most powerful critics on the voter-identification issue.

Rodriguez said it would be impractical to require voters to travel to county election offices to prove their identity, as well as a logistical nightmare. Maricopa County had over 65,000 provisional ballots in the 2004 election, and Pima County had over 60,000. Rodriguez said election officials already have a method to verify provisional ballots by matching the signature on the ballot envelope with the voter's signature on their registration form.

"Considering gas is now $3 a gallon, and how far somebody might live from the elections office, are voters really going to do that?" Rodriguez said. "That sounds like a quick response off the top of (Brewer's) head without really thinking it through."

So there could be more battles ahead.

Thursday's letter also contradicted - or "clarified" - a letter sent in April from a different Justice Department official to Brewer. She and other Proposition 200 supporters had used the letter to justify a hard-line stance against providing provisional ballots to voters without identification. Brewer had also used the April letter to chastise Napolitano for vetoing a bill that would have prevented people from casting a provisional ballot at polling places if they didn't have identification.

The letter Brewer received in April raised some eyebrows at the time. It had come from a politically appointed Justice Department official, Sheldon Bradshaw. He had resigned and started a new job as chief counsel for the Food and Drug Administration two weeks before he wrote to Brewer.

Schlozman didn't say why he disagreed with Bradshaw's earlier letter but wrote "we feel it necessary to clarify our earlier interpretation in order to ensure an accurate representation of the Justice Department's views."

Thursday's letter reversed Bradshaw's position and left Napolitano's chief legal adviser feeling vindicated.

"We've said all along that federal law requires provisional ballots and the statute was crystal clear on that," said Tim Nelson, Napolitano's general counsel. "This certainly calls into question whether the DOJ is going to pre-approve the secretary of state's voter manual."

Nelson said Napolitano disagreed with Brewer over denying provisional ballots to those who lacked identification, but backed off because it appeared the idea had the backing of the Justice Department, and Attorney General Goddard had agreed as well.

Goddard said Thursday he was still evaluating the department's letter but said, "It appears to be a major change in position about identification on provisional ballots, and is pretty much in line with the governor's position."

Vincelli@rutgers.edu

Hi Karen,

Attached is the August progress report in fulfillment of our Contract to Provide Research Assistance to the EAC for the Development of Voluntary Guidance on Provisional Voting and Voter Identification Procedures. Please note, as per your instructions earlier this month, that the financial report will be sent via Fedex under separate cover to: Ms. Dianna Scott, Administrative Officer, EAC. Also attached to the progress report is a finalized list of our Peer Review Group members. If you have any questions regarding this report, please contact Tom O'Neill at (908) 794-1030 or tom_onell@verizon.net.

Have a great day,
Lauren Vincelli

OUTLINE

- Introduction
- Provisional Voting
  - Task 3.5
- Voter Identification Requirements
  - Task 3.10
  - Task 3.11
- Project Management
  - Task 3.1
- Financial Report

INTRODUCTION

This report describes our progress from August 1 through August 31, 2005. It includes brief descriptions of key tasks; progress made; challenges encountered or anticipated; milestones reached; and projections for work to be completed in the coming month.

Research on Provisional Voting and a draft of reports on the analysis and alternatives were substantially completed in preparation for the September 6 briefing for the EAC. Important reports such as the National Survey of Local Election Officials' Experience with Provisional Voting; Statistical Review Provisional Voting in the 2004 Election; State-by-state Narrative of Developments in Provisional Voting and the compilation of Provisional Voting statutes, regulations, and litigation from the 50 states, were all completed in August.

We made further progress on recruiting a balanced and authoritative Peer Review Group (which, as this report is written, is receiving all the documents listed above for review). Ingrid Reed of Eagleton will coordinate the work of the Peer Review Group. A list of the members of the Peer Review Group is attached.

This report is divided into 3 sections: Provisional Voting, Voter Identification Requirements, and Project Management. Each section references specific tasks described in paragraph 3 of the contract. The Financial Report will be sent separately by the Rutgers Division of Grant and Contract Accounting.

Please direct questions or comments about this report to Tom O'Neill at: tom_oneill@verizon.net or (908) 794-1030.
PROVISIONAL VOTING

Tasks 3.4 – 3.9 in our contract relate to provisional voting. Work on the first of these must be complete before proceeding to later tasks. Task 3.4 was completed in August, and Task 3.5 is well underway.

Task 3.5: Analysis and Alternative Approaches. Assess the potential, problems, and challenges of provisional voting and develop alternative means to achieve the goals of provisional voting.

LEGISLATION, REGULATIONS, AND LITIGATION

The research team at the Moritz College of Law has the lead responsibility for the collection and analysis of legislation, administrative procedures and litigation. This information constitutes the compendium of legislation, administrative regulations, and case law called for under this task. It has provided a base of understanding for the analysis of states’ actual experience with provisional voting in 2004, for which the Eagleton team has lead responsibility.

Description: The Moritz team has created a 50-state chart to summarize information on provisional voting, compiled statutes, case law and administrative procedures regarding Provisional Voting and is near completion with this research.

Progress: We completed the state by state summaries of provisional voting in August. Also complete is a memorandum outlining provisional voting legislative changes since the 2004 election. This material was sent to the EAC as part of the package for briefing on September 6.

Challenges: The variety in the form and frequency of provisional voting legislation from state to state makes creating a snap-shot view across states a challenge.

Work Plan: The analysis of all the information, data, and survey results concerning provisional voting data will be completed in September, on schedule. The alternatives document should also be complete in September, pending response from the EAC on which direction those alternatives should follow.

PREPARATION FOR AND EXPERIENCE WITH PROVISIONAL VOTING

The Eagleton team has researched and compiled a narrative of each state’s experience with provisional voting in 2004. The report findings from the survey of 400 local election officials is now complete. The survey results improve our understanding of actual practice in administering provisional voting, including the steps local officials took to prepare for the election.
PROVISIONAL VOTING NARRATIVES

Description: To construct the narratives, a researcher examined newspaper accounts, state websites, and reports from third-party organizations to gather information on the experience with provisional voting in the 2004 election. To organize the information derived from this examination, we created an information system that catalogues information about the states (i.e. whether a state was new to provisional voting, the percentage of provisional votes counted, the method of notifying voters if their vote was counted, etc.) and combined it with Moritz's collection and analysis of statutes, regulations and litigation.

Progress: A state-by-state narrative of developments in Provisional Voting is complete and has been distributed to the EAC and the Peer Review Group. This work has been crucial to the process of constructing our draft analysis and recommendation of alternative approaches for provisional voting required under Task 3.5.

Challenges: The primary obstacle to constructing the narratives was difficulty in communicating and obtaining necessary information from various state officials. As a result, the narratives underwent multiple revisions in order to incorporate the most up-to-date material available. Had the Election Day Study been available, this task would probably have been simplified considerably.

Work Plan: We completed revisions of the narratives.

SURVEY OF COUNTY ELECTION OFFICIALS

Description: The Center for Public Interest Polling (CPIP) at Eagleton conducted a national survey of county election officials to measure several aspects of provisional voting.

Progress: The analysis of the survey results and findings report are complete.

Work Plan: We used the information from the survey in drafting the analysis and alternatives document required under Task 3.5.
The contract lists 7 tasks (3.10 – 3.16) related to Voter Identification Requirements. The research on Voter ID requirements is proceeding concurrently with our work on the experience of provisional voting, and is becoming the principal focus of our research.

**Task 3.10: Legislation, regulations, and litigation**

The research team at the Moritz College of Law has the lead responsibility for the collection and analysis of legislation, administrative procedures and litigation with regard to Voter Identification Requirements. This collection of material is nearing completion. It will constitute the compendium of legislation, administrative regulations, and case law called for under this task.

**Description:** The Moritz team has compiled statutes on Voter Identification, and will provide a summarized analysis of this research to the project team for review.

**Progress:** We are refining the 50 state (plus District of Columbia) chart of data on voter identification. So far collected are voter identification statutes for 35 states. Summaries of the existing voter identification statutes have been written for forty states.

**Challenges:** Identifying the relevant statutes has been challenging because of the different terminology used from state to state to codify voter identification issues, and because many states have scattered election law provisions throughout their codes. This variety from state to state makes creating a snap-shot view across states a challenge.

**Work Plan:** The state by state voter identification statute summaries will be completed for the remaining ten states and D.C. and the review of the chart will be completed. Analysis of voter identification data will begin.

**SUPPLEMENTS TO LEGAL ANALYSIS**

To supplement the legal analysis, the Eagleton team is undertaking two research efforts: First, compiling information on the debate over voter ID in the states; and second, estimating the effect on turnout of different voter ID regimes. Tracking the continuing political debate over voter identification reveals that the relatively narrow HAVA requirements for voter identification have apparently sparked in many states a broader concern, and a sharp political debate over rigorous identification requirements for all voters. The research follows these developments both to monitor possible secondary effects of HAVA on voter ID, and to provide a rich collection of alternative approaches for consideration.

Individual narratives for the states with significant activity in voter ID will provide a resource for understanding the wide range of experience in the 2004 election. The narratives will include an appraisal of the prevalence and nature of vote fraud, a focus of the concern with
increasing the rigor of voter ID requirements. The next key milestones will be the completion of the state database and drafting the first narratives.

**VOTER ID AND TURNOUT ANALYSIS**

The second supplemental analysis will provide objective information on a contentious feature of the debate over voter ID in the states: the effects of more rigorous voter ID regimes on voter turnout and the relationship between the voter ID regime and vote fraud. As part of this effort, Eagleton is undertaking a statistical analysis to gauge the effect of a state's voter ID regime on turnout, especially turnout by minority and elderly voters.

**Description:** We are creating a database and gathering statistics on the effects of state-level voter identification requirements on voter turnout at the county-level in the 2004 election.

**Progress:** The collection of data for the Voter ID-Turnout analysis is complete. The assembled database contains population demographic data, voter registration data and voter turnout data from all 50 states, 3113 Counties, and the District of Columbia. We have also utilized exit poll data collected on Election Day 2004 as a resource for understanding the demographics of voter turnout. The analysis of that data is underway.

**Challenges:** The main challenges to this task include gathering the complete set of changes to Voter ID laws over the past 5 years, and then incorporating those changes into a sound statistical methodology.

**Projection:** We will continue to work towards resolving the methodology issue, and ultimately produce a final report on this subject. The analysis of the impact that voter identification requirements have upon voter turnout should be completed around mid-September.
PROJECT MANAGEMENT

PEER REVIEW GROUP

Description: A feature of our proposal was the creation of a Peer Review Group (PRG). The Peer Review Group will review our research and methodology and provide valuable feedback and suggestions for the direction of our work.

Progress: The composition of the Peer Review Group has been determined and the membership has been submitted to the EAC. Additionally, as of the date of this report all PRG members have received their first mailing, which included several reports from our research, and a draft of our analysis and alternatives outline for their review.

Challenges: Our timeline for circulating and discussing our research with the PRG has been compromised due to delays in completing the recruitment of members of the group.

Projections: We are in the process of scheduling our first conference call with PRG members for the week of Sept. 19, 2005.

COORDINATION AND INFORMATION MANAGEMENT

Collecting and merging information and data from myriad sources is a demanding requirement of this research. We have developed two principal mechanisms to facilitate the analysis of the material collected or created in the project: an information system and an internal website for easy access to drafts and reports.

INFORMATION SYSTEM

Description: The statutory data and reports prepared by the Moritz College of Law is being merged with the political and procedural data and analysis prepared by the Eagleton Institute of Politics to provide a cohesive final product to the EAC, which will include a compendium of case law and statutes regarding provisional voting and voter identification.

Progress: At this point in the research process, many documents are complete after a lengthy process of circulating drafts among team members. As we near the end of the Provisional Voting research and move into the Voter Identification research, we will re-evaluate the volume of files contained in the Information System and update the system.

Projections: The entire project team continues to review all project drafts, and will staff members combine and format all documents and materials in preparation for our final reporting to the EAC.

INTRANET

Description: All project team members have signed on to the Intranet site. The Intranet facilitates the exchange of information and collaboration among project participants.
**Progress:** Project team members regularly post drafts, completed materials and spreadsheets online for internal review. The intranet has been extremely helpful to team members and serves as an internal website with announcements and important documents readily available to all team members.

---

**FINANCIAL REPORT**

The financial reporting for this project is supervised and prepared by the Division of Grant and Contract Accounting (DGCA) at Rutgers. Financial reporting on grant accounts is limited to actual expenses that have been incurred during the reporting period. Our contact at DGCA is: Constance Bornheimer, (732) 932-0165, EXT. 2235.

A detail of expenses incurred from project August 1- August 31, 2005, will be sent under separate cover to: Ms. Dianna Scott, Administrative Officer, EAC.

Eagleton/Moritz team-

I'd like to propose a conference call with EAC Commissioner Martinez, General Counsel, Julie Thompson, Research Manager Karen Lynn-Dyson and your team for either 10:30 or 1:30 on Friday, September 30.

This will be to discuss the draft guidance and final report you will be producing for the EAC.

Please let me know which time works for you.

Regards,
Karen Lynn-Dyson
Research Manager
U.S. Election Assistance Commission
1225 New York Avenue, NW Suite 1100

tel: 202-566-3123
Karen - Let's do it on Friday at 1:30. From my initial polling, at least Tom O'Neill, Ingrid Reed and I will be available. Since we will not all be at the same location, would you like us to initiate a conference call from here and give you a number to call in to?

Excellent-

Friday at 1:30 it is.

Please do let the EAC staff know what number to call. Ray Martinez and Tom Wilkey may be calling from the road. Julie Thompson and I will be here.

Thanks, again

I've had a chance to go over, more thoroughly, the Eagleton study and findings and think it would be helpful for you all to take a special look at the research that was done related to provisional case law.

Shall we get together for about an hour or so today or tomorrow, so that you all can look through this material? This would be in preparation for Friday's call with Eagleton.

Thanks

K

Hi Adam,

It was great meeting you at the UDC Law Symposium last week. I wanted to let you know that we are having a meeting about the voter fraud and intimidation meeting at 10 AM on October 28 at the EAC, and it would be great if you and Commissioner Martinez could be there. Let me know, and let’s stay in touch. Thanks so much.

Adam,

Just to make sure we're talking about the same thing, I'm actually not going to be at the "kick-off" on the 14th. This is a meeting just about our project on the 28th. The project is already underway and the contracts finalized.

Since the meeting I refer to on the 28th is from 10-12, is there any possibility of the three of us having lunch after that?

Tova

Subject: Re: October 28 meeting

Tova:

I was about to email you as well. It was certainly good to meet you last week, as I've heard about your work through numerous sources, and am glad we have finally been able to chat. As with many things (we started to discuss), the EAC is doing a lot of these projects for the first time. And unlike a thinktank, or nonprofit, we are constrained in a number of ways, and there are "sensitivities" that exist. Of course, there are benefits to not being a nonprofit, as well.

I'll state that at least myself, but hopefully Cmsr. Martinez will be at the kickoff meeting. You may do this already, but I would attempt to lay out the ideal structure for your involvement in the contract, and perhaps communicate this to Karen and the other contractor immediately before the meeting. That will frame this contract structure (beyond the terms of the agreement) to your liking.

Obviously a suggestion. However, I think that the goal is good, efficient research that is unimpeachable in partisan or methodological grounds—that will then be submitted to the Commission for it approval (and actually getting its approval).

Feel free to call me anytime. If you're in DC before then, and have some time, let's get Cmsr Martinez, you and I together for lunch or coffee.

Best,
Adam

Subject Re: Requested Documents

Karen:

I enjoyed the discussion too. I really think that this project will be of national importance and can positively affect elections administration while providing an answer to the handling of the vote fraud problem for the future.

On another note, why don't you leave an evening free while I am there for dinner. I am trying to bring my wife along. If you can bring your husband it could make for an interesting evening.

Regards,

Job

Summary of Election Activities of Job Serebrov

Background to Election Problems in Arkansas

Ever since Reconstruction, Arkansas has had a history of election problems. The election fraud that gave rise to the Brooks-Baxter War in Arkansas in the 1870s involved people from both sides of the aisle voting more than once, the dead rising to cast a ballot or two, destroying ballots, creating ballots and making ballot boxes disappear. A strong one-party system
perpetuated this tradition into modern times.

In 1995, I met with Arkansas Supreme Court Justice Tom Glaze to discuss voting issues and my efforts to clean up the electoral process. Although supportive, Justice Glaze encouraged me to proceed with caution. Before being elected to the Supreme Court, Justice Glaze had been employed in the 1960s by Gov. Win Rockefeller to clean up ballot fraud throughout Arkansas. He was nearly disbarred in the process by those involved in ballot fraud in a small, rural county.

Shortly after my discussion with Justice Glaze, I discovered how pervasive the election problems were in the state. For instance, ballot boxes were stuffed or disappeared into the night only to return altered. Contrary to state law, county sheriffs running in contested elections maintained custody of the ballot boxes. In one instance, 20 voted ballot boxes were found in the attic of a sheriff's deputy after he died.

In my private practice as an attorney, I represented numerous clients in county election contests throughout Arkansas. I also represented clients in matters before the Federal Election Commission. I have never lost an election case. Finally, I was hired as a consultant to a major nonprofit legal organization to review and summarize the 2002 amendments to federal election laws and apply the new law to 10 scenarios.

Member, Washington County Board of Election Commissioners, Fayetteville, Arkansas (1990-1996)

This board consisted of three commissioners; I was the lone Republican. We were charged with supervising the training of poll workers, evaluating voting systems and then purchasing an optical scan system to be used countywide, preparing and justifying our annual budget before the Washington County Quorum Court, hiring and supervising staff and sitting as an administrative tribunal.

When I first came on the board, Washington County was primarily a one-party county and the Democrats were used to running elections according to tradition rather than the law. I had to battle with the two Democrats on the board to enforce election laws within the county. As I started to force the issue in the courts, the Republican Party gained strength. Four years later and after outlasting eight Democrat commissioners, I was able to work with new Democrat commissioners who recognized the need to enforce the law. At this point, the commission requested that I draft administrative regulations for the board. These remain in place today.
Founder, President, General Counsel; Arkansans for Fair Elections (1994-1999)

In 1994, Gov. Mike Huckabee (R), then a candidate for lieutenant governor, asked me to serve as his general counsel for ballot fraud protection. Thinking it best to act independently of any candidate, I formed Arkansans for Fair Elections. I served as the organization's president and, later, general counsel. This group launched a statewide educational campaign to train poll watchers to recognize irregular or fraudulent electoral procedures; this included the creation of literature and a video. Our extensive public relations campaign brought media attention to the issue. We also organized a statewide team of citizen poll watchers and attorneys to ensure that the election laws were fairly enforced. We were so successful in the lieutenant governor's race that Arkansans for Fair Elections was asked to continue the effort until 1999 when I moved to Louisiana.

General Counsel - Ballot Fraud Protection Committee, Republican Party of Arkansas (1995-1999)

In late 1995, Asa Hutchinson, chairman of the Republican Party of Arkansas, appointed me as general counsel for the newly formed Ballot Fraud Protection Committee of the state party. I retained this position until 1999. I was responsible for coordinating statewide enforcement efforts and directing a legal team to respond to problematic situations prior to and on election day.

(Through my role with Arkansans for Fair Elections and the Ballot Fraud Protection Committee, I successfully sued or negotiated a settlement in more than two-thirds of the 75 counties in Arkansas over electoral irregularities.)

Legal Consultant to Republican Members of the Arkansas General Assembly (1994-1996)

Republicans in the General Assembly requested that I review and draft suggested changes to Arkansas election law. Based on my personal experience as an election commissioner and as an election attorney, I identified a number of areas of concern and drafted new statutes modeled on the best examples that I could find from other states. My proposal was not passed by the Democrat-controlled General Assembly as a package, however, several of its components were passed into law.

Consultant to the Arkansas Court of Appeals Redistricting Commission (1996-1999)

I drafted five redistricting bills and maps for the
constitutionally required redistricting of the Arkansas Court of Appeals. These bills were based on current U.S. Supreme Court precedent regarding gerrymandering. I had to present each bill and give supporting testimony to the commission.

Director of International Development - Louisiana State University, Baton Rouge, Louisiana (2000-2003)

Part of my duties as director was to develop international cooperative projects. The theme of several of these proposals was democratization. In each case, I required review of the national election code of the country involved.

My activities in Namibia led to a request by the director of the Namibian Election Commission, Joram Rukambe and the Speaker of the Namibian National Assembly, Dr. Mose Tjitendero to review and suggest changes to the Namibian election code. This review took three months and resulted in proposed alterations a number of code sections. These suggestions were considered by the Namibian National Assembly and a number were incorporated into the code revisions. Additionally, I drafted legislation for the Speaker to guarantee voting rights to agricultural workers that were being denied by the owners of the farms. This legislation also was passed into law.

During this time, I was qualified as an election expert and placed on an election consultant list by the United Nations, IFES and the Electoral Institute of Southern Africa.

Related Memberships

• Republican Party of Arkansas (1990-1999)
• Benton County, Arkansas, Republican Committee (1996-1999)
• Washington County, Arkansas, Republican Committee (1990-1996)

(When we moved to Louisiana in 1999, the party was in such turmoil that is was difficult to get involved. This past year, I have been prohibited by the Hatch Act from participating in partisan politics. This prohibition ends August 19 when my judicial clerkship ends.)

Related Education

• Graduate certificate in electoral governance, Griffith University, Queensland, Australia (2003)

Subject: October Progress Report

Karen,
Attached is the Progress Report for October. Please note that this report includes an attachment showing how our study classifies each state on key variables, such as counting out-of-precinct ballots, requirements for ballot evaluation, and other variables. It also displays how the data we used differs for some states for the vote counts reported by the Election Day Survey. We believe that our data is more accurate and complete (see for example the data for New Mexico and Pennsylvania).

I look forward to responding to any questions or concerns you or others at the EAC may have.

Tom O'Neill

Deliberative Process Privilege
INTRODUCTION

This report describes our progress from October 1 through October 31, 2005. It includes brief descriptions of key tasks; progress made; challenges encountered or anticipated; milestones reached; and projections for work to be completed in the coming month.

In October we focused on finalizing our Provisional Voting analysis paper, including the development of recommendations to the EAC for a draft guidance document and best practices. These policy prescriptions are based on our research and the comments of the Peer Review Group. We completed a careful review of our data to reconcile it with other sources and identify the latest, most reliable information to use in the analysis. (See the attachment to this Progress Report for the details.) The importance of this demanding effort was described in September’s Progress Report.

Also in October we revised the schedule for the project in light of the additional time that has been needed for review of earlier drafts by the EAC and the late completion of the Election Day Study. We will seek a meeting with the EAC in the next several weeks to confer about the schedule to complete the project and alternative approaches that could speed the conclusion of our work.

We will submit to the EAC a final draft of our report, a preliminary guidance document, and draft best practices before Thanksgiving. We project that EAC will take 3 to 4 weeks to review and react to that final draft. And we understand that after its review, the EAC will decide if it should move towards issuing a Guidance Document or recommending best practices. If the EAC does decide to issue a Guidance Document on Provisional Voting, the time needed for a review by the advisory boards is likely to delay a public hearing until early February.
This report is divided into 3 sections: Provisional Voting, Voter Identification Requirements, and Project Management. Each section references specific tasks described in paragraph 3 of the contract. The Financial Report will be sent separately by the Rutgers Division of Grant and Contract Accounting.

Please direct questions or comments about this report to tom_oneill@verizon.net or by telephone at (908) 794-1030.

**PROVISIONAL VOTING**

Tasks 3.4 – 3.9 in our contract relate to Provisional Voting. Work on the first of these must be complete before proceeding to later tasks. Task 3.4 was completed in August, Tasks 3.5 and 3.6 are nearing completion.

**Task 3.5: Analysis and Alternative Approaches.** Assess the potential, problems, and challenges of Provisional Voting and develop alternative means to achieve the goals of Provisional Voting.

**LEGISLATION, REGULATIONS, AND LITIGATION**

The research team at the Moritz College of Law has the lead responsibility for the collection and analysis of legislation, administrative procedures and litigation. This information constitutes the compendium of legislation, administrative regulations, and case law called for under this task. It has provided a base of understanding for the analysis of states’ actual experience with Provisional Voting in 2004, for which the Eagleton team has lead responsibility.

**Description:** The Moritz team has created a 50-state chart to summarize information on Provisional Voting, compiled statutes, case law and administrative procedures regarding Provisional Voting and has completed this research.

**Progress:** We have completed the memorandum outlining Provisional Voting legislative changes since the 2004 election and we are continuing to clarify the laws prior to these changes.

**Challenges:** The variety in the form and frequency of Provisional Voting legislation from state to state makes creating a snap-shot view across states a challenge.

**Work Plan:** The final analysis will be sent to the EAC by Thanksgiving.
PREPARATION FOR AND EXPERIENCE WITH PROVISIONAL VOTING

The Eagleton team has researched and compiled a narrative of each state's experience with Provisional Voting in 2004. The report findings from the survey of 400 local election officials are now complete. The survey results have proven to be instrumental in shaping our understanding of actual practice in administering Provisional Voting, including the steps local officials took to prepare for the election.

PROVISIONAL VOTING NARRATIVES

Description: To construct the narratives, a researcher examined newspaper accounts, state websites, and reports from third-party organizations to gather information on the experience with Provisional Voting in the 2004 election. To organize the information derived from this examination, we created an information system that catalogues information about the states (i.e., whether a state was new to Provisional Voting, the percentage of provisional votes counted, the method of notifying voters if their vote was counted, etc.) and combined it with Moritz's collection and analysis of statutes, regulations and litigation.

Progress: We completed a state-by-state narrative of developments in Provisional Voting and distributed it to the EAC and the PRG. This work has been helpful in understanding the context of the data collected on provisional voting from the states.

Challenges: The primary obstacle to constructing the narratives was difficulty in communicating and obtaining necessary information from various state officials. As a result, the narratives underwent several revisions to incorporate up-to-date and reliable information. Now that so many other analyses, including the Election Day Survey, have been released, we were challenged by different interpretations of the same basic facts. But the reconciliation of interpretation and data collection has been invaluable in establishing rigor in our report.

Work Plan: We completed revisions of the narratives incorporating comments from the PRG and addressing any discrepancies between our findings and other interpretations of similar information included in other studies.

PROVISIONAL VOTING STATISTICAL ANALYSIS

Description: During October the Eagleton research team continued to check its statistical analysis, and worked to reconcile the classifications of this analysis (such as states counting only those provisional ballots cast within the proper precinct versus states that counted ballots cast within the proper county) with the classification made in other parts of this study or in other studies (such as the Election Day Study or Electionline reports).

Progress: The effort to double check all of the classifications used in the study is complete. The results of this effort are displayed in the attachment to this progress report, “Characteristics of the Provisional Voting Process -- Classification of the States.”

028420
beginning on page 9. Only Delaware and Arkansas remain unclear in regard to one of the measures, and both states have been contacted to receive clarification in this area.

**Challenges:** The difficulties encountered have been a result of communication delays and time constraints. Some states have been more responsive to our inquiries about their practices than others. Overall, this is not an irresolvable problem but it does slow the process of completion down.

**Work Plan:** By early-November the final revision of the statistical analysis, which includes full reconciliation of all data within the study, will be complete. The reconciliation of data is displayed in the attachment to this progress report.

**SURVEY OF COUNTY ELECTION OFFICIALS**

**Description:** The Eagleton Center for Public Interest Polling (CPIP) conducted a national survey of county election officials to measure several aspects of Provisional Voting.

**Progress:** The analysis of the survey results and findings report is complete. As a result of the critique by the PRG, the research team is revising and clarifying the descriptions of the survey design and sample selection process to make the research methods more transparent.

**Work Plan:** We used the information from the survey in drafting the analysis and alternatives document required under Task 3.5. We will include necessary clarifications regarding survey design and sample selection in the final analysis and alternatives document.

---

**Task 3.6: Prepare preliminary draft guidance document.**

The report and recommendations now nearing completion constitutes the draft preliminary guidance document. Based on our conversation with the EAC, the draft gives the EAC the option of proceeding with a guidance document or issuing recommendations to the state for best practices, recommendations that would not constitute voluntary guidance. Before proceeding to Task 3.7 (revise the guidance document for publication) or 3.8 (arrange a public hearing on the draft guidance), we will await the EAC’s decision on how to proceed.
The contract lists 7 tasks (3.10 – 3.16) related to Voter Identification Requirements. The research on Voter ID requirements is proceeding concurrently with our work on the experience of Provisional Voting, and is becoming the principal focus of our research.

### Task 3.10: Legislation, regulations, and litigation

The research team at the Moritz College of Law has the lead responsibility for the collection and analysis of legislation, administrative procedures and litigation with regard to Voter Identification Requirements. This collection of material is nearing completion. It will constitute the compendium of legislation, administrative regulations, and case law called for under this task.

**Description:** The Moritz team has compiled statutes on Voter Identification, and will provide a summarized analysis of this research to the project team for review.

**Progress:** The 50 State (plus the District of Columbia) chart has been completed, the voter identification statutes have been collected for all states and D.C., and summaries of the existing voter identification statutes have been written for all states and D.C.

**Challenges:** Identifying the relevant statutes has been challenging because of the different terminology used from state to state to codify voter identification issues, and because many states have scattered election law provisions throughout their codes. This variety from state to state makes creating a snap-shot view across states a challenge.

**Work Plan:** Analysis of voter identification data has begun and will increasingly become the central focus of our work.

### SUPPLEMENTS TO LEGAL ANALYSIS

To supplement the legal analysis, the Eagleton team is undertaking two research efforts: First, compiling information on the debate over voter ID in the states; and second, estimating the effect on turnout of different voter ID regimes. Tracking the continuing political debate over voter identification reveals that the relatively narrow HAVA requirements for voter identification have apparently sparked in many states a broader concern and a sharp political debate over rigorous identification requirements for all voters. The research follows these developments both to monitor possible secondary effects of HAVA on voter ID, and to provide a rich collection of alternative approaches for consideration.
VOTER ID AND TURNOUT ANALYSIS

The second supplemental analysis will provide objective information on a contentious feature of the debate over voter ID in the states: the effects of more rigorous voter ID regimes on voter turnout and the relationship between the voter ID regime and vote fraud. As part of this effort, Eagleton is undertaking a statistical analysis to gauge the effect of a state's voter ID regime on turnout, especially turnout by minority and elderly voters.

Description: We have created a database and gathered statistics on the effects of state-level voter identification requirements on voter turnout at the county-level in the 2004 election.

Progress: The collection of data for the Voter ID-Turnout analysis is complete. The assembled database contains population demographic data, voter registration data and voter turnout data from all 50 states, 3113 Counties, and the District of Columbia. We have also used exit poll data collected on Election Day 2004 as a resource for understanding the demographics of voter turnout.

Challenges: The analysis of these data had been postponed until the data reconciliation of Provisional Voting is complete. As a result of the extensive revision and data reconciliation efforts aimed at the Provisional Voting section of our work VID had been temporarily placed on hold. We are now beginning data analysis on the impact of voter identification requirements on voter turnout.

Work Plan: The analysis of the impact that voter identification requirements have upon voter turnout should be completed by early December. Early January is our target to deliver the draft report and outline of alternative policies to the Peer Review Group. In mid January, the EAC would receive a draft report and recommendations that take into account the comments of the PRG.

PROJECT MANAGEMENT

PEER REVIEW GROUP

Description: A feature of our proposal was the creation of a Peer Review Group (PRG). It reviews our research and methodology and provides valuable feedback and suggestions for the direction of our work.

Progress: Eagleton has stayed in touch with members of the Peer Review Group since the September 21st conference call, and has solicited their final comments on the Provisional Voting research. During October, we telephoned two members who did not participate in the conference call to confirm their commitment to serving as members of the Peer Review Group. Profess Guy Charles affirmed his interest. Professor Pamela Karlan did not return the call. The revisions in the schedule for the project have now made it possible to begin the process of scheduling a meeting of the PRG to consider our draft report and recommendations on Voter Identification Issues. We anticipate that meeting will take place the second week of January.
Challenges: No new challenges were encountered during October.

COORDINATION AND INFORMATION MANAGEMENT

Collecting and merging information and data from myriad sources is a demanding requirement of this research. We have developed two principal mechanisms to facilitate the analysis of the material collected or created in the project: an information system and an internal website for easy access to drafts and reports.

INFORMATION SYSTEM

Description: The statutory data and reports prepared by the Moritz College of Law is being merged with the political and procedural data and analysis prepared by the Eagleton Institute of Politics to provide a cohesive final product to the EAC, which will include a compendium of case law and statutes regarding Provisional Voting and voter identification.

Progress: At this point in the research process, many documents are complete after a lengthy process of circulating drafts among team members. We have reorganized our system by separating final drafts from earlier versions of documents, discarding dated files contained in the Information System, and updating the system as a whole. Upon their completion, new documents continue to be added.

Projections: The entire project team continues to use the Information System which contains the above referenced research, in working toward the preparation for our final reports to the EAC.

INTRANET

Description: All project team members have signed on to the Intranet site, and regularly post drafts, completed materials and spreadsheets online for internal review. The Intranet facilitates the exchange of information and collaboration among project participants.

FINANCIAL REPORT

The financial reporting for this project is supervised and prepared by the Division of Grant and Contract Accounting (DGCA) at Rutgers. Financial reporting on grant accounts is limited to actual expenses that have been incurred during the reporting period. Our contact at DGCA is: Constance Bornheimer, (732) 932-0165, EXT. 2235.

A detail of expenses incurred from project October 1- October 31, 2005, will be sent under separate cover to: Ms. Dianna Scott, Administrative Officer at the EAC.
ATTACHMENT TO OCTOBER PROGRESS REPORT
Characteristics of the Provisional Voting Process
Classification of the States

Our research on provisional voting divided the various states into several categories to allow an assessment of how different factors may have influenced the process of casting and counting provisional ballots. This analysis was conducted before the release of the Election Day Study, and the categories we used may differ in some respects from its work. The categories analyzed here are:

1. New vs. Old (states that used a provisional ballot before the 2004 election)
2. Use of a statewide database of registered voters vs. no use of a statewide database
3. Counting out-of-precinct ballots vs. not counting out-of-precinct ballots
4. Voter identification requirements
5. Method used to verify provisional ballots
6. Levels of provisional ballots cast and counted

We first assigned states within these categories based on classifications done by Electionline.org in its studies. The Electionline data was the only published information available at the time of our research. We reviewed the Electionline data carefully, and, in select cases, updated it with new, detailed information that had become available after its publication. The changes we made are explained below.

Please note that:
--Idaho, Maine, Minnesota, New Hampshire, Wisconsin and Wyoming were excluded from our analysis. They have election-day registration systems, and did not need to use HAVA-compliant provisional ballots.

--North Dakota does not register voters, so it also was excluded from HAVA requirements and did not use provisional voting.

--Mississippi has not reported its provisional voting results and could not be included in our analysis, though it was compliant in 2004.

--Pennsylvania did not report its totals for the Election Day Study, but we obtained information on Pennsylvania and did include it in our analysis.
New vs. Old States

We classified states as “new” or “old” based on the 2001 Electionline study of provisional voting and condensing its classifications into a single dichotomous variable, new/old with all other cases excluded. The Electionline study divided states into five categories of their use of provisional ballots in the 2000 election:

1. Use of provisional ballots (P)
2. Limited use of provisional ballots (LP)
3. Affidavit ballots (A)
4. No system in place (N)
5. Unnecessary/Not Applicable (U/NA)

We collapsed all of the states listed as using provisional ballots, limited use of provisional ballots or affidavit ballots as “old” states, because the states in all three categories would have been familiar with key aspects of provisional voting. States that had no provisional voting system in place for the 2002 election, and were HAVA compliant in 2004, were listed as “new” states, as 2004 would have been the first year in which they would be offering the option of provisional voting. States that were listed as unnecessary or not applicable were excluded from this study, as they were exempt from the HAVA regulations in 2004 because they either allowed same-day registration or did not register voters.

Rhode Island is the only state categorized as an old state by Electionline that we moved into the list of new states. Electionline’s map shows Rhode Island as a state that used provisional voting in 2000, but in the state description, it is listed as having no system in place. We learned from the Rhode Island Board of Elections that the state had previously permitted potential voters to sign an affidavit if they did not appear on a precinct’s list of registered voters, but felt they were registered to vote. Based on the signed affidavit, the election official would then contact a county official to see if the voter was on a more complete registration list. If the voter’s name was on the complete list, that voter was permitted to cast a regular ballot. As this process did not grant the voter a provisional ballot, but served as a different type of administrative failsafe, we concluded that Rhode Island’s first use of provisional voting was in 2004 and, therefore, classified the state as “new” to the system of provisional balloting.

---

**Statewide List of Registered Voters**

The Electionline preview of the 2004 Election\(^2\) was the starting point for compiling a list of states that had a statewide database of registered voters. That study listed 34 States that did not have their statewide database systems complete, and 16 that did, including the District of Columbia. North Dakota does not register voters, so does not need to compile such a database. Electionline’s criterion for concluding that a state had a statewide list was that the state have participation from all jurisdictions in a statewide system. We added Oklahoma to the list of states with statewide databases.

because we found they had met the Electionline criteria by the 2004 election, albeit too late for inclusion in the Electionline survey.

Minnesota has a statewide database but was excluded from the analysis because it did not offer provisional ballots and was exempt from the HAVA requirements.

**Out-of-Precinct Ballots**

We based our classification of states that allow the counting of ballots cast outside the correct precinct on the data in the 2004 Electionline preview of the 2004 election. States that evaluated ballots cast in a precinct where the voter was not registered were categorized as “out-of-precinct.” States that invalidated such ballots were categorized as “In-precinct only.”

Voter Identification

We relied on Electionline studies, including the Voter Identification study\(^3\) and the 2004 Election Preview, to classify the states on their requirements for voter identification. Each state’s categorization is taken directly from the Electionline studies except Hawaii.\(^4\) The five different, and increasingly rigorous, categories are: Give Name (8 states), Sign Name (14 states), Match Signature (8 states), Provide ID (15 states), and Photo ID (5 states).

\(^3\) This study can be found at: http://electionline.org/Portals/1/Publications/Voter%20Identification.pdf

\(^4\) In 2004, ElectionLine listed Hawaii as requiring identification. Our review of statutes revealed that Hawaii could require photo ID. Since that is the most rigorous form of identification that may be required of voters, we classified Hawaii under this category.

South Dakota complicates the effort to assign each state to a category. It permits voters to sign an affidavit that would allow them to vote without presenting photo ID. While Hawaii did not normally require photo ID, its statutes gave challenged voters the opportunity to respond by producing a photo ID.

Verification Method

We identified four different ways states assessed provisional ballots to determine if they should be counted: signature match, match voter data, signed affidavits, and bringing back identification later. We gathered information about these verification techniques by checking state websites and consulting journalistic accounts. We consulted state legislation to provide further information where needed.

Data Collection
To assemble our data for analysis, we began by using the data on provisional votes cast and counted reported by Electionline. To increase the accuracy of this data, we surveyed each state’s election websites for updated data, and for reported numbers on the county level. We then sent emails to 49 (we excluded Alaska, see below) states and the District of Columbia, requesting updated data on the number of provisional votes cast and counted by county. We received information from 25 states by our cut-off date of August 25, 2005.

* North Carolina lacked clear standards to evaluate provisional ballots and is excluded from this analysis.

| 26 States              | 25 States                   |

<sup>5</sup> Alaska was not contacted via email, as the state does not have voting districts comparable to counties in other states and could not be matched with comparable census data.

<sup>6</sup> Maryland reported provisional ballots that were counted per county, but not number cast.

<sup>7</sup> Nebraska reported an incomplete list of provisional ballots cast and counted by county, but designated counties by number, rather than by name.
Data Differences with Election Day Study

The data used in this study differs from the data reported in the Election Day Study for 19 states. The Election Day Study was not completed until well after our statistical analysis of provisional voting was finished, on the schedule laid out in our work plan. Where there are differences, they are typically very small, usually fewer than 100 votes either cast or counted. Of the 9 states that have differences of more than 100 votes cast or counted, 7 have reported their numbers directly to us and can be considered updated data that EDS had not obtained. For one of those states, New Mexico, EDS had incomplete data, and for another, Pennsylvania, EDS had no data at all. The data that we have collected reflects updated numbers from the states that have changed following recounts and litigation that altered how ballots were evaluated.

Subject Provisional Voting Report Status and Request for Advice

Karen - We would like to talk with you about the process and schedule for completing our work in a way that is most useful to the EAC. I am attaching a draft timeline for the completion of this work and listing below five specific questions we need to resolve as quickly as possible. I would appreciate it if you would call me to discuss how best to address these matters - whether by telephone or by coming to meet in Washington.

We are planning to submit our report on Provisional Voting to the EAC by November 18th. Although it is not required in our contract, we will at the same time give copies to the members of the Peer Review Group offering them the opportunity to send us any additional corrections or other comments.

We are considering making all our recommendations for both Provisional Voting and Voter ID in the form of Best Practices. Some of them might well lend themselves to Guidance, but our discussion of the earlier draft with the EAC left us with the clear impression that on this topic the preference was for recommendations for Best Practices rather than a Guidance document. The calendar also argues for the Best Practices route to enable the EAC to give states advice they can use in 2006. (The attached draft timeline would need to be revised if the EAC prefers to propose some of the recommendations as Guidance.)
QUESTIONS:
1. Does the EAC agree with the approach described above to make all recommendations in the form of Best Practices rather than Guidance?

2. How long will it take the EAC to review and return comments on our draft Provisional Voting document? Is our attached revised schedule realistic in anticipating EAC comments no later than the week of December 12th on the report we send you at the end of this week?

3. After we revise our report on Provisional Voting to reflect any comments we receive from the EAC, and follow a similar process for our report on Voter Identification, what further steps would the Commission like us to take? Would you want us to conduct a review with your Board of Advisors and/or hold public hearings even though these steps are, we understand, required only for a Guidance Document? A review by the Board of Advisors would offer the opportunity to solicit suggestions for Best Practices from its members, thus strengthening the document and building a constituency for their adoption. (The attached draft timeline does not include such additional reviews.)

4. In any case, we will need a no-cost extension to the contract to carry us past December 31st. How do we make that request?

5. Assuming that we conduct fewer public hearings than we had anticipated, can we reallocate funds we had budgeted for that purpose to cover the higher than anticipated personnel and consultant costs we will be incurring after the first of the year?

We look forward to discussing these matters with you.

Thanks, John

Subject Final Best Practices Document

Dear Ms. Karen Lynn-Dyson:

Attached please find the final draft ‘Best Practices to Improve Provisional Voting Report’ completed by the Eagleton Institute of Politics, and Mortiz College of Law.

Please note that our report has two attachments, the first of which is appended directly within the text of the report, and the second of which is a separate excel document. In addition to this electronic submission I will be sending you a hard copy, via FedEx of these materials later today.

Please let me know if you have any difficulty opening the files.

Sincerely,

Johanna Dobrich

Background of the Research

This report to the United States Election Assistance Commission (EAC) presents recommendations for best practices to improve the process of provisional voting. It is based on research conducted by the Eagleton Institute of Politics at Rutgers, the State University of New Jersey, and the Moritz College of Law at Ohio State University under contract to the EAC, dated May 24, 2005. The research included a review and legal analysis of state statutes, regulations and litigation concerning provisional voting, a sample survey of local election officials, and a statistical analysis of provisional voting in the 2004 election. Also consulted as a basis for these recommendations were other studies, notably the EAC's Election Day Survey.¹

The Help America Vote Act of 2002 (HAVA) (Public Law 107-252) authorizes the EAC (SEC. 241, 42 USC 15381) to conduct periodic studies of election administration issues. The purpose of these studies is to promote methods for voting and administering elections, including provisional voting, that are convenient, accessible and easy to use; that yield accurate, secure and expeditious voting systems; that afford each registered and eligible voter an equal opportunity to vote and to have that vote counted; and that are efficient.

Section 302(a) of HAVA requires states to establish the process of provisional balloting by January 2004.² The process HAVA outlined leaves considerable room for variation among the states, arguably including such critical questions as who qualifies as a registered voter eligible to cast a provisional ballot that will be counted and, arguably, in what jurisdiction (precinct or larger unit) that the ballot must be cast in order to be counted.³

The general requirement is that, if a registered voter appears at a polling place to vote in an election for Federal office, but the potential voter's name does not appear on the official list of eligible voters for the polling place, or if an election official asserts that the individual is not eligible to vote, that potential voter be permitted to cast a provisional ballot. In some states, those who should receive a provisional ballot include, in the words of the Election Day Survey, include first-time voters who cannot provide identification, as required under HAVA, and voters who were...
challenged at the poll. HAVA also provides that those who vote pursuant to a court order keeping the polls open after the established closing hour shall vote by provisional ballot. HAVA also requires election administrators to notify individuals of their opportunity to cast a provisional ballot.

Provisional Ballots in the 2004 Election

In the 2004 election, nationwide about 1.9 million votes, or 1.6% of turnout, were cast as provisional ballots. More than 1.2 million, or just over 63% were counted. Provisional ballots accounted for a little more than 1% of the final vote tally.6

These totals obscure the tremendous variation in provisional voting among the states. HAVA allows the states considerable latitude in how to implement provisional voting, including deciding who beyond the required categories of voters should receive provisional ballots and how to determine which provisional ballots should be counted. Six states accounted for two-thirds of all the provisional ballots cast.7 State by state, the percentage of provisional ballots in the total vote varied by a factor of 1,000, from a high of 7% in Alaska's to Vermont's .006%. The portion of provisional ballots cast that were actually counted also displayed wide variation, ranging from 96% in Alaska to 6% in Delaware. States with voter registration databases counted, on average, 20% of the provisional ballots cast. Those without databases counted ballots at more than twice that rate: 44%. (Or, as the Carter-Baker Commission report put it, "provisional ballots were needed half as often in states with unified databases as in states without.")

The wide variations in the use of provisional ballots argue for the promulgation of best practices that states can use to determine how to make procedures clearer to both officials and voters could improve the implementation of provisional voting across the country.

One important source of variation among states was a state's previous experience with provisional voting. The share of provisional ballots in the total vote was six times greater in states that had used provisional ballots before than in states where the provisional ballot was new. In the 25 states that had some experience with provisional voting before HAVA, a higher portion of the total vote was cast as provisional ballots and a greater percentage of the provisional ballots cast were counted than in the 18 new to provisional balloting.8

1 The definition of who was entitled to a provisional ballot could differ significantly among the states. In California, for example, the Secretary of State directed counties to provide voters with the option of voting on a provisional paper ballot if they felt uncomfortable casting votes on the paperless e-voting machines. "I don't want a voter to not vote on Election Day because the only option before them is a touch-screen voting machine. I want that voter to have the confidence that he or she can vote on paper and have the confidence that their vote was cast as marked," Secretary Shelley said. See http://wired.com/news/vote/0.2845.63298.00.html. (Our analysis revealed no differences in the use of provisional ballots in the counties with these paperless e-voting machines.) In Ohio, long lines at some polling places resulted in legal action directing that voters waiting in line be given provisional ballots to enable them to vote before the polls closed. (Columbus Dispatch, November 3, 2004.)

2 These figures differ slightly from those in the Election Day Survey. Data used for this study include complete voting data for New Mexico, for which the Election Day Survey had only partial data, and vote totals for Pennsylvania, which was not included in the provisional voting analysis in the Election Day Survey. See the appendix to this report for a full explanation of the differences in data between this research and the Election Day Survey.

7 California, New York, Ohio, Arizona, Washington, and North Carolina. The appearance of Arizona, Washington and North Carolina on this list shows that the number of provisional ballots cast depends on factors other than the size of the population.

9 See the appendix for our classification of "old" and "new" states and explanation of why the total is less than 50.
The percentage of the total vote cast as provisional ballots averaged more than 2% (2.17%) in the 25 experienced states. This was 4 times the rate in states new to provisional voting, which averaged 0.47%. The experienced states counted an average of 58% of the provisional ballots cast, nearly double the proportion in the new states, which counted just 33% of cast provisional ballots.
The combined effect of these two differences was significant. In experienced states 1.53% of the total vote came from counted provisional ballots. In new states, provisional ballots accounted for only 0.23% of the total vote.

Those voting with provisional ballots in experienced states were enfranchised more frequently than those in the new states, another indication that there is room for improvement in provisional ballot procedures. That conclusion gains support from the perspectives of the local election officials revealed in the survey conducted as a part of this research. Local (mostly county level) election officials from “experienced” states were more likely to:
- Be prepared to direct voters to their correct precincts with maps;
- Regard provisional voting as easy to implement;
- Report that provisional voting sped up and improved polling place operations
- Conclude that the provisional voting process helped officials maintain accurate registration databases.

Officials from “new” states, on the other hand, were more likely to agree with the statement that provisional voting created unnecessary problems for election officials and poll workers.

If experience with provisional voting does turn out to be a key variable in performance, that is good news. As states gain experience with provisional ballots their management of the process could become more consistent and more effective over subsequent elections. Further information from the EAC on best practices and the need for more consistent management of the election process could sharpen the lessons learned by experience. The EAC should consider providing the “new” states with information on more effective administration of provisional voting. EAC could also consider convening a national meeting for state and county election officials to share experiences and best practices from their own jurisdictions.

But the optimistic conclusion that experience will make all the difference may be unwarranted. Only if the performance of the “new” states was the result of administrative problems stemming from inexperience will improvement be automatic as election officials move along the learning curve. Two other possibilities exist. Current understanding of the provisional voting processes in use in 2004 is not sufficient to determine unambiguously which view is correct.

1. “New” states may have a political culture different from “old” states. That is, underlying features of the “new” states political system may be the reason they had not adopted some form of provisional voting before HAVA. The “new” states may strike a different balance among the competing objectives of ballot access, ballot security and practical administration. They may ascribe more responsibility to the individual voter to take such guidance learned from that.
actions as registering early, finding out where the right precinct is, or re-registering after changing address. They may value keeping control at the local level, rather than ceding authority to state or federal directives. If the inconsistent performance in the "new" states arises out of this kind of political culture, improving effectiveness in the use of the provisional ballots – as measured by intrastate consistency in administration— will be harder and take longer to achieve.  

2. "Old" states may devote fewer resources to updating their registration files or databases because they are comfortable with provisional ballots as a fail safe way for voters with registration problems a way to cast a ballot. The adoption of statewide voter registration databases in compliance with HAVA therefore may reduce the variation in the use of provisional ballots among the states.

Other influences decreasing consistency among the states include:

- The more rigorous the verification requirements of the voter's identity and registration status, the smaller the percentage of provisional ballots that were counted. Some states merely require a voter's signature, some match signatures, some require identity documents, others require an affidavit, and a few require photo identification.  
  - In the 4 states that simply matched signatures, nearly 3.5% of the total turnout consisted of provisional ballots, and just under three-fourths of those ballots (73%) were counted.
  - In the 14 states that required voters to provide such additional information as address or date of birth just over 1.5% of the total turnout consisted of provisional ballots, and 55% of those ballots were counted.
  - In the 14 states that required an affidavit (attesting, for example, that the voter was legally registered and eligible to vote in the jurisdiction) just over one-half of the total turnout came from provisional ballots, and less than one-third of those (30%) were counted. (But note that HAVA requires all voters to certify that they are eligible and registered in order to cast a provisional ballot, which is functionally an affidavit. The 14 states described here used an explicit affidavit form.)
  - In the 10 states that required voters to return later with identifying documents just under 1.5% of the total turnout came from provisional ballots, and more than half (52%) of these were counted. Voters apparently found this requirement less onerous than the affidavit, even though it required a separate trip to a government office.

- Voter registration databases provided information that reduced the number of provisional ballots counted.  

11 Despite differing political cultures among states and the latitude HAVA provides states, the statute does, indeed impose some degree of uniformity on issues that Congress thought essential. For example, before HAVA, took effect, "no state gave the voter the right to find out the status of their ballot after the election. " Now all offer that opportunity. See Bal and Silver, "The Impact of Politics, Race and Fiscal Strains on State Electoral Reforms after Election 2000," manuscript, Department of Political Science, Michigan State University. Resisting HAVA’s mandates through foot-dragging lacks any legitimate foundation in law or policy.  
12 See Table 2 in Appendix 2 for information on the verification method used in each state.  
13 The Election Day Survey found that states using statewide voter registration databases reported a lower incidence of casting provisional ballots than states without voter registration databases, suggesting that better administration of voter registration rolls might be associated with fewer instances where voters would be required to cast a provisional ballot due to a problem with their voter registration.
registered-voter databases counted only 20% of the ballots that were cast. States without such databases counted more than double that rate (44%). As HAVA’s requirement for adoption of statewide databases spreads across the country, this variation among states is likely to narrow. Real-time access to a continually updated, statewide list of registered voters should reduce the number of provisional ballots used and reduce the percentage counted since most of those who receive them will be less likely to be actually registered in the state.

- States that counted out-of-precinct ballots counted 56% of the provisional ballots cast. States that counted ballots cast only in the proper precinct counted an average of 42% of provisional ballots. 
  - In experienced states, the disparity was even more pronounced; 52% of provisional ballots cast were counted in states requiring in-district ballots, while 70% were counted in those allowing out-of-precinct ballots.
  - If all states had counted out-of-precinct ballots, perhaps 290,000 more voters would have been enfranchised across the country. 

Variation With-in States
Not only was there little consistency among states in the use of provisional ballots, there was also little consistency within states. This was true in both new and old states. Of the 20 states for which we have county-level provisional ballot data, the rate of counting provisional ballots varied by as much as 90% to 100% among counties in the same state. This suggests that additional factors outside of the statewide factors analyzed here also influence the use of provisional ballots. Reacting to the lack of consistency within states, the Carter-Baker Commission recommended that "states, not counties or municipalities, should establish uniform procedures for the verification and counting of provisional ballots, and that procedure should be applied uniformly throughout the state." 

Election Line reported that:
- In Ohio some counties counted provisional ballots not cast in the assigned precinct even though the state’s policy was to count only those ballots cast in the correct precinct.

---

14 The Election Day Survey concluded that "jurisdictions with jurisdiction-wide provisional ballot acceptance reported higher rates of provisional ballots cast, 2.09 percent of registration or 4.67 percent of ballots cast in polling places, than those with in-precinct-only acceptance, 0.72 and 1.16 percent, respectively. Predictably, those jurisdictions with more permissive jurisdiction-wide acceptance reported higher rates of counting provisional ballots, 71.50 percent, than other jurisdictions, 52.50 percent."

15 This estimate is a rough approximation. States that recognize out-of-precinct ballots counted, on average, 56% of the provisional votes cast. Applying that ratio to the 1.9 million provisional ballots cast nationwide would result in 1.1 million provisional ballots that would have been counted if all states accepted out-of-precinct votes. States that did not recognize out-of-precinct ballots counted 42% of the provisional ballots cast, or about 813,000 ballots, for a difference of about 290,000 votes. 

16 For example, The Election Day Survey also found that "the reported rate of provisional ballots cast increases with population size, from 0.10 percent for voter registration in jurisdictions under 1,000 voting age population (VAP), to 2.51 percent in jurisdictions over one million VAP. It also calculated that, “The highest reported rate of counting provisional ballots was also among predominantly Hispanic jurisdictions, 79.30 percent, followed by predominantly non-Hispanic White areas, 62.60 percent; predominantly non-Hispanic Black communities, 58.60 percent; and predominantly non-Hispanic Native American jurisdictions, 48.70 percent."

17 Report of the Commission on Federal Election Reform, "Building Confidence in U.S. Elections," September 2005, p.16. The report observed that, "...different procedures for counting provisional ballots within and between states led to legal challenges and political protests. Had the margin of victory for the presidential contest been narrower, the lengthy dispute that followed the 2000 election could have been repeated."
Some counties in Washington tracked down voters who would otherwise have had their provisional ballots rejected because they had failed to complete part of their registration form, gave them the chance to correct those omissions, and then counted the provisional ballot. This would probably not have come to light except for the sharp examination caused by the very close election for governor.

Resources available to administer provisional voting varied considerably among and within states. The result is that differences in demographics and resources result in different experiences with provisional voting. For example, the Election Day Survey found that:

- Jurisdictions with lower education and income tend to report more inactive voter registrations, lower turnout, and more provisional ballots cast.
- Jurisdictions with higher levels of income and education reported higher average numbers of poll workers per polling place or precinct and reported lower rates of staffing problems per precinct.
- Staffing problems appeared to be particularly acute for jurisdictions in the lowest income and education categories. Small, rural jurisdictions and large, urban jurisdictions tended to report higher rates of an inadequate number of poll workers within polling places or precincts.
- Predominantly non-Hispanic, Black jurisdictions reported a greater percentage of polling places or precincts with an inadequate number of poll workers. Predominantly non-Hispanic, Native American jurisdictions reported the second highest percentage of staffing problems.

The conclusions to be drawn from these findings are clear. In voting districts with lower education levels, poverty, high mobility, and inadequately staffed polling places, the voting process is unlikely to function well. More people will end up casting provisional ballots. That makes the provisional voting process especially important. But if jurisdictions struggle with regular voting, how well are they likely to do with the more complicated provisional balloting process? In precincts were the voting process, in general, is managed poorly, provisional ballots cannot be expected to work much better. In these areas, the focus should be on broader measures to improve the overall functionality of struggling voting districts, although improving the management of provisional balloting may help at the margin.
Effectiveness of Provisional Voting

The certainty of our conclusions about the effectiveness of provisional voting is limited because of a fundamental challenge of methodology and the lack of important information. An ideal assessment of how well provisional ballots served the needs of voters and the public interest requires knowing the decisions of local officials in 200,000 precincts on how to inform voters about provisional voting, their performance in providing a provisional ballot to those qualified to receive one, and their decisions whether to count a provisional ballot. And information needed about the eligibility or registration status of provisional voters is also not available.

We see no automatic correlation between the quality of a state’s voting system and either the number of provisional ballots cast or counted. Low numbers could reflect an accurate statewide voting data and good voter education. Or they could suggest that provisional ballots were not made easily available. High numbers could be seen as signifying an effective provisional voting system or a weak registration process. But we do know, that in 2004 provisional ballots enfranchised 1.2 million citizens, who would otherwise have been turned away from the polls.

Not knowing the total number of registered voters who might have voted but could not makes a precise, quantitative estimate of the effectiveness of provisional voting impossible. The Cal Tech – MIT Voting Technology Project, however, estimated that 4–6 million votes were lost in the 2000 presidential election for the reasons shown in Table 1 below. The estimate is an approximation, but it may provide data good enough for a general assessment of the size of the pool of potential voters who might have been helped by the provisional ballot process.

Table 1 Cal Tech – MIT Voting Technology Project Estimates

4 – 6 million votes are lost in presidential elections due to the causes shown in the table. Registration mix-ups (e.g., name not on list) and polling place operations (e.g., directed to wrong precinct) are the causes most likely to be remedied by provisional voting.
The table shows that the universe of voters who could be helped by provisional voting might be 2.5 - 3 million voters. A rough estimate of the effectiveness of provisional voting in 2004, then, might be 40% to 50% (ballots counted/votes lost). Whatever the precise figure, it seems reasonable to conclude that there is considerable room for improvement in the administration of provisional voting.

**Legislative Response**

Indeed, several states came to the conclusion that the administration of their provisional voting procedures needed to be improved and amended their statutes after the 2004 election. State legislation adopted since the election points to particular areas of concern.

Not enough time to examine and count the provisional ballots. Florida, Indiana, Virginia, and Washington all have clarified or extended the timeline to evaluate the ballots. But taking more time can prove a problem, particularly in presidential elections with the looming deadline to certify the vote for the Electoral College.21

Lack of uniform rules for counting ballots and effective training of the election officials in interpreting and applying those rules to determine the validity of ballots. Colorado, New Mexico, North Carolina, and Washington have all passed legislation focused on improving the efficacy and consistency of the voting and counting process.

The issue of counting provisional ballots cast in the wrong precinct was addressed by Colorado, Arkansas, and North Dakota.

**Litigation**

Successful legal challenges to the process highlight areas where provisional voting procedures were wanting. A flurry of litigation occurred around the country in October 2004 concerning the so-called "wrong precinct issue" — whether provisional ballots cast by voters in a precinct other than their designated one would be counted for statewide races. These lawsuits were largely unsuccessful in their stated goal: most courts, including the U.S. Court of Appeals for the Sixth Circuit (the only federal appeals court to rule on the issue), rejected the contention that HAVA requires the counting of these wrong-precinct provisional ballots.

This litigation was significant nonetheless.

Another interpretation of the data should be considered. The Census Bureau's Current Population Survey (CPS) developed the category of "registration mix-ups" to assess the states' registration systems after each election when it asks people if they were registered and if they voted. The CPS gives breakdowns of reasons why people did not vote. Survey responders tend to deflect blame when answering questions about voting. In the narrow context of provisional ballots, "registration problems" would cover only voters who went to the polls where the determination that they were not registered was wrong or were registered, but in the wrong precinct. If they were in the wrong precinct, provisional voting can help them in only 17 states. In 2004, only 6.8% of those not voting and registered blamed registration problems, while 6.9% reported so in 2000.

Twelve states made statutory or regulatory changes: Arizona, Arkansas, Colorado, Florida, Georgia, Indiana, Louisiana, Montana, New Mexico, North Carolina, Virginia and Wyoming. See Table 4 in Appendix 2.

The resources available to evaluate and count provisional ballots within a tight schedule may not be easily available. The General Accounting Office reports that Detroit, where 1,350 provisional ballots were cast and 123 counted, found the 5-day time frame for processing provisional ballots "very challenging and unrealistic. To overcome this challenge, the entire department's employees were mobilized to process provisional ballots." The report also found that in Los Angeles County, "staff had to prepare duplicate ballots to remove ineligible or invalid contests when voters cast their ballots at the wrong precinct. To overcome this challenge, staffing was increased to prepare the duplicate ballots." In a close, contested election, "duplicate" ballots would doubtless receive long and careful scrutiny. See Appendix 7, GAO, "Views of Selected Local Election Officials on Managing Voter Registration and Ensuring Eligible Citizens Can Vote," September 2005. (GAO Report-05-997)
• First, the Sixth Circuit decision established the precedent that voters have the right to sue in federal court to remedy violations of HAVA.

• Second—and significantly—the litigation clarified the right of voters to receive provisional ballots, even though the election officials were certain they would not be counted. The decision also defined an ancillary right—the right to be directed to the correct precinct. There voters could cast a regular ballot that would be counted. If they insisted on casting a provisional ballot in the wrong precinct, they would be on notice that it would be a symbolic gesture only.

• Third, these lawsuits prompted election officials to take better care in instructing precinct officials on how to notify voters about the need to go to the correct precinct in order to cast a countable ballot—although the litigation regrettably came too late to be truly effective in this regard. In many states, on Election Day 2004, the procedures in place for notifying voters about where to go were less than ideal, reflecting less-than-ideal procedures for training poll workers on this point.

There was also pre-election litigation over the question whether voters who had requested an absentee ballot were entitled to cast a provisional ballot. In both cases (one in Colorado and one, decided on Election Day, in Ohio), the federal courts ruled that HAVA requires that these voters receive a provisional ballot. Afterwards, it is for state officials under state law to determine whether these provisional ballots will be counted, in part by determining if these provisional voters already had voted an absentee ballot (in which case one ballot should be ruled ineligible, in order to avoid double voting). These decisions confirm the basic premise that provisional ballots should be available whenever voters believe they are entitled to them, so that their preferences can be recorded, with a subsequent determination whether these preferences count as valid votes.

**Need for Promulgation of Best Practices**

Because every provisional ballot counted represents a voter who, if the system had worked really well, should have voted by regular ballot, the advent of statewide registration databases is likely to reduce the use provisional ballots. The one area in which such databases may not make a difference is for those who voted by provisional ballot because they did not bring required identification documents to the polling place. Beyond that exception, even with statewide registries in every state, provisional voting will remain an important failsafe, and voters should have confidence that the failsafe will operate correctly.

The wide variation in the implementation of provisional voting among and within states suggests that EAC can help states strengthen their processes. Research-based recommendations for best, or at least better, practices based on the experience gained in the 2004 election can be useful in states' efforts to achieve greater consistency in the administration of provisional voting.

**Recommendations for Best Practices**

Recent legislative activity shows that state efforts to improve the provisional voting process are underway. Those states, as well as others that have not yet begun to correct shortcomings that became apparent in 2004, can benefit from considering the best practices described here. By recommending best practices, the EAC will offer informed advice while respecting diversity among the states. One way to strengthen the recommendations and build a constituency for them would be for EAC to ask its advisory committee members to recommend as best practices procedures that have worked in their states.

**EAC's Guidance and Recommendations**

EAC's guidance and recommendations for best practices will provide information to allow states to adopt procedures likely to strengthen their systems.

**Final Notes**

- There were also pre-election litigation over the question whether voters who had requested an absentee ballot were entitled to cast a provisional ballot. In both cases (one in Colorado and one, decided on Election Day, in Ohio), the federal courts ruled that HAVA requires that these voters receive a provisional ballot. Afterwards, it is for state officials under state law to determine whether these provisional ballots will be counted, in part by determining if these provisional voters already had voted an absentee ballot (in which case one ballot should be ruled ineligible, in order to avoid double voting). These decisions confirm the basic premise that provisional ballots should be available whenever voters believe they are entitled to them, so that their preferences can be recorded, with a subsequent determination whether these preferences count as valid votes.
Self-evaluation of Provisional Voting – 4 Key Questions

The first recommendation is not for a specific procedure, but rather for a way of thinking about provisional voting. As legislators and election officials in the states prepare for the 2006 election, they should ask themselves these questions about their provisional voting systems.

1. Does the provisional voting system distribute, collect, record, and tally provisional ballots with sufficient accuracy to be seen as procedurally legitimate by both supporters and opponents of the winning candidate? Does the tally include all votes cast by properly registered voters who correctly completed the steps required?

2. Is the system sufficiently robust to perform well under the pressure of a close election when ballot evaluation will be under scrutiny and with litigation looming?

3. Do the procedural requirements of the system permit cost-efficient operation? Are the administrative demands of the system reasonably related to the staff and other resource requirements available?

4. How great is the variation in the use of provisional voting in counties or equivalent levels of voting jurisdiction within the state? Is the variation great enough to cause concern that the system may not be administered uniformly across the state?

If the answers to these questions leave room for doubt about the effectiveness of the system or some of its parts, the EAC’s recommendation of best practices should provide the starting point for a state’s effort to improve its provisional voting system.

Best Practices For Each Step In The Process

We examined each step of the provisional voting process to identify specific areas where the states should focus their attention, and we offer recommendations in each area appropriate to the responsibilities that HAVA assigns the EAC for the proper functioning of the provisional voting process.

The Importance of Clarity

The EAC should emphasize above all else the importance of clarity in the rules governing every stage of provisional voting. As the Century Foundation’s recent report observed, “Close elections increasingly may be settled in part by the evaluating and counting of provisional ballots. . . . To avoid post election disputes over provisional ballots—disputes that will diminish public confidence in the accuracy and legitimacy of the result—well in advance of the election, states should establish, announce, and publicize clear statewide standards for every aspect of the provisional ballot process, from who is entitled to receive a provisional ballot to which ones are counted.”

Litigation surrounding the 2004 election resulted in decisions that, if reflected in state statutes or regulations and disseminated in effective training for poll workers, can increase the clarity of provisional ballot procedures, increase predictability, and bolster confidence in the system. By taking the following steps, states can incorporate those court rulings into their procedures.

---

• Promulgate, ideally by legislation, clear standards for evaluating provisional ballots, and provide training for the officials who will apply those standards. For example, in Washington State, the court determined that an election official’s failure in evaluating ballots to do a complete check against all signature records is an error serious enough to warrant recanvassing. See Washington State Republican Party v. King County Division of Records, 103 P.3d 725, 727-728 (Wash. 2004). Recent legislation in Arizona indicates that the EAC’s recommendations should emphasize HAVA’s requirement that persons appearing at the polling place claiming to be registered voters cannot be denied a ballot because they do not have identification with them. Poll workers need appropriate training to understand their duty to give such voters a provisional ballot.

A. Registration and Pre-Election Information for Voters

Providing crisp, clear information to voters before the election is important to the success of the provisional voting process. The better voters understand their rights and obligations, the easier the system will be to manage, and the more legitimate the appearance of the process. States can begin by assessing the utility and clarity of the information for voters on their websites and by considering what information might be added to sample ballots mailed to voters before elections. Best practices in this area would include:

1. If states require identification at the time of registration, the kind of IDs required should be stated precisely and clearly and be publicly and widely available in a form that all voters can understand. For example, "You must bring your driver’s license. If you don’t have a driver’s license, then you must bring an ID card with your photograph on it and this ID card must be issued by a government agency." 22

23 See Washington State Republican Party v. King County Division of Records, 103 P.3d 725, 727-728 (Wash. 2004)
24 See Panio v. Sunderland, 824 N.E.2d 488, 490 (NY, 2005) See also Order, Hawkins v. Blunt, No.04-4177-CV-C-RED (W.D. Mo. October 12, 2004). While rejecting the notion that all ballots cast in the wrong precinct should be counted, the court ruled that provisional votes cast in the wrong precinct should be thrown out provided that the voter had been directed to the correct precinct. This meant that provisional votes cast in the wrong precinct (and even the wrong polling place) would count if there were no evidence that the voter had been directed to a different polling place. The court placed a duty upon election officials to make sure the voters were in the correct locations. Note that this question would not arise in a state that counted ballots cast in the wrong polling place but within the correct county.

26 The Florida Democratic Party v. Hood, 342 F. Supp. 2d 1073, 1075-76 (N.D. Fla. 2004). The court explained that provisional voting is designed to correct the situation that occurs when election officials do not have perfect knowledge and when they make incorrect determinations about eligibility (the “fail-safe” notion). Denying voters provisional ballots because of on-the-spot determinations directly contradicts this idea. Even before the cited decision, the Florida Secretary of State’s office had determined that any voter who makes the declaration required by federal law is entitled to vote a provisional ballot, even if the voter is in the wrong precinct.

27 Websites in 29 states describe, with varying degrees of specificity, the identification voters may need. In 18 states voters can learn something about the precinct in which they should vote. And in 6 states (California, District of Columbia, Kentucky, Michigan, North Carolina, and South Carolina) they can verify their registration on the website.
2. The process to re-enfranchise felons should be clear and straightforward. To avoid litigation over the registration status of felons, best practice should be defined as making re-enfranchisement automatic, or no more burdensome than the process required for any new registrant.28

3. A state website for voters should offer full, clear information on boundaries of precincts, location of polling places, requirements for identification, and other necessary guidance that will facilitate registration and the casting of a regular ballot. An 800 number should also be provided. Models are available: the statewide databases in Florida and Michigan provide voters with provisional voting information, registration verification and precinct location information.

B. At the Polling Place
Avoiding error at the polling place will allow more voters to cast a regular ballot and all others who request it to cast a provisional ballot.

1. The layout and staffing of the polling place, particularly the multi-precinct polling place is important. Greeters, maps, and prominently posted voter information about provisional ballots, ID requirements, and related topics can help the potential voters cast their ballot in the right place. States should require poll workers to be familiar with the options and provide the resources needed for them to achieve the knowledge needed to be helpful and effective. Colorado has clear regulations on polling place requirements, including HAVA information and voting demonstration display.29 After the 2004 election, New Mexico adopted a requirement for poll workers to attend an "election school."30 Such statutory direction could help other states ensure uniform instruction of poll workers.

2. The provisional ballot should be of a design or color sufficiently different from a regular ballot to avoid confusion over counting, as occurred in Washington State. The ballot might include a tear-off leaflet with information for voters such as: "Reasons Why Your Provisional Ballot Might Not Be Counted" on one side and "What to Do if My Provisional Ballot Is Not Counted" on the other.

3. Because provisional ballots offer a fail-safe, supplies of the ballots at each polling place should be sufficient for all the potential voters likely to need them. In 2004, some polling places ran out of ballots, with unknown effects on the opportunity to vote. In Middlesex County, New Jersey, for example, on Election Day the Superior Court ordered the county clerk to assure that sufficient provisional ballots were available at several heavily used polling places, and it authorized the clerk "in the event additional provisional ballots are required . . . to photocopy official provisional ballots."31 At least two states, Connecticut and Delaware, provide guidelines to local election officials on how to estimate the demand for provisional ballots. States that do not offer a practical method to guide the supply of provisional ballots at polling places should consider doing so. The guideline should take into account both the number of voters in the district and the

28 The Century Foundation, op. cit.
30 2005 N.M. Laws 270 page no. 4-5.
31 Voting Order, November 2, 2004, Superior Court of New Jersey, Law Division, Middlesex County.
number of provisional ballots actually cast in recent elections. Connecticut sets the number at 1% of the voters in the district, Delaware at 6%.

4. To achieve the procedural clarity needed to forestall disputes, states should establish a clear chain of custody for the handling of provisional ballots from production through distribution, collection and, finally, evaluation. A number of states have clear procedures for at least parts of this chain of custody. Illinois includes the potentially beneficial requirement that ballots be transported by bi-partisan teams, which offers the potential to avoid some charges of election fraud.

C. Evaluating Voter Eligibility and Counting Provisional Ballots

The clarity of criteria for evaluating voter eligibility is critical to a sound process for deciding which of the cast provisional ballots should be counted. The recognition of the validity of those criteria is important to establishing the legitimacy of the system as a whole. The experience in 2004 in North Carolina, Washington, and Ohio underline the importance of clear criteria. As the Century Foundation report put it, "Whatever procedures the states choose [to determine if a provisional ballot should be counted], the paramount consideration—as with all others concerning provisional voting—is that they be clear and thus not susceptible to post-election manipulation and litigation." Nonetheless, the Panio v. Sutherland decision in New York shows the difficulty of defining the range of administrative errors from which the provisional voters should be held harmless. Even when the standard is "clerical error" judges can differ over what that means exactly. Possibly a state law might be able to clarify a definition by giving examples of clerical errors, but even then the definition is unlikely to be perfect.

1. State statutes or regulations should define a reasonable period for voters who lack the HAVA-specified ID or other information bearing on their eligibility to provide it in order to facilitate the state's ability to verify that the person casting the provisional ballot is the same one who registered. While there may be a concern to ensure that the individual who returns with the ID may not be the same individual who cast the provisional ballot, the spirit of HAVA demands that the opportunity to prove identity be provided after Election Day. A signature match can go far in establishing that the individual who voted

32 Connecticut: "Equal to or not less than 1% of the number of electors who are eligible to vote in any given district, or such other number as the municipal clerk and the registrars agree is sufficient to protect voting rights. Conn. Gen. Stat. Ann. § 9-232.

33 Delaware: Each County Department of Elections Office is required to provide to each election district a number of provisional ballots equal to 6% of registered voters in that district, with a minimum allocation of 15 ballots. Additional supplies to be delivered when the supply becomes "very low." Del.Code Ann. Tit 15 § 4948(e).

34 Indiana requires that the precinct election board give the ballots to the Inspector, who takes the ballots to Circuit Court Clerk. Ind. Code Ann. Sec. 3-11.7-2-4.

35 The Century Foundation, op. cit.

and the individual returning later with identification is, in fact, the same person.

Encouraging a voter who lacks ID on Election Day to return later to help the verification process by providing proper identification will strengthen the system and increase public confidence in the electoral process. Our data indicate that some voters would prefer to return with ID rather than to sign an affidavit, perhaps because of uncertainty about the legal process involved in the affidavit. At least 11 states allow voters to provide ID or other information one to 13 days after voting. Of particular interest is Kansas, which allows voters to proffer their ID by electronic means or by mail, as well as in person.37

2. More provisional voters are enfranchised in those states that count ballots cast outside the correct precinct.38 The best practice may be to count provisional ballots even if they are cast in the wrong precinct. While HAVA arguably leaves this decision up to the states, pointing out the effect of the narrower definition on the portion of ballots counted could be useful to the states in deciding this question. States should be aware, however, of the additional burden placed on the ballot-evaluation process when out-of-precinct ballots are considered. See the experience in Los Angeles County with the difficulties in evaluating out-of-precinct ballots described earlier in this report.

3. Alternatively, if a state chooses to require voters to appear at their assigned precinct, where the same polling site serves more than one precinct, a voter’s provisional ballot should count so long as the voter cast that ballot correct polling site even if at the wrong precinct within that location.39

4. Officials should follow a written procedure, and perhaps a checklist, to identify the reason why a provisional ballot is rejected (e.g., check the applicable box “unregistered voter”; “lack of signature match” “wrong precinct,” etc.) Those forms should be disclosed publicly when completed. Colorado’s election rules offer particularly clear guidance to the officials evaluating a provisional ballot.40

Colorado Rejection Codes (Any ballot given a rejection code shall not be counted):

- **RFS** (Rejection federal or state) No federal or state candidates or issues to duplicate.
- **RNS** (Rejection not signed) Provisional Ballot Affidavit not signed.
- **RIN** (Rejection incomplete information provided) Required information is incomplete and the designated election official is unable to confirm voter’s eligibility.
- **RNR** (Rejection not registered) Voter did not register by the voter registration deadline or by emergency registration, Colorado voter registration record was not found, or voter was previously cancelled and has not been reinstated pursuant to 1-2-605(10). C.R.S.
- **REE** (Rejection envelope empty) Provisional ballot envelope is empty.
- **RAB** (Rejection voter voted absentee) Designated election official has confirmed that voter voted an absentee ballot.
- **REV** (Rejection based on ballot cast in early voting) Voter voted early.

38 See Andersen, op. cit, pgs. 23 – 24 for an analysis of the significant effect of counting out-of-precinct ballots. The Election Day Survey found that, “Most notably, jurisdictions that permitted jurisdiction-wide acceptance of provisional ballots reported higher rates of provisional ballots being cast, but also reported a much higher incidence of provisional ballots being counted, than other jurisdictions.”

39 Chances are administrative error accounts for the voter being directed to the wrong precinct under these circumstances.

40 8 ccr 1505-1, at 26.5.4, adopted august 4, 2005. See also 1-2-609(3) C.R.S.
RIP (Rejection based on incorrect party) Incorrect Party in Primary Election.

RFE (Rejection felon not eligible to vote) Individual was convicted of a felony and is either serving a sentence of confinement or detention or is on parole.

RWC (Rejection elector not registered in county or State of Colorado) Non-county or non-state resident; therefore voter not eligible to vote in the county where the provisional ballot was voted.

RID (Rejection first time voter has not supplied identification upon registration or thereafter prior to and during time voter voted) First Time Voter who registered by mail or through a voter registration drive, is tagged as ID deficient, and did not provide ID at the time of voting.

RRD (Rejection registration deficient) Voter had deficient or incomplete registration and required information was not provided prior to or at the time of filling in the provisional ballot envelope. Voter's eligibility cannot be established.

D. Verification of Provisional Ballots

1. States that use the information on the provisional ballot to permit voters who have changed their addresses to update their registrations should adopt clear procedures on that process and specify how the new information will be communicated between different Boards of Elections

2. The time by which election officials must complete their eligibility evaluations is critical, particularly in presidential elections. States should consider in particular how to divide the time allowed them by the safe-harbor provisions that apply in presidential elections to the certification to the Electoral College. Some part of this five-week period will be consumed by the eligibility evaluation, but states should take care to provide a sufficient period of time as well for challenges. If a state consumes 21 days following the election in the eligibility evaluations, only two weeks will remain for legal challenges to be concluded. Is that sufficient? Or should the state provide the resources needed to complete the eligibility determinations in 10 days or two weeks, leaving three weeks or more for legal challenges in a close election? Our research did not identify an optimum division of the five weeks available. The best practice here is for states to consider the issue and make a careful decision about how to complete all steps in the evaluation of ballots and challenges to those determinations within the five weeks available.

E. Post-election Information for Voters

Timely information to voters about the disposition of their provisional ballot will provide helpful feedback and more important enable voters to determine if they are registered for future elections and, if not, what they need to do to become registered.

1. Establish mechanisms to ensure that voters casting provisional ballots are informed whether they are now registered for future elections and, if not, what they need to do to become registered.

F. State Laws Governing Litigation over Provisional Voting

1. Establish special, streamlined litigation procedures for Election Day complaints that individuals are being denied the right to cast a provisional ballot
Broader Considerations

G. Integrity and the Appearance of Integrity

1. State laws or regulations providing for non or bi-partisan bodies to make a public determination of the validity of provisional ballots would increase confidence in the system.

2. To improve transparency, state laws or regulations should require the purging process for registration to be public and with an opportunity for voters to correct an erroneous determination that they should be purged.

3. State laws or regulations should require the evaluation process for provisional ballots to be public.

H. Continuous Assessment of the Provisional Ballot – Process and Performance

Defining what constitutes a successful provisional voting system is difficult. As noted earlier, the most successful system is probably not the one with the most provisional votes cast (that could indicate problems with the registration system). Nor is the system with the greatest number counted or with the fewest counted necessarily superior because the evaluation process could be flawed.

Defining quality requires a broad perspective about how well the system works, how open it is to error recognition and correction, and how well provisional voting processes are connected to the registration and voter identification regimes. The EAC should consider engaging one of the national quality organizations to evaluate the provisional ballot process within the broader context of the electoral system. Pending such a review, the EAC can recommend that states take the following actions.

1. Recognize that the first step to improving quality is to see the provisional voting process as a system and take a systems approach to regular evaluation through standardized metrics with explicit goals for performance.

2. States should begin by collecting data systematically on the provisional voting process so that they can evaluate their voting system and assess changes from one election to the next. The effort should start in the 2006 election, and the data collected should include:

   - Provisional votes cast and counted by jurisdiction, with details on why the voter had to vote provisionally (lack of ID, not on list, challenged at polling place, issued absentee ballot, etc) and number of ballots actually counted in each category.
   - Reasons why provisional ballots were not counted, using categories such as those that have been adopted by Colorado, described earlier in this report.
   - Measures of variance among jurisdictions.
   - Number of poll workers trained in administration of provisional voting by polling place.
   - Number of jurisdictions posting information on provisional voting in the polling place.
   - Time required to evaluate ballots by jurisdiction.
Improving understanding of the provisional voting process through analysis of detailed information will enable state and local election officials to strengthen their systems. By collecting and analyzing this data states can identify which aspects of the registration and electoral system are most important in shunting voters into the provisional ballot process. Responsible officials can then look to their registration system, identification requirements or poll worker training as a way to reduce the need for voters to cast their ballots provisionally.

**Conclusion – Research-based, continuing improvements for provisional voting are needed.**

The recommendations above are based on research that began in late May 2005. Our research focused on six key questions raised by the EAC. The answers to those questions provided the foundation for our policy recommendation. Those questions are:

1. How did the states prepare for the onset of the HAVA provisional ballot requirement?
2. How did this vary between states that had previously had some form of provisional ballot and those that did not?
3. How did litigation affect implementation?
4. How effective was provisional voting in enfranchising qualified voters?
5. Did state and local processes provide for consistent counting of provisional ballots?
6. Did local election officials have a clear understanding of how to implement provisional voting?

To answer those questions, the Eagleton-Moritz team undertook the following research efforts:

1. Survey of 400 local (mostly county) election officials to learn their views about the administration of provisional voting and to gain insights into their experience in the 2004 election.
2. Review of news and other published reports in all 50 states to understand the local background of provisional voting and develop leads for detailed analysis.
3. Statistical analysis of provisional voting to determine associations between the use of provisional voting and such variables as states’ experience with provisional voting, use of statewide registration databases, counting out-of-precinct ballots, and use of different approaches to voter identification.
4. Collection and review of the provisional voting statutes and regulations in all 50 states.
5. Analysis of litigation affecting provisional voting or growing out of disputes over provisional voting in all states.

Our research-based recommendations provide EAC with a strategy to engage the states in a continuing effort to strengthen the provisional voting process and increase the consistency with which provisional voting is administered, particularly within a state. As EAC and the states moved forward to assess and adopt the recommendations made here, provisional voting merits continuing observation and research. The situation is fluid. As states, particularly states that did not offer a provisional ballot before 2004, gain greater experience with the process and as statewide voter databases are adopted, the provisional voting process will demand further, research-based refinement.
ATTACHMENT 1 – Characteristics of the Provisional Voting Process

Classification of the States

Our research on provisional voting divided the various states into several categories to allow an assessment of how different factors may have influenced the process of casting and counting provisional ballots. This analysis was conducted before the release of the Election Day Study, and the categories we used may differ in some respects from its work. The categories analyzed here are:

1. New vs. Old (states that used a provisional ballot before the 2004 election)
2. Use of a statewide database of registered voters vs. no use of a statewide database
3. Counting out-of-precinct ballots vs. not counting out-of-precinct ballots
4. Voter identification requirements
5. Method used to verify provisional ballots
6. Levels of provisional ballots cast and counted

We first assigned states within these categories based on classifications done by Electionline.org in its studies. The Electionline data was the only published information available at the time of our research. We reviewed the Electionline data carefully, and, in select cases, updated it with new, detailed information that had become available after its publication. The changes we made are explained below.

Please note that:

--Idaho, Maine, Minnesota, New Hampshire, Wisconsin and Wyoming were excluded from our analysis. They have election-day registration systems, and did not need to use HAVA-compliant provisional ballots.

--North Dakota does not register voters, so it also was excluded from HAVA requirements and did not use provisional voting.

--Mississippi has not reported its provisional voting results and could not be included in our analysis, though it was compliant in 2004.

--Pennsylvania did not report its totals for the Election Day Study, but we obtained information on Pennsylvania and did include it in our analysis.
New vs. Old States

We classified states as "new" or "old" based on the 2001 Electionline study of provisional voting and condensing its classifications into a single dichotomous variable, new/old with all other cases excluded. The Electionline study divided states into five categories of their use of provisional ballots in the 2000 election:

1. Use of provisional ballots (P)
2. Limited use of provisional ballots (LP)
3. Affidavit ballots (A)
4. No system in place (N)
5. Unnecessary/Not Applicable (U/NA)

We collapsed all of the states listed as using provisional ballots, limited use of provisional ballots or affidavit ballots as "old" states, because the states in all three categories would have been familiar with key aspects of provisional voting. States that had no provisional voting system in place for the 2002 election, and were HAVA compliant in 2004, were listed as "new" states, as 2004 would have been the first year in which they would be offering the option of provisional voting. States that were listed as unnecessary or not applicable were excluded from this study, as they were exempt from the HAVA regulations in 2004 because they either allowed same-day registration or did not register voters.

Rhode Island is the only state categorized as an old state by Electionline that we moved into the list of new states. Electionline's map shows Rhode Island as a state that used provisional voting in 2000, but in the state description, it is listed as having no system in place. We learned from the Rhode Island Board of Elections that the state had previously permitted potential voters to sign an affidavit if they did not appear on a precinct's list of registered voters, but felt they were registered to vote. Based on the signed affidavit, the election official would then contact a county official to see if the voter was on a more complete registration list. If the voter's name was on the complete list, that voter was permitted to cast a regular ballot. As this process did not grant the voter a provisional ballot, but served as a different type of administrative failsafe, we concluded that Rhode Island's first use of provisional voting was in 2004 and, therefore, classified the state as "new" to the system of provisional balloting.

---

Statewide List of Registered Voters

The Electionline preview of the 2004 Election[^1] was the starting point for compiling a list of states that had a statewide database of registered voters. That study listed 34 States that did not have their statewide database systems complete, and 16 that did, including the District of Columbia. North Dakota does not register voters, so does not need to compile such a database. Electionline’s criterion for concluding that a state had a statewide list was that the state have participation from all jurisdictions in a statewide system. We added Oklahoma to the list of states with statewide databases because we found they had met the Electionline criteria by the 2004 election, albeit too late for inclusion in the Electionline survey.

Minnesota has a statewide database but was excluded from the analysis because it did not offer provisional ballots and was exempt from the HAVA requirements.

Out-of-Precinct Ballots

We based our classification of states that allow the counting of ballots cast outside the correct precinct on the data in the 2004 Electionline preview of the 2004 election. States that evaluated ballots cast in a precinct where the voter was not registered were categorized as “out-of-precinct.” States that invalidated such ballots were categorized as “In-precinct only.”
We relied on Electionline studies, including the Voter Identification study\(^43\) and the 2004 Election Preview, to classify the states on their requirements for voter identification. Each state's categorization is taken directly from the Electionline studies except Hawaii.\(^44\) The five different, and increasingly rigorous, categories are: Give Name (8 states), Sign Name (14 states), Match Signature (8 states), Provide ID (15 states), and Photo ID (5 states).

Voter Identification

\(^43\) This study can be found at: http://electionline.org/Portals/1/Publications/Voter%20Identification.pdf

\(^44\) In 2004, ElectionLine listed Hawaii as requiring identification. Our review of statutes revealed that Hawaii could require photo ID. Since that is the most rigorous form of identification that may be required of voters, we classified Hawaii under this category.
States in italics are exempt from HAVA or did not report Provisional Ballot data and are not included in the analysis.

South Dakota complicates the effort to assign each state to a category. It permits voters to sign an affidavit that would allow them to vote without presenting photo ID. While Hawaii did not normally require photo ID, its statutes gave challenged voters the opportunity to respond by producing a photo ID.

Verification Method

We identified four different ways states assessed provisional ballots to determine if they should be counted: signature match, match voter data, signed affidavits, and bringing back identification later. We gathered information about these verification techniques by checking state websites and consulting journalistic accounts. We consulted state legislation to provide further information where needed.

Data Collection
To assemble our data for analysis, we began by using the data on provisional votes cast and counted reported by Electionline. To increase the accuracy of this data, we surveyed each state’s election websites for updated data, and for reported numbers on the county level. We then sent emails to 49 (we excluded Alaska, see below) states and the District of Columbia, requesting updated data on the number of provisional votes cast and counted by county. We received information from 25 states by our cut-off date of August 25, 2005.

* North Carolina lacked clear standards to evaluate provisional ballots and is excluded from this analysis.

26 States 25 States

<sup>45</sup> Alaska was not contacted via email, as the state does not have voting districts comparable to counties in other states and could not be matched with comparable census data.

<sup>46</sup> Maryland reported provisional ballots that were counted per county, but not number cast.

<sup>47</sup> Nebraska reported an incomplete list of provisional ballots cast and counted by county, but designated counties by number, rather than by name.
Data Differences

The data used in this study differs from the data reported in the Election Day Study for 19 states. The Election Day Study was not completed until well after our statistical analysis of provisional voting was finished, on the schedule laid out in our work plan. Where there are differences, they are typically very small, usually fewer than 100 votes either cast or counted. Of the 9 states that have differences of more than 100 votes cast or counted, 7 have reported their numbers directly to us and can be considered updated data that EDS had not obtained. For one of those states, New Mexico, EDS had incomplete data, and for another, Pennsylvania, EDS had no data at all. The data that we have collected reflects updated numbers from the states that have changed following recounts and litigation that altered how ballots were evaluated.

Attachment 1 Characteristics of the Provisional Voting Process, Classification of the States
Attachment 2 State Provisional Voting Systems, Comparative Tables
The table shows that the universe of voters who could be helped by provisional voting might be 2.5 – 3 million voters. A rough estimate of the effectiveness of provisional voting in 2004, then, might be 40% to 50% (ballots counted/votes lost) *. Whatever the precise figure, it seems reasonable to conclude that there is considerable room for improvement in the administration of provisional voting.

* Another interpretation of the data should be considered. The Census Bureau's Current Population Survey (CPS) developed the category of "registration mix-ups" to assess the states' registration systems after each election when it asks people if they were registered and if they voted. The CPS gives breakdowns of reasons why people did not vote. Survey responders tend to deflect blame when answering questions about voting. In the narrow context of provisional ballots, 'registration problems' would cover only voters who went to the polls where the determination that they were not registered was wrong or were registered, but in the wrong precinct. If they were in the wrong precinct, provisional voting can help them in only 17 states. In 2004, only 6.8% of those not voting and registered blamed registration problems, while 6.9% reported so in 2000.

John-
Just wanted to let you know that we've had to push back, by a week, the review of Eagleton's Best Practices document.

EAC staff are very focused on the release of the Voting Systems Guidelines; this will be completed by mid-week next week. I'm told that the Commissioners will turn their attention to the Best Practices document, immediately following this.

Regards-

Karen Lynn-Dyson
Research Manager
U.S. Election Assistance Commission

Hey-

I've had a chance to take a close look at the Eagleton Best Practices document.

I find it very confusing (to say the least) and think it is a very long way from a Best Practices document we would want to or could use for our constituency.

Look forward to you all's thoughts and insights about next steps.

K
Karen Lynn-Dyson

Dear Ms. Karen Lynn-Dyson:

Attached please find the Eagleton/Moritz Progress Report for the month of November.

Please direct any questions about this report to Tom O'Neill (tom_oneill@verizon.net).

Sincerely,

Johanna Dobrich

  o Task 3.11

• Project Management
  o Task 3.1

• Financial Report

INTRODUCTION

This report describes our progress from November 1 through November 30, 2005. It includes brief descriptions of key tasks; progress made; challenges encountered or anticipated; milestones reached; and projections for work to be completed in the coming month.

In November we completed and submitted our Provisional Voting analysis paper, including recommendations to the EAC for best practices. These policy prescriptions are based on our research and the comments of the Peer Review Group on that research. We completed a careful review of our data to reconcile it with other sources and identify the latest, most reliable information to use in the analysis. The importance of this demanding effort was described in October’s Progress Report. We continue to await the EAC’s comments on that final draft.

Also in November we revised the schedule for the project in light of the additional time that has been needed for review of earlier drafts by the EAC and the late completion of the Election Day Study. We made a written request to the EAC for a no-cost extension of the contract through the end of February which we understand is likely to be approved before Christmas.

Since the submission of our Provisional Voting report to the EAC on November 28, 2005, our efforts have been entirely aimed at the completion of the voter identification research. We have been advised that EAC will take several weeks to review and react to our final draft on provisional voting. As we await a January meeting on that topic, we are moving ahead
quickly on the statistical analysis of voter identification data and summarizing the legal research that was completed earlier.

This Monthly Progress Report is divided into 3 sections: Provisional Voting, Voter Identification Requirements, and Project Management. Each section references specific tasks described in paragraph 3 of the contract. The Financial Report will be sent separately by the Rutgers Division of Grant and Contract Accounting.

Please direct questions or comments about this report to tom_oneill@verizon.net or by telephone at (908) 794-1030.

PROVISIONAL VOTING

Tasks 3.4 – 3.9 in our contract relate to Provisional Voting. Task 3.4 was completed in August, and Tasks 3.5 and 3.6 were completed in November.

Task 3.6: Prepare preliminary draft guidance document.

The report and recommendations which were sent to the EAC on November 28, 2005 recommends against the adoption of a guidance document per se and advises that the EAC adopt its recommendations as best practices. That recommendation followed agreement by the EAC with that course of action. The submission of that report and recommendations, however, constitutes the document required under this task. Before proceeding to Task 3.7 (revise the guidance document for publication) or 3.8 (arrange a public hearing on the draft guidance), we await the EAC’s decision on how to proceed.
VOTER IDENTIFICATION REQUIREMENTS

The contract lists 7 tasks (3.10 – 3.16) related to Voter Identification Requirements. The research on Voter ID requirements is proceeding concurrently with our work on the experience of Provisional Voting, and is the principal focus of our research at this time.

Task 3.10: Legislation, regulations, and litigation

The research team at the Moritz College of Law has the lead responsibility for the collection and analysis of legislation, administrative procedures and litigation with regard to Voter Identification Requirements. This collection of material is nearing completion. It will constitute the compendium of legislation, administrative regulations, and case law called for under this task.

Description: The Moritz team has compiled statutes on Voter Identification, and will provide a summarized analysis of this research to the project team for review.

Progress: The 50 state (plus District of Columbia) chart has been completed, the voter identification statutes have been collected for all states and D.C., and summaries of the existing voter identification statutes have been written for all states and D.C. Moritz has completed its review of voter identification litigation. Moritz and Eagleton have worked together to review the research, clarify the categorization of that research on our charts, and reconcile the data developed in our two different research techniques categorizations.

Challenges: The biggest challenge facing the reconciliation process of research findings, descriptions and categorizations is that it is being done by two different teams (Moritz and Eagleton) who rely on different primary source materials. Despite the necessity this has created to reconcile conflicting data from time to time, the collaboration has also been very beneficial because it has made our research efforts more rigorous.

Work Plan: During December we will conclude our reconciliation and continue analysis of voter identification research, including an analysis of the most important issues and trends in voter identification litigation.

SUPPLEMENTS TO LEGAL ANALYSIS

To supplement the legal analysis, the Eagleton team is undertaking two research efforts: First, compiling information on the debate over voter ID in the states; and second, estimating the effect on turnout of different voter ID regimes. Tracking the continuing political debate over voter identification reveals that the relatively narrow HAVA requirements for voter identification have apparently sparked in many states a broader concern and a sharp political debate over rigorous identification requirements for all voters. The research follows these developments both to monitor possible secondary effects of HAVA on voter ID, and to provide a rich collection of alternative approaches for consideration.
During the month of November, we developed narratives to establish how laws were passed, looking at when they were proposed and when they were eventually enacted. In the upcoming month, Eagleton will examine voter registration forms across the states to see what forms of identification are requested from mail-in registrants. The difficulty will be determining the 2004 status of the states.

**VOTER ID AND TURNOUT ANALYSIS**

Now under way is a statistical analysis to gauge the effect of a state’s voter ID regime on turnout, especially turnout by minority and elderly voters.

**Description:** We have created a database and gathered statistics on the effects of state-level voter identification requirements on voter turnout at the county-level in the 2004 election. In November, we have analyzed both aggregate- and individual-level data to determine whether there is any relationship between voter turnout and the various forms of voter identification states require.

**Progress:** Analysis is under way for two data sets: County-level data that includes registration and turnout rates for 2000 and 2004, as well as Census measures and indicators of the type of voter identification requirements that were in existence at the time of the 2004 presidential election. The second data set consists of the voter supplement to the November 2004 Current Population Survey. This data set allows for testing of the same hypotheses at the individual level. Preliminary findings from the aggregate data set suggest that voter ID requirements have their greatest effect at the registration stage, as opposed to the turnout stage. This is a first cut at the data, however, and we will be adding a number of control variables to the analysis to see if the relationship holds.

**Challenges:** These analyses use hierarchal linear modeling. Because voter identification requirements vary by state, one must pay special attention to other, unseen state-level influences on the data. The models are difficult to run and interpret, so the analyses are time-consuming.

**Work Plan:** The statistical analyses will continue during the month of December, and a draft of the findings is anticipated by the end of the month.

**PROJECT MANAGEMENT**

**PEER REVIEW GROUP**

**Description:** A feature of our proposal was the creation of a Peer Review Group (PRG). It reviews our research and methodology and provides valuable feedback and suggestions for the direction of our work.
Progress: During the month of November, Eagleton contacted the PRG Members on two occasions. First, all members received the final draft provisional voting report that was submitted to the EAC. Further comments are welcome but not expected from the PRG. Second, we have asked PRG members to reserve two dates in mid-January for potential conference call sessions to review the voter identification report.

Challenges: No new challenges were encountered during November.

COORDINATION AND INFORMATION MANAGEMENT

Collecting and merging information and data from myriad sources is a demanding requirement of this research. We have developed two principal mechanisms to facilitate the analysis of the material collected or created in the project: an information system and an internal website for easy access to drafts and reports.

INFORMATION SYSTEM

Description: The statutory data and reports prepared by the Moritz College of Law is being merged with the political and procedural data and analysis prepared by the Eagleton Institute of Politics to provide a cohesive final product to the EAC, which will include a compendium of case law and statutes regarding Provisional Voting and voter identification.

Progress: At this point in the research process, many documents are complete after a lengthy process of circulating drafts among team members. We have reorganized our system by separating final drafts from earlier versions of documents, discarding dated files contained in the Information System, and updating the system as a whole. Upon their completion, new documents continue to be added.

Projections: The entire project team continues to use the Information System which contains the above referenced research, in working toward the preparation for our final reports to the EAC.

INTRANET

Description: All project team members have signed on to the Intranet site, and regularly post drafts, completed materials and spreadsheets online for internal review. The Intranet facilitates the exchange of information and collaboration among project participants.

FINANCIAL REPORT

The financial reporting for this project is supervised and prepared by the Division of Grant and Contract Accounting (DGCA) at Rutgers. Financial reporting on grant accounts is limited to actual expenses that have been incurred during the reporting period. Our contact at DGCA is: Constance Bornheimer, (732) 932-0165, EXT. 2235.
A detail of expenses incurred from project November 1 - November 30, 2005, will be sent under separate cover to: Ms. Dianna Scott, Administrative Officer at the EAC.
Tom-

I have forwarded your inquiry on to the key EAC staff involved with the review of the Eagleton/Moritz provisional voting best practices document.

Once I have gotten a sense of the dates and times for their review, I will be certain to let you know.

Regards-
Karen Lynn-Dyson
Research Manager
U.S. Election Assistance Commission
1225 New York Avenue, NW Suite 1100
Washington, DC 20005
tel:202-566-3123

Karen: I hope the New Year has started well for you.

Can you please give me your current best estimate of when we will hear from the EAC in response to the draft report and recommendations on provisional voting. We have some scheduling issues to resolve with the completion of the work on Voter ID, and reducing the uncertainty about discussion and further revision on the provisional voting piece would be helpful in clarifying our calendar.

Tom O'Neill
I've received written comments from Donetta, Paul and Julie.

Are there comments you would like to add, as I prepare a summary document for Eagleton?

Thanks

Karen Lynn-Dyson

Subject: Re: January Progress Report

Tom-

I have now received comments back on the Provisional Voting Best Practices document, from all of EAC's senior staff. I am in the process of combining these comments into one document, and will get the copy to you by mid-week next week.

By-and-large the comments are not major. The comment of greatest magnitude relates to the fact-checking process and the overall accuracy of regarding Eagleton's/Moritz' recording of States' previous experiences with provisional voting.

Overall, the Commission is continuing to review its option of issuing guidance on this topic, along with best practices.

Shall we schedule a conference call for Friday, February 24 at 10:00 AM to go over the EAC's comments and Eagleton putting the finishing touches on its report?

Also, when should the EAC expect the Voter ID document?

Tom-

I will begin to poll the Commissioners to get a sense of when they might be available to do a "close out" meeting with Eagleton.

Karen Lynn-Dyson
Research Manager
U.S. Election Assistance Commission
1225 New York Avenue, NW Suite 1100
Washington, DC 20005
tel:202-566-3123

Karen, 

The Eagleton-Moritz team would like to schedule a meeting with the EAC in March. It would be the final substantive meeting on our contract, which expires at the end of March.

The agenda would include:

1. Brief the Commission on the principal findings and recommendations of the Voter ID research and hear questions and comments on that work.
2. Discuss the changes we made to the Provisional Voting paper as a result of comments and questions from the Commission.
3. Explore the Commission's intentions for the use of our work as recommendations for best practices or otherwise.
I believe the meeting should take place after you receive the Voter ID paper from us in the first week of March, and ideally after the Commission staff has had enough time for a preliminary review of it.

The earlier we could set a date for this meeting, the more key members of the team would be able to participate.

Tom O'Neill
As you know Eagleton is finishing up their project and would like to give us a final report on it.

Are your Commissioners and Tom available to meet on any of the following days from 1:00-2:30:

March 23
March 29
March 30

Thanks

Subject Re: Eagleton close-out meeting

Commissioner-

Given travels costs and the number of persons involved from the Eagleton/Moritz team, the idea was to do the two meetings in the same day.

However, I could ask Nicole to determine if there is a day in March that might work with your schedule.

I am very reluctant to schedule a meeting later in April as the contract is technically over March 31 (a Friday). April 3 is the following Monday.

Please advise. Thanks

"Tom O'Neill"
<tom_oneill@verizon.net>
03/15/2006 08:21 PM

Karen,

Attached is the final draft of the Voter ID paper, with recommendations for the EAC to consider promulgating as best practices. Two appendices are included as part of the draft and a third, the statistical analysis of the effects of different voter ID requirements on turnout, is attached separately to this email.

We look forward to discussing this final draft with you and with the commissioners on April 3. I'll be preparing a Powerpoint presentation for that meeting. Any guidance you can give me later this month on particular questions that briefing should address would be appreciated.

The Moritz-Eagleton team will be meeting next Tuesday at 9:30 a.m.. If you have preliminary comments you would like us to consider, that meeting would be a most convenient occasion to
discuss them.

Tom O'Neill

ReportFinalDraft.doc
REPORT AND RECOMMENDATIONS TO THE EAC
VOTER IDENTIFICATION ISSUES

1. Introduction and Report Background

This report to the United States Election Assistance Commission (EAC) presents recommendations for best practices to improve implementation of the requirements for voters to show identification pursuant to [statute or regulation citation]. It is based on research conducted by the Eagleton Institute of Politics at Rutgers, the State University of New Jersey, and the Moritz College of Law at Ohio State University under contract to the EAC, dated May 24, 2005. The research included a review and legal analysis of state statutes, regulations and litigation concerning voter identification and provisional voting, a sample survey of local election officials, and a statistical analysis of the effects of various requirements for voter identification on turnout in the 2004 election. This report is a companion to a report on Provisional Voting submitted to the EAC on November 28, 2005 under the same contract.

The Help America Vote Act of 2002 (HAVA) (Public Law 107-252) authorizes the EAC (SEC. 241, 42 USC 15381) to conduct periodic studies of election administration issues. The purpose of these studies is to promote methods for voting and administering elections, including provisional voting, that are convenient, accessible and easy to use; that yield accurate, secure and expeditious voting systems; that afford each registered and eligible voter an equal opportunity to vote and to have that vote counted; and that are efficient.

2. Voter Identification – Background and Approach of the Study

Voters may have to identify themselves twice in the electoral process: when registering to vote and then when casting a ballot. The burden of providing required ID documents on the voter may be greater at the polls on Election Day than at the time of registration. The burden of checking ID, even as simple as a signature match, can be much greater on election workers at the polls than on those registering voters. Poll workers may be faced with long lines and limited time. This analysis focuses on ID requirements on Election Day, but with an appreciation that the ID requirements at time of registration and on Election Day are inter-related. 1 The emphasis here is on Voter ID on Election Day and afterwards as election judges evaluate provisional...

---

1 As the Carter-Baker Commission noted, photographic ID requirements for in-person voting do little to address the problem of fraudulent registration by mail, especially in states that do not require third-party organizations that register voters to verify identification. Commission on Federal Election Reform, pp 46-47.
ballots. This is the critical period for the electoral system, the time when ballot access and ballot security are in the most sensitive balance.

This analysis takes a view of voter ID issues broader than the rather narrow identification requirements in HAVA. Much of the national ferment over voter ID goes beyond HAVA to require more rigorous documentation of identity for all would-be voters, not just those casting a ballot for the first time who had not registered in person. The controversy in the states over voter ID stems from the HAVA requirements, goes beyond those requirements, and sets the context for the analysis here.2

Identification is often described as the critical step in protecting the integrity of the ballot, the process that ensures that the potential voter is eligible and permitted to cast a ballot and one ballot only. In fact, ensuring ballot integrity requires a perspective that takes in the entire voting process. Protecting the integrity of the ballot requires more than preventing the ineligible from voting. It also should ensure that all those who are eligible and want to vote can cast a ballot that counts, and that they can effectively cast a ballot for the candidate of their choice. The protection effort must take into account all forms of voting, including absentee ballots, and embrace each step in the process. A voting system that establishes onerous requirements for voters to identify themselves may prevent the ineligible from voting, but it may also prevent the eligible from casting a ballot. If the ID requirements of a ballot protection system block ineligible voters from the polls at the cost of preventing eligible voters who cannot obtain or forget to bring to the polls the required forms of identification, the integrity of the ballot may not have been improved; the harm may be as great as the benefit.

Assessing the effectiveness of voter ID as a way to protect the integrity of the ballot should logically include an estimate of the nature and frequency of vote fraud. This analysis does not include consideration of the incidence of vote fraud, the forms that it takes, nor the possible effectiveness of various voter ID regimes to counter attempts at vote fraud. The EAC has commissioned a separate study of vote fraud and instructed us not to address that issue in this research.

2 Harvard Law Review 119:1127. “Legislators hoping to stiffen their state antifraud laws have taken their cue from identification provisions buried in HAVA. . . . HAVA makes explicit that it shall not ‘be construed to prevent a State from establishing election technology and administration requirements that are more strict than’ HAVA itself provides. The states have accepted the invitation.”

028491
Nonetheless, a broad view of ballot integrity is needed to appreciate the background and context of this narrower study. We explore the inter-relationships between Voter ID requirements and Provisional Voting and estimate the effects of various voter ID requirements on turnout and on the casting of provisional ballots.

Voters lacking required ID, or who have ID that does not reflect their current address, may be able to vote only by casting a provisional ballot. To the extent that stricter voter ID requirements divert more voters to the provisional ballot, voter ID requirements can put stress on the already pressured management of the polling place. Administering provisional ballots is more expensive than the normal ballot. Scrutiny of ID can create lines at the polling places, lines made longer as voters are diverted to the provisional voting line. Each of these potential consequences of more elaborate voter identification processes can increase the chance of litigation. Long lines will, at best, discourage voters and at worst make voting seem a hassle that will keep more citizens from the polls. A review of voter identification practices should keep in mind that America’s problem may well be that too many people do not vote rather than that a few people may vote more than once.

An evaluation of the effect of different Voter ID regimes will be more effective if based on clear standards—legal, equitable, practical. The standards suggested here can best be described as the set of questions to be asked about Voter ID requirements. We suggest 7 questions that try to measure the most important dimensions of the problem.

- Is the Voter ID system designed on the basis of valid and reliable, empirical studies of the incidence of the sorts of vote fraud it is designed to prevent?
- How effective is the ID requirement in increasing the security of the ballot? How well can it be coordinated with a statewide voter database?
- How practical is the requirement? Can it be administered smoothly by the staff and budget likely to be made available? How much additional training of polling place workers might be required? Is it simple enough or can it be defined with sufficient clarity

---

3 For example, the Florida voter ID law adopted after the 2004 election and pre-cleared by the Department of Justice, permits voters who cannot meet the ID requirements to sign an affidavit on the envelope of a provisional ballot, which will be counted if the signature matches that on the voter’s registration form.

4 See the final section of this report for a brief overview of possible effects of a statewide voter database on voter identification issues.
that poll workers throughout the state can administer it uniformly and with a minimum of
local interpretation made on the fly under the pressure of Election Day?\textsuperscript{5}

- How cost-effective is the system? Does it increase the security of the ballot at an
affordable cost, measured in both monetary and other costs? To improve understanding
of the non-monetary component of the costs, conducting a voter impact study might be
appropriate. The voter impact study would examine, before the adoption of the
regulation, the cost of compliance by the voter (such as the cost in time and money of
acquiring a photo ID card), any offsetting benefits to voters, and the possible disparate
effects of the regulation on various groups of voters.

- If a side effect of the Voter ID regulation is likely to reduce turnout, generally or among
particular groups, is it possible to take other steps to ameliorate the adverse
consequences?\textsuperscript{6}

- Does it comply with the letter and spirit of Voting Rights Act?

- The seventh question is more difficult to measure than those described in the 6
questions outlined above. The Voter ID requirements should have a neutral result on the
composition of the qualified electorate. That is, those requirements should not be
designed to reduce the turnout of particular groups of voters who may have a propensity
to support one party over another. Whatever the requirement may be, all citizens should
be able to comply with it easily and at no or minimal cost.

**Summary of findings and conclusions**

Voter turnout at the state level in 2004 declined where voter identification requirements were
more demanding. While the trend is not perfectly linear, the data show a general movement
toward lower turnout as requirements tend toward requiring greater levels of proof. An average
of 63.1 percent of the voting age population turned out in states that required voters to state
their names, compared to 57.3 percent in states that required photo identification. Including
other factors beyond voter id requirements diminishes the influence of voter ID on turnout. But
the analysis still offers some support for the hypothesis that as the burden of voter identification

\textsuperscript{5} In New York, in 2004, disparities in training and voting information were made all too apparent in a study
finding elections officials had wildly varying interpretations of what the state's voter identification
requirement was. Tova Wang, "Warning Bell in Ohio," December 5, 2005. Website, the Foundation for
National Progress.

\textsuperscript{6} For example, the Carter-Baker Commission accompanied its recommendation for a national voter ID
card with a recommendations for an affirmative effort by the states to reach out and register the
unregistered, to use the new Voter ID regime as a means to enroll more voters.
requirements increases, turnout declines. The effect is particularly noticeable in counties with concentrations of Hispanic residents or of people living below the poverty line.

Evidence on the incidence of vote fraud, especially on the kind of vote fraud that could be reduced by requiring more rigorous voter identification is not sufficient to evaluate the tradeoffs between ensuring ballot access and ensuring ballot integrity. The lack of full understanding of the dynamics of voter ID requirements on political participation can be remedied by requiring the collection and reporting of data on the reasons potential voters are required to cast a provisional ballot and the reasons for rejecting provisional ballots. Also useful would be the results of exit polling of voters on their experiences in meeting voter ID requirements and on what type of ballot they cast.\(^7\) And, of course, more information is needed on the incidence and varieties of vote fraud, but that inquiry is outside the scope of this report.

**Recommendations for consideration and action by the EAC**

The EAC should consider the following actions to improve understanding of the relationship between voter ID requirements, broadly defined, and the two important goals of ensuring ballot access and ensuring ballot integrity.

- Encourage or sponsor further research to clarify the connection between Voter ID requirements and the number of potential voters actually able to cast a ballot.
- Recommend as a best practice that before states adopt a change described as increasing ballot security, states should publish an analysis of the number of eligible, potential voters that the new requirement may keep away from the polls or be permitted to cast only a provisional ballot as well as an estimate of the number of ineligible voters who will be prevented from voting.
- Encourage or require the states in the 2006 election and beyond, to collect and report reliable, credible information on the relationship between ballot access and ballot security. The data should be analyzed to provide a sound estimate of the incidence of the kinds of vote fraud that more stringent ID requirements may prevent and should describe the dynamics of voter ID in preserving the security of the ballot?

\(^7\) Arizona held its first election with new, stricter ID requirements on March 14, 2006. In at least one county (Maricopa) election officials handed a survey to voters that asked if they knew about the voter identification law and if they did, how they found out about it. Edythe Jensen, "New Voter ID Law Goes Smoothly in Chandler," *Arizona Republic*, March 15, 2006. More surveys of this kind can illuminate the dynamics of voter ID and voting in ways not possible with the current lack of information on this subject.
Useful information could be supplied by exit polling. It would identify those who had cast a provisional ballot and ask why they were unable to cast a regular ballot. Answers would illuminate the frequency with which ID issues divert voters into the provisional ballot line.

Polling to ask voters what they know about the voter ID requirements would also provide useful context for evaluating the effect of various voter ID requirements on electoral participation.

- Encourage states to examine the time period allowed for voters who cast a provisional ballot because they lacked required ID to return with their identification. In eleven states, voters who had to cast a provisional ballot because they lacked the ID required for a regular ballot were permitted to return later with their ID. Their provision of this ID is the critical step in evaluating the ballots. The length of the period in which the voter may return with ID is important. In setting the time period for return, which now varies among the states from the same day to about two weeks, states should consider three criteria: the convenience of the voter, the total time allowed to evaluate ballots, and the safe harbor provision in presidential elections.

---

8 Our research on provisional voting reveals that states that provide more than week to evaluate provisional ballots end up counting substantially more of those ballots than states that provide less than a week.
3. Voter ID and Turnout

As of the 2004 election, the states and the District of Columbia could be divided into 5 different Voter ID regimes. These are shown in Table 1, Voter ID Requirements. Nine states required that voters give their names; 14 that they sign their names; 8 match the signature to a sample in the registration book; 15 require some form of ID (ranging from a utility bill to a government-issued photo ID), and 5 states in 2004 required a photo ID, although in all those states voters without that credential could cast a regular ballot after signing an affidavit concerning their identity and eligibility.

</table>

*In Florida and Louisiana, states that required a photo ID in 2004, voters without that credential could sign an affidavit concerning their identity and eligibility and cast a regular ballot.

**These states in 2004, voters lacking a photo ID could vote by providing other ID.

*Arizona voters who lack a photo ID may present 2 forms of ID with no photograph, such as 2 utility bills.

**State only requires ID for first-time voters who register by mail without providing ID. They accept all forms of ID listed in the statute.

***Georgia is currently enjoined from implementing this law, returning them for the time being to their 2004 requirement of provide ID.

****Pennsylvania requires ID of all first-time voters, whether they registered by mail or in-person.

*****Tennessee voters must provide signature and address. In counties without computerized lists, the signature is compared to the registration card. In counties with computerized lists, the signature is compared to a signature on ID presented with registration.

******Texas voters must present a current registration certificate. Those without a certificate can vote provisionally after completing an affidavit.

In 9 states, voters were required merely to state their names so that poll workers could locate them in the registration book. In 14 states, voters signed their names. In 8 states, voters' signatures were matched with a specimen signature. In 15 states voters had to show some form of ID, not necessarily an official picture ID. And in 5 states, voters were required to show an official photo ID, although in 2004 voters who lacked a picture ID could execute an affidavit and vote a regular ballot.
This neat assignment of each state to one of a few categories may fail to reflect actual practice at a polling place. Like any system run by fallible people it is subject to wide variation in practice. Voters may be confronted with demands for identification at variance with state statutes or legislation. Other voters may be waved through the process without a look at any document, no matter what the regulations may say. Under the press of long lines and unfamiliar requirements, there is, in short, no sure way to report the wide variety of conditions voters may encounter.

It is not practical to attempt to capture the wide variety of how voter ID requirements may be actually implemented across the nation's tens of thousands of polling places. Recognizing that means that the analysis of the effect of state requirements on county-level turnout must be viewed with some caution.

**Effect of Voter ID requirements on Turnout**

**Summary of Findings and Conclusions**
We categorized each state according to its voter ID requirements in 2004, as shown in Table 1 and analyzed turnout data for each county according to the voter identification requirements of its state. We also assessed self-reported turnout by the sample interviewed in the November 2004 Current Population Survey of the Census Bureau.  

Voter turnout at the state level in 2004 varied based on voter identification requirements. An average of 63.1 percent of the voting age population turned out in states that required voters to state their names, compared to 57.3 percent in states that required photo identification. Other factors, of course, also influence turnout. Taking those other factors into account in the county-level analysis makes the effect of the voter ID requirement less dramatic. But the analysis still offers some support for the hypothesis that as the burden of voter identification requirements increases, turnout declines. The effect is particularly noticeable in counties with concentrations of Hispanic residents or of people living below the poverty line.

The individual-level analysis, based on the CPS, produced a similar result. Voter identification requirements exert a statistically significant, negative effect on whether survey respondents said they had voted in 2004. The probability that a respondent to the survey voted dropped with each
level of voter identification requirement, with a total drop of 2.5 percent across the five types of identification.

Future policy decisions should consider the tradeoffs between the incidence of vote fraud that can be prevented by stricter voter ID requirements and the number of eligible voters who will be kept from the polls by those stricter ID requirements. Continuing research is needed to provide the information to inform this calculation of benefits and costs.

Methods and Findings

We classified each state as having one of five types of identification requirements in place on Election Day 2004. Upon arrival at polling places, voters had to either: state their names (9 states); sign their names (13 states and the District of Columbia); match their signature to a signature on file with the local election board (8 states); provide a form of identification that did not necessarily include a photo (15 states); or provide a photo identification (5 states). We then tested the assumption that voter identification requirements would prove to be increasingly demanding on the voter, with providing photo ID the most rigorous, a form of identification, and providing a form of photo identification.

The analysis recognized that election laws in numerous states offer exceptions to these requirements if a prospective voter lacked the ID. Laws in those states set a minimum standard that a voter must meet in order to vote using a regular ballot. We therefore also categorized states based on the minimum requirement for voting with a regular ballot. None of the states required photo identification as a minimum standard for voting with a regular ballot. Four states, however, required voters to swear an affidavit as to their identity (Florida, Indiana, Louisiana, and North Dakota). The five categories for minimum requirements were: state name (12 states), sign name (14 states and the District of Columbia), match one’s signature to a signature on file (six states), provide a non-photo identification (14 states), or swear an affidavit (four states). This analysis treats the array of minimum identification requirements also in terms of increasing demand on the voter: state name, sign name, match signature, provide non-photo identification, and, given the potential legal consequences for providing false information, swearing an affidavit.
Voter turnout at the state level in 2004 declined as voter identification requirements became more demanding, as shown in Table 2. While the trend is not perfectly linear, there is a general movement toward lower turnout as requirements tend toward requiring greater levels of proof. Using the maximum requirements as the independent variable, an average of 63.1 percent of the voting age population turned out in states that required voters to state their names, compared to 57.3 percent in states that required photo identification. A similar trend emerged when using the minimum requirements as the independent variable. Sixty-one percent of the voting age population turned out in states requiring voters to state their names, compared to 58.7 percent in states that required an affidavit from voters.

Voter identification requirements alone do not determine voter turnout. Other influences – demographic or political– also affect voter participation. Multivariate models that take into account other predictors an place the effects of voter identification in a more accurate context. To consider that broader context, our multivariate analysis included whether the county was in a presidential battleground state or a state with a competitive race for governor or the U.S. Senate. Demographic variables included the percentage of the voting-age population in each county that was Hispanic or African-American, the percentage of county residents age 65 and older, and the percentage of the county population living below the poverty line. The dependent variable in each model was voter turnout at the county level, with turnout calculated as the percentage of the voting-age population that voted in the 2004 election.

The aggregate analysis for the maximum identification requirements revealed a small and negative effect on turnout in 2004 controlling for electoral context and demographic factors. If the state was a battleground for president, governor or senate voter turnout increased. As the percentage of senior citizens in the county increased, so did turnout. The percentage of African-
Americans in the county had no effect, but the percentage of Hispanic adults reduced voter turnout, as did the percentage of individuals living below the poverty line.

In general, analysis of the aggregate data at the county level provides some support for the hypothesis that as the burden of voter identification requirements increases, turnout declines, at least in the case of the maximum requirements. This is particularly so for counties with concentrations of Hispanic residents or individuals who live below the poverty line.

Information collected for the Census Bureau Current Population Survey in November 2004 makes it possible to examine the influence of voter ID requirements at the individual level. Self-identified registered voters reported their experience at the polls in the survey. (Note that the voter turnout rate for the CPS sample, an average of 89%, is much higher than the turnout rates presented in the aggregate data analysis, which average 58%. The difference is a result of several factors, including different denominators in calculating the turnout rate — self-reported registered voters in the CPS versus the much larger voting-age population for the aggregate data. Also some survey respondents overstate their incidence of voting.) Nevertheless, the CPS serves as a widely accepted source of data on voting behavior.

The dependent variable in the individual analyses is whether respondents said they voted in the 2004 election. As in the aggregate analysis the contextual variables consist of whether the state was a battleground state or had competitive state-level races. The analysis also controlled for gender, age in years, education, household income, race or ethnicity, and employment status, marital status, and residential mobility.

The analysis revealed that voter identification requirements exerted a statistically significant, negative effect on whether survey respondents said they had voted in 2004. Of the other state factors, only the competitiveness of the presidential race had a significant effect on turnout. In terms of demographic influences, consistent with previous research, age, education, income, and marital status all were positive predictors of voting. Women also were more likely to say they voted than men. Those who had moved within six months before the interview were less likely to say they had voted.

Allowing the voter identification requirement to vary while holding constant all other variables in the model showed that the predicted probability of turnout ranged from 91.2 percent if all voters had to state their names to 88.7 percent if all voters had to provide photo identification. (Note...
that these turnout figures are higher than actual because of the factors involved in the CPS's self-reported survey, but that the difference in effect is reasonably related to the results obtained in the aggregate analysis.) In other words, the probability of voting dropped with each level of the maximum voter identification requirement, with a total drop of 2.5 percent across the five types of identification. When taking into account the minimum requirement for identification, the probability showed a similar decline, with a slightly larger total drop of 3.3 percent.

Both the maximum and minimum identification requirements had negative and statistically significant effects for white voters. Allowing the requirements to vary from stating one's name to providing photo identification or an affidavit showed drops of 2.5 percent and 3.3 percent respectively in the predicted probability of voting. The identification requirements had no effect on the probability of African-Americans voting, but the minimum identification requirements had a comparatively sizable effect on voter turnout among Hispanics. The predicted probability of Hispanics voting ranged from 87 percent if stating one's name would be the required form of identification to 77.3 percent if a voter would have to provide an affidavit in order to vote, a difference of 9.7 percent. Variation also emerged along the lines of income, with the effects of voter identification requirements varying to a greater extent for voters in households below the poverty line compared to those living above the poverty line.

Registered voters who had less than a high school education had a 77.5 percent probability of voting if the maximum requirement would be stating one's name, and a 70.8 percent probability if they would have to provide photo identification under the maximum requirement, a difference of 6.7 percent. The range of effects of voter identification requirements was smaller among those with higher levels of education (and non-existent for one category – voters with some college education).

Discussion and Conclusions of the Analysis

The results presented here give evidence that tougher voter identification requirements are associated with a decline in voter participation. The overall effect for all registered voters was fairly small, but even a slight decline in turnout has the potential to alter the outcome of a close election. The decline is apparent in both the aggregate data and the individual-level data, although not always for both the maximum and minimum sets of requirements.
• Hispanic voters and the poor appear to be less likely to vote if the level of required identification becomes more demanding, according to both the aggregate and the individual-level data. In the individual-level data, for Hispanic voters, the probability of voting dropped by 9.7 percent across the various levels of minimum identification requirements. Survey respondents living in poor households would be 5.3 percent less likely to vote as the requirements vary from stating one’s name to attesting to one’s identity in an affidavit.

• Self-reported registered voters who had not graduated from high school would be 6.7 percent less likely to vote if the maximum requirement is photo identification as opposed to stating one’s name. When considering the minimum requirements, those with less than a high school education would be 7.4 percent less likely to say they voted if the requirement was an affidavit as opposed to stating one’s name.

• Age was also a key factor, with voters ages 18 to 24 being 7.7 percent to 8.9 percent less likely to vote as the requirements ranged from stating one’s name to providing a photo identification or affidavit.

• Two concerns aired by critics of voter identification requirements were not borne out by the results. African-American voters did not appear to be affected by voter identification requirements, according to both the aggregate data and individual-level data analyses. Also, the elderly, while they would be slightly less likely to vote as requirements range from least to most demanding, would not necessarily be affected in the dramatic manner predicted by some opposed to photo identification requirements in particular.

The data examined in this analysis could not capture the dynamics of how identification requirements might lower turnout. Do these requirements dampen turnout because individuals are aware of the requirements and stay away from the polls because they cannot or do not want to meet the requirements? Or, do the requirements result in some voters being turned away when they cannot meet the requirements on Election Day? The CPS data do not include measures that can answer these questions, pointing up the need for collection of additional data. Knowing more about the “on the ground” experiences of voters concerning identification requirements could guide policy-makers at the state and local level in determining whether and at what point in the electoral cycle a concerted public information campaign might be most
effective in helping voters to meet identification requirements. Such knowledge also could help in designing training for poll workers to handle questions about, and potential disputes over, voter identification requirements.
4. Litigation over Voter ID Requirements

There have been a handful of cases challenging identification requirements in court in recent years. In general, requirements that voters provide some identifying documentation have been upheld, where photo ID is not the only acceptable form. Whether or not laws requiring photo ID will be upheld is more doubtful. To date, only one court has considered a law requiring voters to show photo ID (Common Cause v. Billups), and that court concluded that this requirement is likely unconstitutional. Cases challenging the mandatory disclosure of voters’ Social Security numbers on privacy grounds have yielded mixed results.

**Non-photo identification.** For the most part, courts have looked favorably on cases challenging requirements that voters present some form of identifying documents if the photo identification is the only form accepted. In Colorado Common Cause v. Davidson, No. 04CV7709, 2004 WL 2360485, at *1 (Colo. Dist. Ct. Oct. 18, 2004), plaintiffs challenged a law requiring all in-person voters to show identification (not just first-time registrants). The court upheld this requirement against a constitutional challenge. Similarly, in League of Women Voters v. Blackwell, 340 F. Supp. 2d 823 (N.D. Ohio 2004), the court rejected a challenge to an Ohio directive requiring first-time voters who registered by mail to provide one of the HAVA-permitted forms of identification, in order to have their provisional ballots counted. Specifically, the directive provided that their provisional ballots would be counted if the voter (a) orally recited his driver's license number or the last four digits of his social security number or (b) returned to the polling place before it closed with some acceptable identification (including reciting those identification numbers). *Id.* This was found to be consistent with HAVA.

**Photo ID.** Since the 2004 election, two states have adopted laws requiring photo identification in order to have one’s vote counted, without an affidavit exception: Georgia and Indiana. Both these requirements were enacted in 2005 and both have been challenged in court. The Georgia law required voters attempting to cast a ballot in person present a valid form of photographic identification. O.C.G.A. § 21-2-417. On October 18, 2005, the District Court granted the Plaintiff’s motion for a preliminary injunction, enjoining the application of the new identification requirements on constitutional grounds. In granting the injunction, the court held that plaintiffs’ claims under both the Fourteenth Amendment (equal protection) and Twenty-Fourth Amendment (poll tax) had a substantial likelihood of succeeding on the merits at trial (Common Cause v. Billups,
Prelim. Inj. 96, 104). In January 2006, Georgia enacted a modified version of its photo ID law, which the court has not yet ruled on. In the other state that has enacted a photo ID requirement without an affidavit exception (Indiana), legal challenges have also been filed. (Indiana Democratic Party v. Rokita and Crawford v. Marion County Election Board). Cross-motions for summary judgment are currently pending. Another case of significance, for purposes of photo ID requirements, is American Civil Liberties Union of Minnesota v. Kifffmeyer, No. 04-CV-4653, 2004 WL 2428690, at *1 (D. Minn. Oct. 28, 2004). In that case, the court enjoined a Minnesota law that allowed the use of tribal photo ID cards, only for an Indian who lived on the reservation. 2004 WL 2428690, at *1. The Court found no rational basis for distinguishing based on whether or not the cardholder lives on the reservation. Id. at *1, 3. The court’s decision in this case indicates that courts are likely to look strictly on photo ID requirements.

Privacy. In Greidinger v. Davis, 988 F.2d 1344 (4th Cir. 1993), the court struck down on due process grounds a Virginia law requiring disclosure of voters’ social security numbers for voter registration. The social security numbers recorded in voter registration lists had been disclosed to the public and political parties that had requested the lists. The court found that the requirement to give the social security number effectively conditioned rights on the consent to an invasion of privacy. It concluded that this public disclosure of the social security numbers was not necessary to achieve the government’s interest in preventing fraud. On the other hand, in McKay v. Thompson, 226 F.3d 752 (6th Cir. 2000), the court rejected privacy challenges based on both the Constitution and federal statutes, to a Tennessee law requiring social security numbers for voter registration since 1972. 226 F.3d at 755. Second, the NVRA only permits requiring the minimum amount of information necessary to prevent duplicate voter registration and to determine eligibility. The distinction appears to be between the use of Social Security numbers for internal purposes only, which was deemed permissible, and the disclosure of those numbers to the public which was not.

These decisions suggest that the courts will look strictly at requirements that voters produce a photo ID in order to cast a regular ballot. The courts have used a balancing test to weigh the legitimate interest in preventing election fraud against the citizen’s right to privacy (protecting social security numbers from public disclosure, for example) and the reasonableness of requirements for identity documents. To provide both the clarity and certainty in administration of elections needed to forestall destabilizing challenges to outcomes, these early decisions
suggest that best practice may be to conform to the NVRA's limitation on requirements for voter identification to the minimum needed to prevent duplicate registration and ensure eligibility.
5. Developments since 2004

Since the passage of HAVA, with its limited requirements for voter identification, and following the 2004 election, debate over voter ID has taken place in state legislatures across the country. That debate has not been characterized by solid information on the consequences of tightening requirements for voters to identify themselves before being permitted to cast a regular, rather than a provisional, ballot.

Better information might improve the quality of the debate. Answers to the following key questions are not available in a form that might satisfy those on both sides of the argument.

- What is the overall incidence of vote fraud?
- How does fraud take place in the various stage of the process: registration, voting at the polls, absentee voting, or ballot counting?
- What contribution can tighter requirements for voter ID make to reducing vote fraud?
- What would be the other consequences of increasingly demanding requirements for voters to identify themselves? This is the question addressed, within the limits of the available data, in the analysis in this report.

This information would allow a more informed judgment to be brought to bear in the states as they consider the tradeoffs among the competing goals of ballot integrity, ballot access, and administrative efficiency. The Carter-Baker Commission recognized the tradeoffs when it tied recommendation for national ID to an affirmative effort by government to identify unregistered voters and make it easy for them to register.

State Voter Databases and Voter ID

With the implementation of the HAVA Computerized Statewide Voter Registration List, an application for voter registration for an election for Federal office may not be accepted or processed unless the application includes a driver’s license number or last four digits of the Social Security number on the voter registration form. This information can be used to verify the identity of the registrant through interfacing with lists maintained by the Motor Vehicle office and Social Security office. If registrants do not have either a driver’s license or Social Security number, the State will assign a unique identifier number to that person.
HAVA does not require that the states notify registrants to remedy any failure to provide either of these numbers or to confirm that they have provided a verifiable number. Verification at the time of registration could forestall difficulties at the polling place. HAVA is silent on how the ID might be required at the polling place for new voters whose driving license or Social Security number could not be verified. Errors in recording those numbers are sure to occur.

Some states are wrestling now with these unresolved issues. In New Jersey, for example, pending legislation require that voters must be able to confirm their registration through a secure access to the SVRL. It also requires voters to present ID at the polls in order to cast a regular ballot if the numbers recorded on the registration have not been verified (or if no verifiable number appears on the registration). It recognizes the HAVA requirement that if the number provided by the voter has not been verified and if the voter does not present ID at the polls, that voter may cast a provisional ballot. The bill does not specify they have to provide ID within 48 hours in order for their vote to count, as is the case with first-time mail-in registrants.

As some states gain experience in this area, the EAC would perform a useful service by making timely recommendations of best practices for all states to consider.

6. Conclusions

The form of Voter ID required of voters affects turnout. Lack of ID can keep voters from the polls. Or, when they go to the polls, it is reasonable to conclude that stricter Voter ID requirements will divert more voters into the line for provisional ballots. (This conclusion is a conjecture because we lack good data on why voters must cast their ballots provisionally.) The result can be longer lines at the polls and confusion, without a clear demonstration that the security of the ballot is correspondingly increased. The dynamics of Voter ID requirements—how the more rigorous Voter ID requirements—affect the decision by potential voters to go or stay away from the polls are not well understood. This lack of understanding should be recognized in the policy process. The debate over voter ID in the states would be improved by additional research sponsored by the EAC. That research might address that, so far as may be

---

10 In this connection, the Brennan Center's response to the Carter-Baker Commission report observes that, "while it might be true that in a close election "a small amount of fraud could make the margin of difference," it is equally true that the rejection of a much larger number of eligible voters could make a much bigger difference in the outcome." The exclusion of voters through restrictive ID requirements could affect election outcomes as much as fraud by voters at the polls. Response to the Report of the 2005 Commission on Federal Election Reform, The Brennan Center for Justice at NYU School of Law and Spencer Overton, On Behalf Of The National Network on State Election Reform, September 19, 2005.
necessary to reduce vote fraud, could identify methods to eliminate the need for voters to bring specific identity documents with them to the polls while assuring that each voter who casts a ballot is eligible and votes only once. One way to break the connection between the benefits of photo ID and the need for the voter to bring identification to the polling place, as recommended by our colleague Edward Foley: keep the information to verify a voter’s identity in the records at the polling place. Other approaches could be developed.  

"A potential solution to this problem is to break the connection with the photo requirement and the obligation to produce identification at the polls. Eligible citizens could be required to provide a photograph at the time they register to vote, and poll workers would match this photograph with the image of the person standing in front of them. Given the availability of digital photography, the photos of registered voters could be stored in electronic poll books and easily "pulled up" with a click of a computer mouse when voters sign in to vote. These electronic photos should satisfy the anti-fraud concerns of conservatives as much as printed photos that citizens would be required to bring to the polls. . . . Of course, to satisfy the concerns of liberals, a requirement to provide a digital photograph at time of registration would have to address the cost and accessibility issues identified earlier."

b. Analysis of Effects of Voter ID Requirements on Turnout (attached as a separate document)

c. Indexed database of major articles on Voter ID Requirements and related topics (included with this draft)

d. Compendium of states' legislation, procedures, and litigation
APPENDIX – Court Decisions and Literature on Voter Identification and Related Issues

Court Decisions

Summary of Relevant Cases:

Challenges Prevailed:

**American Civil Liberties Union of Minnesota v. Kiffmeyer, 2004**
- Action for temporary restraining order – granted
- Statute: allowed use of tribal identification cards w/ name, address & photo as a valid identification to register to vote only if the voter lives on the reservation to “complete” a mail-in application (which only affected about 600 voters w/ incomplete applications)
- Claim -14th Amendment EPC: likely to prevail, no rational basis for a distinction between Indians residing on reservations and those not
- Statute: may use certain forms of photo identification lacking address together with a utility bill but not tribal identification cards
- Claim -14th Amendment EPC: likely to prevail

**Greidinger v. Davis, 1993**
- Statute: mandated disclosure of SS # as a precondition to voter registration (rationale was voter identification, but the numbers were rarely used to verify identity & were disclosed in voter lists to both political parties and the public upon request)
- Claims:
  - 14th Amendment EPC: no classification (applied strict scrutiny)
  - Substantive due process: law invalid; found that the statute conditioned the fundamental right to vote on the consent to an invasion of privacy; this was found to be a substantial burden (applied strict scrutiny)
    - Compelling interests: preventing voter fraud (deemed compelling)
    - Necessary: fails, preventing voter fraud when allowing names for inspection could be achieved by supplying addresses and DOBs or use of voter registration numbers
    - HOWEVER: Court also made it clear that if the registration scheme kept the SS# for internal use only – it would be valid

Challenges Rejected:

**League of Women Voters v. Blackwell, 2004.**
- Sec. of State Directive: provisional ballots issued if first-time voter, who registered by mail and did not provide ID, cannot produce proper ID at the polls AND that the provisional ballot will only be counted if the voter returns to the poll before it closes w/ ID or can recite SS# or DL#
- Claims – Supremacy Clause & HAVA: ruled that HAVA did not specify how the first-time voters’ identifications should be verified and this method was not unreasonable or too burdensome

**Colorado Common Clause v. Davidson, 2004**
- Statute: required all voters to show ID (most types permitted) before voting
- Claims:
  - HAVA: ruled that HAVA did not preempt more strict state laws & allowed States to be more strict as long as consistent with the purpose of HAVA (both HAVA & CO provisions’ purposes were to prevent voter fraud)
  - Substantive due process and equal protection
    - No improper discrimination
• Preventing voter fraud is a compelling interest since it is irreversible once vote is cast
• Only marginally more intrusive than HAVA, many types of identification permitted – thus, valid

**McKay v. Thompson, 2000**
- Statute: mandated disclosure of SS # as a precondition to voter registration
- Claims:
  - Privacy Act, Section 7: ruled that Tennessee voter system exempt from Privacy Act because it is pre-75
  - NVRA, permitting only min. amt. of info. necessary to prevent duplicate registration and determine eligibility: ruled that NVRA does not specifically forbid the use of SS#s & the Privacy Act specifically permits them pre-75
  - Substantive due process: ruled that internal use of SS# not a burden
  - Free Exercise, based on Bible’s supposed prohibition on use of universal identifiers: ruled that law is generally applicable and thus valid
  - P&I, Article IV: does not protect in-state citizens
  - P&I, 14th Amend.: no protection for privilege where Congress authorized its infringement

**Kemp v. Tucker, 1975**
- Statute: required name, occupation, address, sex, race, height, hair color, eye color, and date of birth be listed on voter registration card for identification purposes
- Claims:
  - VRA: ruled that race was not made a “qualification” for voting
  - 15th Amendment: ruled that it did not abridge right to vote on account of race because rejection of application was due to failure to provide information, not race; race only one factor in identification
  - 14th Amendment EPC: ruled there was no distinction among voters

**Perez v. Rhiddlehoover, 1966**
- Statute: date of birth, place of birth, mother’s first or maiden name, color of eyes, sex, race, occupation, and whether owner, tenant or boarder must appear on the registration for identification
- Claims:
  - VRA: ruled that it was not a “test or device” because it applied equally
  - 15th Amendment: same reasons

**Cases in Which the Plaintiffs Have Prevailed in Challenging the Statute Requiring Voter Identification:**

This was an action just before the November 2004 election for a temporary restraining order, which was granted. The ACLU challenged a Minnesota law allowing the use of tribal identification cards with the name, address, and photograph as a valid identification (equal to a driver’s license) for use in “completing” an incomplete mail-in voter registration only if the Indian lives on the reservation. 2004 WL 2428690, at *1. The Court ruled that this distinction would likely violate the Equal Protection Clause because there was no rational basis for differentiating
between the validity of the identification based on whether or not the cardholder lives on the reservation. *Id.* at *1, 3.

Secondly, the ACLU challenged a second statute which allowed the use of certain photo identification lacking the voter’s address to be used together with a utility bill or bank statement as valid identification for registration. *Id.* at *3. The statute did not, however, permit using a tribal identification for this same purpose. *Id.* The Court ruled that this likely violated the equal protection clause as well. *Id.*

*Greiding v. Davis*, 988 F.2d 1344 (4th Cir. 1993).

This case challenged a Virginia law requiring the social security number for voter registration, which the State subsequently disclosed to the public and political parties upon request in voter registration lists, which included the social security numbers. Failure to provide the social security number resulted in the denial of the registration application. The law was challenged under the Equal Protection Clause and under substantive due process. The Court quickly rejected the equal protection challenge because the law made no classification. 988 F.2d at 1350.

The law was invalidated under substantive due process. *Id.* at 1355. The Court found that the statutory scheme conditioned the fundamental right to vote on the consent to an invasion of privacy, based on concerns of identity theft. *Id.* at 1353-54. The Court found this to be a substantial burden on the right to vote. *Id.* at 1354. The Court recognized that the government’s interest in preventing voter fraud was compelling. *Id.* However, the Court found that disclosure of the information to the public and political parties was not necessary to achieve that interest. *Id.* Disclosure of addresses or dates of birth would be sufficient to aid the public in distinguishing between two voters with the same name. *Id.* at 1355. The Court did state that required disclosure of the social security number for internal use only would be valid. *Id.* at 1354 n.10.

**Cases in Which the Statute or Practice of Voter Identification Has Been Upheld:**

The League of Women Voters challenged the Secretary of State’s directive that provisional ballots should be issued to all first-time voters who registered by mail without providing identification who cannot show proper identification at the polls. 340 F. Supp. 2d at 828. The Directive also stated that the provisional ballots would only be counted if the voter orally recited his driver’s license number or the last four digits of his social security number or returned to the polling place before it closed with some acceptable identification, including reciting those identification numbers. *Id.* The Court stated that HAVA only requires verification of eligibility of first time voters registering by mail; it does not say how that should be done. *Id.* at 831. The Court found the burden on the right to vote to be slight. *Id.* The Directive was found valid under HAVA and the Supremacy Clause because the number of uncounted votes would be small, the requirement was reasonable, and there was adequate notice of the requirement on the registration forms. *Id.* at 829-30.

In this case, the validity of three Colorado statutory provisions was challenged. The laws (1) required all in-person voters to show identification (not just first-time registrants); (2) provided that votes cast in the wrong precinct would not be counted; and (3) provided that
provisional ballots would not be counted if the voter applied for an absentee ballot. 2004 WL 2360485, at *1. The plaintiffs also challenged the provisions under HAVA. The identification provision allowed nearly all forms of acceptable identification under HAVA. Id. at *6.

The challenge to the identification requirement failed under both challenges. The Court interpreted HAVA as not intended to preempt state laws and as permitting states to be more strict than, but not inconsistent with, HAVA. Id. at *10. The Court felt that the purpose of both laws was the same, to reduce voter fraud, and thus, both laws could coexist. As to the Constitutional claim, both equal protection and substantive due process, the Court felt that preventing voter fraud, which is impossible to remedy once a vote is cast, is a compelling interest, and the Court also felt that a voter identification requirement for all voters, with many types of acceptable identification, was only marginally more intrusive than HAVA. Id. at 12. The Court also found no improper discrimination between voters. Id. Thus, the provision was upheld.

McKay v. Thompson, 226 F.3d 752 (6th Cir. 2000).

The Sixth Circuit ruled that the Privacy Act, the National Voter Registration Act, Substantive Due Process, the Privileges and Immunities Clauses (Fourteenth Amendment & Article IV), and the First Amendment right to free exercise do not prohibit requiring disclosure of social security numbers as a precondition to voter registration.

The Privacy Act, Section 7, mandates that it is unlawful for a government to deny a right or privilege because of a citizen's refusal to disclose his social security number, unless the disclosure was required for a system established prior to 1975. 226 F.3d at 755 (citing Privacy Act of 1974, Pub. L. No. 93-579 (1974)). Since Tennessee required social security numbers for voter registration since 1972, his challenge was rejected. 226 F.3d at 755. Second, the NVRA only permits requiring the minimum amount of information necessary to prevent duplicate voter registration and to determine eligibility. Id. at 755-56 (citing 42 U.S.C. §1973gg-3(c)(2)(B)). The Court rejected this challenge because the NVRA does not specifically forbid the use of social security numbers, and the Privacy Act, a more specific statute, grandfathered their use if prior to 1975. 226 F.3d at 756.

Finally, the plaintiff's constitutional claims were all rejected. His substantive due process claim was rejected because internal receipt and use of social security numbers does not burden the fundamental right to vote. Id. The free exercise challenge, based on the Bible's supposed prohibition of universal identifiers, was rejected because the law was generally applicable and not directed at particular religious practices. Id. The Privileges and Immunities Clause claim was rejected because the Clause does not apply to citizens of the state. Id. The Fourteenth Amendment Privileges and Immunities claim, based on the right to vote as unique to U.S. citizenship, was rejected because the Clause provides no protection where Congress has authorized the infringement. Id.

A statute was upheld, which required name, occupation, address, sex, race, height, hair color, eye color, and date of birth to be recorded on the voter registration card and allowed registration officials to reject an incomplete application. 396 F. Supp. at 738. Claims were alleged under the Fourteenth Amendment's Equal Protection Clause, the Fifteenth Amendment, and the Voting Rights Act.

As to the Fourteenth and Fifteenth Amendment claims, the Court reasoned that preventing voter fraud is a compelling goal, and identification provisions are "an essential means of achieving the goal." Id. at 739. The Court also rejected the equal protection claim because the statutes did not create a distinction at all. Id. at 740 n.3. Since race is just one of
several characteristics required, the Court found that it was intended for preventing voter fraud, not some other motive.  Id. at 740. As to the VRA, the Court rejected the claim that it added race as a qualification for voting as frivolous.  Id. As to a Fifteenth Amendment claim that it abridged the right to vote on account of race, the Court also made a distinction between rejecting a voter application because of race and rejecting an application because of failure to answer all relevant questions to assist in preventing voter fraud.  Id. The statute was upheld.

**Perez v. Rhiddlehoover, 186 So. 2d 686 (La. Ct. App. 1966).**

A voter registration requirement was challenged and upheld. The statute stated that date of birth, place of birth, mother's first or maiden name, color of eyes, sex, race, occupation, and whether owner, tenant or boarder must appear on the registration. 186 So.2d at 690. This information was required for identification of voters, especially when voters had the same name, to prevent duplicate voting. It was challenged under the Voting Rights Act of 1965 Section 4(a) which prohibits denying the right to vote for failure to comply with a "test or device." The Court felt that this requirement was not a test or device for discrimination because it applied equally. Id. at 691. The Court also determined that it was not in conflict with the Fifteenth Amendment either. Id.

**Friendly House, et al. v. Janet Napolitano et al., CV 04-649 TUC DCB**

On November 30, 2004, the Mexican American Legal Defense and Educational Fund (MALDEF) filed suit seeking to halt the implementation of Proposition 200. Proposition 200 created a number of legal requirements to ensure that public benefits are not available to illegal immigrants. In particular, Proposition 200 requires that a person attempting to register to vote provide one of six specific forms of proof of United States citizenship. Compl. 12-13. Also, any person attempting to vote must present either one form of photo identification or two forms of non-photo identification. Id. at 13.

The lawsuit alleges two violations that directly relate to the voting identification restrictions. First, the lawsuit alleges a violation of the Twenty-Fourth and Fourteenth amendments in that a voter must pay a poll tax by spending money to purchase the required identification. Id. at 20. Second, the lawsuit alleges violation of the Voting Rights Act. Id. at 21. The lawsuit was recently dismissed by the 9th Circuit Court of Appeals for a lack of standing. The Circuit Court found that there was no injury-in-fact, meaning that once an injury occurs the suit will likely be refiled. Additionally, it should be noted that the voter identification issue is only a part of the lawsuit, and much of the focus has been on other aspects of Proposition 200.

**Current Litigation Concerning Voter ID Issues**

Litigation is filled with uncertainty. Litigation stemming from newly passed voter identification requirements will continue into the foreseeable future. Lawsuits are currently pending over voter identification requirements in Georgia and Indiana. Other states, such as Ohio, are considering new identification requirements that could lead to further litigation. The Georgia lawsuit has already succeeded in getting a preliminary injunction against the law in question, which will likely galvanize interested parties in other states to pursue similar litigation. Of course, if the injunction is eventually overturned at the appellate level it could have a similar chilling affect on future litigation.

This summary major litigation pending in Georgia and Indiana includes a brief assessment of the likelihood of success:

---

12 As of January 2, 2006
Georgia (Common Cause/Georgia v. Billups):

On September 19, 2005, Common Cause of Georgia, in conjunction with several other non-profit organizations, filed suit in Federal District Court against the Georgia Secretary of State and other election officials, challenging the constitutionality of Georgia’s new voter identification requirements. The new law requires all voters attempting to cast a ballot in person to present a valid form of photographic identification. O.C.G.A. § 21-2-417. A voter that is unable to provide proper identification is given a provisional ballot. However, that provisional ballot will be counted only if the voter is able to subsequently present valid identification within two days of the election. Id.

The lawsuit alleges five separate violations of state and federal law. First, the complaint alleges that the identification requirements infringe on the right to vote guaranteed in the Georgia constitution (Compl. 32). In addition, the Plaintiffs claim violations of the Federal Civil Rights Act and Voting Rights Act. (Compl. 36,38). Finally, the lawsuit alleges violations of the Fourteenth and Twenty-Fourth amendments to the U.S. Constitution. The complaint claims that the ID requirements constitute an "undue burden" on the right to vote, in violation of the Equal Protection Clause of the Fourteenth Amendment (Compl. 34). The ID requirement does not apply to most absentee voters, and thus the requirement is also over-broad and not narrowly tailored to address the stated purpose of preventing voter fraud (Compl. 34). The complaint further alleges that the cost of obtaining a photo ID constitutes a poll tax, in violation of the Twenty-Fourth Amendment, and that the cost is also a violation of the Fourteenth Amendment because it applies to voters who choose to vote in person, and not to those who vote absentee (Compl. 34,35).

On October 18, 2005, the District Court granted the Plaintiff’s motion for a preliminary injunction, enjoining the application of the new identification requirements. In granting the injunction, the court held that both federal constitutional claims had a substantial likelihood of succeeding on the merits at trial (Prelim. Inj. 96, 104). The court also held that, while the two federal statutory claims were plausible, they both lacked sufficient evidence at the time to have a substantial likelihood of success. (Prelim. Inj. 109,111,116). Finally, the court held that the Georgia constitutional claim would be barred by the Eleventh Amendment to the U.S. Constitution. (Prelim. Inj. 77).

The Defendants appealed the motion for preliminary injunction to the Eleventh Circuit, and oral argument is scheduled for March 1, 2006. In addition, some news reports have claimed that the Georgia legislature is considering re-visiting the ID requirements in light of the on-going litigation. As for the merits, in granting the preliminary injunction the District Court has already signaled its belief that the federal constitutional claims are likely meritorious. The Eleventh Circuit may have a different view, but for now the case looks to have a reasonable chance of success.

Indiana (Indiana Democratic Party v. Rokita and Crawford v. Marion County Election Board):

The Indiana lawsuit is similar to its Georgia counterpart in content, though not in status. In Indiana separate lawsuits, now joined, were filed by the state Democratic Party and the

13 Litigation documents are available at the Election Law @ Moritz website. http://moritzlaw.osu.edu/electionlaw/litigation/index.php
Indiana Civil Liberties Union (ICLU). The Democratic Party’s lawsuit is directed against the Indiana Secretary of State, while the ICLU’s lawsuit involves the Marion County Board of Elections and the State of Indiana. Like Georgia, Indiana law also requires citizens voting in person to present some form of official photo identification. IC § 3-11-8-25.1. Voters unable to present identification are given a provisional ballot, which is counted if they are able to provide the required identification by Noon on the second Monday following the election. IC § 3-11.7-5-1. Unlike Georgia, Indiana provides state issued identification at no charge. However, there are costs involved in the process, including transportation to the Bureau of Motor Vehicles, and payment for documents such as birth certificates, which are needed to obtain the ID. (Second Am. Compl. 6).

The Democratic Party’s complaint raises Fourteenth Amendment claims similar to those in the Georgia lawsuit, including concerns about substantially burdening the right to vote, the enactment of a de-facto poll tax from the costs indirectly associated with obtaining ID, and the lack of applicability to voters who cast an absentee ballot. (Second Am. Compl. 6-9). In addition, the complaint alleges that the substantial burden placed on the right to vote violates the First Amendment protection of expressive or symbolic speech, as well as the freedom of association as applied to Democratic primary elections. (Second Am. Compl. 9-10). Finally, the complaint alleges violations of the Voting Rights Act, National Voter Registration Act, and the Help America Vote Act (Second Am. Compl. 10-11). The ICLU’s complaint alleges many of the same violations, but also includes claims of a violation of Indiana’s constitutional guarantee of a free and equal election system. (Compl. 15)

The case is currently in the pre-trial phase, with both sides awaiting decisions on their respective motions for summary judgment. The likelihood of success is bolstered by the fact that the Fourteenth amendment constitutional claims have already been found persuasive by at least one other Federal District Court. However, the Indiana law is notably different than its Georgia counterpart in that it provides free identification. While the plaintiffs make a solid argument that related costs still amount to a poll-tax, it is possible that the court could distinguish on this matter.

Unlike the Georgia case, the Indiana lawsuit also claims a violation of the Help America Vote Act. Although the claim is not completely clear, it seems as though the Plaintiffs are arguing that the Indiana statute requires more stringent identification than what is required by HAVA. 42 U.S.C. § 15483(b)(1)-(2). While this is true, it is unclear how this violates the statute. HAVA merely states that certain voters unable to produce HAVA required identification be given a provisional ballot. Id. Indiana law meets this requirement. IC § 3-11-8-25.1. Although Indiana law requires more stringent identification for counting the provisional ballot, HAVA leaves theses decisions to state law. 42 U.S.C. § 15482(a).

---

15 According to an AP article, the Plaintiffs filed some type of brief on December 21—however it is not yet up on the Moritz website and I am unsure how to access it otherwise.

All-

About a week ago you received a copy of the Eagleton draft report on Voter Identification. As you know, Eagleton will be coming to EAC on April 3 to do a project close-out meeting with the agency.

Should you have comments or edits that you would like me to pass along to Eagleton, regarding their draft report on Voter ID, please get them to me by COB Friday, March 24, so that I may pass them along to Eagleton for inclusion in their final document.

Thank you

Adam Ambrogi/EAC/GOV

hey-- an idea...
From Eagleton ID report[below]... perhaps something to discuss for addition in the Data collection project-- asking pollworkers to keep the numbers of those people turned away for lack of eligibility....

Would be helpful.
Adam

...States should publish an analysis of the number of eligible, potential voters that the new requirement may keep away from the polls or be permitted to cast only a provisional ballot as well as an estimate of the number of ineligible voters who will be prevented from voting.

Had planning on integrating all of the Commissioner's comments through Wednesday and passing them on to Eagleton.

As you know Commissioners will meet with Eagleton next Monday. Depending on the feedback I may bring up the report on Thursday.

Subject Revised Voter ID Paper

Karen,

Attached is a new draft of the Voter ID paper, revised to take into account the comments you gave us on Tuesday as well as some points raised recently by other reviewers. We'll be bringing hard copies of this draft with us to Monday's briefing. If you could distribute the new "Executive Summary" (pages 1 – 5) in advance to those who will take part in the meeting on Monday, I think the discussion would be improved.

Our train is scheduled to get into Union Station at 10:30 on Monday. Barring Amtrak delays, we should arrive at your offices shortly before 11.

Tom O'Neill

VoterIDReport0330.doc
FINAL DRAFT REPORT AND RECOMMENDATIONS TO THE EAC
VOTER IDENTIFICATION ISSUES

Report Background
This report to the United States Election Assistance Commission (EAC) presents an analysis of voter identification requirements across the country and makes recommendations for best practices to improve implementation of voter ID requirements at the polls. It is based on research conducted by the Eagleton Institute of Politics at Rutgers, the State University of New Jersey, and the Moritz College of Law at Ohio State University under a contract to the EAC, dated May 24, 2005. The research included a review and legal analysis of state statutes, regulations and litigation concerning voter identification and provisional voting, a sample survey of local election officials, and a statistical analysis of the effects of various requirements for voter identification on turnout in the 2004 election. This report is a companion to a report on Provisional Voting submitted to the EAC on November 28, 2005 under the same contract.

The Help America Vote Act of 2002 (HAVA) (Public Law 107-252) authorizes the EAC (Sec. 241, 42 USC 15381) to conduct periodic studies of election administration issues. The purpose of these studies is to promote methods for voting and administering elections, including provisional voting, that are convenient, accessible and easy to use; that yield accurate, secure and expeditious voting systems; that afford each registered and eligible voter an equal opportunity to vote and to have that vote counted; and that are efficient.

Executive Summary

Methods
To explore the effects of voter ID requirements on electoral participation in 2004, as measured by turnout, we gathered information on the requirements in effect in the 50 states and the District of Columbia in that year. We assigned each state to one of five categories based on its ID requirements. The five categories are progressively more rigorous based on the demands they make on both voters¹ (and, to some extent) on election workers. The categories range from "Stating Name" which we judge to be somewhat less demanding than "Signing Name." "Signature Match" requires poll workers to examine the signature and compare it to a sample,

¹ Even the most relaxed provisions for identification at the polls — anything stricter than the honor system used in North Dakota — will impose some burden on particular voters. Harvard Law Review 119:1146
which is slightly more demanding that the voter simply signing. "Present ID" requires voters to offer some documentary evidence of their identity, ranging from a utility bill to a passport. It is more demanding than the previous three categories because it requires that the voter remember to bring this documentation to the polls. (Even a simple ID, such as a utility bill, may not be available to some renters or, say, those in group housing.) We regard a government “Photo ID” as the most rigorous requirement. Such identity documents are not uniformly and conveniently available to all voters.

We collected data on turnout in all counties to permit an estimate of the relationship between the rigor of the ID requirements and the level of turnout. This aggregate analysis is useful, but does not provide valid estimates on the effects of different kinds of ID requirements on particular demographic groups (e.g., the old, the young, African-Americans, the poor, or high school graduates.) To allow that analysis, we used the Census Bureau’s Current Population Survey from November 2004, which asked a large sample of Americans about their experience in the election. It has the disadvantage of relying on self reports by respondents about their registration status, citizenship, and experience in the polling place, but it provides the demographic data needed to supplement the aggregate analysis.

To understand the legal issues raised by voter ID requirements, we collected and analyzed the few major cases that have been decided on this issue. The decisions so far suggest the constitutional and other constraints to policies on voter ID requirements.

Findings
The form of Voter ID required of voters affects turnout. Lack of ID can keep voters from the polls. Or, when they go to the polls, it is reasonable to conclude that stricter Voter ID requirements will divert more voters into the line for provisional ballots. (This conclusion is a conjecture because we lack precise information on why voters must cast their ballots provisionally.) The result can be longer lines at the polls and confusion, without a clear demonstration that the security of the ballot is correspondingly increased.

Voter turnout at the state level in 2004 was lower in states where voter identification requirements were more demanding. While the trend is not perfectly linear, the data show a general movement toward lower turnout as requirements tend toward requiring greater levels of proof. An average of 63.1 percent of the voting age population turned out in states that required
voters to state their names, compared to 57.3 percent in states that required photo identification. Those figures, however, probably overstate the effect since the inclusion of other factors beyond voter ID requirements in the analysis diminishes the extent of influence of voter ID on turnout. After taking account of the other factors, the analysis still offers some support for the hypothesis that as the burden of voter identification requirements increases, turnout declines. The effect is particularly noticeable in counties with concentrations of Hispanic residents or people living below the poverty line.

Our analysis of litigation suggests that the courts will look strictly at requirements that voters produce a photo ID in order to cast a regular ballot. The courts have used a balancing test to weigh the legitimate interest in preventing election fraud against the citizen’s right to privacy (protecting social security numbers from public disclosure, for example) and the reasonableness of requirements for identity documents. To provide both the clarity and certainty in administration of elections needed to forestall destabilizing challenges to outcomes, best practice for the states may be to limit requirements for voter identification to the minimum needed to prevent duplicate registration and ensure eligibility.

Evidence on the incidence of vote fraud, especially on the kind of vote fraud that could be reduced by requiring more rigorous voter identification is not now sufficient to evaluate the tradeoffs between ensuring ballot access and ensuring ballot integrity. The lack of full understanding of the dynamics of voter ID requirements on political participation can be remedied by requiring the collection and reporting of data on the reasons potential voters are required to cast a provisional ballot and the reasons for rejecting provisional ballots during the 2006 and subsequent elections. Also useful would be the results of exit polling of voters on their experiences in meeting voter ID requirements and on what type of ballot they cast. And, of course, more information is needed on the incidence and varieties of vote fraud, but that inquiry is outside the scope of this report.

A voting system that requires voters to produce an identify document or documents may indeed prevent the ineligible from voting. It may also prevent eligible voters from casting a ballot. If the

---

2 Arizona held its first election with new, stricter ID requirements on March 14, 2006. In at least one county (Maricopa) election officials handed a survey to voters that asked if they knew about the voter identification law and if they did, how they found out about it. Edythe Jensen, "New Voter ID Law Goes Smoothly in Chandler," Arizona Republic, March 15, 2006. More surveys of this kind can illuminate the dynamics of voter ID and voting in ways not possible with the current lack of information on this subject.
ID requirement of a ballot protection system blocks ineligible voters from the polls at the cost of preventing eligible voters who lack the required forms of identification, the integrity of the ballot may not have been improved; the harm may be as great as the benefit.

Recommendations for consideration and action by the EAC
The dynamics of Voter ID requirements –how more rigorous Voter ID requirements affect the decision by potential voters to go or stay away from the polls-- are not well understood. This lack of understanding should be recognized in the policy process in the states. The debate over voter ID in the states would be improved by additional research sponsored by the EAC.

The EAC should consider the following actions to improve understanding of the relationship between voter ID requirements, broadly defined, and the two important goals of ensuring ballot access and ensuring ballot integrity.

- Encourage or sponsor further research to clarify the connection between Voter ID requirements and the number of potential voters actually able to cast a ballot.
- Recommend as a best practice the publication of a “Voting Impact Statement” by states considering changing their voter ID requirements to protect the integrity of the ballot. The analysis will help ensure that efforts to increase ballot security have a neutral effect on electoral participation by eligible voters. The Voter Impact Statement would estimate the number and demographics of 1) eligible, potential voters that a proposed stricter ID requirement may keep away from the polls or be permitted to cast only a provisional ballot; and 2) and assess the number of ineligible voters who will be prevented from voting by the stricter ID requirements.
- Encourage or require the states in the 2006 election and beyond, to collect and report reliable, credible information on the relationship between ballot access and ballot security. EAC should analyze this publish an analysis of this information to provide a sound estimate of the incidence of the kinds of vote fraud that more stringent ID requirements may prevent. The analysis should describe the dynamics of the voter ID process in preserving the security of the ballot. The states should also be encouraged to use this information to increase the effectiveness of programs to ensure that all eligible voters have required ID and are permitted to vote in future elections.
  - Useful information could be supplied by exit polling or surveys of voters by local election officials. It would make clear why those who cast a provisional ballot...
were found ineligible to cast a regular ballot. The answers would illuminate the frequency with which ID issues divert voters into the provisional ballot line.

- Polling to ask voters what they know about the voter id requirements would also provide useful context for evaluating the effect of various voter ID requirements on electoral participation.

- Encourage states to examine the time period allowed for voters who cast a provisional ballot because they lacked required ID to return with their identification. In eleven states, voters who had to cast a provisional ballot because they lacked the ID required for a regular ballot were permitted to return later with their ID. Their provision of this ID is the critical step in evaluating the ballots. The length of the period in which the voter may return with ID is important. In setting the time period for return, which now varies among the states from the same day to about two weeks, states should consider three factors: the convenience of the voter, the total time allowed to evaluate ballots\(^3\), and the safe harbor provision in presidential elections.

- Recommendations to the states from EAC should reflect current judicial trends. Requirements that voters provide some identifying documentation have been upheld, where photo ID is not the only acceptable form. Whether laws requiring photo ID will be upheld is more doubtful. To date, only one court has considered a law requiring voters to show photo ID (Common Cause v. Billups), and that court concluded that this requirement is likely unconstitutional.

**Background and Approach of the Study**

Establishing the eligibility of a person to vote has long been part of the electoral process. Voters may have to identify themselves twice in the electoral process: when registering to vote and then when casting a ballot. The stress on voters to provide required ID documents may be greater at the polls on Election Day than when registering. The pressures arising from the need to check ID, even so simple a check as a signature match, can be greater at the polls on Election Day than at the time of registration. Poll workers may be faced with long lines and limited time.

---

\(^3\) Our research on provisional voting reveals that states that provide more than a week to evaluate provisional ballots end up counting substantially more of those ballots than states that provide less than a week.
This analysis focuses on ID requirements on Election Day, but with an appreciation that the ID requirements at time of registration and on Election Day are inter-related. The emphasis in this report is on Voter ID requirements on Election Day and afterwards as election judges evaluate provisional ballots. This is the critical period for the electoral system, the time when ballot access and ballot security are in the most sensitive balance.

The report looks broadly at voter ID issues and goes beyond the rather narrow identification requirements in HAVA. Much of the current debate in state legislatures on voter ID goes beyond HAVA to require more rigorous documentation of identity for all would-be voters, not just those who had not registered in person and are casting a ballot for the first time. The controversy in the states over voter ID seems to have been sparked in part by the HAVA requirements, but goes beyond those requirements, and sets the context for the analysis here.

We recognize that the previously technical, rather dull subject of voter ID requirements has become fiercely partisan and divisive in many states. The polarization of the debate has raised the stakes over this issue, making dispassionate analysis both more valuable and more rare. Voter ID is often described as the critical step in protecting the integrity of the ballot, the process to ensure that the potential voter is eligible and, if eligible, is permitted to cast one ballot and one ballot only. Truly protecting the integrity of the ballot, however, requires a perspective that takes in the entire voting process. It demands more than preventing the ineligible from voting, and should also ensure that all those who are eligible and want to vote can cast a ballot that counts. The protection effort must embrace all forms of voting, including absentee ballots, and consider each step in the process from registration through vote counting.

---

4 As the Carter-Baker Commission noted, photo ID requirements for in-person voting do little to address the problem of fraudulent registration by mail, especially in states that do not require third-party organizations that register voters to verify ID. Commission on Federal Election Reform, pp 46-47.
5 Harvard Law Review 119:1127: “Legislators hoping to stiffen their state antifraud laws have taken their cue from identification provisions buried in HAVA.”
6 “Of the various electoral procedure laws passed in the fifty states since the 2000 and 2004 presidential elections and those still being debated in state legislatures and local media, few arouse more potent partisan feelings than voter identification laws.” Harvard Law Review 119:1144. John Fund’s 2004 book, Stealing Elections: How Voter Fraud Threaten Our Democracy, cites (pages 16 – 17) a Rasmussen Research poll that asked respondents if they were more concerned with voting by ineligible participants or with disenfranchisement of eligible voters. Sixty-two percent of Kerry supporters, but only 18 percent of Bush supporters, worried more about disenfranchisement; 58 percent of Bush supporters, but only 19 percent of Kerry supporters were more concerned with voter fraud.
A voting system that requires voters to produce an identity document or documents may prevent the ineligible from voting. It may also prevent the eligible from casting a ballot. If the ID requirements block ineligible voters from the polls at the cost of preventing eligible voters who cannot obtain or have left at home the required forms of identification, the integrity of the ballot may not have been improved; the harm may be as great as the benefit.

Assessing the effectiveness of voter ID as a way to protect the integrity of the ballot should logically include an estimate of the nature and frequency of vote fraud. The EAC has informed us that it has commissioned a separate analysis of the incidence of vote fraud. Consequently, this research does not include consideration of vote fraud nor the possible effectiveness of various voter ID regimes to counter attempts at vote fraud. As a result, our analysis of the effects of voter ID requirements on turnout cannot take into account how many potential voters who did not turn out under comparatively stricter voter ID requirements might have been ineligible or eligible to vote.

In some states, voters lacking required ID, or who have ID that does not reflect their current address, are able to vote only by casting a provisional ballot. Voter ID requirements that require voters to bring a document to the polls—rather than simply sign their names—can divert more voters to the provisional ballot. Requiring poll workers to request and check ID, can put stress on the already demanding environment of the polling place. Scrutiny of ID can create lines at the polling places. Further delays can result when voters cast a provisional ballot and fill out the ballot envelope. Voters who cast a provisional ballot because they lack their ID on Election Day, and who then fail to return with the needed document or documents, will have their ballot rejected. And, of course, the cost of processing provisional ballots is greater than the cost of regular ballots.

Each of these potential consequences of more elaborate voter identification processes can increase the chance of litigation. Long lines will, at best, discourage voters and at worst make voting seem a hassle, an impression that could keep more citizens (even those with ID) from the

---

7 For example, the Florida voter ID law adopted after the 2004 election and pre-cleared by the Department of Justice, permits voters who cannot meet the ID requirements to sign an affidavit on the envelope of a provisional ballot, which will be counted if the signature matches that on the voter’s registration form.

8 The EAC’s Election Day Study found “improper ID,” to be the third most common reason for a provisional ballot to be rejected. “Improper ID” was cited by 7 states responding to the survey, compared to 14 mentions for voting in the wrong precinct. Election Day Study, Chapter 6, p. 5.
polls. In conducting this analysis, we were sensitive to the observation that the problem with American elections may well be that too many people do not vote rather than that a few people may vote more than once.

An evaluation of the effect of different Voter ID regimes can be more effective if based on clear standards—legal, equitable, practical. The standards suggested here can best be described as the set of questions to be asked about Voter ID requirements. We suggest 7 questions that try to measure the most important dimensions of the problem.

1. Is the Voter ID system designed on the basis of valid and reliable, empirical studies of the incidence of the sorts of vote fraud it is designed to prevent?

2. How effective is the ID requirement in increasing the security of the ballot? How well can it be coordinated with a statewide voter database?

3. How practical is the requirement? Can it be administered smoothly by the staff and budget likely to be made available? How much additional training of polling place workers might be required? Is it simple enough or can it be defined with sufficient clarity that poll workers throughout the state can administer it uniformly and with a minimum of local interpretation made on the fly under the pressure of Election Day?

4. How cost-effective is the system? Does it demonstrably increase the security of the ballot affordably, measured in both monetary and other costs? To improve understanding of the non-monetary component of the costs, conducting a voter impact study might be appropriate. The voter impact study would examine, before the adoption of the regulation, the cost of compliance by the voter (such as the cost in time and money of acquiring a photo ID card), any offsetting benefits to voters, and the possible disparate effects of the regulation on various groups of voters.

---

9 “Often where the battle over voter identification is most heated, real evidence of voter fraud proves scarce: in Georgia, for example, the Secretary of State averred that she had never encountered a single instance of voter impersonation at the polls. State laws might sometimes impose tighter restrictions on in-person voting than on absentee ballots, which yield the greatest incidence of, and provide the easiest avenue for, voter fraud…” Harvard Law Review 127:1144 (2006)

10 See the final section of this report for a brief overview of possible effects of a statewide voter database on voter identification issues.

11 In New York, in 2004, disparities in training and voting information were made apparent in a study finding elections officials had wildly varying interpretations of what the state’s voter identification requirement actually was. Tova Wang, “Warning Bell in Ohio,” December 5, 2005. Website, the Foundation for National Progress.

12 “Absent clear empirical evidence demonstrating widespread individual voter fraud, legislatures need to fashion narrowly tailored voter identification provisions with an eye toward the inevitable and well-grounded constitutional challenges that will arise in the courts. Only as states grow more adept at
impact statement that demonstrated the nexus between the identification regime and the integrity of the ballot could provide protection against inevitable legal challenges.

5. If a side effect of the Voter ID regulation is likely to reduce turnout, generally or among particular groups, is it possible to take other steps to ameliorate the adverse consequences?\(^\text{13}\)

6. Does it comply with the letter and spirit of Voting Rights Act?

7. The seventh question is the most difficult to answer. Does the Voter ID requirement have a neutral result on the composition of the qualified and eligible electorate? ID requirements should not be designed to, or unintentionally, reduce the turnout of particular groups of voters or supporters of one party or another. Whatever the requirement may be, can all citizens comply with it easily and at no or minimal cost?

Voter ID and Turnout

As of the 2004 election, the states and the District of Columbia could be divided into 5 different Voter ID regimes. These are shown in Table 1, *Voter ID Requirements*. Nine states required that voters give their names; 14 that they sign their names; 8 match the signature to a sample in the registration book; 15 require some form of ID (ranging from a utility bill to a government-issued photo ID), and 5 states in 2004 required a photo ID, although in all those states voters without that credential could cast a regular ballot after signing an affidavit concerning their identity and eligibility or provide other forms of ID.

This neat assignment in the following table and map of each state to one category no doubt fails to reflect actual practice at many polling places. Like any system run by fallible people, the voter ID process is subject to wide variation in practice. Voters may be confronted with demands for identification different from the directives in state statutes or regulation. Some voters may be waved through the process without a look at any document, no matter what the regulations say. Under the press of long lines and unfamiliar requirements, there is, in short, no sure way to report the wide variety of conditions voters actually encounter.

\(^{13}\) For example, the Carter-Baker Commission coupled its recommendation for a national voter ID card to a call for an affirmative effort by the states to reach out and register the unregistered, that is, to use the new Voter ID regime as a means to enroll more voters. Similarly, Richard Hasen Hasen’s has suggested combining a national voter ID with universal registration. See his "Beyond the Margin of Litigation: Reforming U.S. Election Administration to Avoid Electoral Meltdown," 62 Washington and Lee Law Review 937 (2005).

^In Florida and Louisiana, states that required a photo ID in 2004, voters without that credential could sign an affidavit concerning their identity and eligibility and cast a regular ballot.

^^In these states in 2004, voters lacking a photo ID could vote by providing other ID.

*Arizona voters who lack a photo ID may present 2 forms of ID with no photograph, such as 2 utility bills.

**State only requires ID for first-time voters who register by mail without providing ID. They accept all forms of ID listed in the statute.

***Georgia is currently enjoined from implementing this law, returning them for the time being to their 2004 requirement of provide ID.

****Pennsylvania requires ID of all first-time voters, whether they registered by mail or in-person.

*****Tennessee voters must provide signature and address. In counties without computerized lists, the signature is compared to the registration card. In counties with computerized lists, the signature is compared to a signature on ID presented with registration.

******Texas voters must present a current registration certificate. Those without a certificate can vote provisionally after completing an affidavit.

Figure 1

Voter ID Requirements 2004
Since it is not practical to attempt to capture the wide variety of how voter ID requirements are actually implemented across the nation's tens of thousands of polling places, the analysis of the effect of state requirements on county-level turnout must be viewed with some caution.

**Effect of Voter ID requirements on Turnout**

We categorized each state according to its voter ID requirements in 2004, as shown in Table 1 and analyzed turnout data for each county according to the voter identification requirements of its state. We also assessed self-reported turnout by the sample interviewed in the November 2004 Current Population Survey of the Census Bureau. 14

Voter turnout at the state level in 2004 varied based on voter identification requirements. An average of 63.1 percent of the voting age population turned out in states that required voters to state their names, compared to 57.3 percent in states that required photo identification. Other factors, of course, also influence turnout. Taking those other factors into account in the county-level analysis makes the effect of the voter ID requirement less dramatic. But the analysis still offers some support for the hypothesis that as the burden of voter identification requirements increases, turnout declines. The effect is particularly noticeable in counties with concentrations of Hispanic residents or of people living below the poverty line.

The individual-level analysis, based on the CPS, produced a similar result. Voter identification requirements exert a statistically significant, negative effect on whether survey respondents said they had voted in 2004. The probability that a respondent to the survey voted dropped with each level of voter identification requirement, with a total drop of 2.5 percent across the five types of identification.

Future policy decisions should consider the tradeoffs between the incidence of vote fraud that can be prevented by stricter voter ID requirements and the number of eligible voters who will be kept from the polls by those stricter ID requirements. Continuing research is needed to provide the information to inform this calculation of benefits and costs.

14 See Appendix ___ for the full report on voter ID and turnout.
Methods and Findings

We classified each state as having one of five types of identification requirements in place on Election Day 2004. Upon arrival at polling places, voters had to either: state their names (9 states); sign their names (13 states and the District of Columbia); match their signature to a signature on file with the local election board (8 states); provide a form of identification that did not necessarily include a photo (15 states); or provide a photo identification (5 states). We then tested the assumption that voter identification requirements would prove to be increasingly demanding on the voter, with providing photo ID the most rigorous.

The analysis recognized that election laws in numerous states offer exceptions to these requirements if a prospective voter lacked the ID. Laws in those states set a minimum standard that a voter must meet in order to vote using a regular ballot. We therefore also categorized states based on the minimum requirement for voting with a regular ballot. None of the states required photo identification as a minimum standard for voting with a regular ballot. Four states, however, required voters to swear an affidavit as to their identity (Florida, Indiana, Louisiana, and North Dakota). The five categories for minimum requirements were: state name (12 states), sign name (14 states and the District of Columbia), match one’s signature to a signature on file (six states), provide a non-photo identification (14 states), or swear an affidavit (four states). This analysis treats the array of minimum identification requirements also in terms of increasing demand on the voter: state name, sign name, match signature, provide non-photo identification, and, given the potential legal consequences for providing false information, swearing an affidavit is regarded as the most rigorous.

Voter turnout at the state level in 2004 declined as voter identification requirements became more demanding, as shown in Table 2. While the trend is not perfectly linear, there is a general movement toward lower turnout as requirements tend toward requiring greater levels of proof. Using the maximum requirements as the independent variable, an average of 63.1 percent of the voting age population turned out in states that required voters to state their names, compared to 57.3 percent in states that required photo identification. A similar trend emerged when using the minimum requirements as the independent variable. Sixty-one percent of the voting age population turned out in states requiring voters to state their names, compared to 58.7 percent in states that required an affidavit from voters.

Voter identification requirements alone do not determine voter turnout. Other influences – demographic or political – also affect voter participation. Multivariate models that take into account other predictors can place the effects of voter identification in a more accurate context.

The multivariate analysis included whether the county was in a presidential battleground state or a state with a competitive race for governor or the U.S. Senate. Demographic variables included the percentage of the voting-age population in each county that was Hispanic or African-American, the percentage of county residents age 65 and older, and the percentage of the county population living below the poverty line. The dependent variable in each model was voter turnout at the county level, with turnout calculated as the percentage of the voting-age population that voted in the 2004 election.

The aggregate analysis for the maximum identification requirements revealed a small and negative effect on turnout in 2004 controlling for electoral context and demographic factors. If the state was a battleground voter turnout increased. As the percentage of senior citizens in the county increased, so did turnout. The percentage of African-Americans in the county had no effect, but the percentage of Hispanic adults reduced voter turnout, as did the percentage of individuals living below the poverty line. In general, analysis of the aggregate data at the county level provides some support for the hypothesis that as the burden of voter identification requirements increases, turnout declines, at least in the case of the maximum requirements.

The decline in turnout is particularly noticeable in counties with concentrations of Hispanic residents or individuals who live below the poverty line. Determining if the reduction in turnout is, in fact, among the Hispanic or poor residents of those counties requires further research at the individual level.
Information collected for the Census Bureau Current Population Survey in November 2004 makes it possible to examine the influence of voter ID requirements at the individual level. Self-identified registered voters reported their experience at the polls in the survey. Note that the voter turnout rate for the CPS sample, an average of 89%, is much higher than the turnout rates presented in the aggregate data analysis, which average 58%. The difference is a result of several factors, including different denominators in calculating the turnout rate – self-reported registered voters in the CPS versus the much larger voting-age population for the aggregate data. Also some survey respondents overstate their incidence of voting. Nevertheless, the CPS serves as a widely accepted source of data on voting behavior.

The dependent variable in the individual analyses is whether respondents said they voted in the 2004 election. As in the aggregate analysis the contextual variables consist of whether the state was a battleground state or had competitive state-level races. The analysis also controlled for gender, age, education, household income, race or ethnicity, and employment status, marital status, and residential mobility.

The analysis revealed that voter identification requirements exerted a statistically significant, negative effect on whether survey respondents said they had voted in 2004. Of the other state factors, only the competitiveness of the presidential race had a significant effect on turnout. In terms of demographic influences, consistent with previous research, age, education, income, and marital status all were positive predictors of voting. Women also were more likely to say they voted than men. Those who had moved within six months before the interview were less likely to say they had voted.

Allowing the voter identification requirement to vary while holding constant all other variables in the model showed that the predicted probability of turnout ranged from 91.2 percent if all voters had to state their names to 88.7 percent if all voters had to provide photo identification. (Note that these turnout figures are higher than actual because of the factors involved in the CPS's self-reported survey, but that the difference in effect is reasonably related to the results obtained in the aggregate analysis.) In other words, the probability of voting dropped with each level of the maximum voter identification requirement, with a total drop of 2.5 percent across the five types of identification. When taking into account the minimum requirement for identification, the probability showed a similar decline, with a slightly larger total drop of 3.3 percent.
Both the maximum and minimum identification requirements had negative and statistically significant effects for white voters. Allowing the requirements to vary from stating one's name to providing photo identification or an affidavit showed drops of 2.5 percent and 3.3 percent respectively in the predicted probability of voting. The identification requirements had no effect on the probability of African-Americans voting, but the minimum identification requirements had a comparatively sizable effect on voter turnout among Hispanics. The predicted probability of Hispanics voting ranged from 87 percent if stating one's name would be the required form of identification to 77.3 percent if a voter would have to provide an affidavit in order to vote, a difference of 9.7 percent. Variation also emerged along the lines of income, with the effects of voter identification requirements varying to a greater extent for voters in households below the poverty line compared to those living above the poverty line.

Registered voters who had less than a high school education had a 77.5 percent probability of voting if the maximum requirement would be stating one's name, and a 70.8 percent probability if they would have to provide photo identification under the maximum requirement, a difference of 6.7 percent. The range of effects of voter identification requirements was smaller among those with higher levels of education (and non-existent for one category – voters with some college education).

Discussion and Conclusions of the Analysis
The results give evidence that tougher voter identification requirements are associated with a decline in voter participation. The overall effect for all registered voters was fairly small, but even a slight decline in turnout has the potential to alter the outcome of a close election. The decline is apparent in both the aggregate data and the individual-level data, although not always for both the maximum and minimum sets of requirements.

- Hispanic voters and the poor appear to be less likely to vote if the level of required identification becomes more demanding, according to both the aggregate and the individual-level data. In the individual-level data, for Hispanic voters, the probability of voting dropped by 9.7 percent across the various levels of minimum identification requirements. Survey respondents living in poor households would be 5.3 percent less likely to vote as the requirements vary from stating one's name to attesting to one's identity in an affidavit.
• Self-reported registered voters who had not graduated from high school would be 6.7 percent less likely to vote if the maximum requirement is photo identification as opposed to stating one's name. When considering the minimum requirements, those with less than a high school education would be 7.4 percent less likely to say they voted if the requirement was an affidavit as opposed to stating one’s name.

• Age was also a key factor, with voters ages 18 to 24 being 7.7 percent to 8.9 percent less likely to vote as the requirements ranged from stating one’s name to providing a photo identification or affidavit.

• Two concerns aired by critics of voter identification requirements were not borne out by the results. African-American voters did not appear to be affected by voter identification requirements, according to both the aggregate data and individual-level data analyses. Also, the self-reports of elderly voters, while indicating that they would be slightly less likely to vote as ID requirements become stricter, do not show a dramatic effect.

The data examined in this analysis could not capture the dynamics of how identification requirements lower turnout. Do know the voter ID and stay away from the polls because they cannot or do not want to meet them? Or, do the requirements result in some voters being turned away when they cannot meet the requirements on Election Day? The CPS data do not include measures that can answer these questions, pointing up the need for collection of additional data. Knowing more about the “on the ground” experiences of voters concerning identification requirements could guide policy-makers at the state and local level in determining whether and at what point in the electoral cycle a concerted public information campaign might be most effective in helping voters to meet identification requirements. Such knowledge also could help in designing training for poll workers to handle questions about, and potential disputes over, voter identification requirements.

It is important to note that the 2004 data do not allow us to draw conclusions about the effect of laws such as those recently passed in Georgia and Indiana, which require government-issued photo ID. No such laws were in place in 2004, and the five states that then required photo ID at the time allowed voters who signed an affidavit or provided another form of identification to cast a regular ballot.
Litigation Over Voter ID Requirements

A handful of cases have challenged identification requirements in court in recent years. In general, requirements that voters provide some identifying documentation have been upheld, where photo ID is not the only acceptable form. Whether laws requiring photo ID will be upheld is more doubtful. To date, only one court has considered a law requiring voters to show photo ID (Common Cause v. Billups), and that court concluded that this requirement is likely unconstitutional. Cases challenging the mandatory disclosure of voters' Social Security numbers on privacy grounds have yielded mixed results.

Non-photo identification. For the most part, courts have looked favorably on requirements that voters present some form of identifying documents if the photo identification is not the only form accepted. In Colorado Common Cause v. Davidson, No. 04CV7709, 2004 WL 2360485, at *1 (Colo. Dist. Ct. Oct. 18, 2004), plaintiffs challenged a law requiring all in-person voters to show identification (not just first-time registrants). The court upheld this requirement against a constitutional challenge. Similarly, in League of Women Voters v. Blackwell, 340 F. Supp. 2d 823 (N.D. Ohio 2004), the court rejected a challenge to an Ohio directive requiring first-time voters who registered by mail to provide one of the HAVA-permitted forms of identification, in order to have their provisional ballots counted. Specifically, the directive provided that their provisional ballots would be counted if the voter (a) orally recited his driver's license number or the last four digits of his social security number or (b) returned to the polling place before it closed with some acceptable identification (including reciting those identification numbers). Id. This was found to be consistent with HAVA.

Photo ID. Since the 2004 election, two states have adopted laws requiring photo identification in order to have one's vote counted, without an affidavit exception: Georgia and Indiana. Both these requirements were enacted in 2005 and both have been challenged in court. The Georgia law required voters attempting to cast a ballot in person present a valid form of photographic identification. O.C.G.A. § 21-2-417. On October 18, 2005, the District Court granted the Plaintiff's motion for a preliminary injunction, enjoining the application of the new identification requirements on constitutional grounds. In granting the injunction, the court held that plaintiffs' claims under both the Fourteenth Amendment (equal protection) and Twenty-Fourth Amendment (poll tax) had a substantial likelihood of succeeding on the merits at trial (Common Cause v. Billups,
In January 2006, Georgia enacted a modified version of its photo ID law, which the court has not yet ruled on. In the other state that has enacted a photo ID requirement without an affidavit exception (Indiana), legal challenges have also been filed. (Indiana Democratic Party v. Rokita and Crawford v. Marion County Election Board). Cross-motions for summary judgment are currently pending. Another case of significance, for purposes of photo ID requirements, is American Civil Liberties Union of Minnesota v. Kiffmeyer, No. 04-CV-4653, 2004 WL 2428690, at *1 (D. Minn. Oct. 28, 2004). In that case, the court enjoined a Minnesota law that allowed the use of tribal photo ID cards, only for an Indian who lived on the reservation. 2004 WL 2428690, at *1. The Court found no rational basis for distinguishing based on whether or not the cardholder lives on the reservation. Id. at *1, 3. The court’s decision in this case indicates that courts are likely to look strictly on photo ID requirements.

Privacy. In Greidinger v. Davis, 988 F.2d 1344 (4th Cir. 1993), the court struck down on due process grounds a Virginia law requiring disclosure of voters’ social security numbers for voter registration. The social security numbers recorded in voter registration lists had been disclosed to the public and political parties that had requested the lists. The court found that the requirement to give the social security number effectively conditioned rights on the consent to an invasion of privacy. It concluded that this public disclosure of the social security numbers was not necessary to achieve the government’s interest in preventing fraud. On the other hand, in McKay v. Thompson, 226 F.3d 752 (6th Cir. 2000), the court rejected privacy challenges based on both the Constitution and federal statutes, to a Tennessee law requiring social security numbers for voter registration since 1972. 226 F.3d at 755. Second, the NVRA only permits requiring the minimum amount of information necessary to prevent duplicate voter registration and to determine eligibility. The distinction appears to be between the use of Social Security numbers for internal purposes only, which was deemed permissible, and the disclosure of those numbers to the public which was not.

These decisions suggest that the courts will look strictly at requirements that voters produce a photo ID in order to cast a regular ballot. The courts have used a balancing test to weigh the legitimate interest in preventing election fraud against the citizen’s right to privacy (protecting social security numbers from public disclosure, for example) and the reasonableness of requirements for identity documents. To provide both the clarity and certainty in administration of elections needed to forestall destabilizing challenges to outcomes, these early decisions...
suggestion that best practice may be to limit requirements for voter identification to the minimum needed to prevent duplicate registration and ensure eligibility.

Developments since 2004
Since the passage of HAVA, with its limited requirements for voter identification, and following the 2004 election, debate over voter ID has taken place in state legislatures across the country. That debate has not been characterized by solid information on the consequences of tightening requirements for voters to identify themselves before being permitted to cast a regular, rather than a provisional, ballot.

Better information might improve the quality of the debate. Answers to the following key questions are not available in a form that might satisfy those on both sides of the argument.

- What is the overall incidence of vote fraud?
- How does fraud take place in the various stages of the process: registration, voting at the polls, absentee voting, or ballot counting?
- What contribution can tighter requirements for voter ID make to reducing vote fraud?
- What would be the other consequences of increasingly demanding requirements for voters to identify themselves? This is the question addressed, within the limits of the available data, in the analysis in this report.

Answering these questions would provide the information needed for more informed judgment in the states as they consider the tradeoffs among the competing goals of ballot integrity, ballot access, and administrative efficiency. The Carter-Baker Commission recognized the tradeoffs when it tied recommendation for national ID to an affirmative effort by government to identify unregistered voters and make it easy for them to register.

State Voter Databases and Voter ID
With the implementation of the HAVA Computerized Statewide Voter Registration List, an application for voter registration for an election for Federal office may not be accepted or processed unless the application includes a driver’s license number or last four digits of the Social Security number on the voter registration form. This information can be used to verify the identity of the registrant through interfacing with lists maintained by the Motor Vehicle office and Social Security office. If registrants do not have either a driver’s license or Social Security number, the State will assign a unique identifier number to that person.
HAVA does not require that the states notify registrants to remedy any failure to provide either of these numbers or to confirm that they have provided a verifiable number. Verification at the time of registration could forestall difficulties at the polling place. HAVA is silent on how the ID might be required at the polling place for new voters whose driving license or Social Security number could not be verified. Errors in recording those numbers are sure to occur.

Some states are wrestling now with these unresolved issues. In New Jersey, for example, pending legislation would require that voters must be able to confirm their registration through a secure access to the SVRL. It also requires voters to present ID at the polls in order to cast a regular ballot if the numbers recorded on the registration have not been verified (or if no verifiable number appears on the registration). It recognizes the HAVA requirement that if the number provided by the voter has not been verified and if the voter does not present ID at the polls, that voter may cast a provisional ballot. The bill does not specify they have to provide ID within 48 hours in order for their vote to count, as is the case with first-time mail-in registrants.

As some states gain experience in this area, the EAC would perform a useful service by making timely recommendations of best practices for all states to consider.

6. Conclusions

The form of Voter ID required of voters affects turnout. Lack of ID can keep voters from the polls. Or, when they go to the polls, it is reasonable to conclude that stricter Voter ID requirements will divert more voters into the line for provisional ballots. (This conclusion is a conjecture because we lack good data on why voters must cast their ballots provisionally.) The result can be longer lines at the polls and confusion, without a clear demonstration that the security of the ballot is correspondingly increased.  

The dynamics of Voter ID requirements—how the more rigorous Voter ID requirements—affect the decision by potential voters to go or stay away from the polls are not well understood. This lack of understanding should be recognized in the policy process. The debate over voter ID in

---

15 In this connection, the Brennan Center's response to the Carter-Baker Commission report observes that, "while it might be true that in a close election "a small amount of fraud could make the margin of difference," it is equally true that the rejection of a much larger number of eligible voters could make a much bigger difference in the outcome." *Response to the Report of the 2005 Commission on Federal Election Reform*, The Brennan Center for Justice at NYU School of Law and Spencer Overton, On Behalf Of The National Network on State Election Reform, September 19, 2005
the states would be improved by additional research sponsored by the EAC. So far as it may be necessary to reduce vote fraud made possible by inadequate voter ID, the research could identify methods to eliminate the need for voters to bring specific identity documents with them to the polls while assuring that each voter who casts a ballot is eligible and votes only once.

One way to break the connection between the benefits of photo ID and the need for the voter to bring identification to the polling place, as recommended elsewhere by one of the authors of this report, Edward Foley: keep the information to verify a voter's identity in the records at the polling place. Other approaches could be developed.  

16 A potential solution to this problem is to break the connection with the photo requirement and the obligation to produce identification at the polls. Eligible citizens could be required to provide a photograph at the time they register to vote, and poll workers would match this photograph with the image of the person standing in front of them. Given the availability of digital photography, the photos of registered voters could be stored in electronic poll books and easily "pulled up" with a click of a computer mouse when voters sign in to vote. Of course, to satisfy the concerns of liberals, a requirement to provide a digital photograph at time of registration would have to address the cost and accessibility issues identified earlier.

APPENDIX – Court Decisions and Literature on Voter Identification and Related Issues

Court Decisions

Summary of Relevant Cases:

Challenges Prevailed:

American Civil Liberties Union of Minnesota v. Kiffmeyer, 2004
- Action for temporary restraining order – granted
- Statute: allowed use of tribal identification cards w/ name, address & photo as a valid identification to register to vote only if the voter lives on the reservation to “complete” a mail-in application (which only affected about 600 voters w/ incomplete applications)
- Claim -14th Amendment EPC: likely to prevail, no rational basis for a distinction between Indians residing on reservations and those not
- Statute: may use certain forms of photo identification lacking address together with a utility bill but not tribal identification cards
- Claim -14th Amendment EPC: likely to prevail

Greidinger v. Davis, 1993
- Statute: mandated disclosure of SS # as a precondition to voter registration (rationale was voter identification, but the numbers were rarely used to verify identity & were disclosed in voter lists to both political parties and the public upon request)
- Claims:
  - 14th Amendment EPC: no classification (applied strict scrutiny)
  - Substantive due process: law invalid; found that the statute conditioned the fundamental right to vote on the consent to an invasion of privacy; this was found to be a substantial burden (applied strict scrutiny)
    - Compelling interests: preventing voter fraud (deemed compelling)
    - Necessary: fails, preventing voter fraud when allowing names for inspection could be achieved by supplying addresses and DOBs or use of voter registration numbers
    - HOWEVER: Court also made it clear that if the registration scheme kept the SS# for internal use only – it would be valid

Challenges Rejected:

- Sec. of State Directive: provisional ballots issued if first-time voter, who registered by mail and did not provide ID, cannot produce proper ID at the polls AND that the provisional ballot will only be counted if the voter returns to the poll before it closes w/ ID or can recite SS# or DL#
- Claims – Supremacy Clause & HAVA: ruled that HAVA did not specify how the first-time voters’ identifications should be verified and this method was not unreasonable or too burdensome

Colorado Common Clause v. Davidson, 2004
- Statute: required all voters to show ID (most types permitted) before voting
- Claims:
  - HAVA: ruled that HAVA did not preempt more strict state laws & allowed States to be more strict as long as consistent with the purpose of HAVA (both HAVA & CO provisions’ purposes were to prevent voter fraud)
  - Substantive due process and equal protection
    - No improper discrimination
Preventing voter fraud is a compelling interest since it is irreversible once vote is cast
Only marginally more intrusive than HAVA, many types of identification permitted — thus, valid

McKay v. Thompson, 2000
- Statute: mandated disclosure of SS # as a precondition to voter registration
- Claims:
  - Privacy Act, Section 7: ruled that Tennessee voter system exempt from Privacy Act because it is pre-75
  - NVRA, permitting only min. amt. of info. necessary to prevent duplicate registration and determine eligibility: ruled that NVRA does not specifically forbid the use of SS#s & the Privacy Act specifically permits them pre-75
  - Substantive due process: ruled that internal use of SS# not a burden
  - Free Exercise, based on Bible’s supposed prohibition on use of universal identifiers: ruled that law is generally applicable and thus valid
  - P&I, Article IV: does not protect in-state citizens
  - P&I, 14th Amend.: no protection for privilege where Congress authorized its infringement

Kemp v. Tucker, 1975
- Statute: required name, occupation, address, sex, race, height, hair color, eye color, and date of birth be listed on voter registration card for identification purposes
- Claims:
  - VRA: ruled that race was not made a “qualification” for voting
  - 15th Amendment: ruled that it did not abridge right to vote on account of race because rejection of application was due to failure to provide information, not race; race only one factor in identification
  - 14th Amendment EPC: ruled there was no distinction among voters

Perez v. Rhiddlehoover, 1966
- Statute: date of birth, place of birth, mother’s first or maiden name, color of eyes, sex, race, occupation, and whether owner, tenant or boarder must appear on the registration for identification
- Claims:
  - VRA: ruled that it was not a “test or device” because it applied equally
  - 15th Amendment: same reasons

Cases in Which the Plaintiffs Have Prevailed in Challenging the Statute Requiring Voter Identification:

This was an action just before the November 2004 election for a temporary restraining order, which was granted. The ACLU challenged a Minnesota law allowing the use of tribal identification cards with the name, address, and photograph as a valid identification (equal to a driver’s license) for use in “completing” an incomplete mail-in voter registration only if the Indian lives on the reservation. 2004 WL 2428690, at *1. The Court ruled that this distinction would likely violate the Equal Protection Clause because there was no rational basis for differentiating
between the validity of the identification based on whether or not the cardholder lives on the reservation. \textit{Id.} at *1, 3.

Secondly, the ACLU challenged a second statute which allowed the use of certain photo identification lacking the voter's address to be used together with a utility bill or bank statement as valid identification for registration. \textit{Id.} at *3. The statute did not, however, permit using a tribal identification for this same purpose. \textit{Id.} The Court ruled that this likely violated the equal protection clause as well. \textit{Id.}

\textbf{Greidinger v. Davis, 988 F.2d 1344 (4th Cir. 1993).}

This case challenged a Virginia law requiring the social security number for voter registration, which the State subsequently disclosed to the public and political parties upon request in voter registration lists, which included the social security numbers. Failure to provide the social security number resulted in the denial of the registration application. The law was challenged under the Equal Protection Clause and under substantive due process. The Court quickly rejected the equal protection challenge because the law made no classification. 988 F.2d at 1350.

The law was invalidated under substantive due process. \textit{Id.} at 1355. The Court found that the statutory scheme conditioned the fundamental right to vote on the consent to an invasion of privacy, based on concerns of identity theft. \textit{Id.} at 1353-54. The Court found this to be a substantial burden on the right to vote. \textit{Id.} at 1354. The Court recognized that the government's interest in preventing voter fraud was compelling. \textit{Id.} However, the Court found that disclosure of the information to the public and political parties was not necessary to achieve that interest. \textit{Id.} Disclosure of addresses or dates of birth would be sufficient to aid the public in distinguishing between two voters with the same name. \textit{Id.} at 1355. The Court did state that required disclosure of the social security number for internal use only would be valid. \textit{Id.} at 1354 n.10.

\textbf{Cases in Which the Statute or Practice of Voter Identification Has Been Upheld:}

The League of Women Voters challenged the Secretary of State's directive that provisional ballots should be issued to all first-time voters who registered by mail without providing identification who cannot show proper identification at the polls. 340 F. Supp. 2d at 828. The Directive also stated that the provisional ballots would only be counted if the voter orally recited his driver's license number or the last four digits of his social security number or returned to the polling place before it closed with some acceptable identification, including reciting those identification numbers. \textit{Id.} The Court stated that HAVA only requires verification of eligibility of first time voters registering by mail; it does not say how that should be done. \textit{Id.} at 831. The Court found the burden on the right to vote to be slight. \textit{Id.} The Directive was found valid under HAVA and the Supremacy Clause because the number of uncounted votes would be small, the requirement was reasonable, and there was adequate notice of the requirement on the registration forms. \textit{Id.} at 829-30.

In this case, the validity of three Colorado statutory provisions was challenged. The laws (1) required all in-person voters to show identification (not just first-time registrants); (2) provided that votes cast in the wrong precinct would not be counted; and (3) provided that
provisional ballots would not be counted if the voter applied for an absentee ballot. 2004 WL 2360485, at *1. The plaintiffs also challenged the provisions under HAVA. The identification provision allowed nearly all forms of acceptable identification under HAVA. Id. at *6.

The challenge to the identification requirement failed under both challenges. The Court interpreted HAVA as not intended to preempt state laws and as permitting states to be more strict than, but not inconsistent with, HAVA. Id. at *10. The Court felt that the purpose of both laws was the same, to reduce voter fraud, and thus, both laws could coexist. As to the Constitutional claim, both equal protection and substantive due process, the Court felt that preventing voter fraud, which is impossible to remedy once a vote is cast, is a compelling interest, and the Court also felt that a voter identification requirement for all voters, with many types of acceptable identification, was only marginally more intrusive than HAVA. Id. at 12. The Court also found no improper discrimination between voters. Id. Thus, the provision was upheld.

**McKay v. Thompson, 226 F.3d 752 (6th Cir. 2000).**

The Sixth Circuit ruled that the Privacy Act, the National Voter Registration Act, Substantive Due Process, the Privileges and Immunities Clauses (Fourteenth Amendment & Article IV), and the First Amendment right to free exercise do not prohibit requiring disclosure of social security numbers as a precondition to voter registration.

The Privacy Act, Section 7, mandates that it is unlawful for a government to deny a right or privilege because of a citizen's refusal to disclose his social security number, unless the disclosure was required for a system established prior to 1975. 226 F.3d at 755 (citing Privacy Act of 1974, Pub. L. No. 93-579 (1974)). Since Tennessee required social security numbers for voter registration since 1972, his challenge was rejected. 226 F.3d at 755. Second, the NVRA only permits requiring the minimum amount of information necessary to prevent duplicate voter registration and to determine eligibility. Id. at 755-56 (citing 42 U.S.C. §1973gg-3(c)(2)(B)). The Court rejected this challenge because the NVRA does not specifically forbid the use of social security numbers, and the Privacy Act, a more specific statute, grandfathered their use if prior to 1975. 226 F.3d at 756.

Finally, the plaintiff's constitutional claims were all rejected. His substantive due process claim was rejected because internal receipt and use of social security numbers does not burden the fundamental right to vote. Id. The free exercise challenge, based on the Bible's supposed prohibition of universal identifiers, was rejected because the law was generally applicable and not directed at particular religious practices. Id. The Privileges and Immunities Clause claim was rejected because the Clause does not apply to citizens of the state. Id. The Fourteenth Amendment Privileges and Immunities claim, based on the right to vote as unique to U.S. citizenship, was rejected because the Clause provides no protection where Congress has authorized the infringement. Id.

A statute was upheld, which required name, occupation, address, sex, race, height, hair color, eye color, and date of birth to be recorded on the voter registration card and allowed registration officials to reject an incomplete application. 396 F. Supp. at 738. Claims were alleged under the Fourteenth Amendment's Equal Protection Clause, the Fifteenth Amendment, and the Voting Rights Act.

As to the Fourteenth and Fifteenth Amendment claims, the Court reasoned that preventing voter fraud is a compelling goal, and identification provisions are "an essential means of achieving the goal." Id. at 739. The Court also rejected the equal protection claim because the statutes did not create a distinction at all. Id. at 740 n.3. Since race is just one of
several characteristics required, the Court found that it was intended for preventing voter fraud, not some other motive. Id. at 740. As to the VRA, the Court rejected the claim that it added race as a qualification for voting as frivolous. Id. As to a Fifteenth Amendment claim that it abridged the right to vote on account of race, the Court also made a distinction between rejecting a voter application because of race and rejecting an application because of failure to answer all relevant questions to assist in preventing voter fraud. Id. The statute was upheld.

**Perez v. Rhiddlehoover, 186 So. 2d 686 (La. Ct. App. 1966).**

A voter registration requirement was challenged and upheld. The statute stated that date of birth, place of birth, mother’s first or maiden name, color of eyes, sex, race, occupation, and whether owner, tenant or boarder must appear on the registration. 186 So.2d at 690. This information was required for identification of voters, especially when voters had the same name, to prevent duplicate voting. It was challenged under the Voting Rights Act of 1965 Section 4(a) which prohibits denying the right to vote for failure to comply with a “test or device.” The Court felt that this requirement was not a test or device for discrimination because it applied equally. Id. at 691. The Court also determined that it was not in conflict with the Fifteenth Amendment either. Id.

**Friendly House, et al. v. Janet Napolitano et al., CV 04-649 TUC DCB**

On November 30, 2004, the Mexican American Legal Defense and Educational Fund (MALDEF) filed suit seeking to halt the implementation of Proposition 200. Proposition 200 created a number of legal requirements to ensure that public benefits are not available to illegal immigrants. In particular, Proposition 200 requires that a person attempting to register to vote provide one of six specific forms of proof of United States citizenship. Compl. 12-13. Also, any person attempting to vote must present either one form of photo identification or two forms of non-photo identification. Id. at 13.

The lawsuit alleges two violations that directly relate to the voting identification restrictions. First, the lawsuit alleges a violation of the Twenty-Fourth and Fourteenth amendments in that a voter must pay a poll tax by spending money to purchase the required identification. Id. at 20. Second, the lawsuit alleges violation of the Voting Rights Act. Id. at 21. The lawsuit was recently dismissed by the 9th Circuit Court of Appeals for a lack of standing. The Circuit Court found that there was no injury-in-fact, meaning that once an injury occurs the suit will likely be refiled. Additionally, it should be noted that the voter identification issue is only a part of the lawsuit, and much of the focus has been on other aspects of Proposition 200.

**Current Litigation Concerning Voter ID Issues**

Litigation is filled with uncertainty. Litigation stemming from newly passed voter identification requirements will continue into the foreseeable future. Lawsuits are currently pending over voter identification requirements in Georgia and Indiana. Other states, such as Ohio, are considering new identification requirements that could lead to further litigation. The Georgia lawsuit has already succeeded in getting a preliminary injunction against the law in question, which will likely galvanize interested parties in other states to pursue similar litigation. Of course, if the injunction is eventually overturned at the appellate level it could have a similar chilling affect on future litigation.

This summary major litigation pending in Georgia and Indiana includes a brief assessment of the likelihood of success:

---

17 As of January 2, 2006
Georgia (Common Cause/Georgia v. Billups):

On September 19, 2005, Common Cause of Georgia, in conjunction with several other non-profit organizations, filed suit in Federal District Court against the Georgia Secretary of State and other election officials, challenging the constitutionality of Georgia's new voter identification requirements. The new law requires all voters attempting to cast a ballot in person to present a valid form of photographic identification. O.C.G.A. § 21-2-417. A voter that is unable to provide proper identification is given a provisional ballot. However, that provisional ballot will be counted only if the voter is able to subsequently present valid identification within two days of the election. Id.

The lawsuit alleges five separate violations of state and federal law. First, the complaint alleges that the identification requirements infringe on the right to vote guaranteed in the Georgia constitution (Compl. 32). In addition, the Plaintiffs claim violations of the Federal Civil Rights Act and Voting Rights Act. (Compl. 36, 38). Finally, the lawsuit alleges violations of the Fourteenth and Twenty-Fourth amendments to the U.S. Constitution. The complaint claims that the ID requirements constitute an "undue burden" on the right to vote, in violation of the Equal Protection Clause of the Fourteenth Amendment (Compl. 34). The ID requirement does not apply to most absentee voters, and thus the requirement is also over-broad and not narrowly tailored to address the stated purpose of preventing voter fraud (Compl. 34). The complaint further alleges that the cost of obtaining a photo ID constitutes a poll tax, in violation of the Twenty-Fourth Amendment, and that the cost is also a violation of the Fourteenth Amendment because it applies to voters who choose to vote in person, and not to those who vote absentee (Compl. 34, 35).

On October 18, 2005, the District Court granted the Plaintiff's motion for a preliminary injunction, enjoining the application of the new identification requirements. In granting the injunction, the court held that both federal constitutional claims had a substantial likelihood of succeeding on the merits at trial (Prelim. Inj. 96, 104). The court also held that, while the two federal statutory claims were plausible, they both lacked sufficient evidence at the time to have a substantial likelihood of success. (Prelim. Inj. 109, 111, 116). Finally, the court held that the Georgia constitutional claim would be barred by the Eleventh Amendment to the U.S. Constitution. (Prelim. Inj. 77).

The Defendants appealed the motion for preliminary injunction to the Eleventh Circuit, and oral argument is scheduled for March 1, 2006. In addition, some news reports have claimed that the Georgia legislature is considering re-visiting the ID requirements in light of the on-going litigation. As for the merits, in granting the preliminary injunction the District Court has already signaled its belief that the federal constitutional claims are likely meritorious. The Eleventh Circuit may have a different view, but for now the case looks to have a reasonable chance of success.

Indiana (Indiana Democratic Party v. Rokita and Crawford v. Marion County Election Board):

The Indiana lawsuit is similar to its Georgia counterpart in content, though not in status. In Indiana separate lawsuits, now joined, were filed by the state Democratic Party and the

---

18 Litigation documents are available at the Election Law @ Moritz website.
http://moritzlaw.osu.edu/electionlaw/litigation/index.php

Indiana Civil Liberties Union (ICLU). The Democratic Party's lawsuit is directed against the Indiana Secretary of State, while the ICLU's lawsuit involves the Marion County Board of Elections and the State of Indiana. Like Georgia, Indiana law also requires citizens voting in person to present some form of official photo identification. IC § 3-11-8-25.1. Voters unable to present identification are given a provisional ballot, which is counted if they are able to provide the required identification by Noon on the second Monday following the election. IC § 3-11.7-5-1. Unlike Georgia, Indiana provides state issued identification at no charge. However, there are costs involved in the process, including transportation to the Bureau of Motor Vehicles, and payment for documents such as birth certificates, which are needed to obtain the ID. (Second Am. Compl. 6).

The Democratic Party's complaint raises Fourteenth Amendment claims similar to those in the Georgia lawsuit, including concerns about substantially burdening the right to vote, the enactment of a de-facto poll tax from the costs indirectly associated with obtaining ID, and the lack of applicability to voters who cast an absentee ballot. (Second Am. Compl. 6-9). In addition, the complaint alleges that the substantial burden placed on the right to vote violates the First Amendment protection of expressive or symbolic speech, as well as the freedom of association as applied to Democratic primary elections. (Second Am. Compl. 9-10). Finally, the complaint alleges violations of the Voting Rights Act, National Voter Registration Act, and the Help America Vote Act (Second Am. Compl. 10-11). The ICLU's complaint alleges many of the same violations, but also includes claims of a violation of Indiana's constitutional guarantee of a free and equal election system. (Compl. 15)

The case is currently in the pre-trial phase, with both sides awaiting decisions on their respective motions for summary judgment. The likelihood of success is bolstered by the fact that the Fourteenth amendment constitutional claims have already been found persuasive by at least one other Federal District Court. However, the Indiana law is notably different than its Georgia counterpart in that it provides free identification. While the plaintiffs make a solid argument that related costs still amount to a poll-tax, it is possible that the court could distinguish on this matter.

Unlike the Georgia case; the Indiana lawsuit also claims a violation of the Help America Vote Act. Although the claim is not completely clear, it seems as though the Plaintiffs are arguing that the Indiana statute requires more stringent identification than what is required by HAVA. 42 U.S.C. § 15483(b)(1)-(2). While this is true, it is unclear how this violates the statute. HAVA merely states that certain voters unable to produce HAVA required identification be given a provisional ballot. Id. Indiana law meets this requirement. IC § 3-11-8-25.1. Although Indiana law requires more stringent identification for counting the provisional ballot, HAVA leaves these decisions to state law. 42 U.S.C. § 15482(a).

20 According to an AP article, the Plaintiffs filed some type of brief on December 21—however it is not yet up on the Moritz website and I am unsure how to access it otherwise.
APPENDIX
Annotated Bibliography on Voter Identification Issues

Law Journals

  - Discusses HAVA a lot
  - Benefits of US adopting Mexican system of identifying voters and voter registration
  - Discusses HAVA, problems of 2000 election, discusses registration & identification
  - Discussion of HAVA requirements and voter ID, problems in 2000
  - Discusses changes in AL to their election law in 2003, including adding voter ID
  - HAVA discussed
  - Discusses challenging elections based on voter fraud & illegal votes
  - Discusses a GA law in 2001 removing hunting & fishing licenses from list of acceptable ID and a failed amendment to limit acceptable ID to photo ID only
  - General discussion of ways voters are verified, what happens when voters are challenged as illegal voters
  - Discusses a photo ID law passed in Michigan in 1997 (later declared violated EPC of 14th amendment)
  - Arguments against photo ID
  - Discusses voter registration as a way to combat fraud & several different ways to do it

Historical articles:
  - Lot of analysis on HAVA and voter ID
  - Little bit of historical
  - Arguments for and against certain types of voter ID laws

- History of voting & requirements & laws throughout time
- Future: I-voting & e-registration – improvements in voter ID which would result

**Marginally relevant/limited discussion of Voter ID issues**

  - Discusses HAVA & implementation

  - Discusses an AL law expanding exemptions to ID requirement if 2 poll workers identify them

  - Internet voting

  - Voter ID and Internet voting
  - Costs & Benefits of Internet voting
  - States using or examining Internet voting

  - Discusses illegal ballots, fraudulent registration

  - Anti fraud election reform in Missouri

  - Vote by mail and discusses fraud issues involved

  - Voter fraud arguments against NVRA

  - History of voting and requirements
  - Theory

------ "Voter Registration and Turnout in the United States." Perspectives on Politics. 2:3 (September 2004).

Appendix
I have taken a look at the agendas. My questions start with assignment as resource person. Is Peggy going to be present for the Vote Fraud and Intimidation presentation? I have not been the person refereeing between Job and Tova, nor am I up to date on what their findings and work are. If I am just there to support the meeting, that's great, but Peggy should be there to make any substantive comments. I suffer from a similar problem with regard to the Eagleton presentation (other than what I gathered from their presentation a few weeks ago).

Perhaps what I need to know is what is the "resource person" supposed to do?

As a second question, do we know whether this lunch on Tuesday is "set". The hotel contract will have to be amended to include this lunch. I don't want to move forward on setting that up if it is not approved by the two Boards or it is otherwise not going to occur.

Third issue is that last time the Standards Board wanted a parliamentarian -- not volunteering, but that should be considered in terms of how our staff is assigned.
MEMORANDUM

TO: MEMBERS OF EAC BOARD OF ADVISORS
FROM: BEVERLY KAUFMAN, CHAIR
       PAUL DEGREGORIO, EAC COMMISSIONER
DATE: APRIL 24, 2006
SUBJECT: UPCOMING MEETING OF BOARD OF ADVISORS, MAY 23-24, 2006

The next meeting of the EAC Board of Advisors (to be held jointly with the EAC Standards Board) will be held in Washington, D.C. on Tuesday, May 23 and Wednesday, May 24, 2006 at the Hamilton Crown Plaza hotel. We hope you will be able to attend this important meeting, which will focus on consideration and discussion of a number of ongoing election administration research projects currently underway by the EAC. Additionally, there will also be a discussion regarding recent work conducted by the National Institute of Standards and Technology (NIST) regarding voter verifiable audit trail. (Please see the draft agenda attached for additional information.)

As was the case with our previous meetings of the EAC Board of Advisors, the EAC will pay the cost of travel, hotel and a Federal per diem for any member of the Board of Advisors wishing to attend the May 2006 meeting. Our travel agent, Adventure Travel, will be contacting you with further information regarding travel and lodging arrangements. If you have any questions, please contact Amie Sherrill of the Election Assistance Commission. She may be reached at (202) 566-3100 (email address is asherrill@eac.gov).

Thank you in advance for your willingness to join us in Washington, D.C. We look forward to seeing you soon.
U.S. ELECTION ASSISTANCE COMMISSION
Board of Advisors Meeting Agenda
Washington, D.C.
May 23 – 24, 2006

Tuesday, May 23, 2006

Noon – 1:15 P.M.   LUNCHEON

Brief Welcoming Remarks
Chairman Paul DeGregorio

EAC Staff Presentations:

Katrina Voting Assistance Relief (Edgardo Cortes);
Public Access Portals (Edgardo Cortes);
Legal On-Line Information Clearinghouse (Julie Thompson-Hodgkins);
Design for Democracy (improvements to ballot design, national voter registration mail-in form and polling place signage) (Karen Lynn-Dyson)

NOTE: The EAC Standards Board will be meeting simultaneously.

1:15 – 1:30 P.M.   BREAK

1:30 – 2:30 P.M.   BOARD OF ADVISORS PLENARY SESSION
Session Chaired by Beverly Kaufman, Chair

• Appointment of Parliamentarian

• Call of Roll and Appointment of Proxy Committee

• Appointment of Resolutions Committee

• Review of Meeting Book Materials

• Report of Proxy Committee to establish voting strength

• Adoption of Agenda

• Adoption of Minutes of August 2005 Meeting
2:30 – 4:00 P.M. PRESENTATION AND CONSIDERATION OF DRAFT REPORT ON POLL WORKER RECRUITMENT, TRAINING AND RETENTION (INCLUDING COLLEGE POLL WORKERS)

Presenters:
Jennifer Collins-Foley, EAC Consultant
Dora Rose, Center for Election Integrity, Cleveland State University
Resource Person: Karen Lynn-Dyson, EAC

4:00 – 4:15 P.M. BREAK

4:15 – 5:30 P.M. PRESENTATION AND CONSIDERATION OF DRAFT REPORT ON VOTE COUNT/RECOUNT

Presenters:
Dr. Thad Hall, Assistant Professor of Political Science, University of Utah
Doug Chapin, EAC Consultant
Resource Person: Julie Thompson-Hodgkins, EAC

NOTE: Attendees on their own for dinner.

Wednesday, May 24, 2006

8:00 – 8:30 A.M. CONTINENTAL BREAKFAST

8:30 – 9:15 A.M. PRESENTATION AND CONSIDERATION OF DRAFT REPORT ON PROVISIONAL VOTING

Presenters:
Thomas O'Neil: Project Manager, EAC Provisional Voting
Edward Foley: Director, Election Law@Moritz (The Ohio State University)
Resource Person: Julie Thompson-Hodgkins, EAC

9:15 – 10:00 A.M. BRIEFING ON PROPOSED MANAGEMENT GUIDELINES

Presenters:
Connie Schmidt, EAC Consultant
Brit Williams, EAC Consultant
Resource Person: Brian Hancock, EAC

10:00 – 10:15 A.M. BREAK

10:30 – 11:00 A.M. PRESENTATION AND CONSIDERATION OF DRAFT REPORT ON VOTER FRAUD/VOTER INTIMIDATION

Presenters:
Job Serebrov, Associate, The Nixon Law Firm
Tova Wang, Democracy Fellow, The Century Foundation
Resource Person: Juliet Thompson-Hodgkins, EAC

11:00 – 11:55 A.M. PRESENTATION AND CONSIDERATION OF DRAFT REPORT ON VOTER IDENTIFICATION

Presenters:
Thomas O’Neil: Project Manager, EAC Voter I.D. Study
Edward Foley, Director, Election Law@Moritz, The Ohio State University
Resource Person: Juliet Thompson-Hodgkins, EAC

NOON – 1:30 P.M. EAC Activities Update

Brief Remarks by: Chairman Paul DeGregorio
Commissioner Gracia Hillman

Presentation: General Update on NIST/TGDC Activities

Introduction of Speakers: Commissioner Donetta Davidson

Presentors:
John Wack, NIST

1:40 – 2:45 P.M. PRESENTATION AND CONSIDERATION OF DRAFT REPORT ON IMPROVING DATA COLLECTION

Presenters:
Karen Lynn-Dyson, Research Director, EAC
Laiza Otero, Research Associate, EAC
Resource Person: Brian Hancock, EAC

2:45 – 3:00 P.M. BREAK

3:00 – 5:00 P.M. BOARD OF ADVISORS PLENARY SESSION
Session Chaired by Beverly Kaufman, Chair

- Election of Officers
- Report of Resolutions Committee
  Chaired by Vice Chairman Chris Thomas
- Other Business

5:00 P.M. ADJOURN
Dear Commissioners:

This is to let you know that the Working Group for our Voting Fraud and Voter Intimidation preliminary research project is scheduled to meet in EAC's large conference room the afternoon of Thursday, May 18. I will provide more information about this meeting to you later.

Peggy Sims
Election Research Specialist
Adam:

J.R. Perez's resume is attached, and I have forwarded my last explanatory email to Job in answer to his concerns. I will tell Tova not to contact Ray, but that she may talk with you about this issue. Thanks! ---
Peggy

--- Forwarded by Margaret Sims/EAC/GOV on 05/09/2006 02:45 PM ---

As you may recall, the Commissioners directed me to find a nonpartisan local election official to serve on the Working Group. The three of us discussed the desirability of having a Hispanic. I proposed that I find someone from Texas because of that State's colorful history of voting fraud and their innovative approaches to combat it. In those Texas counties that hire Election Administrators to run elections, rather than having elected officials do so (Tax Assessor for voter registration; County Clerk for balloting), the Election Administrator is hired by the County Election Commission and is supposed to perform his or her duties in a nonpartisan manner. (See attached excerpts from Texas Election Code regarding election administrator hiring and restrictions on partisan activity.)

Any experienced Texas election official will be familiar with voting fraud and voter intimidation schemes used in that State. Mr. Perez has over 13 years experience as a county Election Administrator in Texas. You won't find many news articles mentioning him because he has kept his nose clean. (The Texas press, as in many other parts of the country, prefers to report bad news.) Mr. Perez is plugged into the association of Texas election officials and the two largest organizations of election officials in this country: the International Association of Clerks, Recorders, Election Officials and Treasurers (IACREOT); and The Election Center. He is a past President and past Chairman of the Legislative Committee for the Texas Association of Election Administrators. He currently serves on IACREOT's Election Officials Committee, which plans the educational sessions for election officials that are conducted at that organization's conferences. His peers in IACREOT and The Election Center have selected his submissions on web presentations (IACREOT) and his professional practices papers (Election Center) for awards. Mr. Perez also has access to information from other States through his membership in IACREOT and The Election Center. He also has a sense of humor, which you will note if you access the staff web page on the Guadalupe County Elections web site and hear the Mission Impossible theme... something that might be useful in the upcoming meeting.

Guadalupe County is small but growing. In 2004, the county had over 65 thousand registered voters (a number more than doubled the number of registered voters in 1988). A third of the county's population claims Hispanic or Latino origin, according to the U.S. Census Bureau. The county is in south central Texas and is bordered by Comal, Hays, Cladwell, Gonzales, Wilson, and Bexar counties. In the 1980s, the county was predominately a farming community; but in recent years, many people have moved from...
San Antonio (Bexar County) to Guadalupe County, preferring to live in Guadalupe County and work in Bexar County.

--- Peggy

"Job Serebrov" <serebrov@sbcglobal.net>

Peggy:

What political party is Perez with? How political is he? Is the position in Texas neutral or political? Who appointed Perez?

As to Pat I will contact him but I can't promise anything. If Pat can't come, who is getting knocked off Tova's list?

Job

Subject Re: Working Group

Peggy:

What political party is Perez with? How political is he? Is the position in Texas neutral or political? Who appointed Perez?

As to Pat I will contact him but I can't promise anything. If Pat can't come, who is getting knocked off Tova's list?

Job
Adam:

Regarding the Vote Count/Recount contract, I am trying to schedule a teleconference with Thad for tomorrow. We will discuss preparations for his presentation, among other things. He may suggest additional materials, other than the testimony, that may be acceptable to us.

Regarding the Vote Fraud/Voter Intimidation project, I don't think the materials will include a written recap of the Working Group meeting, scheduled for May 18, if we have to have the materials to you NLT COB May 17. I can provide a verbal recap at the meeting. I may be able to pull together a written recap after May 18, but it won't be available much earlier than the week of the meetings.

Let me know if you have any questions. --- Peggy

Attached, please find draft letter to be sent to the Commissioners. Any comments or corrections, please make them and send them back to Amie and myself. We hope to send this email by 3 PM today, so please take a look quickly-- for your projects.

 Commissioners:

Peggy, Edgardo, Karen, Laiza, Adam and Amie met this afternoon to discuss what materials will be ready to present to the Standards Board and Board of Advisors members during the meetings later this month. Listed below is what we have determined to be available for their review and feedback. Please review this list and offer your feedback.

Also, attached is an updated SB agenda with "comments" on work product for each project to be discussed.

**Design for Democracy** - exhibits to be on display for board member review and feedback; Ric Grefe will be present with KLD to discuss the processes used to get to these specific examples; Preliminary Design Report (dated April 10, 2006) to be delivered electronically to the members for their review prior to the meeting.
Legal Information Clearinghouse - demo version of the website will be available to show

Public Access Portals - there is a conference scheduled for June 16-18; a tentative agenda and, if desired, a list of participants will be made available to the members for their review and feedback; also future steps can also be outlined for their feedback

Katrina Voting Assistance Relief - due to the limited amount of information that we can offer, we propose eliminating this topic and substituting discussions on our Language Working Group meetings

Language Working Groups - the members will be updated on our two working group meetings and the information received at both, as well as our next steps

Provisional Voting - a draft of the final report is to be delivered to the 4 C's by 5/11 for their review and feedback; product following 4C review will be available 5/17 for electronic distribution to board members

Poll Worker R T & R (including College Pollworker) - reports as they stand now are not ready to be presented, according the KLD; Peggy and Karen to communicate to project managers the need for a report by 5/11 for review by the 4 C's

Proposed Management Guidelines - Connie, Brit, and Brian to determine on 5/10 what materials are ready for presentation to board members; currently a 3 page overview briefing of guideline principles and a 20 page chapter on security principles have been prepared

Vote Count/Recount - materials to be delivered to board members include the public testimony given by Thad Hall and Doug Chapin at our Seattle public meeting and several case studies outlining examples

EAC Election Day Survey - draft report with changes/updates highlighted and website application clips to be presented (Ready).

Voting Fraud/Voter Intimidation - a summary of the preliminary research and a recap of the discussions of the May 18 working group meeting offering brainstorming ideas, not advice

NIST/TGDC activities - Allan Eustis states that NIST is working to provide their summary of materials to be provided, and that they will get that to us ASAP.

Voter Identification - a PowerPoint presentation outlining the process and a summary of findings. Peer review group to occur May 11th, with final Draft due the 15th. At this time, Commissioners can determine whether Draft Report is ready to submit to the SB and BOA.

- Appointment of Parliamentarian
- Adoption of Agenda
- Review of Meeting Book Materials
- Presentation of Proposed Permanent Bylaws
- Election of Executive Board Vacancy

2:30 – 4:00 P.M. DISCUSSION: DRAFT REPORT ON PROVISIONAL VOTING

Presenters:
NOTE: Attendees on their own for dinner.

Wednesday, May 24, 2006

8:00 – 8:30 A.M. CONTINENTAL BREAKFAST

8:30 – 9:15 A.M. BRIEFING: PROPOSED MANAGEMENT GUIDELINES

Presenters:
Connie Schmidt, EAC Consultant
Brit Williams, EAC Consultant
EAC Resource Person: Brian Hancock

9:15 – 10:00 A.M. BRIEFING: DRAFT REPORT ON VOTE COUNT/RECOUNT

Presenters:
Dr. Thad Hall, Assistant Professor of Political Science, University of Utah
Doug Chapin, EAC Consultant
EAC Resource Person: Peggy Sims

10:00 – 10:15 A.M. BREAK

10:30 – 11:00 A.M. DISCUSSION: DRAFT EAC ELECTION DAY SURVEY

Presenters:
Karen Lynn-Dyson, Research Director, EAC
Laiza Otero, Research Associate, EAC

11:00 – 11:55 P.M. BRIEFING: BRIEFING ON VOTING FRAUD/VOTER INTIMIDATION

Presenters:
Job Serebrov, Associate, The Nixon Law Firm
NOON – 1:30 P.M. JOINT LUNCHEON

EAC Activities Update

Brief Remarks by: Chairman Paul DeGregorio
Vice-Chairman Ray Martinez III
Commissioner Gracia Hillman

Presentation: General Update on NIST/TGDC Activities

Introduction of Speaker: Commissioner Donetta Davidson

Presenters:
John Wack, NIST

1:40 – 2:45 P.M. DISCUSSION: DRAFT REPORT ON VOTER IDENTIFICATION

Presenters:
Thomas O'Neill, Provisional Voting/Voter Identification Study
Edward Foley, Director, Election Law@Moritz, The Ohio State University

EAC Resource Person: Julie Thompson-Hodgkins

2:45 – 3:00 P.M. BREAK

3:00 – 5:00 P.M. STANDARDS BOARD PLENARY SESSION

Session Chaired by Peggy Nighswonger, Chair, Executive Board

Discussion and consideration of Standards Board business.

5:00 P.M. ADJOURN
Adam and Amie:

Attached are the status report on the Voting Fraud-Voter Intimidation research project and two versions of the PowerPoint presentation from our Vote Count/Recount contractor (one with the first slide labeled for the EAC Standards Board; the other with the first slide labeled for the Board of Advisors). — Peggy
INTRODUCTION

Section 241 of the Help America Vote Act of 2002 (HAVA) requires EAC to conduct research on election administration issues. Among the tasks listed in the statute is the development of:

- nationwide statistics and methods of identifying, deterring, and investigating voting fraud in elections for Federal office [section 241(b)(6)]; and

- ways of identifying, deterring, and investigating methods of voter intimidation [section 241(b)(7)].

EAC's Board of Advisors recommended that the agency make research on these matters a high priority.

FOCUS OF CURRENT RESEARCH

In September 2005, the Commission hired two consultants with expertise in this subject matter, Job Serebrov and Tova Wang, to:

- develop a comprehensive description of what constitutes voting fraud and voter intimidation in the context of Federal elections;

- perform background research (including Federal and State administrative and case law review), identify current activities of key government agencies, civic and advocacy organizations regarding these topics, and deliver a summary of this research and all source documentation;

- establish a project working group, in consultation with EAC, composed of key individuals and representatives of organizations knowledgeable about the topics of voting fraud and voter intimidation;

- provide the description of what constitutes voting fraud and voter intimidation and the results of the preliminary research to the working group, and convene the working group to discuss potential avenues for future EAC research on this topic; and

- produce a report to EAC summarizing the findings of the preliminary research effort and working group deliberations that includes recommendations for future research, if any;

As of the date of this report, the consultants have drafted a definition of election fraud, reviewed relevant literature and reports, interviewed persons from government and private sectors with subject matter expertise, analyzed news reports of alleged election fraud, reviewed case law, and established a project working group.
DEFINITION OF ELECTION FRAUD

The consultants drafted a definition of election fraud that includes numerous aspects of voting fraud (including voter intimidation, which is considered a subset of voting fraud) and voter registration fraud, but excludes campaign finance violations and election administration mistakes. This draft will be discussed and probably refined by the project working group, which is scheduled to convene on May 18, 2006.

LITERATURE REVIEW

The consultants found many reports and books that describe anecdotes and draw broad conclusions from a large array of incidents. They found little research that is truly systematic or scientific. The most systematic look at fraud appears to be the report written by Lori Minnite, entitled “Securing the Vote: An Analysis of Election Fraud”. The most systematic look at voter intimidation appears to be the report by Laughlin McDonald, entitled “The New Poll Tax”. The consultants found that books written about this subject all seem to have a political bias and a pre-existing agenda that makes them somewhat less valuable.

Moreover, the consultants found that reports and books make allegations but, perhaps by their nature, have little follow up. As a result, it is difficult to know when something has remained in the stage of being an allegation and gone no further, or progressed to the point of being investigated or prosecuted or in any other way proven to be valid by an independent, neutral entity. This is true, for example, with respect to allegations of voter intimidation by civil rights organizations, and, with respect to fraud, John Fund’s frequently cited book, “Stealing Elections”.

Consultants found that researchers agree that measuring something like the incidence of fraud and intimidation in a scientifically legitimate way is extremely difficult from a methodological perspective and would require resources beyond the means of most social and political scientists. As a result, there is much more written on this topic by advocacy groups than social scientists.

Other items of note:

- There is as much evidence, and as much concern, about structural forms of disenfranchisement as about intentional abuse of the system. These include felon disenfranchisement, poor maintenance of databases and identification requirements.

- There is tremendous disagreement about the extent to which polling place fraud, e.g. double voting, intentional felon voting, noncitizen voting, is a serious problem. On balance, more researchers find it to be less of a problem than is commonly described in the political debate; but some reports say it is a major problem, albeit hard to identify.
• There is substantial concern across the board about absentee balloting and the opportunity it presents for fraud.

• Federal law governing election fraud and intimidation is varied and complex and yet may nonetheless be insufficient or subject to too many limitations to be as effective as it might be.

• Deceptive practices, e.g. targeted flyers and phone calls providing misinformation, were a major problem in 2004.

• Voter intimidation continues to be focused on minority communities, although the American Center for Voting Rights uniquely alleges it is focused on Republicans.

Recommendations

The consultants recommend that subsequent EAC research include a follow up study of allegations made in reports, books and newspaper articles. They also suggest that the research should focus on filling the gap between the lack of reports based on methodical studies by social or political scientists and the numerous, but less scientific, reports published by advocacy groups.

INTERVIEWS

The consultants jointly selected experts from the public and private sector for interviews. The consultants’ analysis of their discussions with these members of the legal, election official, advocacy, and academic communities follows.

Common Themes

• There is virtually universal agreement that absentee ballot fraud is the biggest problem, with vote buying and registration fraud coming in after that. The vote buying often comes in the form of payment for absentee ballots, although not always. Some absentee ballot fraud is part of an organized effort; some is by individuals, who sometimes are not even aware that what they are doing is illegal. Voter registration fraud seems to take the form of people signing up with false names. Registration fraud seems to be most common where people doing the registration were paid by the signature.

• There is widespread but not unanimous agreement that there is little polling place fraud, or at least much less than is claimed, including voter impersonation, “dead” voters, noncitizen voting and felon voters. Those few who believe it occurs often enough to be a concern say that it is impossible to show the extent to which it happens, but do point to instances in the press of such incidents. Most people believe that false registration forms have not resulted in polling place fraud,
although it may create the perception that vote fraud is possible. Those who believe there is more polling place fraud than reported/investigated/prosecuted believe that registration fraud does lead to fraudulent votes. Jason Torchinsky from the American Center for Voting Rights is the only interviewee who believes that polling place fraud is widespread and among the most significant problems in the system.

- Abuse of challenger laws and abusive challengers seem to be the biggest intimidation/suppression concerns, and many of those interviewed assert that the new identification requirements are the modern version of voter intimidation and suppression. However there is evidence of some continued outright intimidation and suppression, especially in some Native American communities. A number of people also raise the problem of poll workers engaging in harassment of minority voters. Other activities commonly raised were the issue of polling places being moved at the last moment, unequal distribution of voting machines, videotaping of voters at the polls, and targeted misinformation campaigns.

- Several people – including representatives from the Department of Justice (DOJ) - indicate that, for various reasons, DOJ is bringing fewer voter intimidation and suppression cases now, and has increased its focus on matters such as noncitizen voting, double voting, and felon voting. While DOJ’s Voting Section, Civil Rights Division, focuses on systemic patterns of malfeasance, the Election Crimes Branch, Public Integrity Section, has increased prosecutions of individual instances of felon, alien, and double voting at the same time as it maintains an aggressive pursuit of systematic schemes to corrupt the electoral process.

- The problem of badly kept voter registration lists, with both ineligible voters remaining on the rolls and eligible voters being taken off, remains a common concern. A few people are also troubled by voters being on registration lists in two states. They said that there was no evidence that this had led to double voting, but it opens the door to the possibility. There is great hope that full implementation of the new requirements of HAVA – done well, a major caveat – will reduce this problem dramatically.

Common Recommendations:

- Many of those interviewed recommend better poll worker training as the best way to improve the process; a few also recommended longer voting times or voting on days other than election day (such as weekends) but fewer polling places so only the best poll workers would be employed.

- Many interviewed support stronger criminal laws and increased enforcement of existing laws with respect to both fraud and intimidation. Advocates from across the spectrum expressed frustration with the failure of the Department of Justice to pursue complaints.
With respect to DOJ’s Voting Section, Civil Rights Division, John Tanner indicated that fewer cases are being brought because fewer are warranted – it has become increasingly difficult to know when allegations of intimidation and suppression are credible since it depends on one’s definition of intimidation, and because both parties are doing it. Moreover prior enforcement of the laws has now changed the entire landscape – race based problems are rare now. Although challenges based on race and unequal implementation of identification rules would be actionable, Mr. Tanner was unaware of such situations actually occurring and his office has not pursued any such cases.

Craig Donsanto of DOJ’s Election Crimes Branch, Public Integrity Section, says that while the number of election fraud related complaints have not gone up since 2002, nor has the proportion of legitimate to illegitimate claims of fraud, the number of cases DOJ is investigating and the number of indictments his office is pursuing are both up dramatically. Since 2002, DOJ has brought more cases against alien voters, felon voters and double voters than ever before. Mr. Donsanto would like more resources so that his agency can do more and would like to have laws that make it easier for the federal government to assume jurisdiction over voter fraud cases.

- A couple of interviewees recommend a new law that would make it easier to criminally prosecute people for intimidation even when there is not racial animus.

- Several advocate expanded monitoring of the polls, including some associated with the Department of Justice.

- Almost everyone hopes that administrators will maximize the potential of statewide voter registration databases to prevent fraud.

- Challenge laws, both with respect to pre-election day challenges and challengers at the polls, need to be revised by all states to ensure they are not used for purposes of wrongful disenfranchisement and harassment.

- Several people advocate passage of Senator Barak Obama’s “deceptive practices” bill.

- There is a split on whether it would be helpful to have nonpartisan election officials – some indicated they thought even if elections officials are elected as non partisan officials, they will carry out their duties in biased ways nonetheless. However, most agree that elections officials pursuing partisan agendas are a problem that must be addressed in some fashion. Suggestions included moving election responsibilities out of the secretary of states’ office; increasing transparency in the process; and enacting conflict of interest rules.

- A few recommend returning to allowing use of absentee ballots “for cause” only if it were politically feasible.
A few recommend enacting a national identification card, including Pat Rogers, an attorney in New Mexico, and Jason Torchinsky from ACVR, who advocates the proposal in the Carter-Baker Commission Report.

A couple of interviewees indicated the need for clear standards for the distribution of voting machines.

NEWS ARTICLES

Consultants conducted a Nexis search of related news articles published between January 1, 2001 and January 1, 2006. A systematic, numerical analysis of the data collected during this review is currently being prepared. What follows is an overview of these articles provided by the consultants.

Absentee Ballots

According to press reports, absentee ballots are abused in a variety of ways:

- Campaign workers, candidates and others coerce the voting choices of vulnerable populations, usually elderly voters.
- Workers for groups and individuals have attempted to vote absentee in the names of the deceased.
- Workers for groups, campaign workers and individuals have attempted to forge the names of other voters on absentee ballot requests and absentee ballots and thus vote multiple times.

It is unclear how often actual convictions result from these activities (a handful of articles indicate convictions and guilty pleas), but this is an area in which there have been a substantial number of official investigations and actual charges filed, according to news reports where such information is available. A few of the allegations became part of civil court proceedings contesting the outcome of the election.

While absentee fraud allegations turn up throughout the country, a few states have had several such cases. Especially of note are Indiana, New Jersey, South Dakota, and most particularly, Texas. Interestingly, there were no articles regarding Oregon, where the entire system is vote by mail.
Voter Registration Fraud

According to press reports, the following types of allegations of voter registration fraud are most common:

- Registering in the name of dead people;
- Fake names and other information on voter registration forms;
- Illegitimate addresses used on voter registration forms;
- Voters being tricked into registering for a particular party under false pretenses; and
- Destruction of voter registration forms depending on the party the voter registered with.

There was only one self evident instance of a noncitizen registering to vote. Many of the instances reported included official investigations and charges filed, but few actual convictions, at least from the news reporting. There have been multiple reports of registration fraud in California, Colorado, Florida, Missouri, New York, North Carolina, Ohio, South Dakota and Wisconsin.

Voter Intimidation and Suppression

This is the area which had the most articles, in part because there were so many allegations of intimidation and suppression during the 2004 election. Most of these remained allegations and no criminal investigation or prosecution ensued. Some of the cases did end up in civil litigation.

This is not to say that these alleged activities were confined to 2004 – there were several allegations made during every year studied. Most notable were the high number of allegations of voter intimidation and harassment reported during the 2003 Philadelphia mayoral race.

A very high number of the articles were about the issue of challenges to voters’ registration status and challengers at the polling places. There were many allegations that planned challenge activities were targeted at minority communities. Some of the challenges were concentrated in immigrant communities.

However, the tactics alleged varied greatly. The types of activities discussed also include the following:

- Photographing or videotaping voters coming out of polling places;
- Improper demands for identification;
• Poll watchers harassing voters;
• Poll workers being hostile to or aggressively challenging voters;
• Disproportionate police presence;
• Poll watchers wearing clothes with messages that seemed intended to intimidate; and
• Insufficient voting machines and unmanageably long lines.

Although the incidents reported on occurred everywhere, not surprisingly, many came from “battleground” states. There were several such reports out of Florida, Ohio and Pennsylvania.

“Dead Voters and Multiple Voting”

There were a high number of articles about people voting in the names of the dead and voting more than once. Many of these articles were marked by allegations of big numbers of people committing these frauds, and relatively few of these allegations turning out to be accurate according to investigations by the newspapers themselves, elections officials, and criminal investigators. Often the problem turned out to be a result of administrative error, poll workers mis-marking voter lists, a flawed registration list and/or errors made in the attempt to match names of voters on the list with the names of the people who voted. In a good number of cases, there were allegations that charges of double voting by political leaders were an effort to scare people away from the voting process.

Nonetheless there were a few cases of people actually being charged and/or convicted for these kinds of activities. Most of the cases involved a person voting both by absentee ballot and in person. A few instances involved people voting both during early voting and on Election Day, which calls into question the proper marking and maintenance of the voting lists. In many instances, the person charged claimed not to have voted twice on purpose. A very small handful of cases involved a voter voting in more than one county and there was one substantiated case involving a person voting in more than one state. Other instances in which such efforts were alleged were disproved by officials.

In the case of voting in the name of a dead person, the problem lay in the voter registration list not being properly maintained, i.e. the person was still on the registration list as eligible to vote, and a person took criminal advantage of that. In total, the San Francisco Chronicle found five such cases in March 2004; the AP cited a newspaper analysis of five such persons in an Indiana primary in May 2004; and a senate committee found two people to have voted in the names of the dead in 2005.
As usual, there were a disproportionate number of such articles coming out of Florida. Notably, there were three articles out of Oregon, which has one hundred percent vote-by-mail.

**Vote Buying**

There were a surprising number of articles about vote buying cases. A few of these instances involved long-time investigations concentrated in three states (Illinois, Kentucky, and West Virginia). There were more official investigations, indictments and convictions/pleas in this area.

**Deceptive Practices**

In 2004 there were numerous reports of intentional disinformation about voting eligibility and the voting process meant to confuse voters about their rights and when and where to vote. Misinformation came in the form of flyers, phone calls, letters, and even people going door to door. Many of the efforts were reportedly targeted at minority communities. A disproportionate number of them came from key battleground states, particularly Florida, Ohio, and Pennsylvania. From the news reports found, only one of these instances was officially investigated, the case in Oregon involving the destruction of completed voter registration applications. There were no reports of prosecutions or any other legal proceeding.

**Non-citizen Voting**

There were surprisingly few articles regarding noncitizen registration and voting – just seven all together, in seven different states across the country. They were also evenly split between allegations of noncitizens registering and noncitizens voting. In one case, charges were filed against ten individuals. In another case, a judge in a civil suit found there was illegal noncitizen voting. Three instances prompted official investigations. Two cases, from this Nexis search, remained just allegations of noncitizen voting.

**Felon Voting**

Although there were only thirteen cases of felon voting, some of them involved large numbers of voters. Most notably, of course, are the cases that came to light in the Washington gubernatorial election contest (see Washington summary) and in Wisconsin (see Wisconsin summary). In several states, the main problem was the large number of ineligible felons that remained on the voting list.

**Election Official Fraud**

In most of the cases in which fraud by elections officials is suspected or alleged, it is difficult to determine whether it is incompetence or a crime. There are several cases of ballots gone missing, ballots unaccounted for and ballots ending up in a worker’s possession. In two cases workers were said to have changed peoples’ votes. The one
instance in which widespread ballot box stuffing by elections workers was alleged was in Washington State. The judge in the civil trial of that election contest did not find that elections workers had committed fraud. Four of the cases are from Texas.

Recommendation

The consultants recommend that subsequent EAC research should include a Nexis search that specifically attempts to follow up on the cases for which no resolution is evident from this particular initial search.

CASE LAW RESEARCH

After reviewing over 40,000 cases from 2000 to the present, the majority of which came from appeals courts, the consultants found comparatively few applicable to this study. Of those that were applicable, the consultants found that no apparent thematic pattern emerges. However, it appears to them that the greatest areas of fraud and intimidation have shifted from past patterns of stealing votes to present problems with voter registration, voter identification, the proper delivery and counting of absentee and overseas ballots, provisional voting, vote buying, and challenges to felon eligibility.

Recommendation

Because so few cases provided a picture of these current problems, consultants suggest that subsequent EAC research include a review of state trial-level decisions.

PROJECT WORKING GROUP

Consultants and EAC worked together to select members for the Voting Fraud-Voter Intimidation Working Group that included election officials and representatives of advocacy groups and the legal community who have an interest and expertise in the subject matter. (See Attachment A for a list of members.) The working group is scheduled to convene at EAC offices on May 18, 2006 to consider the results of the preliminary research and to offer ideas for future EAC activities concerning this subject.

FINAL REPORT

After convening the project working group, the consultants will draft a final report summarizing the results of their research and the working group deliberations. This report will include recommendations for future EAC research related to this subject matter. The draft report will be reviewed by EAC and, after obtaining any clarifications or corrections deemed necessary, will be made available to the EAC Standards Board and EAC Board of Advisors for review and comment. Following this, a final report will be prepared.

EAC Invited Technical Advisor:

Craig Donsanto
Director, Election Crimes Branch, U.S. Department of Justice
Karen, I don’t have the capacity to produce a PDF copy of the report. (I thought we discussed this last week and you agreed that the word document would suffice.) Someone at Eagleton could surely covert the DOC file to PDF, but since I just read your email now (4:50), we could not provide a PDF copy today. Please let me know if you want me to pursue this tomorrow.

Thanks for the schedule below. But it raises a question. Earlier this week you told me that the Commissioners asked that we limit our presentation to 10 minutes and leave the rest of the time for questions and comments. As I noted in my response, condensing our reports to 10 minutes poses a challenge. Is the 10 minute limit no longer operative?

Tom O’Neill
Tom-

Look forward to getting a PDF copy of the final versions of the Voter ID paper and the Provisional Voting Paper by COB today.

Here is the timing breakdown for next week's presentations:

**EAC Standards Board (137 members)**

Tuesday, May 23, 2006
2:30-4:00 PM
Hamilton Ballroom
Provisional Voting
45 minutes for presentation
45 minutes for questions and answers

Wednesday, May 24, 2006
1:40-2:45 PM
Hamilton Ballroom
Voter Identification
40 minutes for presentation
25 minutes questions and answers

**EAC Board of Advisors (36 members)**

Wednesday, May 24, 2006
8:30-9:15 AM
Lafayette Park Ballroom
Provisional Voting
20 minutes for presentation
25 minutes questions and answers

Wednesday, May 24, 2006
11:00-11:55 PM
Lafayette Ballroom
Voter Identification
30 minutes presentation
25 minutes questions and answers

**EAC General Counsel Julie Thompson - Hodgkins will facilitate /moderate all of your sessions**

Will be in touch tomorrow after the Commissioners have met.

Subject PV Final Draft for Review by Advisory and Standards Boards

Karen,

Attached is the Final Draft of our report on Provisional Voting for review by the Advisory Board and the Standards Board. I understand from our conversation earlier today that it will be reviewed by the Commissioners at their meeting next week, and, if approved by them, distributed to the boards in advance of their meetings on May 23 and 24. This report will form the basis of our PowerPoint briefing for the boards at those meetings. I will not have hard copies of those PowerPoint presentations for distribution to the boards until the day of the meeting.

We intend to have the Final Draft Voter ID Report to you in time for review by the Commissioners at their second meeting next week.

Thanks for your guidance.

This research report on Provisional Voting in the 2004 election is part of a broader analysis that also includes a study of Voter Identification Requirements, a report on which is forthcoming. Conducting the work was a consortium of The Eagleton Institute of Politics of Rutgers, The State University of New Jersey, and The Moritz College of Law of The Ohio State University.

The Eagleton Institute explores state and national politics through research, education, and public service, linking the study of politics with its day-to-day practice. It focuses attention on how contemporary political systems work, how they change, and how they might work better. Eagleton regularly undertakes projects to enhance political understanding and involvement, often in collaboration with government agencies, the media, non-profit groups, and other academic institutions.

The Moritz College of Law has served the citizens of Ohio and the nation since its establishment in 1891. It has played a leading role in the legal profession through countless contributions made by graduates and faculty. Its contributions to election law have become well known through its Election Law @ Moritz website. Election Law @ Moritz illuminates public understanding of election law and its role in our nation’s democracy.

The Peer Review Group improved the quality of our work by critiquing drafts of our analysis, conclusions and recommendations. While the Group as a whole and the comments of its members individually contributed generously to the research effort, any errors of fact or weaknesses in inference are the responsibility of the Eagleton-Moritz research team. The members of the Peer Review Group do not necessarily share the views reflected in the policy recommendations of the report.
EXECUTIVE SUMMARY

Background and Methodology

This report to the United States Election Assistance Commission (EAC) presents recommendations for best practices to improve the process of provisional voting. It is based on research conducted by the Eagleton Institute of Politics at Rutgers, the State University of New Jersey, and the Moritz College of Law at Ohio State University under contract to the EAC, dated May 24, 2005.

The Help America Vote Act of 2002 (HAVA, (Public Law 107-252) authorizes the EAC (SEC. 241, 42 USC 15381) to conduct periodic studies of election administration issues. The purpose of these studies is to promote methods for voting and administering elections, including provisional voting, that are convenient, accessible and easy to use; that yield accurate, secure and expeditious voting systems; that afford each registered and eligible voter an equal opportunity to vote and to have that vote counted; and that are efficient. Section 302(a) of HAVA required states to establish provisional balloting procedures by January 2004. The process HAVA outlined left considerable room for variation among the states, arguably including such critical questions as who qualifies as a registered voter eligible to cast a provisional ballot that will be counted and in what jurisdiction (precinct or larger unit) the ballot must be cast in order to be counted.

The general requirement for provisional voting is that, if a registered voter appears at a polling place to vote in an election for Federal office, but either the potential voter’s name does not appear on the official list of eligible voters for the polling place, or an election official asserts that the individual is not eligible to vote, that potential voter must be permitted to cast a provisional ballot. In some states, those who should receive a provisional ballot include, in the words of the EAC’s Election Day Survey, “first-time voters who registered by mail without identification and cannot provide identification, as required under HAVA…”

HAVA also provides that those who vote pursuant to a court order keeping the polls open after the established closing hour shall vote by provisional ballot. Election administrators are required by HAVA to notify individuals of their opportunity to cast a provisional ballot.

The Election Center’s National Task Force Report on Election Reform in July 2001 had described provisional ballots as providing “voters whose registration status cannot be determined at the polls or verified at the election office the opportunity to vote. The validity of these ballots is determined later, thus ensuring that no eligible voter is turned away and those truly ineligible will not have their ballots counted.” It recommended “in the absence of election day registration or other solutions to address registration questions, provisional ballots must be adopted by all jurisdictions.” See www.electioncenter.org.

The 2004 election saw at least a dozen suits filed on the issue of whether votes cast in the wrong precinct but the correct county should be counted. One federal circuit court decided the issue in Sandusky County Democratic Party v. Blackwell, 387 F.3d 565 (6th Cir. 2004), which held that votes cast outside the correct precinct did not have to be counted. The court relied on the presumption that Congress must be clear in order to alter the state-federal balance; thus Congress, the court concluded would have been clearer had it intended to eliminate state control over polling location (387 F.3d at 578). An alternative argument, that HAVA’s definition of “jurisdiction” incorporates the broader definition in the National Voting Rights Act, however, has not been settled by a higher court. But for now states do seem to have discretion in how they define “jurisdiction” for the purpose of counting a provisional ballot.

The definition of who was entitled to a provisional ballot could differ significantly among the states. In California, for example, the Secretary of State directed counties to provide voters with the option of voting on a provisional paper ballot if they felt uncomfortable casting votes on the paperless e-voting machines. “I don’t want a voter to not vote on Election Day because the only option before them is a touch-screen voting machine. I want that voter to have the confidence that he or she can vote on paper and have the confidence that their vote was cast as marked,” Secretary Shelley said. See http://wired.com/news/evote/0,2645,63298,00.html . (Our analysis revealed no differences in the use of provisional ballots in the counties with these paperless e-voting machines.) In Ohio, long lines at some polling places resulted in legal action directing that voters waiting in line be given provisional ballots to enable them to vote before the polls closed. (Columbus Dispatch, November 3, 2004.)
Our research began in late May 2005. It focused on six key questions raised by the EAC.

1. How did the states prepare for the onset of the HAVA provisional ballot requirement?
2. How did this vary between states that had previously had some form of provisional ballot and those that did not?
3. How did litigation affect implementation?
4. How effective was provisional voting in enfranchising qualified voters?
5. Did state and local processes provide for consistent counting of provisional ballots?
6. Did local election officials have a clear understanding of how to implement provisional voting?

To answer those questions, we:

1. Surveyed 400 local (mostly county) election officials to learn their views about the administration of provisional voting and to gain insights into their experience in the 2004 election.
2. Reviewed the EAC’s Election Day Survey, news and other published reports in all 50 states to understand the local background of provisional voting and develop leads for detailed analysis.
3. Analyzed statistically provisional voting data from the 2004 election to determine associations between the use of provisional voting and such variables as states’ experience with provisional voting, use of statewide registration databases, counting out-of-precinct ballots, and use of different approaches to voter identification.
4. Collected and reviewed the provisional voting statutes and regulations in all 50 states.
5. Analyzed litigation affecting provisional voting or growing out of disputes over provisional voting in all states.

Our research is intended to provide EAC with a strategy to engage the states in a continuing effort to strengthen the provisional voting process and increase the consistency with which provisional voting is administered, particularly within a state. As EAC and the states move forward to assess and adopt the recommendations made here, provisional voting merits continuing observation and research. The situation is fluid. As states, particularly those states that did not offer a provisional ballot before 2004, gain greater experience with the process and as statewide voter databases are adopted, the provisional voting process will demand further, research-based refinement.

KEY FINDINGS

Variation among the states
In the 2004 election, nationwide about 1.9 million votes, or 1.6% of turnout, were cast as provisional ballots. More than 1.2 million, or just over 63%, were counted. Provisional ballots accounted for a little more than 1% of the final vote tally. These totals obscure the wide variation in provisional voting among the states.\(^5\)

---

\(^4\) Attachment 1 provides detailed information on how this study classifies the states according to the characteristics of their provisional voting procedures. It also describes how the data used in the statistical analysis may differ from the data in the Election Day Survey, which became available as our research was concluding.

\(^5\) HAVA allows the states considerable latitude in how to implement provisional voting, including deciding who beyond the required categories of voters should receive provisional ballots and how to determine which provisional ballots should be counted.
Six states accounted for two-thirds of all the provisional ballots cast.\(^6\)

- The percentage of provisional ballots in the total vote varied by a factor of 1,000 -- from a high of 7% in Alaska to Vermont's 0.006%.
- The portion of provisional ballots cast that were counted ranged from 96% in Alaska to 6% in Delaware.
- States with voter registration databases counted, on average, 20% of the provisional ballots cast.
- States without databases counted ballots at more than twice that rate: 44%.\(^7\)
- States that provided more time to evaluate provisional ballots counted a greater proportion of those ballots. Those that provided less than one week counted an average of 35.4% of their ballots, while states that permitted more than 2 weeks, counted 60.8%.

An important source of variation among states was a state's previous experience with provisional voting. The share of provisional ballots in the total vote was six times greater in states that had used provisional ballots before than in states where the provisional ballot was new. In the 25 states that had some experience with provisional voting before HAVA, a higher portion of the total vote was cast as provisional ballots and a greater percentage of the provisional ballots cast were counted than in the 18 new to provisional balloting.\(^8\)

Variation within states

Within states, too, there was little consistency among different jurisdictions. Of the 20 states for which we have county-level provisional ballot data, the rate of counting provisional ballots varied by as much as 90% to 100% among counties in the same state. This suggests that additional factors (including the training of election judges or poll workers) beyond statewide factors, such as experience or the existence of voter registration databases, also influence the use of provisional ballots.

- In Ohio some counties counted provisional ballots not cast in the assigned precinct even though the state's policy was to count only those ballots cast in the correct precinct.
- Some counties in Washington tracked down voters who would otherwise have had their provisional ballots rejected because they had failed to complete part of their registration form, gave them the chance to correct those omissions, and then counted the provisional ballot.

Resources available to administer provisional voting varied considerably among and within states. Differences in demographics and resources result in different experiences with provisional voting. For example, the Election Day Survey found that staffing problems appeared to be particularly acute for jurisdictions in the lowest income and education categories. Small, rural jurisdictions and large, urban jurisdictions tended to report higher rates of an inadequate number of poll workers within polling places or precincts.

- Jurisdictions with lower education and income tend to report more inactive voter registrations, lower turnout, and more provisional ballots cast.

---

\(^6\) California, New York, Ohio, Arizona, Washington, and North Carolina. The appearance of Arizona, Washington and North Carolina on this list shows that the number of provisional ballots cast depends on factors other than the size of the population.

\(^7\) As the Carter-Baker Commission report put it, "provisional ballots were needed half as often in states with unified databases as in states without." Report on the Commission on Federal Election Reform, "Building Confidence in U. S. Elections," September 2005, p. 16.

\(^8\) See the appendix for our classification of "old" and "new" states and explanation of why the total is less than 50.
• Jurisdictions with higher levels of income and education reported higher average numbers of poll workers per polling place or precinct and reported lower rates of staffing problems per precinct.

In precincts located in districts where many voters live in poverty and have low levels of income and education, the voting process, in general, may be managed poorly. Provisional ballots cannot be expected to work much better. In these areas, the focus should be on broader measures to improve the overall functionality of struggling voting districts, although improving the management of provisional balloting may help at the margin.

The lessons of litigation
Successful legal challenges highlight areas where provisional voting procedures were wanting. A flurry of litigation occurred around the country in October 2004 concerning the so-called “wrong precinct issue” – whether provisional ballots cast by voters in a precinct other than their designated one would be counted for statewide races. Most courts, including the U.S. Court of Appeals for the Sixth Circuit (the only federal appeals court to rule on the issue), rejected the contention that HAVA requires the counting of these wrong-precinct provisional ballots. This litigation was significant nonetheless.

• First, the Sixth Circuit decision established the precedent that voters have the right to sue in federal court to remedy violations of HAVA.
• Second --and significantly-- the litigation clarified the right of voters to receive provisional ballots, even though the election officials were certain they would not be counted. The decision also defined an ancillary right --the right to be directed to the correct precinct. There voters could cast a regular ballot that would be counted. If they insisted on casting a provisional ballot in the wrong precinct, they would be on notice that it would be a symbolic gesture only.
• Third, these lawsuits prompted election officials to take better care in instructing precinct officials on how to notify voters about the need to go to the correct precinct in order to cast a countable ballot.

States move to improve their processes
Shortly after the 2004 election, several states came to the conclusion that the administration of their provisional voting procedures needed to be improved, and they amended their statutes. The new legislation highlights areas of particular concern to states about their provisional voting process.

• Florida, Indiana, Virginia, and Washington have clarified or extended the timeline to evaluate the ballots.
• Colorado, New Mexico, North Carolina, and Washington have passed legislation focused on improving the efficacy and consistency of the voting and counting process.
• Colorado, Arkansas, and North Dakota took up the issue of counting provisional ballots cast in the wrong precinct.

The wide variation in the implementation of provisional voting among and within states suggests that EAC can help states strengthen their processes. Research-based recommendations for best, or at least better, practices that draw on the experience gained in the 2004 election can be useful in states’ efforts to achieve greater consistency in the administration of provisional voting. The important effect of experience on the administration of the provisional ballot process indicates that the states have much they can learn from each other.
SUMMARY OF RECOMMENDATIONS FOR BEST PRACTICES

State efforts to improve the provisional voting process have been underway since the 2004 election. By recommending best practices, the EAC will offer informed advice while respecting diversity among the states.

Take a quality-improvement approach
Defining what constitutes a successful provisional voting system is difficult. Defining quality requires a broad perspective about how well the system works, how open it is to error recognition and correction, and how well provisional voting processes are connected to the registration and voter identification regimes. A first step is for states to recognize that improving quality begins with seeing the provisional voting process as a system and taking a systems approach to regular evaluation through standardized metrics with explicit goals for performance. EAC can facilitate action by the states by recommending as a best practice that:

- Each state collect data systematically on the provisional voting process to permit evaluation of its voting system and assess changes from one election to the next. The data collected should include: provisional votes cast and counted by county; reasons why provisional ballots were not counted, measures of variance among jurisdictions, and time required to evaluate ballots by jurisdiction

Emphasize the importance of clarity
Above all else, the EAC should emphasize the importance of clarity in the rules by which each state governs provisional voting. As state legislators and election officials prepare for the 2006 election, answers to the questions listed in the recommendation section of this report could be helpful. Among those questions are:

- Does the provisional voting system distribute, collect, record, and tally provisional ballots with sufficient accuracy to be seen as procedurally legitimate by both supporters and opponents of the winning candidate?
- Do the procedural requirements of the system permit cost-efficient operation?
- How great is the variation in the use of provisional voting in counties or equivalent levels of voting jurisdiction within the state? Is the variation great enough to cause concern that the system may not be administered uniformly across the state?

Court decisions suggest areas for action
The court decisions following the 2004 election also suggest procedures for states to incorporate into their procedures for provisional voting. EAC should recommend to the states that they:

- Promulgate clear standards for evaluating provisional ballots, and provide training for the officials who will apply those standards.
- Provide effective materials to be used by local jurisdictions in training poll workers on such procedures as how to locate polling places for potential voters who show up at the wrong place.
- Make clear that the only permissible requirement to obtain a provisional ballot is an affirmation that the voter is registered in the jurisdiction and eligible to vote in an election for federal office. Poll workers need appropriate training to understand their duty to give such voters a provisional ballot.

Assess each stage of the provisional voting process
Beyond the procedures suggested by court decisions, states should assess each stage of the provisional voting process. They can begin by assessing the utility and clarity of the information for voters on their websites and by considering what information might be added to sample ballots mailed to voters before elections. The better voters understand their rights and obligations, the easier the system will be to manage, and the more legitimate the appearance of the process.

Avoiding error at the polling place will allow more voters to cast a regular ballot and all others who request it to cast a provisional ballot. Our recommendations for best practices to avoid error at the polling place include:

- The layout and staffing of the multi-precinct polling place is important. States should ensure that training materials distributed to every jurisdiction make poll workers familiar with the options available to voters.
- The provisional ballot should be of a design or color sufficiently different from a regular ballot to avoid confusion over counting and include take-away information for the voter on the steps in the ballot evaluation process.
- Because provisional ballots offer a fail-safe, supplies of the ballots at each polling place should be sufficient for all the potential voters likely to need them. Best practice would be for states should provide guidelines (as do Connecticut and Delaware) to estimate the supply of provisional ballots needed at each polling place.

The clarity of criteria for evaluating voter eligibility is critical to a sound process for deciding which of the cast provisional ballots should be counted.

- State statutes or regulations should define a reasonable period for voters who lack the HAVA-specified ID or other information bearing on their eligibility to provide it in order to facilitate the state’s ability to verify that the person casting the provisional ballot is the same one who registered. At least 11 states allow voters to provide ID or other information one to 13 days after voting. Kansas allows voters to proffer their ID by electronic means or by mail, as well as in person.
- More provisional voters have their ballots counted in those states that count ballots cast outside the correct precinct. While HAVA arguably leaves this decision up to the states, pointing out the effect of the narrower definition on the portion of ballots counted could be useful to the states in deciding this question. States should be aware, however, of the additional burden placed on the ballot-evaluation process when out-of-precinct ballots are considered. And tradeoffs are involved if out-of-precinct voters are unable to vote for the local offices that might appear on the ballot in their district of residence.
- If a state does require voters to appear at their assigned precinct, where the same polling site serves more than one precinct, a voter’s provisional ballot should count so long as the voter cast that ballot at the correct polling site even if at the wrong precinct within that location. While the best practice might be for poll workers to direct the voter to correct precinct poll workers’ advice is not always correct, and the voter should be protect against ministerial error.
- Officials should follow a written procedure, and perhaps a checklist, to identify the reason why a provisional ballot is rejected. Colorado’s election rules offer particularly clear guidance to the official evaluating a provisional ballot.

In verifying provisional ballots, the time by which election officials must make their eligibility determinations is particularly important in presidential elections because of the need to certify electors to the Electoral College. Our research did not identify an optimum division of the five weeks available.
The best practice here is for states to consider the issue and make a careful decision about how to complete all steps in the evaluation of ballots and challenges to those determinations within the five weeks available. After the election, timely information to voters about the disposition of their provisional ballot can enable voters to determine if they are registered for future elections and, if not, what they need to do to become registered.

Best practice for the states is to establish mechanisms to ensure that voters casting provisional ballots are informed whether they are now registered for future elections and, if not, what they need to do to become registered.

Final observation
The detailed examination of each stage in the provisional voting process can lay the foundation each state needs to improve its system. Efforts to improve provisional voting may be most effective as part of a broader effort by state and local election officials to strengthen their systems. Collecting and analyzing data about those systems will enable states to identify which aspects of the registration and electoral system are most important in shunting voters into the provisional ballot process. Responsible officials can then look to their registration system, identification requirements or poll worker training as ways to reduce the need for voters to cast their ballots provisionally.
Provisional Voting in 2004

In the 2004 election, nationwide about 1.9 million votes, or 1.6% of turnout, were cast as provisional ballots. More than 1.2 million or just over 63% were counted. Provisional ballots accounted for a little more than 1% of the final vote tally.

These totals obscure the wide variation in provisional voting among the states. Six states accounted for two-thirds of all the provisional ballots cast. State by state, the percentage of provisional ballots in the total vote varied by a factor of 1,000 — from a high of 7% in Alaska to Vermont's 0.006%. The portion of provisional ballots cast that were actually counted also displayed wide variation, ranging from 96% in Alaska to 6% in Delaware. States with voter registration databases counted, on average, 20% of the provisional ballots cast. Those without databases counted provisional ballots at more than twice that rate, 44%.

An important source of variation was a state's previous experience with provisional voting. The share of provisional ballots in the total vote was six times greater in states that had used provisional ballots before than in states where the provisional ballot was new. In the 25 states that had some experience with provisional voting before HAVA, a higher portion of the total vote was cast as provisional ballots and a greater percentage of the provisional ballots cast were counted than in the 18 new to provisional balloting.

- The percentage of the total vote cast as provisional ballots averaged more than 2% in the 25 experienced states. This was 4 times the rate in states new to provisional voting, which averaged 0.47%.
- The experienced states counted an average of 58% of the provisional ballots cast, nearly double the proportion in the new states, which counted just 33% of cast provisional ballots.
- The combined effect of these two differences was significant. In experienced states 1.53% of the total vote came from counted provisional ballots. In new states, provisional ballots accounted for only 0.23% of the total vote.

Those voting with provisional ballots in experienced states had their ballots counted more frequently than those in the new states. This experience effect is evidence that there is room for improvement in provisional balloting procedures, especially in those states new to the process. That conclusion gains support from the perspectives of the local election officials revealed in the survey conducted as a part of this research. Local (mostly county level) election officials from "experienced" states were more likely to:

9 HAVA allows the states considerable latitude in how to implement provisional voting, including deciding who beyond the required categories of voters should receive provisional ballots and how to determine which provisional ballots should be counted.
10 California, New York, Ohio, Arizona, Washington, and North Carolina. The appearance of Arizona, Washington and North Carolina on this list shows that the number of provisional ballots cast depends on factors other than the size of the population.
11 See the appendix for our classification of "old" and "new" states and explanation of why the total is less than 50.
12 To appropriate for the wide differences in vote turnout among the 50 states the average figures here are calculated as the mean of the percent cast or counted rather than from the raw numbers of ballots cast or counted.
13 Managing the provisional voting process can strain the capacity election administrators. For example, Detroit, counted 123 of the 1,350 provisional ballots cast there in 2004. A recent study concluded that Detroit's "6-day time limit to process provisional ballots was very challenging and unrealistic. To overcome this challenge, the entire department's employees were mobilized to process provisional ballots." (emphasis added.) GAO Report-05-997. "Views of Selected Local Officials on Managing Voter Registration and Ensuring Citizens Can Vote," September 2005.
• Be prepared to direct voters to their correct precincts with maps;
• Regard provisional voting as easy to implement;
• Report that provisional voting sped up and improved polling place operations
• Conclude that the provisional voting process helped officials maintain accurate registration databases.

Officials from "new" states, on the other hand, were more likely to agree with the statement that provisional voting created unnecessary problems for election officials and poll workers.

If experience with provisional voting does turn out to be a key variable in performance, that is good news. As states gain experience with provisional ballots their management of the process could become more consistent and more effective over subsequent elections. Further information from the EAC on best practices and the need for more consistent management of the election process could sharpen the lessons learned by experience. The EAC can facilitate the exchange of experience among the states and can offer all states information on more effective administration of provisional voting.

Concluding optimistically that experience will make all the difference, however, may be unwarranted. Only if the performance of the "new" states was the result of administrative problems stemming from inexperience will improvement be automatic as election officials move along the learning curve. Two other possibilities exist. Our current understanding of how provisional voting worked in 2004 is not sufficient to determine unambiguously which view is correct.

1. "New" states may have a political culture different from "old" states. That is, underlying features of the "new" states political system may be the reason they had not adopted some form of provisional voting before HAVA. The "new" states may strike a different balance among the competing objectives of ballot access, ballot security and practical administration. They may ascribe more responsibility to the individual voter to take such actions as registering early, finding out where the right precinct is, or re-registering after changing address. They may value keeping control at the local level, rather than ceding authority to state or federal directives. The training they offer poll workers about provisional ballots may not be as frequent or effective as in other states. If the inconsistent performance in the "new" states arises out of this kind of political culture, improving effectiveness in the use of the provisional ballots -- as measured by intrastate consistency in administration-- will be harder and take longer to achieve.14

2. "Old" states may devote fewer resources to updating their registration files or databases because they consider provisional ballots as a reasonable fail safe way for voters with registration problems a way to cast a ballot. The adoption of statewide voter registration databases in compliance with HAVA therefore may reduce the variation in the use of provisional ballots among the states.

Other influences decreasing consistency among the states include:

14 Despite differing political cultures among states and the latitude HAVA provides states, the statute does, indeed impose some degree of uniformity on issues that Congress thought essential. For example, before HAVA, took effect, "no state gave the voter the right to find out the status of their ballot after the election. " Now all offer that opportunity. See Bali and Silver, "The Impact of Politics, Race and Fiscal Strains on State Electoral Reforms after Election 2000," manuscript, Department of Political Science, Michigan State University. Resisting HAVA's mandates through foot-dragging lacks any legitimate foundation in law or policy.
The more rigorous the verification requirements, the smaller the percentage of provisional ballots that were counted. Some states verified provisional ballots by comparing the voter's signature to a sample, some matched such identifying data as address, birth date, or social security number, others required voters who lacked ID at the polling place to return later with the ID to evaluate the provisional ballot, and some required provisional voters to execute an affidavit.

- In the 4 states that simply matched signatures, nearly 3.5% of the total turnout consisted of provisional ballots, and just under three-fourths of those ballots (73%) were counted.
- In the 14 states that required voters to provide such additional information as address or date of birth just over 1.5% of the total turnout consisted of provisional ballots, and 55% of those ballots were counted.
- In the 14 states that required an affidavit (attesting, for example, that the voter was legally registered and eligible to vote in the jurisdiction) just over one-half of a percent (0.6%) of turnout came from provisional ballots, and less than one-third of those (30%) were counted. (But note that HAVA requires all voters to certify that they are eligible and registered in order to cast a provisional ballot, which is functionally an affidavit. The 14 states described here used an explicit affidavit form.)
- In the 10 states that required voters to return later with identifying documents just under 1.5% of the total turnout came from provisional ballots, and more than half (52%) of these were counted. Voters apparently found this requirement less onerous than the affidavit, even though it required a separate trip to a government office.

Voter registration databases provided information that reduced the number of provisional ballots counted. In states using provisional voting for the first time, states with registered-voter databases counted only 20% of the ballots that were cast. States without such databases counted more than double that rate (44%). As HAVA's requirement for adoption of statewide databases spreads across the country, this variation among states is likely to narrow. Real-time access to a continually updated, statewide list of registered voters should reduce the number of provisional ballots used and reduce the percentage counted since most of those who receive them will be less likely to be actually registered in the state.

- States that counted out-of-precinct ballots counted 56% of the provisional ballots cast. States that counted ballots cast only in the proper precinct counted an average of 42% of provisional ballots.

---

15 See Table 2 in Appendix 2 for information on the verification method used in each state.
16 The Election Day Survey found that states using statewide voter registration databases reported a lower incidence of casting provisional ballots than states without voter registration databases, suggesting that better administration of voter registration rolls might be associated with fewer instances where voters would be required to cast a provisional ballot due to a problem with their voter registration.
17 The Election Day Survey concluded that: "Jurisdictions with jurisdiction-wide provisional ballot acceptance reported higher rates of provisional ballots cast, 2.09 percent of registration or 4.67 percent of ballots cast in polling places, than those with in-precinct-only acceptance, 0.72 and 1.18 percent, respectively. Predictably, those jurisdictions with more permissive jurisdiction-wide acceptance reported higher rates of counting provisional ballots, 71.50 percent, than other jurisdictions, 52.50 percent."
- In experienced states, the disparity was even more pronounced: 52% of provisional ballots cast were counted in states requiring in-district ballots, while 70% were counted in those allowing out-of-precinct ballots.
- If all states had counted out-of-precinct ballots, perhaps 290,000 more provisional ballots would have been counted across the country.18

- States that provide a longer the time to evaluate provisional ballots counted a higher proportion of those ballots.19
  - Fourteen states permitted less than one week to evaluate provisional ballots, 15 states permitted between one and two weeks, and 14 states permitted greater than two weeks20.
  - Those states that permitted less than one week counted an average of 35.4% of their ballots.
  - States that permitted between one and two weeks counted 47.1%.
  - States that permitted more than 2 weeks, counted 60.8% of the provisional ballots cast21.
  - The effect of allowing more time for evaluation is felt most strongly in states where more than 1% of the overall turnout was of provisional ballots. In states where provisional ballots were used most heavily, those that permitted less than one week to evaluate ballots counted 58.6% while those that permitted one to two weeks counted 65.0% of ballots, and those states that permitted greater than three weeks verified the highest proportion of provisional ballots, at 73.8%.

Variation Within States
Not only was there little consistency among states in the use of provisional ballots, there was also little consistency within states. This was true in both new and old states. Of the 20 states for which we have county-level provisional ballot data, the rate of counting provisional ballots varied by as much as 90% to 100% among counties in the same state. This suggests that additional factors beyond statewide factors, such as verification requirements or the time provided for ballot evaluation, also influence the provisional voting process. Reacting to the lack of consistency within states, the Carter-Baker Commission) recommended that "states, not counties or municipalities, should establish uniform procedures for the verification and counting of provisional ballots, and that procedure should be applied uniformly throughout the state."22

Election Line reported that:

---

18 This estimate is a rough approximation. States that recognize out-of-precinct ballots counted, on average, 56% of the provisional votes cast. Applying that ratio to the 1.9 million provisional ballots cast nationwide would result in 1.1 million provisional ballots that would have been counted if all states accepted out-of-precinct votes. States that did not recognize out-of-precinct ballots counted 42% of the provisional ballots cast, or about 813,000 ballots, for a difference of about 290,000 votes.
19 See Appendix __, Relationship Between Time Allotted to Verify Provisional Ballots and the Level of Ballots that are Verified, David Andersen, The Eagleton Institute of Politics
20 Many thanks to Ben Shepler, of the Moritz College of Law, for assembling complete data on the time requirements states permitted for the counting of provisional ballots.
21 43 states are included in this analysis, including Washington D.C. The 7 election-day registration states are omitted, as is Mississippi, which never provided data on provisional ballots. North Carolina is also omitted from the regressions, as it does not have a statewide policy on how it verifies provisional ballots.
22 Recommendation 2.3.2 of the Report of the Commission on Federal Election Reform, "Building Confidence in U.S. Elections," September 2005, p.16. The report also observed that, "...different procedures for counting provisional ballots within and between states led to legal challenges and political protests. Had the margin of victory for the presidential contest been narrower, the lengthy dispute that followed the 2000 election could have been repeated."
In Ohio some counties counted provisional ballots not cast in the assigned precinct even though the state's policy was to count only those ballots cast in the correct precinct.

Some counties in Washington tracked down voters who would otherwise have had their provisional ballots rejected because they had failed to complete part of their registration form, gave them the chance to correct those omissions, and then counted the provisional ballot. This would probably not have come to light except for the sharp examination caused by the very close election for governor.

Resources available to administer provisional voting varied considerably among and within states. The result is that differences in demographics and resources result in different experiences with provisional voting. For example, the Election Day Survey found that:

- Jurisdictions with lower education and income tend to report more inactive voter registrations, lower turnout, and more provisional ballots cast.
- Jurisdictions with higher levels of income and education reported higher average numbers of poll workers per polling place or precinct and reported lower rates of staffing problems per precinct.
- Staffing problems appeared to be particularly acute for jurisdictions in the lowest income and education categories. Small, rural jurisdictions and large, urban jurisdictions tended to report higher rates of an inadequate number of poll workers within polling places or precincts.
- Predominantly non-Hispanic, Black jurisdictions reported a greater percentage of polling places or precincts with an inadequate number of poll workers. Predominantly non-Hispanic, Native American jurisdictions reported the second highest percentage of staffing problems.

The conclusions to be drawn from these findings are clear. In voting districts with lower education levels, poverty, and inadequately staffed polling places, the voting process is unlikely to function well. More people will end up casting provisional ballots. That makes the provisional voting process especially important in such districts. But if jurisdictions struggle with regular voting, how well are they likely to do with the more complicated provisional balloting process? In precincts were the voting process, in general, is managed poorly, provisional ballots cannot be expected to work much better. In these areas, the focus should be on broader measures to improve the overall functionality of struggling voting districts, although improving the management of provisional balloting may help at the margin.

Effectiveness of Provisional Voting
The certainty of our conclusions about the effectiveness of provisional voting is limited because of the complexity of the problem and a lack of important information. An ideal assessment of how well provisional ballots worked in 2004 would require knowing the decisions of local officials in 200,000 precincts on how to inform voters about provisional voting; their performance in providing a provisional ballot to those qualified to receive one, and their decisions whether to count a provisional ballot. Information needed about the eligibility or registration status of provisional voters is also not available.

We see no automatic correlation between the quality of a state's voting system and either the number of provisional ballots cast or counted. Low numbers could reflect accurate statewide voting data and good voter education. Or they could suggest that provisional ballots were not
made easily available. High numbers could be seen as signifying an effective provisional voting system or a weak registration process. But we do know that in 2004 provisional ballots allowed 1.2 million citizens to vote, citizens who would otherwise have been turned away from the polls.

Since we do not know the total number of registered voters who might have voted but could not make a precise, quantitative estimate of the effectiveness of provisional voting impossible. The Cal Tech – MIT Voting Technology Project, however, estimated that 4 – 6 million votes were lost in the 2000 presidential election for the reasons shown in Table 1 below. The estimate is an approximation, but it may provide data good enough for a general assessment of the size of the pool of potential voters who might have been helped by the provisional ballot process.

Table 1 Cal Tech – MIT Voting Technology Project Estimates
4 – 6 million votes are lost in presidential elections due to the causes shown in the table. Registration mix-ups (e.g., name not on list) and polling place operations (e.g., directed to wrong precinct) are the causes most likely to be remedied by provisional voting.

The table shows that the universe of voters who could be helped by provisional voting might be 2.5 – 3 million voters. In 2004, about 1.2 million provisional voters were counted. A rough estimate, then, of the effectiveness of provisional voting in 2004, then, might be 40% to 50% (ballots counted/votes lost)\(^23\). Whatever the precise figure, it seems reasonable to conclude that there is considerable room for improvement in the administration of provisional voting.

Legislative Response
Indeed, several states\(^24\) came to the conclusion that the administration of their provisional voting procedures needed to be improved and amended their statutes after the 2004 election. State legislation adopted since the election points to particular areas of concern.

---

\(^23\) Another interpretation of the data should be considered. The Census Bureau's Current Population Survey (CPS) developed the category of "registration mix-ups" to assess the states' registration systems. After each election the CPS asks people if they were registered and if they voted. The CPS gives breakdowns of reasons why people did not vote. Survey responders tend to deflect blame when answering questions about voting. In the narrow context of provisional ballots, 'registration problems' would cover only voters who went to the polls where the determination that they were not registered was wrong or they were registered, but in the wrong precinct. If they were in the wrong precinct, provisional voting can help them in only 17 states. In 2004, only 6.8% of those not voting and registered blamed registration problems, while 6.9% reported so in 2000.

\(^24\) Twelve states made statutory or regulatory changes: Arizona, Arkansas, Colorado, Florida, Georgia, Indiana, Louisiana, Montana, New Mexico, North Carolina, Virginia and Wyoming. See Table 4 in Appendix 2.
Not enough time to examine and count the provisional ballots. Florida, Indiana, Virginia, and Washington all have clarified or extended the timeline to evaluate the ballots. But taking more time can prove a problem, particularly in presidential elections with the looming deadline to certify the vote for the Electoral College.25

Lack of uniform rules for counting ballots and effective training of the election officials in interpreting and applying those rules to determine the validity of ballots. Colorado, New Mexico, North Carolina, and Washington have all passed legislation focused on improving the efficacy and consistency of the voting and counting process.

Litigation
Successful legal challenges to the process highlight areas where provisional voting procedures were wanting. A flurry of litigation occurred around the country in October 2004 concerning the so-called “wrong precinct issue” – whether provisional ballots cast by voters in a precinct other than their designated one would be counted for statewide races. These lawsuits were largely unsuccessful in their stated goal: most courts, including the U.S. Court of Appeals for the Sixth Circuit (the only federal appeals court to rule on the issue), rejected the contention that HAVA requires the counting of these wrong-precinct provisional ballots.

This litigation was significant nonetheless.

• First, the Sixth Circuit decision established the precedent that voters have the right to sue in federal court to remedy violations of HAVA.

• Second – and significantly – the litigation clarified the right of voters to receive provisional ballots, even though the election officials were certain they would not be counted. The decision also defined an ancillary right – the right to be directed to the correct precinct. There voters could cast a regular ballot that would be counted. If they insisted on casting a provisional ballot in the wrong precinct, they would be on notice that it would be a symbolic gesture only.

• Third, these lawsuits prompted election officials to take better care in instructing precinct officials on how to notify voters about the need to go to the correct precinct in order to cast a countable ballot – although the litigation regretfully came too late to be truly effective in this regard. In many states, on Election Day 2004, the procedures in place for notifying voters about where to go were less than ideal, reflecting less-than-ideal procedures for training poll workers on this point.

There was also pre-election litigation over the question whether voters who had requested an absentee ballot were entitled to cast a provisional ballot. In both cases (one in Colorado and one, decided on Election Day, in Ohio), the federal courts ruled that HAVA requires that these voters receive a provisional ballot. Afterwards, it is for state officials under state law to

25 The resources available to evaluate and count provisional ballots within a tight schedule may not be easily available. The General Accounting Office reports that Detroit, where 1,350 provisional ballots were cast and 123 counted, found the 6-day time frame for processing provisional ballots "very challenging and unrealistic. To overcome this challenge, the entire department's employees were mobilized to process provisional ballots." The report also found that in Los Angeles County, "staff had to prepare duplicate ballots to remove ineligible or invalid contests when voters cast their ballots at the wrong precinct. To overcome this challenge, staffing was increased to prepare the duplicate ballots." In a close, contested election, "duplicate" ballots would doubtless receive long and careful scrutiny. See Appendix 7, GAO, "Views of Selected Local Election Officials on Managing Voter Registration and Ensuring Eligible Citizens Can Vote," September 2005. (GAO Report-05-997)
determine whether these provisional ballots will be counted, in part by determining if these provisional voters already had voted an absentee ballot (in which case one ballot should be ruled ineligible, in order to avoid double voting). These decisions confirm the basic premise that provisional ballots should be available whenever voters believe they are entitled to them, so that their preferences can be recorded, with a subsequent determination whether these preferences count as valid votes.

RECOMMENDATIONS

Because every provisional ballot counted represents a voter who, if the system had worked perfectly, should have voted by regular ballot, the advent of statewide registration databases is likely to reduce the use provisional ballots. The one area in which such databases may not make a difference is for those who voted by provisional ballot because they did not bring required identification documents to the polling place. The statewide voter registration database will facilitate verifying that ballot, but the voter will still have vote provisionally. Beyond that exception, even with statewide registries in every state, provisional voting will remain an important failsafe, and voters should have confidence that the failsafe will operate correctly.

The wide variation in the implementation of provisional voting among and particularly within states suggests that EAC can help states strengthen their processes. Research-based recommendations for best, or at least better, practices based on the experience gained in the 2004 election can be useful in states’ efforts to achieve greater consistency in the administration of provisional voting.

Recommendations for Best Practices

Recent legislative activity shows that state efforts to improve the provisional voting process are underway. Those states, as well as others that have not yet begun to correct shortcomings that became apparent in 2004, can benefit from considering the best practices described here. By recommending best practices, the EAC will offer informed advice while respecting diversity among the states. One way to strengthen the recommendations and build a constituency for them would be for EAC to ask its advisory committee members to recommend as best practices procedures that have worked in their states.

Self-evaluation of Provisional Voting –4 Key Questions

The first need to achieve greater consistency within each state is to think about provisional voting systematically. As legislators, election officials, and citizens in the states prepare for the 2006 election, they should ask themselves these questions about their provisional voting systems.

1. Does the provisional voting system distribute, collect, record, and tally provisional ballots with sufficient accuracy to be seen as procedurally legitimate by both supporters and opponents of the winning candidate? Does the tally include all votes cast by properly registered voters who correctly completed the steps required?

2. Is the provisional voting system sufficiently robust to perform well under the pressure of a close election when ballot evaluation will be under scrutiny and litigation looms?

3. Do the procedural requirements of the system permit cost-efficient operation? Are the administrative demands of the system reasonably related to the staff and other resource requirements available?
4. How great is the variation in the use of provisional voting in counties or equivalent levels of voting jurisdiction within the state? Is the variation great enough to cause concern that the system may not be administered uniformly across the state?

If the answers to these questions leave room for doubt about the effectiveness of the system or some of its parts, the EAC’s recommendation of best practices should provide the starting point for a state’s effort to improve its provisional voting system.

**Best Practices For Each Step In The Process**

We examined each step of the provisional voting process to identify specific areas where the states should focus their attention to reduce the inconsistencies noted in our analysis. We offer recommendations in each area appropriate to the responsibilities that HAVA assigns the EAC for the proper functioning of the provisional voting process.

**The Importance of Clarity**

The EAC should emphasize above all else the importance of clarity in the rules governing every stage of provisional voting. As the Century Foundation’s recent report observed, “Close elections increasingly may be settled in part by the evaluating and counting of provisional ballots... To avoid post election disputes over provisional ballots—disputes that will diminish public confidence in the accuracy and legitimacy of the result—well in advance of the election, states should establish, announce, and publicize clear statewide standards for every aspect of the provisional ballot process, from who is entitled to receive a provisional ballot to which ones are counted.”

Litigation surrounding the 2004 election resulted in decisions that, if reflected in state statutes or regulations and disseminated in effective training for poll workers, can increase the clarity of provisional ballot procedures, increase predictability, and bolster confidence in the system. By taking the following steps, states can incorporate those court rulings into their procedures.

- Promulgate, ideally by legislation, clear standards for evaluating provisional ballots, and provide training for the officials who will apply those standards. For example, in Washington State, the court determined that an election official’s failure in evaluating ballots to do a complete check against all signature records is an error serious enough to warrant recanvassing. Clear direction by regulation or statute on what records to use in evaluating ballots could have saved precious time and effort and increased the reliability of the provisional voting system.

- States should provide poll workers standard information resources for the training of poll workers by local jurisdictions. Training materials might include, for example, maps or databases with instruction on how to locate polling places for potential voters who show up at the wrong place. Usable and useful information in the hands of poll workers can protect voters from being penalized by ministerial errors at the polling place.

---

27 See Washington State Republican Party v. King County Division of Records, 103 P3d 725, 727-728 (Wash. 2004)
28 See Panio v. Sunderland 824 N.E.2d 488, 490 (NY, 2005) See also Order, Hawkins v. Blunt, No.04-4177-CV-C-RED (W.D. Mo. October 12, 2004). While rejecting the notion that all ballots cast in the wrong precinct should be counted, the court ruled that provisional votes cast in the wrong precinct should be thrown out provided that the voter had been directed to the correct precinct. This meant that provisional votes cast in the wrong precinct (and even the
State training materials provided to local jurisdictions should make clear that the only permissible requirement to obtain a provisional ballot is an affirmation that the voter is registered in the jurisdiction and eligible to vote in an election for federal office. \(^{29}\) Recent legislation in Arizona indicates that recommendations should emphasize HAVA's requirement that persons appearing at the polling place claiming to be registered voters cannot be denied a ballot because they do not have identification with them. Poll workers may need appropriate training to understand their duty to give such voters a provisional ballot. \(^{30}\)

**A. Registration and Pre-Election Information for Voters**

Providing crisp, clear information to voters before the election is important to the success of the provisional voting process. The better voters understand their rights and obligations, the easier the system will be to manage, and the more legitimate the appearance of the process. States can begin by assessing the utility and clarity of the information for voters on their websites and by considering what information might be added to sample ballots mailed to voters before elections. Best practices in this area would include:

1. If states require identification at the time of registration, the kind of IDs required should be stated precisely and clearly and be publicly and widely available in a form that all voters can understand. For example, "You must bring your driver's license. If you don't have a driver's license, then you must bring an ID card with your photograph on it and this ID card must be issued by a government agency." \(^{31}\)

2. The process to re-enfranchise felons should be clear and straightforward. To avoid litigation over the registration status of felons, best practice should be defined as making re-enfranchisement automatic, or no more burdensome than the process required for any new registrant. \(^{32}\)

3. State or county websites for voters should offer full, clear information on boundaries of precincts, location of polling places, requirements for identification, and other necessary guidance that will facilitate registration and the casting of a regular ballot. An 800 number should also be provided. Models are available: the statewide databases in Florida and Michigan provide voters with provisional voting information, registration verification and precinct location information.

**B. At the Polling Place**

\(^{29}\) Sandusky County Democratic Party v. Blackwell, 387 F.3d 565, 774 (6th Cir. 2004)

\(^{30}\) The Florida Democratic Party v. Hood, 342 F. Supp. 2d 1073, 1075-76 (N.D. Fla. 2004). The court explained that provisional voting is designed to correct the situation that occurs when election officials do not have perfect knowledge and when they make incorrect determinations about eligibility (the "fail-safe" notion). Denying voters provisional ballots because of on-the-spot determinations directly contradicts this idea. Even before the cited decision, the Florida Secretary of State's office had determined that any voter who makes the declaration required by federal law is entitled to vote a provisional ballot, even if the voter is in the wrong precinct.

\(^{31}\) Websites in 29 states describe, with varying degrees of specificity, the identification voters may need. In 18 states voters can learn something about the precinct in which they should vote. And in 6 states (California, District of Columbia, Kentucky, Michigan, North Carolina, and South Carolina) they can verify their registration on the website.

\(^{32}\) The Century Foundation, op. cit.
Avoiding error at the polling place will allow more voters to cast a regular ballot and all others who request it to cast a provisional ballot.

1. The layout and staffing of the polling place, particularly the multi-precinct polling place is important. Greeters, maps, and prominently posted voter information about provisional ballots, ID requirements, and related topics can help the potential voters cast their ballot in the right place. States should require poll workers to be familiar with the options and provide the resources needed for them to achieve the knowledge needed to be helpful and effective. Colorado has clear regulations on polling place requirements, including HAVA information and voting demonstration display. 33 Many states require training of poll workers. In some states that requirement is recent; after the 2004 election, New Mexico adopted a requirement for poll workers to attend an “election school.” 34 A state statutory requirement for training could facilitate uniform instruction of poll workers in those states that do not already provide it.

2. The provisional ballot should be of a design or color sufficiently different from a regular ballot to avoid confusion over counting, as occurred in Washington State. The ballot might include a tear-off leaflet with information for voters such as: “Reasons Why Your Provisional Ballot Might Not Be Counted” on one side and “What to Do if My Provisional Ballot Is Not Counted” on the other.

3. Because provisional ballots offer a fail-safe, supplies of the ballots at each polling place should be sufficient for all the potential voters likely to need them. In 2004, some polling places ran out of ballots, with unknown effects on the opportunity to vote. In Middlesex County, New Jersey, for example, on Election Day the Superior Court ordered the county clerk to assure that sufficient provisional ballots were available at several heavily used polling places, and it authorized the clerk “in the event additional provisional ballots are required . . . to photocopy official provisional ballots.” 35 At least two states, Connecticut and Delaware, provide guidelines to local election officials on how to estimate the demand for provisional ballots. Connecticut sets the number at 1% of the voters in the district, Delaware at 6%. 36 States that do not offer a practical method to guide the supply of provisional ballots at polling places should consider doing so. The guideline should take into account both the number of voters in the district and the number of provisional ballots actually cast in recent elections.

4. To achieve the procedural clarity needed to forestall disputes, states should establish a clear chain of custody for the handling of provisional ballots from production through distribution, collection and, finally, evaluation. A number of states have clear procedures for at least parts of this chain of custody. All states should examine their chain-of-custody requirements for clarity. Illinois includes the potentially beneficial requirement that ballots be transported by bi-partisan teams, which offers the potential to avoid some charges of election fraud.

---

34 2005 N.M. Laws 270 page no. 4-5.
35 Voting Order, November 2, 2004, Superior Court of New Jersey, Law Division, Middlesex County.
36 Connecticut: “Equal to or not less than 1% of the number of electors who are eligible to vote in any given district, or such other number as the municipal clerk and the registrars agree is sufficient to protect voting rights. Conn. Gen. Stat. Ann. § 9-232j.
Delaware: Each County Department of Elections Office is required to provide to each election district a number of provisional ballots equal to 6% of registered voters in that district, with a minimum allocation of 15 ballots. Additional supplies to be delivered when the supply becomes “very low.” Del.Code Ann. Tit 15 § 4948(e).
C. Evaluating Voter Eligibility and Counting Provisional Ballots

The clarity of criteria for evaluating voter eligibility is critical to a sound process for deciding which of the cast provisional ballots should be counted. Public recognition of the validity of those criteria is important to establishing the legitimacy of the system as a whole. The experience in 2004 in North Carolina, Washington, and Ohio underlines the importance of clear criteria. As the Century Foundation report put it, “Whatever procedures the states choose [to determine if a provisional ballot should be counted], the paramount consideration—as with all others concerning provisional voting—is that they be clear and thus not susceptible to post-election manipulation and litigation.”

Nonetheless, the Panio v. Sutherland decision in New York shows the difficulty of defining the range of administrative errors from which the provisional voters should be held harmless. Even when the standard is “clerical error” judges can differ over what that means exactly. Possibly a state law might be able to clarify a definition by giving examples of clerical errors, but even then the definition is unlikely to be perfect.

1. State statutes or regulations should define a reasonable period for voters who lack the HAVA-specified ID or other information bearing on their eligibility to provide it in order to facilitate the state’s ability to verify that the person casting the provisional ballot is the same one who registered. While there may be a concern to ensure that the individual who returns with the ID may not be the same individual who cast the provisional ballot, the spirit of HAVA demands that the opportunity to prove identity be provided after Election Day. A signature match can go far in establishing that the individual who voted and the individual returning later with identification is, in fact, the same person. Encouraging a voter who lacks ID on Election Day to return later to help the verification process by providing proper identification will strengthen the system and increase public confidence in the electoral process. Our data indicate that some voters would prefer to return with ID rather than to sign an affidavit, perhaps because of uncertainty about the legal process involved in the affidavit. At least 11 states allow voters to provide ID or other information one to 13 days after voting. Of particular interest is Kansas, which allows voters to proffer their ID by electronic means or by mail, as well as in person.

2. More provisional ballots are counted in those states that verify ballots cast outside the correct precinct. While HAVA arguably leaves this decision up to the states, pointing out the effect of the narrower definition on the portion of ballots counted could be useful to the states in deciding this question. States should be aware, however, of the

---

37 The Century Foundation, op. cit.
39 In Kansas, the voter can provide ID to a County Election Officer any time before the County Board of Canvassers meets to count provisional ballots. KS. ST. 25-1122(d). ID can be presented in person, OR via mail or electronic means. Id. The Board must meet either on the Friday or Monday following a Tuesday election. Id. at 25-3104. Deadlines in other states are: Alabama – 5:00 P.M. on the Monday following the election AL ST § 17-10A-2(c). Florida: until 5:00 P.M. on the third day following the election . Fla. Stat. Ann. § 101.048 (adopted after the 2004 election); Georgia—no later than 2 days after the election. GA ST § 21-2-417; 419. Illinois- 2 days to submit additional information 10 Ill. Comp. Stat. Ann. 5/18A-15(d); Indiana— in 2004 the deadline was the close of the polls IN. ST. § 3-11.7-5-2(a). The time period was extended to 13 days by the adoption of Indiana Code 3-11-8, Section 25, Subsection (1); Maryland—until the meeting of the Election Board; MD ELEC LAW § 11-303. New Jersey— until the close of business on the second day after the election 19:53C-3(j), Nevada— until 5:00 P.M. on the Friday following the election NV ST 293.3085; New Mexico—until 7:00 P.M. on Election Day NM ADC 1.10.22 (B) (H).
40 See Andersen, op. cit, pgs. 23 – 24 for an analysis of the significant effect of counting out-of-precinct ballots. The Election Day Survey found that, "Most notably, jurisdictions that permitted jurisdiction-wide acceptance of provisional ballots reported higher rates of provisional ballots being cast, but also reported a much higher incidence of provisional ballots being counted, than other jurisdictions."
additional burden placed on the ballot-evaluation process when out-of-precinct ballots are considered. And tradeoffs are involved if out-of-precinct voters are unable to vote for the local offices that might appear on the ballot in their district of residence. One option for states is to involve the voters in the decision by pointing out that voters who cast their provisional ballots in the wrong precinct may not be able to participate in the local election. The voter could then decide to go to the correct precinct or vote provisionally for the higher offices at the top of the ticket only.

3. Alternatively, if a state chooses to require voters to appear at their assigned precinct, where the same polling site serves more than one precinct, a voter’s provisional ballot should count so long as the voter cast that ballot at the correct polling site even if at the wrong precinct within that location. Ideally the voter could be directed to the correct machine, but poll worker advice will not always be correct. One way to assess the balance of issues here is to consider that, if a voter in a multi-precinct polling place is sent to the wrong machine, the error is probably the poll worker’s, and the voter should not be penalized.

4. Officials should follow a written procedure, and perhaps a checklist, to identify the reason why a provisional ballot is rejected (e.g., check the applicable box “unregistered voter”; “lack of signature match” “wrong precinct,” etc.) Those forms should be disclosed publicly when completed. Colorado’s election rules offer particularly clear guidance to the official evaluating a provisional ballot.

Colorado Rejection Codes (Any ballot given a rejection code shall not be counted):

- **RFS** (Rejection federal or state) No federal or state candidates or issues to duplicate.
- **RNS** (Rejection not signed) Provisional Ballot Affidavit not signed.
- **RIN** (Rejection incomplete information provided) Required information is incomplete and the designated election official is unable to confirm voter’s eligibility.
- **RNR** (Rejection not registered) Voter did not register by the voter registration deadline or by emergency registration, Colorado voter registration record was not found, or voter was previously cancelled and has not been reinstated pursuant to 1-2-605(10). C.R.S.
- **REE** (Rejection envelope empty) Provisional ballot envelope is empty.
- **RAB** (Rejection voter voted absentee) Designated election official has confirmed that voter voted an absentee ballot.
- **REV** (Rejection based on ballot cast in early voting) Voter voted early.
- **RIP** (Rejection based on incorrect party) Incorrect Party in Primary Election.
- **RFE** (Rejection felon not eligible to vote) Individual was convicted of a felony and is either serving a sentence of confinement or detention or is on parole.
- **RWC** (Rejection elector not registered in county or State of Colorado) Non-county or non-state resident; therefore voter not eligible to vote in the county where the provisional ballot was voted.
- **RID** (Rejection first time voter has not supplied identification upon registration or thereafter prior to and during time voter voted) First Time Voter who

---

41 Chances are administrative error accounts for the voter being directed to the wrong precinct under these circumstances.

42 8 CCR 1505-1, at 26.5.4, adopted August 4, 2005. See also 1-2-509(3) C.R.S.
D. Verification of Provisional Ballots

1. States that use the information on the provisional ballot to permit voters who have changed their addresses to update their registrations should adopt clear procedures on that process and specify how the new information will be communicated between different Boards of Elections.

2. In verifying provisional ballots, the time by which election officials must make their eligibility determinations is particularly important in presidential elections because of the need to certify electors to the Electoral College. States should consider in particular how to divide the time allowed them by the safe-harbor provisions that apply in presidential elections to the certification to the Electoral College. Some part of this five-week period will be consumed by the eligibility evaluation, but states should take care to provide a sufficient period of time as well for challenges. If a state consumes 21 days following the election in the eligibility evaluations, only two weeks will remain for legal challenges to be concluded. Is that sufficient? Or should the state provide the resources needed to complete the eligibility determinations in 10 days or two weeks, leaving three weeks or more for legal challenges in a close election? Our research did not identify an optimum division of the five weeks available. The prudent course here would be to encourage states to consider the issue and then make a careful decision about how to complete all steps in the evaluation of ballots and challenges to those determinations within the five weeks available.

E. Post-election Information for Voters

Timely information to voters about the disposition of their provisional ballot will provide helpful feedback and more important enable voters to determine if they are registered for future elections and, if not, what they need to do to become registered.

1. Establish mechanisms to ensure that voters casting provisional ballots are informed whether they are now registered for future elections and, if not, what they need to do to become registered.

F. State Laws Governing Litigation over Provisional Voting

1. Establish special, streamlined litigation procedures for Election Day complaints that individuals are being denied the right to cast a provisional ballot.

Broader Considerations

G. Integrity and the Appearance of Integrity

1. State laws or regulations providing for non-partisan or bi-partisan bodies to make a public determination of the validity of provisional ballots would increase confidence in the system.
2. To improve transparency, state laws or regulations should require the purging process for registration to be public and with an opportunity for voters to correct an erroneous determination that they should be purged.

3. State laws or regulation should require the evaluation process for provisional ballots to be public, while protecting the names of those who voted provisionally.

H. Continuous Assessment of the Provisional Ballot -- Process and Performance

Defining what makes for a successful provisional voting system is difficult. The most successful system is probably not the one with the most provisional votes cast (that could indicate problems with the registration system). Nor is the system with the greatest number counted or with the fewest counted necessarily superior because the evaluation process could be flawed.

Defining quality requires a broad perspective about how well the system works, how open it is to error recognition and correction, and how well provisional voting processes are connected to the registration and voter identification regimes. The EAC should consider engaging one of the national quality organizations or processes, such as Six Sigma or the Baldridge Quality process to evaluate the provisional ballot process. Pending such a review, the EAC can recommend that states take the following actions.

1. Recognize that the first step to improving quality is to see the provisional voting process as a system and take a systems approach to regular evaluation through standardized metrics with explicit goals for performance.

2. States should begin by collecting data systematically on the provisional voting process so that they can evaluate their voting system and assess changes from one election to the next. The effort should start in the 2006 election, and the data collected should include:

   -- Provisional votes cast and counted by jurisdiction, say counties, with details on why the voter had to vote provisionally (lack of ID, not on list, challenged at polling place, issued absentee ballot, etc) and number of ballots actually counted in each category.

   -- Reasons why provisional ballots were not counted, using categories such as those that have been adopted by Colorado, described earlier in this report.

   -- Measures of variance among jurisdictions.

   -- Number of poll workers trained in administration of provisional voting by polling place.

   -- Number of jurisdictions posting information on provisional voting in the polling place.

   -- Time required to evaluate ballots by jurisdiction.

---

43 Six Sigma is a measure of quality that strives for near perfection. Six Sigma is a disciplined, data-driven approach and methodology for eliminating defects (driving towards six standard deviations between the mean and the nearest specification limit) in any process -- from manufacturing to transactional and from product to service.

44 The Baldrige Criteria for Performance Excellence provide a systems perspective for understanding performance management. They reflect validated, leading-edge management practices against which an organization can measure itself. With their acceptance nationally and internationally as the model for performance excellence, the Criteria represent a common language for communication among organizations for sharing best practices. The Criteria are also the basis for the Malcolm Baldrige National Quality Award process.
Improving understanding of the provisional voting process through analysis of detailed information will enable state and local election officials to strengthen their systems. By collecting and analyzing this data states can identify which aspects of the registration and electoral system are most important in shunting voters into the provisional ballot process. Responsible officials can then look to their registration system, identification requirements or poll worker training as a way to reduce the need for voters to cast their ballots provisionally.
ATTACHMENT 1 – Data Sources for Classification of the States

Our research on provisional voting divided the various states into several categories to allow an assessment of how different factors may have influenced the process of casting and counting provisional ballots. This analysis was conducted before the release of the Election Day Study, and the categories we used may differ in some respects from its work. The variables used to analyze a state’s use of provisional ballots:

1. New vs. Old (states that used a provisional ballot before the 2004 election)
2. Use of a statewide database of registered voters vs. no use of a statewide database
3. Counting out-of-precinct ballots vs. not counting out-of-precinct ballots
4. Voter identification requirements
5. Method used to verify provisional ballots
6. Levels of provisional ballots cast and counted

We first assigned states within these categories based on classifications done by Electionline.org in its studies. The Electionline data was the only published information available at the time of our research. We reviewed the Electionline data carefully, and, in select cases, updated it with new, detailed information that had become available after its publication. The changes we made are explained below.

--Idaho, Maine, Minnesota, New Hampshire, Wisconsin and Wyoming were excluded from our analysis. They have election-day registration systems, and did not need to use HAVA-compliant provisional ballots.

--North Dakota does not register voters, so it also was excluded from HAVA requirements and did not use provisional voting.

--Mississippi has not reported its provisional voting results and could not be included in our analysis, though it was compliant in 2004.

--Pennsylvania did not report its totals for the Election Day Study, but we obtained information on Pennsylvania and included it in our analysis.

New vs. Old States

We classified states as “new” or “old” based on the 2001 Electionline study of provisional voting, but condensed its classifications into a single dichotomous variable, new/old with all other cases excluded. The Electionline study divided states into five categories of their use of provisional ballots in the 2000 election:

1. Use of provisional ballots (P)
2. Limited use of provisional ballots (LP)
3. Affidavit ballots (A)
4. No system in place (N)
5. Unnecessary/Not Applicable (U/NA)

We included in the list of “Old States” all states listed as using provisional ballots, limited use of provisional ballots or affidavit ballots. States in all three categories would have been familiar with key aspects of provisional voting. States that had no provisional voting system in place for the 2002 election, and were HAVA compliant in 2004, were listed as “new” states, as 2004 would have been the first year in which they would be offering the option of provisional voting. States that were listed as unnecessary or not applicable were excluded from this study, as they

---

This study can be found at: [http://electionline.org/Portals/1/Publications/Provisional%20Voting.pdf](http://electionline.org/Portals/1/Publications/Provisional%20Voting.pdf)
were exempt from the HAVA regulations in 2004 because they either allowed same-day registration or did not register voters.

Rhode Island is the only state categorized as an old state by Electionline that we moved into the list of new states. Electionline’s map shows Rhode Island as a state that used provisional voting in 2000, but in the state description, it is listed as having no system in place. We learned from the Rhode Island Board of Elections that the state had previously permitted potential voters to sign an affidavit if they did not appear on a precinct’s list of registered voters, but felt they were registered to vote. Based on the signed affidavit, the election official would then contact a county official to see if the voter was on a more complete registration list. If the voter’s name was on the complete list, that voter was permitted to cast a regular ballot. As this process did not grant the voter a provisional ballot, but served as a different type of administrative failsafe, we concluded that Rhode Island’s first use of provisional voting was in 2004 and, therefore, classified the state as “new” to the system of provisional balloting.

Statewide List of Registered Voters

The Electionline preview of the 2004 Election\(^46\) was the starting point for compiling a list of states that had a statewide database of registered voters. That study listed 34 States that did not have their statewide database systems complete, and 16 that did, including the District of Columbia. North Dakota does not register voters, so does not need to compile such a database. Electionline’s criterion for concluding that a state had a statewide list was that the state have participation from all jurisdictions in a statewide system. We added Oklahoma to the list of states with statewide databases because we found it had met the Electionline criteria by the 2004 election, albeit too late for inclusion in the Electionline survey.

Out-of-Precinct Ballots

We based our classification of states that allow the counting of ballots cast outside the correct precinct on the data in the 2004 Electionline preview of the 2004 election\(^2\). States that evaluated ballots cast in a precinct where the voter was not registered were categorized as "out-of-precinct." States that invalidated such ballots were categorized as "In-precinct only."

\(^47\) In Illinois, it is not clear that all counties followed this procedure. Some counties may not have counted out-of-precinct ballots.
Verification Method

We identified four different ways states assessed provisional ballots to determine if they should be counted: signature match, match voter data, signed affidavits, and bringing back identification later. We gathered information about these verification techniques by checking state websites and consulting journalistic accounts. We consulted state legislation to provide further information where needed.

* North Carolina lacked clear standards to evaluate provisional ballots and is excluded from this analysis.
Data Collection

To assemble our data for analysis, we began by using the data on provisional votes cast and counted reported by Electionline. To increase the accuracy of this data, we surveyed each state’s election websites for updated data, and for reported numbers on the county level. We then sent emails to 49 (we excluded Alaska, see below) states and the District of Columbia, requesting updated data on the number of provisional votes cast and counted by county. We received information from 25 states by our cut-off date of August 25, 2005.

\(^48\) Alaska was not contacted via email, as the state does not have voting districts comparable to counties in other states and could not be matched with comparable census data.

\(^49\) Maryland reported provisional ballots that were counted per county, but not number cast.

\(^50\) Nebraska reported an incomplete list of provisional ballots cast and counted by county, but designated counties by number, rather than by name.
The data used in this study differ from the data reported in the Election Day Study for 19 states. The Election Day Study was not completed until well after our statistical analysis of provisional voting was finished. Where there are differences, they are typically very small, usually fewer than 100 votes either cast or counted. Of the 9 states that have differences of more than 100 votes cast or counted, 7 have reported their numbers directly to us and can be considered updated data that EDS had not obtained. For one of those states, New Mexico, EDS had incomplete data, and for another, Pennsylvania, EDS had no data at all. The data that we have collected reflects updated numbers from the states that have changed following recounts and litigation that altered how ballots were evaluated.

(b) An election official may waive the identification requirement if the election official knows the identity of the voter. The identification requirement may not be waived for voters who are first-time voters who initially registered by mail or by facsimile or other electronic transmission approved by the director under AS 15.07.050, and did not provide identification as required in AS 15.07.060.

(c) A voter who cannot exhibit a required form of identification shall be allowed to vote a questioned ballot.

effective June 17, 2003

|---------|------------|--------------------------------|
| B. If a statewide voter registration database is not yet operational, for any person who has registered to vote by mail for the first time in this state after January 1, 2003 or who is reregistering by mail after January 1, 2003 after moving from one county to another county in this state, the person shall comply with the following in order to be issued a ballot:

1. The person shall present either one of the following:

   (a) A current form of identification that bears a photograph of the person and the name of the person.

   (b) A current utility bill, bank statement, paycheck, government issued check or other government document that shows the name and registration address of the person.

2. If the person does not present a document that complies with paragraph 1, the person is only eligible to vote a provisional ballot as prescribed by § 16-584.

Effective Dec. 1, 2003

<table>
<thead>
<tr>
<th>Arkansas</th>
<th>Provide ID</th>
<th>Arkansas Code Annotated § 7-5-305</th>
</tr>
</thead>
</table>
| 7-5-305. Requirements.

(a) Before a person is permitted to vote, the election official shall:

(1) Request the voter to identify himself in order to verify the existence of his name on the precinct voter registration list;

(2) Request the voter, in the presence of the election official, to state his address and state or confirm his date of birth;

(3) Determine that the voter's date of birth and address are the same as those on the precinct voter registration list;

(4) If the date of birth given by the voter is not the same as that on the precinct voter registration list, request the voter to provide identification as the election official deems appropriate;

(5)(A) If the voter's address is not the same as that on the precinct voter registration list, verify with the county clerk that the address is within the precinct.

(B) If the address is within the precinct, request the voter to complete a voter registration application form for the purpose of updating county voter registration record files.

(C) If the address is not within the precinct, instruct the voter to contact the county clerk's office to determine the proper precinct;

(6) If the voter's name is not the same as that on the precinct voter registration list, request the voter to complete a voter registration application form for purposes of updating county voter registration record files;

(7) Request the voter, in the presence of the election official, to sign his name, including his given name, his middle name or initial, if any, and his last name in the space provided on the precinct voter registration list. If a person is unable to sign his signature or make his mark or cross, the election official shall enter his initials and the voter's date of birth in the space for the person's signature on the precinct voter registration list; and
(A) Request the voter for purposes of identification to provide a valid driver's license, photo identification card issued by a governmental agency, voter card, social security card, birth certificate, United States passport, employee identification card issued by a governmental agency containing a photograph, employee identification card issued in the normal course of business of the employer, student identification card, Arkansas hunting license, or United States military identification card.

(B)(i) If a voter is unable to provide this identification, the election official shall indicate on the precinct voter registration list that the voter did not provide identification.

(ii) Following each election, the county board of election commissioners may review the precinct voter registration lists and may provide the information of the voters not providing identification at the polls to the prosecuting attorney.

(iii) The prosecuting attorney may investigate possible voter fraud; and

(9) Follow the procedures under §§ 7-5-310, 7-5-311, and 7-5-523, if the person is a disabled voter and presents himself or herself to vote.

Effective: July 16, 2003

California

Sign Name

Any person desiring to vote shall announce his or her name and address in an audible tone of voice, and when one of the precinct officers finds the name in the index, the officer shall in a like manner repeat the name and address. The voter shall then write his or her name and residence address or, if the voter is unable to write, shall have the name and residence address written by another person on a roster of voters provided for that purpose, whereupon a challenge may be interposed as provided in this article.

(Enacted in 1994, no amendments since)

Colorado

Provide ID

(1) Except as provided in subsection (4) of this section, any eligible elector desiring to vote shall show his or her identification as defined in section 1-1-104(19.5), write his or her name and address on the signature card, and give the signature card to one of the election judges.

(4) An eligible elector who is unable to produce identification may cast a provisional ballot in accordance with article 8.5 of this title.

(19.5)(a) "Identification" means:

(I) A valid Colorado driver's license;

(II) A valid identification card issued by the department of revenue in accordance with the requirements of part 3 of article 2 of title 42, C.R.S.;

(III) A valid United States passport;

(IV) A valid employee identification card with a photograph of the eligible elector issued by any branch, department, agency, or entity of the United States government or of this state, or by any county, municipality, board, authority, or other political subdivision of this state;

(V) A valid pilot's license issued by the federal aviation administration or other authorized agency of the United States;

(VI) A valid United States military identification card with a photograph of the eligible elector;

(VII) A copy of a current utility bill, bank statement, government check, paycheck, or other government document that shows the name and address of the elector;

(VIII) A valid medicare or medicaid card issued by the United States health care

| 101.043 (1) The precinct register, as prescribed in s. 98.461, shall be used at the polls in lieu of the registration books for the purpose of identifying the elector at the polls prior to allowing him or her to vote. The clerk or inspector shall require each elector, upon entering the polling place, to present a current and valid picture identification as provided in s. 97.0535(3)(a). If the picture identification does not contain the signature of the voter, an additional identification that provides the voter's signature shall be required. The elector shall sign his or her name in the space provided, and the clerk or inspector shall compare the signature with that on the identification provided by the elector and enter his or her initials in the space provided and allow the elector to vote if the clerk or inspector is satisfied as to the identity of the elector.

(2) Except as provided in subsection (3), if the elector fails to furnish the required identification, or if the clerk or inspector is in doubt as to the identity of the elector, such clerk or inspector shall follow the procedure prescribed in s. 101.49.

97.0535 (3)(a) The following forms of identification shall be considered current and valid if they contain the name and photograph of the applicant and have not expired:

1. Florida driver's license.
2. Florida identification card issued by the Department of Highway Safety and Motor Vehicles.
3. United States passport.
4. Employee badge or identification.
5. Buyer's club identification.
6. Debit or credit card.
8. Student identification.

(b) The following forms of identification shall be considered current and valid if they contain the name and current residence address of the applicant:

1. Utility bill.
| Georgia | Provide ID | (a) Each elector shall present proper identification to a poll worker at or prior to completion of a voter’s certificate at any polling place and prior to such person’s admission to the enclosed space at such polling place. Proper identification shall consist of any one of the following:
1. A valid Georgia driver’s license;
2. A valid identification card issued by a branch, department, agency, or entity of the State of Georgia, any other state, or the United States authorized by law to issue personal identification;
3. A valid United States passport;
4. A valid employee identification card containing a photograph of the elector and issued by any branch, department, agency, or entity of the United States government, this state, or any county, municipality, board, authority, or other entity of this state;
5. A valid employee identification card containing a photograph of the elector and issued by any employer of the elector in the ordinary course of such employer's business;
6. A valid student identification card containing a photograph of the elector from any public or private college, university, or postgraduate technical or professional school located within the State of Georgia;
7. A valid Georgia license to carry a pistol or revolver;
8. A valid pilot's license issued by the Federal Aviation Administration or other authorized agency of the United States;
9. A valid United States military identification card;
10. A certified copy of the elector's birth certificate;
11. A valid social security card;
12. Certified naturalization documentation;
13. A certified copy of court records showing adoption, name, or sex change;
14. A current utility bill, or a legible copy thereof, showing the name and address of the elector;
15. A bank statement, or a legible copy thereof, showing the name and address of the elector;
16. A government check or paycheck, or a legible copy thereof, showing the name and address of the elector; or
17. A government document, or a legible copy thereof, showing the name and address of the elector.
(b) If an elector is unable to produce any of the items of identification listed in subsection (a) of this Code section, he or she shall sign a statement under oath in a form approved by the Secretary of State, separate and distinct from the elector's voter certificate, swearing or affirming that he or she is the person identified on the elector's voter certificate. Such person shall be allowed to vote without undue delay; provided, however, that an elector who registered for the first time in this state by mail and did not provide one of the forms of identification set forth in subsection (a) of this Code section at the time of registration and who is voting for the first time may vote a provisional ballot pursuant to Code Section 21-2-418 upon swearing or affirming that the elector is the person identified in the elector's voter certificate. Such provisional ballot shall only be counted if the registrars are able to verify current and valid identification of the elector as provided in this Code section within the time period for verifying provisional ballots pursuant to Code Section 21-2-419. Falsely swearing or affirming such statement under oath shall be punishable as a felony, and the penalty shall be distinctly set forth on the face of the statement."

**VOTERS DECLARATION OF ELIGIBILITY**

I solemnly swear or affirm that I am a resident of the precinct, ward or township, city of Indiana, county of Indiana, and have not voted and will not vote in any other precinct in said election.

I understand that any false statement in this declaration is a criminal offense.
### Board Member

2. One of the precinct election officials shall announce the voter's name aloud for the benefit of any persons present pursuant to section 49.104, subsection 2, 3, or 5. Any of those persons may upon request view the signed declarations of eligibility and may review the signed declarations on file so long as the person does not interfere with the functions of the precinct election officials.

3. A precinct election official shall require any person whose name does not appear on the election register as an active voter to show identification. Specific documents which are acceptable forms of identification shall be prescribed by the state commissioner.

A precinct election official may require of the voter unknown to the official, identification upon which the voter's signature or mark appears. If identification is established to the satisfaction of the precinct election officials, the person may then be allowed to vote.

(From 2004 version of Iowa Annotated Code; effective January 1, 1995)

### Kansas

| Sign Name | (b) A person desiring to vote shall provide to the election board: (1) the voter's name; (2) if required, the voter's address; and (3) the voter's signature on the registration or poll book. A signature may be made by mark, initials, typewriter, print, stamp, symbol or any other manner if by placing the signature on the document the person intends the signature to be binding. A signature may be made by another person at the voter's direction if the signature reflects such voter's intention.

(Approved April 14, 2004, 2004 Kansas Laws Ch. 93) |

### Kentucky

| Provide ID | 117.227 Confirmation of voter's identity

Election officers shall confirm the identity of each voter by personal acquaintance or by a document, such as a motor vehicle operator's license, Social Security card, or credit card. The election officer confirming the identity shall sign the precinct voter roster and list the method of identification.

Effective: 7/15/02

Section 1. In addition to the forms of identification specifically provided for by KRS 117.227, any identification card that bears both the picture and signature of the voter, or any identification card that has been issued by the county, and which has been approved in writing by the State Board of Elections, shall be acceptable for confirmation of the voter's identity. |

### Louisiana

| Photo ID | A. Identification of voters.

(1) A person who desires to vote in a primary or general election shall give his name and address to a commissioner, who shall announce the applicant's name and address to the persons at the polling place.

(2) Each applicant shall identify himself, in the presence and view of the bystanders, and present to the commissioners a Louisiana driver's license, a Louisiana special identification card issued pursuant to R.S. 40:1321, or other generally recognized picture identification card. If the applicant does not have a Louisiana driver's license, a Louisiana special identification card, or other generally recognized picture identification card, the applicant shall sign an affidavit, which is supplied by the secretary of state, to that effect before the commissioners who shall place the affidavit in the envelope marked "Registrar of Voters" and attach the envelope to the precinct register, and the applicant

| Maine   | Give Name | The voting procedure is as follows.  
1. Name announced. A voter who wishes to vote must state the voter's name and, upon request, residence address to an election clerk who shall announce the name in a loud, clear voice.  
(In effect at time of 2003 amendment: 2003, c. 584, § 9) |
| Maryland | Sign Name | 10-310. (a) For each individual who seeks to vote, an election judge, in accordance with instructions provided by the local board, shall:  
(1) locate the individual's name in the precinct register and locate the preprinted voting authority card and then authorize the individual to vote a regular ballot;  
(2) if the individual's name is not found on the precinct register, search the inactive list and if the name is found, authorize the individual to vote a regular ballot; or  
(ii) if the individual's name is not on the inactive list, refer the individual for provisional ballot voting under § 9-404 of this article;  
(3) establish the identity of the voter by requesting the voter to state the month and day of the voter's birth and comparing the response to the information listed in the precinct register;  
(4) verify the address of the voter's residence;  
(5) if any changes to the voting authority card are indicated by a voter, make the appropriate changes in information on the card or other appropriate form; and  
(6) have the voter sign the voting authority card and either issue the voter a ballot or send the voter to a machine to vote. |
| Mass.   | Give Name | Each voter desiring to vote at a polling place shall give his name and, if requested, his residence to one of the officers at the entrance to the space within the guard rail, who shall thereupon distinctly announce the same. If such name is found on the voting list, the election officer shall check and repeat the name and shall admit the voter to the space enclosed by the guard rail and, in case official ballots, other than those marked "Challenged Ballots" as provided by section thirty-five A, are used, such voter shall be given one ballot. The use of electronic means such as tape recording equipment or radio broadcasting equipment for the recording or broadcasting of the names of voters not yet checked as having voted shall be prohibited.  
Last amended in 1981 |
| Michigan | Sign Name | (1) At each election, before being given a ballot, each registered elector offering to vote shall identify himself or herself by presenting an official state |
identification card issued to that individual pursuant to Act No. 222 of the Public Acts of 1972, being sections 28.291 to 28.295 of the Michigan Compiled Laws, an operator's or chauffeur's license issued to that individual pursuant to the Michigan Vehicle Code, Act No. 300 of the Public Acts of 1949, being sections 257.1 to 257.923 of the Michigan Compiled Laws, or other generally recognized picture identification card and by executing an application showing his or her signature or mark and address of residence in the presence of an election official. If the voter registration cards are used in the precinct, the election official in charge of the precinct registration file shall compare the signature upon the application with the signature upon the registration card. If voter registration lists are used in the precinct, the election inspector shall determine if the name on the application to vote appears on the voter registration list. If the name appears on the voter registration list, the elector shall provide further identification by giving his or her date of birth or other information stated upon the voter registration list. In precincts using voter registration lists, the date of birth may be required to be placed on the application to vote. If the signature or an item of information does not correspond, the vote of the person shall be challenged, and the same procedure shall be followed as provided in this act for the challenging of an elector. If the person offering to vote has signed the registration card or application by making a mark, the person shall identify himself or herself by giving his or her date of birth, which shall be compared with the date of birth stated upon the registration card or voter registration list, or shall give other identification as may be referred to upon the registration card or voter registration list. If the person offering to vote does not have an official state identification card, operator's or chauffeur's license as required in this subsection, or other generally recognized picture identification card, the individual shall sign an affidavit to that effect before an election inspector and be allowed to vote as otherwise provided in this act. However, an elector being allowed to vote without the identification required under this subsection is subject to challenge as provided in section 727.

(2) If, upon a comparison of the signature or other identification, it is found that the applicant is entitled to vote, the election officer having charge of the registration list shall approve the application and write his or her initials on the application, after which the number on the ballot issued shall be noted on the application. The application shall serve as 1 of the 2 poll lists required to be kept as a record of a person who has voted. The application shall be filed with the township, city, or village clerk. If voter registration cards are used in the precinct, the date of the election shall be noted by 1 of the election officials upon the precinct registration card of each elector voting at an election. If voter registration lists are used in the precinct, the election official shall clearly indicate upon the list each elector voting at that election. The clerk of a city, village, or township shall maintain a record of voting participation for each registered elector.

**Match Sig.**

19:15-17. Comparison of signatures or statements made openly; provisional ballots for newly registered voters without proper identification

a. The comparison of signatures of a voter made upon registration and upon election day, and if the voter alleges his inability to write, the comparison of the answers made by such voter upon registration and upon election day, shall be had in full view of the challengers.

b. If a voter has registered by mail after January 1, 2003 to vote for the first time in his or her current county of residence and did not provide personal identification when registering pursuant to section 16 of P.L.1974, c. 30 (C.19:31-6.4), the voter shall be permitted to vote starting at the first election held after January 1, 2004 at which candidates are seeking federal office after displaying one of the following items: (1) a current and valid photo identification card; (2) a current utility bill, bank statement, government check or pay check; (3) any other government document that shows the voter's name and current address; or (4) any other identifying document that the Attorney General has determined to be acceptable for this purpose. If the voter does not display one of these documents, the voter shall not be permitted to vote by machine but shall instead be provided with a provisional ballot, pursuant to the provisions of P.L.1999, c. 233 (C.19:53C-1 et seq.). This subsection shall not apply to any voter entitled to vote by absentee ballot under the "Uniformed and Overseas Citizens Absentee Voting Act" (42 U.S.C. 1973ff-1 et seq.) or to any voter who is provided the right to vote otherwise than in person under section 3 of Pub.L.98-435, the "Voting Accessibility for the Elderly and Handicapped Act," or any other voter entitled to vote otherwise than in person under any other federal law. This subsection shall also not apply to any person who registers to vote by appearing in person at any voter registration agency or to any person whose voter registration form is delivered to the county commissioner of registration or to the Attorney General, as the case may be, through a third party by means other than by mail delivery.

c. Each county commissioner of registration shall collect and maintain, in the manner prescribed by the Attorney General, the information provided pursuant to subsection b. of this section and section 16 of P.L.1974, c. 30 (C.19:31-6.4). Access to the personal identification information provided pursuant to subsection b. of this section and section 16 of P.L.1974, c. 30 (C.19:31-6.4), shall be prohibited, in accordance with subsection a. of section 6 of P.L.2001, c. 404 (C.47:1A-5).

Last Amendment Effective July 2, 2002.

<td>b. If a voter has registered by mail after January 1, 2003 to vote for the first time in his or her current county of residence and did not provide personal identification when registering pursuant to section 16 of P.L.1974, c. 30 (C.19:31-6.4), the voter shall be permitted to vote starting at the first election held after January 1, 2004 at which candidates are seeking federal office after displaying one of the following items: (1) a current and valid photo identification card; (2) a current utility bill, bank statement, government check or pay check; (3) any other government document that shows the voter's name and current address; or (4) any other identifying document that the Attorney General has determined to be acceptable for this purpose. If the voter does not display one of these documents, the voter shall not be permitted to vote by machine but shall instead be provided with a provisional ballot, pursuant to the provisions of P.L.1999, c. 233 (C.19:53C-1 et seq.). This subsection shall not apply to any voter entitled to vote by absentee ballot under the &quot;Uniformed and Overseas Citizens Absentee Voting Act&quot; (42 U.S.C. 1973ff-1 et seq.) or to any voter who is provided the right to vote otherwise than in person under section 3 of Pub.L.98-435, the &quot;Voting Accessibility for the Elderly and Handicapped Act,&quot; or any other voter entitled to vote otherwise than in person under any other federal law. This subsection shall also not apply to any person who registers to vote by appearing in person at any voter registration agency or to any person whose voter registration form is delivered to the county commissioner of registration or to the Attorney General, as the case may be, through a third party by means other than by mail delivery.</td>
<td></td>
</tr>
<tr>
<td>c. Each county commissioner of registration shall collect and maintain, in the manner prescribed by the Attorney General, the information provided pursuant to subsection b. of this section and section 16 of P.L.1974, c. 30 (C.19:31-6.4). Access to the personal identification information provided pursuant to subsection b. of this section and section 16 of P.L.1974, c. 30 (C.19:31-6.4), shall be prohibited, in accordance with subsection a. of section 6 of P.L.2001, c. 404 (C.47:1A-5).</td>

case of a primary election, that the voter is registered in a party designated on the primary election ballot. If the person's registration is confirmed by the presence of his name on the voter list or if the person presents a certificate under the seal and signature of the county clerk showing that he is entitled to vote in the election and to vote in that precinct, the judge shall announce to the election clerks the list number and the name of the voter as shown on the voter list.

E. The election clerk shall locate that list number and name on the signature roster and shall require the voter to sign his usual signature or, if unable to write, to make his mark opposite his printed name. If the voter makes his mark, it shall be witnessed by one of the judges of the precinct board. If the signature roster indicates that the voter is required to present a form of identification before voting, the election judge shall ask the voter for a current and valid photo identification or a copy of a current utility bill, bank statement, government check, paycheck or other government document that shows and matches the name and address of the voter as indicated on the signature roster. If the voter does not provide the required identification, he shall be allowed to vote on a provisional paper ballot.

G. A voter shall not be permitted to vote until he has properly signed his usual signature or made his mark in the signature roster.

| North Carolina | Give Name | (a) Checking Registration. --A person seeking to vote shall enter the voting enclosure through the appropriate entrance. A precinct official assigned to check registration shall at once ask the voter to state current name and residence address. The voter shall answer by stating current name and residence address. In a primary election, that voter shall also be asked to state, and shall state, the political party with which the voter is affiliated or, if unaffiliated, the authorizing party in which the voter wishes to vote. After examination, that official shall state whether that voter is duly registered to vote in that precinct and shall direct that voter to the voting equipment or to the official assigned to distribute official ballots. If a precinct official states that the person is duly registered, the person shall sign the pollbook, other voting record, or voter authorization document in accordance with subsection (c) of this section before voting. |
| North Dakota | Provide ID | 16.1-05-07 Poll clerks to check identification and verify eligibility -- Poll clerks to request, correct, and update incorrect information contained in the pollbook.  
1. Before delivering a ballot to an individual according to section 16.1-13-22, the poll clerks shall request the individual to show a driver's license issued by the state, another form of identification displaying a photograph of the individual and the individual's date of birth, or another appropriate form of identification prescribed by the secretary of state. If an individual offering to vote fails or refuses to show an appropriate form of identification, the individual may be allowed to vote without being challenged according to section 16.1-05-06 if the individual provides to the election board the individual's date of birth and if a member of the election board or a clerk knows the individual and can personally vouch that the individual is a qualified elector of the precinct. After verifying that the individual's name is contained in the pollbook generated from the central voter file, poll clerks shall verify the individual's residential address and mailing address, if different from the individual's residential address.

<td>When an elector appears in a polling place to vote he shall announce his full name and address to the precinct election officials. He shall then write his name and address at the proper place in the poll lists or signature pollbooks provided therefore, except that if, for any reason, an elector shall be unable to write his name and address in the poll list or signature pollbook, the elector may make his mark at the place intended for his name and a precinct official shall write the name of the elector at the proper place on the poll list or signature pollbook following the elector's mark, upon the presentation of proper identification. The making of such mark shall be attested by the precinct official who shall evidence the same by signing his name on the poll list or signature pollbook as a witness to such mark. The elector's signature in the poll lists or signature pollbooks shall then be compared with his signature on his registration form or a digitized signature list as provided for in section 3503.13 of the Revised Code, and if, in the opinion of a majority of the precinct election officials, the signatures are the signatures of the same person, the clerks shall enter the date of the election on the registration form or shall record the date by such other means as may be prescribed by the secretary of state. If the right of the elector to vote is not then challenged, or, if being challenged, he establishes his right to vote, he shall be allowed to proceed into the voting machine. If voting machines are not being used in that precinct, the judge in charge of ballots shall then detach the next ballots to be issued to the elector from Stub B attached to each ballot, leaving Stub A attached to each ballot, hand the ballots to the elector, and call his name and the stub number on each of the ballots. The clerk shall enter the stub numbers opposite the signature of the elector in the pollbook. The elector shall then retire to one of the voting compartments to mark his ballots. No mark shall be made on any ballot which would in any way enable any person to identify the person who voted the ballot. (Effective at time of last update, 1992 H 182, eff. 4-9-93)</td>

polling place and shall compare the elector's signature on his voter's certificate with his signature in the district register. If, upon such comparison, the signature upon the voter's certificate appears to be genuine, the elector who has signed the certificate shall, if otherwise qualified, be permitted to vote: Provided, That if the signature on the voter's certificate, as compared with the signature as recorded in the district register, shall not be deemed authentic by any of the election officers, such elector shall not be denied the right to vote for that reason, but shall be considered challenged as to identity and required to make the affidavit and produce the evidence as provided in subsection (d) of this section. When an elector has been found entitled to vote, the election officer who examined his voter's certificate and compared his signature or initials on the voter's certificate, shall, if the elector's signature is not readily legible, print such elector's name over his signature, and the number of the stub of the ballot issued to him or his number in the order of admission to the voting machines, and at primaries a letter or abbreviation designating the party in whose primary he votes shall also be entered by one of the election officers or clerks. As each voter is found to be qualified and votes, the election officer in charge of the district register shall write or stamp the date of the election or primary, the number of the stub of the ballot issued to him or his number in the order of admission to the voting machines, and at primaries a letter or abbreviation designating the party in whose primary he votes, and shall sign his name or initials in the proper space on the registration card of such voter contained in the district register.

(In effect at time of, and unaltered by: 2004, Oct. 8, P.L. 807, No. 97, § 5.1 (changes procedure for first time voters, not established voters))

Rhode Island Give Name

(a) Each person desiring to vote shall state his or her name and residence, including that person's street address, if he or she has any, to one of the first pair of bi-partisan supervisors, who shall then announce the name and residence in a loud and distinct voice, clear and audible. As each voter's name is announced, the voter shall be handed a ballot application in the following form:

BALLOT APPLICATION

(Poll List)
Senatorial District ________________
Representative District ________________
Voting District ________________
Election ____________________________
Date ________________________________

I hereby certify that I am a registered and qualified elector in the above voting district of
City of
and hereby make application for ballots to be voted at this election.

__________________________________________
(Signature of Voter)

__________________________________________
(Residence Address)

Number Approved ____________________________

(Supervisor of Election)

(b) The voter shall sign the application in the presence and view of a bipartisan pair. They shall locate the voter's name on the certified voting list for the voting district. Upon finding the voter's name on the certified voting list for the district, they shall initial the ballot application in the place provided next to the word "Approved" and shall enter on the certified list of voters a proper notation that the applicant has voted in the election. They shall then return the ballot application to the voter who shall pass down the line and present it to the clerk. After the voter has handed the approved ballot application to the clerk, the clerk shall provide the voter with the appropriate computer ballot and security sleeve, the warden shall direct the voter to the voting booth which the voter shall use, and unless the voter needs instruction or assistance as provided in this chapter, the voter shall cast his or her vote, and if he or she desires place the voted computer ballot in a security sleeve, and shall proceed to the optical scan precinct count unit and shall personally place his or her voted ballot into the designated ballot slot on the unit, and after doing so, shall leave the enclosure at once. No voter shall remain within the voting booth longer than ten (10) minutes, and if the voter refuses to leave after the lapse of ten (10) minutes, the voter shall be removed from the voting booth by order of the warden. Except for the election officials and the election inspector, not more than two (2) voters in excess of the number of voting booths shall be permitted within the enclosed space at any time.

(Last amended 2004, Current through January 2005 Session)

South Carolina  Photo ID  § 7-13-710. Proof of right to vote; signing poll list; comparison of signatures.

When any person presents himself to vote, he shall produce his valid South Carolina driver's license or other form of identification containing a photograph issued by the Department of Motor Vehicles, if he is not licensed to drive, or the written notification of registration provided for by §§ 7-5-125 and 7-5-180 if the notification has been signed by the elector. If the elector loses or defaces his registration notification, he may obtain a duplicate notification from his county board of registration upon request in person, or by telephone or mail. After presentation of the required identification, his name must be checked by one of the managers on the margin of the page opposite his name upon the registration books, or copy of the books, furnished by the board of registration. The managers shall keep a poll list which must contain one column headed "Names of Voters". Before any ballot is delivered to a voter, the voter shall sign his name on the poll list, which must be furnished to the appropriate election officials by the State Election Commission. At the top of each page the voter's oath appropriate to the election must be printed. The signing of the poll list or the marking of the poll list is considered to be an affirmation of the oath by the voter. One of the managers shall compare the signature on the poll list with the signature on the voter's driver's license, registration notification, or other identification and may require further identification of the voter and proof of his right to vote under this title as he considers necessary. If the voter is unable to write or if the voter is prevented from signing by physical handicap, he may sign his name to the poll list by mark with the assistance of one of the managers.

Last amended: 1968

South Dakota  Photo ID  § 12-18-6.1

When a voter is requesting a ballot, the voter shall present a valid form of personal identification. The personal identification that may be presented shall be either:

(1) A South Dakota driver's license or nondriver identification card;
(2) A passport or an identification card, including a picture, issued by an agency of the United States government;
(3) A tribal identification card, including a picture; or
(4) An identification card, including a picture, issued by a high school or an accredited institution of higher education, including a university, college, or...

Vermont Give Name

Before a person may be admitted to vote, he or she shall announce his or her name and if requested, his or her place of residence in a clear and audible tone of voice, or present his or her name in writing, or otherwise identify himself or herself by appropriate documentation. The election officials attending the entrance of the polling place shall then verify that the person's name appears on the checklist for the polling place. If the name does appear, and if no one immediately challenges the person's right to vote on grounds of identity or having previously voted in the same election, the election officials shall repeat the name of the person and:

(1) If the checklist indicates that the person is a first-time voter in the municipality who registered by mail and who has not provided required identification before the opening of the polls, require the person to present any one of the following: a valid photo identification; a copy of a current utility bill; a copy of a current bank statement; or a copy of a government check, paycheck, or any other government document that shows the current name and address of the voter. If the person is unable to produce the required information, the person shall be afforded the opportunity to cast a provisional ballot, as provided in subchapter 6A of this chapter. The elections official shall note upon the checklist a first-time voter in the municipality who has registered by mail and who produces the required information, and place a mark next to the voter's name on the checklist and allow the voter to proceed to the voting booth for the purpose of voting.

(2) If the voter is not a first-time voter in the municipality, no identification shall be required, the clerk shall place a check next to the voter's name on the checklist and allow the voter to proceed to the voting booth for the purpose of voting

(Last amended in 2003)

Virginia Provide ID

§ 24.2-643. Qualified voter permitted to vote; procedures at polling place; voter identification

A. After the polls are open, each qualified voter at a precinct shall be permitted to vote. The officers of election shall ascertain that a person offering to vote is a qualified voter before admitting him to the voting booth and furnishing an official ballot to him.

B. An officer of election shall ask the voter for his full name and current residence address and repeat, in a voice audible to party and candidate representatives present, the full name and address stated by the voter. The officer shall ask the voter to present any one of the following forms of identification: his Commonwealth of Virginia voter registration card, his social security card, his valid Virginia driver's license, or any other identification card issued by a government agency of the Commonwealth, one of its political subdivisions, or the United States; or any valid employee identification card containing a photograph of the voter and issued by an employer of the voter in the ordinary course of the employer's business.

If the voter's name is found on the pollbook, if he presents one of the forms of
identification listed above, if he is qualified to vote in the election, and if no objection is made, an officer shall enter, opposite the voter's name on the pollbook, the first or next consecutive number from the voter count form provided by the State Board, or shall enter that the voter has voted if the pollbook is in electronic form; an officer shall provide the voter with the official ballot; and another officer shall admit him to the voting booth.

Except as provided in subsection E of this section, if a voter is entitled to vote except that he is unable to present one of the forms of identification listed above, he shall be allowed to vote after signing a statement, subject to felony penalties for false statements pursuant to § 24.2-1016, that he is the named registered voter who he claims to be. A voter who requires assistance in voting by reason of physical disability or inability to read or write, and who requests assistance pursuant to § 24.2-649, may be assisted in preparation of this statement in accordance with that section. The provisions of § 24.2-649 regarding voters who are unable to sign shall be followed when assisting a voter in completing this statement.

APPENDIX B – Court Decisions and Literature on Voter Identification and Related Issues

Court Decisions

Summary of Relevant Cases:

Challenges Prevailed:

**American Civil Liberties Union of Minnesota v. Kiffmeyer, 2004**
- Action for temporary restraining order – granted
- Statute: allowed use of tribal identification cards w/ name, address & photo as a valid identification to register to vote only if the voter lives on the reservation to “complete” a mail-in application (which only affected about 600 voters w/ incomplete applications)
- Claim -14th Amendment EPC: likely to prevail, no rational basis for a distinction between Indians residing on reservations and those not
- Statute: may use certain forms of photo identification lacking address together with a utility bill but not tribal identification cards
- Claim -14th Amendment EPC: likely to prevail

**Greidinger v. Davis, 1993**
- Statute: mandated disclosure of SS # as a precondition to voter registration (rationale was voter identification, but the numbers were rarely used to verify identity & were disclosed in voter lists to both political parties and the public upon request)
- Claims:
  - 14th Amendment EPC: no classification (applied strict scrutiny)
  - Substantive due process: law invalid; found that the statute conditioned the fundamental right to vote on the consent to an invasion of privacy; this was found to be a substantial burden (applied strict scrutiny)
    - Compelling interests: preventing voter fraud (deemed compelling)
    - Necessary: fails, preventing voter fraud when allowing names for inspection could be achieved by supplying addresses and DOBs or use of voter registration numbers
    - HOWEVER: Court also made it clear that if the registration scheme kept the SS# for internal use only – it would be valid

Challenges Rejected:

**League of Women Voters v. Blackwell, 2004.**
- Sec. of State Directive: provisional ballots issued if first-time voter, who registered by mail and did not provide ID, cannot produce proper ID at the polls AND that the provisional ballot will only be counted if the voter returns to the poll before it closes w/ ID or can recite SS# or DL#
- Claims – Supremacy Clause & HAVA: ruled that HAVA did not specify how the first-time voters’ identifications should be verified and this method was not unreasonable or too burdensome

**Colorado Common Clause v. Davidson, 2004**
- Statute: required all voters to show ID (most types permitted) before voting
- Claims:
  - HAVA: ruled that HAVA did not preempt more strict state laws & allowed States to be more strict as long as consistent with the purpose of HAVA (both HAVA & CO provisions’ purposes were to prevent voter fraud)
  - Substantive due process and equal protection
    - No improper discrimination
• Preventing voter fraud is a compelling interest since it is irreversible once vote is cast
• Only marginally more intrusive than HAVA, many types of identification permitted – thus, valid

**McKay v. Thompson, 2000**
- Statute: mandated disclosure of SS # as a precondition to voter registration
- Claims:
  - Privacy Act, Section 7: ruled that Tennessee voter system exempt from Privacy Act because it is pre-75
  - NVRA, permitting only min. amt. of info. necessary to prevent duplicate registration and determine eligibility: ruled that NVRA does not specifically forbid the use of SS#s & the Privacy Act specifically permits them pre-75
  - Substantive due process: ruled that internal use of SS# not a burden
  - Free Exercise, based on Bible’s supposed prohibition on use of universal identifiers: ruled that law is generally applicable and thus valid
  - P&I, Article IV: does not protect in-state citizens
  - P&I, 14th Amend.: no protection for privilege where Congress authorized its infringement

**Kemp v. Tucker, 1975**
- Statute: required name, occupation, address, sex, race, height, hair color, eye color, and date of birth be listed on voter registration card for identification purposes
- Claims:
  - VRA: ruled that race was not made a “qualification” for voting
  - 15th Amendment: ruled that it did not abridge right to vote on account of race because rejection of application was due to failure to provide information, not race; race only one factor in identification
  - 14th Amendment EPC: ruled there was no distinction among voters

**Perez v. Rhiddlehoover, 1966**
- Statute: date of birth, place of birth, mother’s first or maiden name, color of eyes, sex, race, occupation, and whether owner, tenant or boarder must appear on the registration for identification
- Claims:
  - VRA: ruled that it was not a “test or device” because it applied equally
  - 15th Amendment: same reasons

**Cases in Which the Plaintiffs Have Prevailed in Challenging the Statute Requiring Voter Identification:**

This was an action just before the November 2004 election for a temporary restraining order, which was granted. The ACLU challenged a Minnesota law allowing the use of tribal identification cards with the name, address, and photograph as a valid identification (equal to a driver's license) for use in “completing” an incomplete mail-in voter registration only if the Indian lives on the reservation. 2004 WL 2428690, at *1. The Court ruled that this distinction would likely violate the Equal Protection Clause because there was no rational basis for differentiating
between the validity of the identification based on whether or not the cardholder lives on the reservation. *Id.* at *1, 3.

Secondly, the ACLU challenged a second statute which allowed the use of certain photo identification lacking the voter's address to be used together with a utility bill or bank statement as valid identification for registration. *Id.* at *3. The statute did not, however, permit using a tribal identification for this same purpose. *Id.* The Court ruled that this likely violated the equal protection clause as well. *Id.*

**Greidinger v. Davis, 988 F.2d 1344 (4th Cir. 1993).**

This case challenged a Virginia law requiring the social security number for voter registration, which the State subsequently disclosed to the public and political parties upon request in voter registration lists, which included the social security numbers. Failure to provide the social security number resulted in the denial of the registration application. The law was challenged under the Equal Protection Clause and under substantive due process. The Court quickly rejected the equal protection challenge because the law made no classification. 988 F.2d at 1350.

The law was invalidated under substantive due process. *Id.* at 1355. The Court found that the statutory scheme conditioned the fundamental right to vote on the consent to an invasion of privacy, based on concerns of identity theft. *Id.* at 1353-54. The Court found this to be a substantial burden on the right to vote. *Id.* at 1354. The Court recognized that the government's interest in preventing voter fraud was compelling. *Id.* However, the Court found that disclosure of the information to the public and political parties was not necessary to achieve that interest. *Id.* Disclosure of addresses or dates of birth would be sufficient to aid the public in distinguishing between two voters with the same name. *Id.* at 1355. The Court did state that required disclosure of the social security number for internal use only would be valid. *Id.* at 1354 n.10.

**Cases in Which the Statute or Practice of Voter Identification Has Been Upheld:**

The League of Women Voters challenged the Secretary of State's directive that provisional ballots should be issued to all first-time voters who registered by mail without providing identification who cannot show proper identification at the polls. 340 F. Supp. 2d at 828. The Directive also stated that the provisional ballots would only be counted if the voter orally recited his driver's license number or the last four digits of his social security number or returned to the polling place before it closed with some acceptable identification, including reciting those identification numbers. *Id.* The Court stated that HAVA only requires verification of eligibility of first time voters registering by mail; it does not say how that should be done. *Id.* at 831. The Court found the burden on the right to vote to be slight. *Id.* The Directive was found valid under HAVA and the Supremacy Clause because the number of uncounted votes would be small, the requirement was reasonable, and there was adequate notice of the requirement on the registration forms. *Id.* at 829-30.

In this case, the validity of three Colorado statutory provisions was challenged. The laws (1) required all in-person voters to show identification (not just first-time registrants); (2) provided that votes cast in the wrong precinct would not be counted; and (3) provided that
provisional ballots would not be counted if the voter applied for an absentee ballot. 2004 WL 2360485, at *1. The plaintiffs also challenged the provisions under HAVA. The identification provision allowed nearly all forms of acceptable identification under HAVA. Id. at *6.

The challenge to the identification requirement failed under both challenges. The Court interpreted HAVA as not intended to preempt state laws and as permitting states to be more strict than, but not inconsistent with, HAVA. Id. at *10. The Court felt that the purpose of both laws was the same, to reduce voter fraud, and thus, both laws could coexist. As to the Constitutional claim, both equal protection and substantive due process, the Court felt that preventing voter fraud, which is impossible to remedy once a vote is cast, is a compelling interest, and the Court also felt that a voter identification requirement for all voters, with many types of acceptable identification, was only marginally more intrusive than HAVA. Id. at 12. The Court also found no improper discrimination between voters. Id. Thus, the provision was upheld.

*McKay v. Thompson, 226 F.3d 752 (6th Cir. 2000).*

The Sixth Circuit ruled that the Privacy Act, the National Voter Registration Act, Substantive Due Process, the Privileges and Immunities Clauses (Fourteenth Amendment & Article IV), and the First Amendment right to free exercise do not prohibit requiring disclosure of social security numbers as a precondition to voter registration.

The Privacy Act, Section 7, mandates that it is unlawful for a government to deny a right or privilege because of a citizen's refusal to disclose his social security number, unless the disclosure was required for a system established prior to 1975. 226 F.3d at 755 (citing Privacy Act of 1974, Pub. L. No. 93-579 (1974)). Since Tennessee required social security numbers for voter registration since 1972, his challenge was rejected. 226 F.3d at 755. Second, the NVRA only permits requiring the minimum amount of information necessary to prevent duplicate voter registration and to determine eligibility. Id. at 755-56 (citing 42 U.S.C. §1973gg-3(c)(2)(B)). The Court rejected this challenge because the NVRA does not specifically forbid the use of social security numbers, and the Privacy Act, a more specific statute, grandfathered their use if prior to 1975. 226 F.3d at 756.

Finally, the plaintiff's constitutional claims were all rejected. His substantive due process claim was rejected because internal receipt and use of social security numbers does not burden the fundamental right to vote. Id. The free exercise challenge, based on the Bible's supposed prohibition of universal identifiers, was rejected because the law was generally applicable and not directed at particular religious practices. Id. The Privileges and Immunities Clause claim was rejected because the Clause does not apply to citizens of the state. Id. The Fourteenth Amendment Privileges and Immunities claim, based on the right to vote as unique to U.S. citizenship, was rejected because the Clause provides no protection where Congress has authorized the infringement. Id.

A statute was upheld, which required name, occupation, address, sex, race, height, hair color, eye color, and date of birth to be recorded on the voter registration card and allowed registration officials to reject an incomplete application. 396 F. Supp. at 738. Claims were alleged under the Fourteenth Amendment's Equal Protection Clause, the Fifteenth Amendment, and the Voting Rights Act.

As to the Fourteenth and Fifteenth Amendment claims, the Court reasoned that preventing voter fraud is a compelling goal, and identification provisions are "an essential means of achieving the goal." Id. at 739. The Court also rejected the equal protection claim because the statutes did not create a distinction at all. Id. at 740 n.3. Since race is just one of
several characteristics required, the Court found that it was intended for preventing voter fraud, not some other motive. *Id.* at 740. As to the VRA, the Court rejected the claim that it added race as a qualification for voting as frivolous. *Id.* As to a Fifteenth Amendment claim that it abridged the right to vote on account of race, the Court also made a distinction between rejecting a voter application because of race and rejecting an application because of failure to answer all relevant questions to assist in preventing voter fraud. *Id.* The statute was upheld.

**Perez v. Rhiddlehoover, 186 So. 2d 686 (La. Ct. App. 1966).**

A voter registration requirement was challenged and upheld. The statute stated that date of birth, place of birth, mother's first or maiden name, color of eyes, sex, race, occupation, and whether owner, tenant or boarder must appear on the registration. 186 So.2d at 690. This information was required for identification of voters, especially when voters had the same name, to prevent duplicate voting. It was challenged under the Voting Rights Act of 1965 Section 4(a) which prohibits denying the right to vote for failure to comply with a “test or device.” The Court felt that this requirement was not a test or device for discrimination because it applied equally. *Id.* at 691. The Court also determined that it was not in conflict with the Fifteenth Amendment either. *Id.*

**Friendly House, et al. v. Janet Napolitano et al., CV 04-649 TUC DCB**

On November 30, 2004, the Mexican American Legal Defense and Educational Fund (MALDEF) filed suit seeking to halt the implementation of Proposition 200. Proposition 200 created a number of legal requirements to ensure that public benefits are not available to illegal immigrants. In particular, Proposition 200 requires that a person attempting to register to vote provide one of six specific forms of proof of United States citizenship. Compl. 12-13. Also, any person attempting to vote must present either one form of photo identification or two forms of non-photo identification. *Id.* at 13.

The lawsuit alleges two violations that directly relate to the voting identification restrictions. First, the lawsuit alleges a violation of the Twenty-Fourth and Fourteenth amendments in that a voter must pay a poll tax by spending money to purchase the required identification. *Id.* at 20. Second, the lawsuit alleges violation of the Voting Rights Act. *Id.* at 21. The lawsuit was recently dismissed by the 9th Circuit Court of Appeals for a lack of standing. The Circuit Court found that there was no injury-in-fact, meaning that once an injury occurs the suit will likely be refiled. Additionally, it should be noted that the voter identification issue is only a part of the lawsuit, and much of the focus has been on other aspects of Proposition 200.

**Current Litigation Concerning Voter ID Issues**

Litigation is filled with uncertainty. Litigation stemming from newly passed voter identification requirements will continue into the foreseeable future. Lawsuits are currently pending over voter identification requirements in Georgia and Indiana. Other states, such as Ohio, are considering new identification requirements that could lead to further litigation. The Georgia lawsuit has already succeeded in getting a preliminary injunction against the law in question, which will likely galvanize interested parties in other states to pursue similar litigation. Of course, if the injunction is eventually overturned at the appellate level it could have a similar chilling affect on future litigation.

This summary major litigation pending in Georgia and Indiana includes a brief assessment of the likelihood of success:

---

1 As of January 2, 2006
Georgia (Common Cause/Georgia v. Billups):

On September 19, 2005, Common Cause of Georgia, in conjunction with several other non-profit organizations, filed suit in Federal District Court against the Georgia Secretary of State and other election officials, challenging the constitutionality of Georgia’s new voter identification requirements. The new law requires all voters attempting to cast a ballot in person to present a valid form of photographic identification. O.C.G.A. § 21-2-417. A voter that is unable to provide proper identification is given a provisional ballot. However, that provisional ballot will be counted only if the voter is able to subsequently present valid identification within two days of the election. Id.

The lawsuit alleges five separate violations of state and federal law. First, the complaint alleges that the identification requirements infringe on the right to vote guaranteed in the Georgia constitution (Compl. 32). In addition, the Plaintiffs claim violations of the Federal Civil Rights Act and Voting Rights Act. (Compl. 36,38). Finally, the lawsuit alleges violations of the Fourteenth and Twenty-Fourth amendments to the U.S. Constitution. The complaint claims that the ID requirements constitute an “undue burden” on the right to vote, in violation of the Equal Protection Clause of the Fourteenth Amendment (Compl. 34). The ID requirement does not apply to most absentee voters, and thus the requirement is also over-broad and not narrowly tailored to address the stated purpose of preventing voter fraud (Compl. 34). The complaint further alleges that the cost of obtaining a photo ID constitutes a poll tax, in violation of the Twenty-Fourth Amendment, and that the cost is also a violation of the Fourteenth Amendment because it applies to voters who choose to vote in person, and not to those who vote absentee (Compl. 34,35).

On October 18, 2005, the District Court granted the Plaintiff’s motion for a preliminary injunction, enjoining the application of the new identification requirements. In granting the injunction, the court held that both federal constitutional claims had a substantial likelihood of succeeding on the merits at trial (Prelim. Inj. 96, 104). The court also held that, while the two federal statutory claims were plausible, they both lacked sufficient evidence at the time to have a substantial likelihood of success. (Prelim. Inj. 109,111,116). Finally, the court held that the Georgia constitutional claim would be barred by the Eleventh Amendment to the U.S. Constitution. (Prelim. Inj. 77).

The Defendants appealed the motion for preliminary injunction to the Eleventh Circuit, and oral argument is scheduled for March 1, 2006. In addition, some news reports have claimed that the Georgia legislature is considering re-visiting the ID requirements in light of the on-going litigation. As for the merits, in granting the preliminary injunction the District Court has already signaled its belief that the federal constitutional claims are likely meritorious. The Eleventh Circuit may have a different view, but for now the case looks to have a reasonable chance of success.

Indiana (Indiana Democratic Party v. Rokita and Crawford v. Marion County Election Board):

The Indiana lawsuit is similar to its Georgia counterpart in content, though not in status. In Indiana separate lawsuits, now joined, were filed by the state Democratic Party and the

---

2 Litigation documents are available at the Election Law @ Moritz website. http://moritzlaw.osu.edu/electionlaw/litigation/index.php

Indiana Civil Liberties Union (ICLU). The Democratic Party's lawsuit is directed against the Indiana Secretary of State, while the ICLU's lawsuit involves the Marion County Board of Elections and the State of Indiana. Like Georgia, Indiana law also requires citizens voting in person to present some form of official photo identification. IC § 3-11-8-25.1. Voters unable to present identification are given a provisional ballot, which is counted if they are able to provide the required identification by Noon on the second Monday following the election. IC § 3-11.7-5-1. Unlike Georgia, Indiana provides state issued identification at no charge. However, there are costs involved in the process, including transportation to the Bureau of Motor Vehicles, and payment for documents such as birth certificates, which are needed to obtain the ID. (Second Am. Compl. 6).

The Democratic Party's complaint raises Fourteenth Amendment claims similar to those in the Georgia lawsuit, including concerns about substantially burdening the right to vote, the enactment of a de-facto poll tax from the costs indirectly associated with obtaining ID, and the lack of applicability to voters who cast an absentee ballot. (Second Am. Compl. 6-9). In addition, the complaint alleges that the substantial burden placed on the right to vote violates the First Amendment protection of expressive or symbolic speech, as well as the freedom of association as applied to Democratic primary elections. (Second Am. Compl. 9-10). Finally, the complaint alleges violations of the Voting Rights Act, National Voter Registration Act, and the Help America Vote Act (Second Am. Compl. 10-11). The ICLU's complaint alleges many of the same violations, but also includes claims of a violation of Indiana's constitutional guarantee of a free and equal election system. (Compl. 15)

The case is currently in the pre-trial phase, with both sides awaiting decisions on their respective motions for summary judgment. The likelihood of success is bolstered by the fact that the Fourteenth amendment constitutional claims have already been found persuasive by at least one other Federal District Court. However, the Indiana law is notably different than its Georgia counterpart in that it provides free identification. While the plaintiffs make a solid argument that related costs still amount to a poll-tax, it is possible that the court could distinguish on this matter.

Unlike the Georgia case, the Indiana lawsuit also claims a violation of the Help America Vote Act. Although the claim is not completely clear, it seems as though the Plaintiffs are arguing that the Indiana statute requires more stringent identification than what is required by HAVA. 42 U.S.C. § 15483(b)(1)-(2). While this is true, it is unclear how this violates the statute. HAVA merely states that certain voters unable to produce HAVA required identification be given a provisional ballot. Id. Indiana law meets this requirement. IC § 3-11-8-25.1. Although Indiana law requires more stringent identification for counting the provisional ballot, HAVA leaves these decisions to state law. 42 U.S.C. § 15482(a).

---

4 According to an AP article, the Plaintiffs filed some type of brief on December 21—however it is not yet up on the Moritz website and I am unsure how to access it otherwise.
Appendix C

Analysis of Effects of Voter Identification Requirements on Turnout
Tim Vercellotti
Eagleton Institute of Politics
Rutgers University
May 16, 2006

Introduction

A key area of disagreement in the policy debate over voter identification requirements concerns whether such requirements dampen turnout among those eligible to vote. Opponents of voter identification laws argue that they constitute an institutional barrier to voting, particularly among the poor, African-Americans, Hispanics, the elderly and people with disabilities (Baxter and Galloway 2005, Electionline.org 2002, Jacobs 2005, Young 2006). This argument holds that voter identification requirements create an extra demand on voters, and thus may discourage some of them from participating in elections. Further, critics of voter identification requirements contend that the effect is greater based on specific types of requirements. Critics argue that requiring voters to produce some form of government-issued photo identification on Election Day is more demanding than requiring, for example, that they state their names at the polling place because of the various steps needed to procure a photo identification card, such as a driver's license. Supporters of voter identification requirements, on the other hand, argue that the requirements are necessary to combat voter fraud, safeguard the integrity of the electoral process, and engender faith in the electoral process among citizens (Young 2006).

This report examines the potential variation in turnout rates based on the type of voter identification requirement in place in each state on Election Day 2004. This report draws from two sets of data – aggregate turnout data at the county level for each state, as compiled by the Eagleton Institute of Politics, and individual-level survey data included in the November 2004 Current Population Survey conducted by the U.S. Census Bureau. Classification of voter identification requirements comes from a review of state statutes conducted by the Moritz College of Law at the Ohio State University.

Types of voter identification requirements

Based on research by the Moritz College of Law, states had one of five types of requirements in place on Election Day 2004. Upon arrival at polling places, voters had to either: state their names (10 states); sign their names (13 states and the District of Columbia); match their signature to a signature on file with the local election board (seven states); provide a form of identification that did not necessarily include a photo (15 states); or provide a photo identification (five states).5 It was then possible to code the states according to these requirements, and test the assumption that voter identification requirements would pose an increasingly demanding requirement in this order: stating one’s name, signing one’s name, matching one’s signature to a signature on file, providing a form of identification, and providing a form of photo identification.

5 Oregon conducts elections entirely by mail. Voters sign their mail-in ballots, and election officials match the signatures to signatures on file. For the purposes of this analysis, Oregon is classified as a state that requires a signature match.
But election laws in numerous states offer exceptions to these requirements if individuals lack the necessary form of identification, and laws in those states set a minimum standard that a voter must meet in order to vote using a regular ballot (as opposed to a provisional ballot). Thus it is also possible to categorize states based on the minimum requirement for voting with a regular ballot. In 2004 the categories were somewhat different compared to the maximum requirement, in that none of the states required photo identification as a minimum standard for voting with a regular ballot. Four states, however, required voters to swear an affidavit as to their identity (Florida, Indiana, Louisiana, and North Dakota). The five categories for minimum requirements were: state name (12 states), sign name (14 states and the District of Columbia), match one’s signature to a signature on file (six states), provide a non-photo identification (14 states), or swear an affidavit (four states). For the purposes of this analysis I also tested the array of minimum identification requirements to assess whether they posed increasing levels of demand on the voter: state name, sign name, match signature, provide non-photo identification, and, given the potential legal consequences for providing false information, swearing an affidavit.

Estimating turnout among citizens in the voting-age population

This report examines turnout among U.S. citizens of voting age in both the aggregate- and the individual-level data. Determining citizenship status in the individual-level data simply involved restricting the analyses to individuals who identified themselves as citizens in the November 2004 Current Population Survey. (Those who said they were not citizens did not have the opportunity to answer the supplemental voting questions contained in the Current Population Survey.)

In the aggregate data, determining the percentage of the voting-age population that has U.S. citizenship posed a methodological challenge. The Census Bureau gathers information on the citizenship status of adults ages 18 and older only during the decennial census. While the Census Bureau provides annual estimates of the population to account for changes between decennial censuses, the bureau does not offer estimates for the proportion of the adult population who are citizens as part of the annual estimates. To address this issue I estimated the 2004 citizen voting-age population for each county using a method reported in the analysis of the 2004 Election Day Survey conducted for the U.S. Election Assistance Commission (U.S. Election Assistance Commission, 2005). I calculated the percentage of the 2000 voting-age population who were citizens in 2000, and applied that percentage to the July 1, 2004 estimates for voting-age population in each county. In other words, I assumed that the percentage of the voting-age population that had U.S. citizenship in 2004 was similar to the percentage of the voting-age population who were citizens in 2000.6

Analysis of aggregate data

If one treats maximum voter identification requirements as a continuous variable, with photo identification as the most demanding requirement, one finds some statistical support for the premise that as the level of required proof increases, turnout declines. Averaging across counties in each state, statewide turnout is negatively correlated with maximum voter

---

6 McDonald and Popkin (2001) recommend an even more stringent approach to voter turnout calculations. They point out that voting-age population estimates include adults who are ineligible to vote (such as convicted felons), and the estimates overlook eligible citizens living overseas. While estimates of the voting-eligible population are available at the state level, I was unable to find such estimates for individual counties, which provide the unit of analysis for the aggregate data analyzed here.
identification requirements ($r = -.30, p < .05$). In considering the array of minimum requirements, with affidavit as the most demanding requirement, however, the correlation between voter identification and turnout is negative, but it is not statistically significant ($r = -.20, p = .16$). This suggests that the relationship between turnout rates and minimum requirements may not be linear. Breaking down the turnout rates by type of requirement reveals in greater detail the relationship between voter identification requirements and voter turnout.

[Table 1 here]

The aggregate data show that 60.9 percent of the estimated citizen voting age population voted in 2004. Differences in voter turnout at the state level in 2004 varied based on voter identification requirements. Taking into account the maximum requirements, an average of 64.2 percent of the voting age population turned out in states that required voters to state their names, compared to 58.1 percent in states that required photo identification. A similar trend emerged when considering minimum requirements. Sixty-three percent of the voting age population turned out in states requiring voters to state their names, compared to 60.1 percent in states that required an affidavit from voters. Given the lack of a clear, consistent linear relationship between turnout and minimum identification requirements, however, I opted to treat the voter identification requirements as a series of dichotomous variables in subsequent analyses.7

Voter identification requirements alone do not determine voter turnout. Multivariate models that take into account other predictors of turnout can paint a more complete picture of the relationship between voter identification requirements and turnout. I estimated the effects of voter identification requirements in multivariate models that also took into account the electoral context in 2004 and demographic characteristics of the population in each county.

I coded the voter identification requirements as a series of dummy variables, coding each variable as one if the requirement existed in a given state, and zero otherwise. This yielded five dichotomous variables for maximum requirements (state name, sign name, match signature, non-photo identification, or photo identification), and five dichotomous variables for minimum requirements (state name, sign name, match signature, non-photo identification, or providing an affidavit). I omitted the variable for stating one’s name so that it could serve as the reference category in comparison with the other four identification requirements in each of the statistical analyses.

To capture electoral context I included whether the county was in a presidential battleground state (any state in which the margin of victory for the winning candidate was five percent or less), and whether the county was in a state with a competitive race for governor and/or the U.S. Senate (also using the threshold of a margin of victory of five percent or less). Another contextual factor to consider is voter registration requirements, such as the deadline for registration. As states set the deadline farther away from Election Day, the task of remembering to register to vote becomes more challenging. Thus I added a variable to reflect the number of days between each state’s registration deadline and the election.8

---

7 Treating maximum voter identification requirements as a continuous variable yielded results in which voter identification requirements were negatively related to aggregate turnout. Those results can be found in Table A-1 in the Appendix to this report.
8 For states that had Election Day registration or no registration requirement (North Dakota), I assigned a value of zero to this variable.
Drawing from U.S. Census projections for 2003, I included the percentage of the voting-age population in each county that was Hispanic or African-American to control for ethnicity and race. I controlled for age using the 2003 Census projection for the percentage of county residents age 65 and older, and I controlled for socioeconomic status by including the median household income for 2002 in each county.\(^9\)

I estimated a series of random effects models to account for the likelihood that data from counties were correlated within each state (for further explanation of random effects and other multilevel models, see Bryk and Raudenbush 1992, Luke 2004, Singer 1998).\(^10\) I allowed the median income variable to have both fixed and random effects in each state to take into account variation in the cost of living in each state. The dependent variable in each model was voter turnout at the county level, with turnout calculated as the percentage of the estimated citizen voting-age population that voted in the 2004 election.

Turning first to an analysis using the maximum identification requirements, two of the four requirements had a small and negative effect on turnout in 2004: matching one's signature and providing a non-photo identification. Taking into account the reference variable of stating one's name, the results indicate that turnout was lower in states that required signature matches or a non-photo identification than in states that required voters to simply state their name, holding constant the electoral context and demographic variables.

Two contextual factors -- whether the county was in a state that was a battleground state and whether that state had a competitive race for governor and/or U.S. Senate-- increased voter turnout. The time between the closing date for registration and the election had a slight negative effect on turnout. As the percentage of Hispanics in the county’s population increased, turnout declined. The percentage of senior citizens in the county and household median income had positive effects on turnout. The percentage of African-Americans in the county did not have a significant effect.

The effects of the minimum voter identification requirements were non-existent. None of the dummy variables for voter identification requirements were statistically significant. Being a battleground state and having a competitive statewide race were significant and positive, as was the percentage of senior citizens in the county and household median income. The percentage of Hispanics in the county’s population continued to have a negative effect on turnout, as did the number of days between the closing date for registration and the election.

I then sought to test the hypothesis that voter identification requirements dampen turnout among minorities, a claim voiced by some critics of the requirements. To test this idea I incorporated a series of interactions between the maximum and minimum voter identification requirements and the percentage of African-Americans and Hispanics living in the counties. In each case the interactions did not improve the fit of the models to the data. A chi-square test of the difference in the deviance for each model (represented by -2 log likelihood in Table 2),

\(^9\) To bring the income figures into a scale comparable to those of the other variables, I used the natural log of median household income.

\(^10\) The data analyses provided evidence that there was, indeed, a clustering of data within each state. The intraclass correlation, bounded by 0 and 1, measures the variation between the states. A random intercept model using only the intercept as a predictor generated an intraclass correlation of .43, indicating considerable variation between the states.
showed no significant improvement by including the interactions (p > 0.05). I report the coefficients for the models with the interactions in the Appendix in tables A-2 and A-3.

Analysis of the aggregate data at the county level generates some support for the hypothesis that as the identification requirements for voting vary, so does turnout. Specifically, in terms of the maximum requirements, the results suggest that requiring a signature match or non-photo identification is negatively related to turnout compared to requiring that a voter state his or her name. But the analysis showed that adding interactions between identification requirements and the percentage of the county that was African-American or Hispanic did not improve the fit of the model to the data.

Aggregate data, however, cannot fully capture the individual demographic factors that may figure into the decision to turn out to vote. For example, previous research has found that education is a powerful determinant of turnout (Wolfinger and Rosenstone 1980, but see also Nagler 1991). Married individuals also are more likely to vote than those who are not married (Alvarez and Ansolabehere 2002; Alvarez, Nagler and Wilson 2004; Fisher, Kenny, and Morton 1993). To fully explore the effects of voter identification requirements on turnout, it is important to examine individual-level data as well.

Individual-level analysis

Individual-level turnout data exists in the November 2004 Current Population Survey conducted by the U.S. Census Bureau. The Census Bureau conducts the CPS monthly to measure unemployment and other workforce data, but the bureau adds a battery of voter participation questions to the November survey in even-numbered years to coincide with either a presidential or midterm Congressional election.

One of the advantages of the CPS is the sheer size of the sample. The survey’s Voting and Registration Supplement consisted of interviews, either by telephone or in person, with 96,452 respondents. The large sample size permits analyses of smaller groups, such as Black or Hispanic voters or voters with less than a high school education. The analyses reported here are based on reports from self-described registered voters. I omitted those who said they were not registered to vote. I also excluded those who said they cast absentee ballots because the identification requirements for absentee ballots may differ from those required when one votes in person. In addition, I eliminated from the sample respondents who said they were not U.S. citizens because the questionnaire design skipped those individuals past the voter registration and turnout questions in the survey.

The dependent variable in these analyses is whether a respondent said he or she voted in the November 2004 election. As in the analysis of aggregate data, I coded the voter

---

11 A reviewer for an earlier version of this paper recommended adding an education variable to the aggregate model. One version of the aggregate model not reported here included the percentage of adults in the county who had at least a college degree. The measure was highly collinear with the percentage of residents living below the poverty line, necessitating removal of the college degree variable from the model.

12 It is important to note that the Census Bureau allows respondents to answer on behalf of themselves and others in the household during the interview. While proxy reporting of voter turnout raises the possibility of inaccurate reports concerning whether another member of the household voted, follow-up interviews with those for whom a proxy report had been given in the November 1984 CPS showed 99 percent agreement between the proxy report and the information given by the follow-up respondent (U.S. Census Bureau 1990).

13 The U.S. Census Bureau reported, based on the November 2004 CPS, that 89 percent of those who identified themselves as registered voters said they voted in 2004 (U.S. Census Bureau 2005). Previous research has shown
identification requirements as a series of dummy variables, coding each variable as one if the requirement existed in a given state, and zero otherwise. This yielded five dichotomous variables for maximum requirements (state name, sign name, match signature, non-photo identification, or photo identification), and five dichotomous variables for minimum requirements (state name, sign name, match signature, non-photo identification, or providing an affidavit). I omitted the variable for stating one's name so that it could serve as the reference category in comparison with the other four identification requirements in each of the statistical analyses.

In addition to the voter identification requirements, the models include two other state-level factors that might have influenced turnout in 2004: whether the state was considered a battleground state in the presidential election, and whether there was a gubernatorial and/or U.S. Senate race in the state (see Alvarez and Ansolabehere 2002, Alvarez et al. 2004, and Kenny et al. 1993 for similar approaches). As in the aggregate data analysis, the threshold that determined whether the state was a battleground state or had a competitive statewide race was a margin of victory of five percent or less. At the individual level, I controlled for gender, household income, and dummy variables for race/ethnicity, age and education. In terms of race and ethnicity, I created dummy variables to represent whether a voter was Black/non-Hispanic, Hispanic, or Asian (with white/non-Hispanic/other voters as the omitted category for reference purposes). I separated education into five dummy variables: less than high school, high school diploma, some college, college graduate, and graduate training. I omitted the "less than high school" variable from the model for reference purposes. Regarding age, I created four dummy variables to represent 18 to 24 years of age, 29 to 44, 45 to 64, and 65 years and older. I omitted the 18-to-24 category as the reference variable in the model.

Drawing on previous research on voting behavior, I also controlled for whether an individual was employed, or at least a member of the workforce (as opposed to being a full-time student, a homemaker, or retired). Both employment and workforce membership have been shown to be positive predictors of turnout (see Mitchell and Wlezien 1995). Marital status, whether one is a native-born citizen and residential mobility also have emerged as significant predictors of turnout (Alvarez and Ansolabehere 2002, Alvarez et al. 2004, Kenney et al. 1993, Wolfinger and Rosenstone 1980). I included in the model variables for whether a respondent was married (coded 1 if yes, 0 otherwise), and whether one was a native-born citizen (coded 1 if yes, 0 otherwise). I measured residential mobility by coding for whether the respondent had moved to a new address in the six months prior to the interview (coded 1 if yes, 0 otherwise).

Results

that, generally speaking, some survey respondents overstate their incidence of voting. Researchers speculate that over-reports may be due to the social desirability that accompanies saying one has done his or her civic duty, or a reluctance to appear outside the mainstream of American political culture (U.S. Census Bureau 1990). It is also possible that voting is an indication of civic engagement that predisposes voters to agree to complete surveys at a higher rate than non-voters (Flanigan and Zingale 2002). Hence the voter turnout rates reported in the CPS tend to be up to 10 percentage points higher than the actual turnout rate for the nation (Flanigan and Zingale 2002). Even with this caveat, however, the CPS serves as a widely accepted source of data on voting behavior.

14 Earlier versions of this paper included an individual-level analysis that included the five maximum voter identification requirements combined into a continuous variable. The results of that analysis, which found that voter identification requirements had a negative relationship with turnout, can be found in table A-4 in the Appendix.

Given that the individual-level analysis focused on registered voters (as opposed to the citizen voting-age population in the aggregate analysis), I did not include the closing date for registration as a predictor of turnout in the individual-level analysis.
The dependent variable is whether a respondent said he or she voted in the November 2004 election (coded 1 for yes, 0 for no). I estimated models using probit analysis, which calculates the effects of independent variables on the probability that an event occurred—in this case whether a respondent said he or she voted. I estimated the models using robust standard errors to control for correlated error terms for observations from within the same state.

Table 3 here

The two models in Table 3 use either the maximum or minimum voter identification requirements in each state. The two models generate similar results. In each model, three of the voter identification requirements exert a statistically significant, negative effect on whether survey respondents said they had voted in 2004. In other words, compared to states that require voters only to state their names, the requirements to sign one’s name, provide a non-photo identification, photo identification in the maximum requirements or affidavit in the minimum requires exert a negative influence on turnout.

Of the other state factors, only the competitiveness of the presidential race had a significant effect on turnout. In terms of demographic influences, African-American voters were more likely than white voters or other voters to say they had cast a ballot, while Asian-Americans were less likely than white or other voters to say they had turned out. Hispanic voters were not statistically different from white or other voters in terms of reported turnout. Consistent with previous research, income, and marital status all were positive predictors of voting. Women also were more likely to say they voted than men. Among the age categories, those ages 45 to 64 and 65 and older were more likely than those ages 18 to 24 to say they voted. Respondents who had earned a high school diploma, attended some college, graduated from college or attended graduate school were all more likely to say they voted than those who had finished high school. Respondents who had moved within six months before the interview were less likely to say they had voted.

While the probit models provide statistical support for the influence of voter identification requirements and other variables on turnout, probit coefficients do not lend themselves to intuitive interpretation. Another common approach in studies of election requirements is to examine how the predicted probability of voter turnout would vary as election requirements vary. I used the probit coefficients to calculate the predicted probability of voting at each level of voter identification requirements while holding all other independent variables in the models at their means.\(^1\)\(^6\) I calculated the probabilities taking into account both maximum and minimum requirements.

Table 4 here

Taking into account that signature matches were not a predictor of turnout, the differences in predicted probability appear to decline from stating one’s name to providing a photo identification or affidavit. Voters in states that required photo identification were 2.7 percent less likely to vote than voters in states where individuals had to give their names.\(^1\)\(^7\) In terms of the

---

\(^1\)\(^6\) In the case of dichotomous independent variables, holding them at their mean amounted to holding them at the percentage of the sample that was coded 1 for the variable (Long 1997).

\(^1\)\(^7\) The voter turnout percentages may seem disproportionately high compared to the turnout rates reported in the aggregate data analysis. It is important to consider that the turnout rates in the aggregate data were a proportion of
minimum requirement, voters in states that required an affidavit at minimum were 4 percent less likely to turn out than voters in states where they had to give their names.

The differences were more pronounced for those lower in education. Constraining the model to show predicted probabilities only for those with less than a high school diploma, the probability of voting was 5.1 percent lower in states that required photo identification as the maximum requirement and 7 percent lower in states that required an affidavit as the minimum requirement compared to states where stating one's name was the maximum or minimum requirement.

Race and ethnicity have generated particular interest in the debate over voter identification requirements. But incorporating dummy variables for Hispanics, African-Americans, and Asian-Americans into one model carries the implicit assumption that the remaining variables, including education and income, will influence each of these groups in a similar manner in terms of deciding whether to vote. These assumptions are not always born out by the data (see Leighley and Vedlitz, 1999.) To isolate the effects of voter identification and other variables on voter turnout within specific racial and ethnic groups, I divided the sample into sub-samples and re-ran the probit models.

[Table 5 here]

The effects of voter identification requirements were similar for white voters compared to the entire sample, which was not surprising given that white voters comprised 81 percent of the sample. Voters in states where the maximum requirement involved signing one's name, providing a non-photo identification or photo identification were less likely to vote than those in a state that required voters to give their names. Taking into consideration the minimum requirements, this was true only for voters in states that require a non-photo identification or an affidavit. White voters in photo identification states were 3.7 percent less likely to vote than were white voters in states where respondents gave their names. The difference in probability was 4.4 percent for voters in states where an affidavit was the minimum requirement.

Voter identification requirements also influenced turnout among Black voters, but to a lesser extent relative to white voters.

[Table 6 here]

Of the maximum voter identification requirements, only the non-photo identification requirement reduced turnout compared to turnout in states that required voters to state their names. The predicted probability of voting was 5.7 percent lower for Black respondents in states that required non-photo identification. In terms of age, only African-Americans age 65 and older were more likely to vote than respondents in the 18 to 24 referent group. Respondents in all levels of education were more likely to vote than respondents without a high school diploma. Gender, income, living in a battleground state, being a part of the workforce and having been born in the United States also were positive predictors. Recent mobility tended to lower the probability of voting. None of the minimum identification requirements had a significant effect on voting, while most of the remaining variables had effects similar to those in the maximum requirement model.
Hispanic voters also were less likely to vote in states that required non-photo identification as opposed to stating one's name.

Using the coefficients from Table 7 to calculate predicted probabilities, for both the maximum and minimum requirements, Hispanic voters were 10 percent less likely to vote in non-photo identification states compared to states where voters only had to give their name. Hispanic voters ages 45 to 64 and 65 and over were more likely to vote than their 18-to-24-year-old counterparts. Education and income also were positive predictors of voting. Interestingly, being a native-born citizen lowered the probability of voting, while native-born citizenship was a positive predictor for African-American voters and was not a predictor at all for white voters. It may be that naturalized citizens of Hispanic descent are more conscious of the value of voting rights than other groups.

Varying voter identification requirements influenced Asian-American voters as well. As with Hispanic and Black voters, Asian-American voters were less likely to turn out in states with non-photo identification requirements than in states where voters gave their names.

Using the probit coefficients to calculate predicted probabilities, Asian-American voters were 8.5 percent less likely to vote in states that required non-photo identification compared to states that require voters to state their names under the maximum requirements, and they were 6.1 percent less likely to vote where non-photo identification was the minimum requirement. Asian-American voters also were 2.2 percent less likely to vote when signatures were the maximum requirement compared to stating one's name.

In terms of other predictors, there were no significant differences in terms of age or income. In contrast to Hispanic voters, where one was a naturalized or natural-born citizen did not affect the probability of voting. Those with high school or college diplomas or graduate training were more likely to turn out than those with less than a high school diploma. Women and married voters also were more likely to turn out than men and voters who were not married.

Discussion and conclusion

The results presented here provide evidence that as voter identification requirements vary, voter turnout does as well. This point emerged from both the aggregate data and the individual-level data, although not always for both the maximum and minimum sets of requirements. The overall effect for all registered voters was fairly small, but still statistically significant.

In the aggregate data, requirements that voters match signatures on file, provide a non-photo identification or photo identification had negative effects on turnout compared to requiring that voters state their names. Interactions with specific groups – African-Americans and Hispanics – did not improve the fit of the aggregate data to the models. But differences emerged among specific groups in the individual-level data. The signature, non-photo identification and photo identification requirements all had negative effects compared to the requirement that voters simply state their names. These effects translated into reduced probabilities of voting of about 3 to 4 percent for the entire sample, with larger differences for specific subgroups.
example, the predicted probability that Hispanics would vote in states that required non-photo identification was about 10 percentage points lower than in states where Hispanic voters gave their names. The difference was about 6 percent for African-Americans and Asian-Americans, and about 2 percent for white voters (the gap widened to 3.7 percent for white voters when comparing photo identification to simply stating one's name).

That the non-photo identification requirement was the most consistent in terms of statistical significance across the groups is intriguing given the intense debates surrounding photo identification requirements. This begs the question as to why photo identification requirements did not have a greater influence in 2004. It may have been due to the fact that photo identification was a maximum requirement in only five states, and each of those states accepted another type of identification as a minimum requirement.

In examining the effects of voter identification requirements on turnout, there is still much to learn. The data examined in this project could not capture the dynamics of how identification requirements might lower turnout. If these requirements dampen turnout, is it because individuals are aware of the requirements and stay away from the polls because they cannot or do not want to meet the requirements? Or, do the requirements result in some voters being turned away when they cannot meet the requirements on Election Day? The CPS data do not include measures that can answer this question. Knowing more about the "on the ground" experiences of voters concerning identification requirements could guide policy-makers at the state and local level in determining whether and at what point in the electoral cycle a concerted public information campaign might be most effective in helping voters to meet identification requirements. Such knowledge also could help in designing training for election judges to handle questions about, and potential disputes over, voter identification requirements.

---

The individual-level data offer some insight here. If advance knowledge of the voter identification requirements were to dampen turnout, it is reasonable to expect that advance knowledge of those requirements also could discourage some individuals from registering to vote. I ran the same probit models using the November 2004 Current Population Survey data and voter registration as the dependent variable (coded 1 if the respondent said he or she was registered, and 0 if the respondent was not registered). Of all of the voter identification requirements, only requiring signatures or matching signatures had a significant effect on whether a respondent said he or she was registered to vote in 2004. In each instance the effect was negative.

Report to the
U. S. Election Assistance Commission
On
Best Practices to Improve Voter Identification Requirements
Pursuant to the
HELP AMERICA VOTE ACT OF 2002
Public Law 107-252

May 16, 2006
Submitted by
The Eagleton Institute of Politics, Rutgers, The State University of New Jersey
The Moritz College of Law, The Ohio State University

Deliberative Process Privilege
This research report on Voter Identification Requirements in the 2004 election is part of a broader analysis that also includes a study of Provisional Voting, which has already been submitted to the EAC. Conducting the work was a consortium of The Eagleton Institute of Politics of Rutgers, The State University of New Jersey, and The Moritz College of Law of The Ohio State University.

The Eagleton Institute explores state and national politics through research, education, and public service, linking the study of politics with its day-to-day practice. It focuses attention on how contemporary political systems work, how they change, and how they might work better. Eagleton regularly undertakes projects to enhance political understanding and involvement, often in collaboration with government agencies, the media, non-profit groups, and other academic institutions.

The Moritz College of Law has served the citizens of Ohio and the nation since its establishment in 1891. It has played a leading role in the legal profession through countless contributions made by graduates and faculty. Its contributions to election law have become well known through its Election Law @ Moritz website. Election Law @ Moritz illuminates public understanding of election law and its role in our nation’s democracy.

A draft of this report and the statistical analysis in its appendix were critiqued by a Peer Review Group. The comments of its members improved the quality of our work. While the Group as a whole and the comments of its members individually contributed generously to the research effort, any errors of fact or weaknesses in inference are the responsibility of the Eagleton-Moritz research team. The members of the Peer Review Group do not necessarily share the views reflected in our recommendations.

REPORT AND RECOMMENDATIONS TO THE EAC
VOTER IDENTIFICATION ISSUES

Report Background
The Help America Vote Act of 2002 (HAVA) (Public Law 107-252) authorizes the United States Election Assistance Commission (EAC) (Sec. 241, 42 USC 15381) to conduct periodic studies of election administration issues. The purpose of these studies is to promote methods for voting and administering elections, including provisional voting, that are convenient, accessible and easy to use; that yield accurate, secure and expeditious voting systems; that afford each registered and eligible voter an equal opportunity to vote and to have that vote counted; and that are efficient.

This study provides information on voter identification practices in the 2004 election. It makes recommendations for best practices to evaluate future proposals for voter ID requirements, including the systematic collection and evaluation of information from the states. The research was conducted by the Eagleton Institute of Politics at Rutgers, the State University of New Jersey, and the Moritz College of Law at the Ohio State University under a contract with the EAC, dated May 24, 2005. The work included a review and legal analysis of state statutes, regulations and litigation concerning voter identification and provisional voting as well as a statistical analysis of the relationship of various requirements for voter identification to turnout in the 2004 election. This report is a companion to a report on Provisional Voting submitted to the EAC on November 28, 2005 under the same contract.

EXECUTIVE SUMMARY AND RECOMMENDATIONS

Background and Methods
This report arrives at a time of considerable ferment over the issue of voter identification. The debate across the nation over requiring voters to produce a specific identification document before being permitted to cast a regular (as opposed to a provisional) ballot, has revealed supporters and opponents in polarized camps.

- Proponents of stricter identification requirements base their case on improving the security of the ballot by reducing opportunities for one kind of vote fraud --multiple voting or voting by those who are not eligible. The proponents argue that their goal is to ensure that only those legally entitled to vote do so, and do so only once at each election.
Opponents seek to forestall more stringent identification requirements, such as for government-issued photo ID, in order to ensure broad access to a regular ballot. They fear that some voters—such as, they argue, racial and ethnic minorities, the young, and elderly voters—may lack convenient access to the required ID documents, or that such voters may be fearful of submitting their ID documents to official scrutiny and thus stay away from the polls.

Both sides argue that their preferred policy will engender faith in the electoral process among citizens.

This report considers policy issues associated with the voter ID debate and investigates whether empirical study can suggest a way to estimate the effects of different voter ID requirements on turnout, and important first step in assessing tradeoffs between ballot security and ballot access. The aim is to contribute to the effort to raise the quality of the debate over this contentious topic. The tradeoffs between ballot security and ballot access are crucial. A voting system that requires voters to produce an identity document or documents may prevent the ineligible from voting. It may also prevent eligible voters from casting a ballot. If the ID requirement of a ballot protection system blocks ineligible voters from the polls at the cost of preventing eligible voters who lack the required forms of identification, the integrity of the ballot may not have been improved; the harm may be as great as the benefit.

As part of the project’s effort to analyze the relationship between Voter ID requirements, turnout, and their policy implications, a statistical analysis was conducted to examine the potential variation in turnout. This statistical study developed a model to illuminate the relationships between voter ID requirements and turnout. This model’s findings and limitations suggest avenues for further research and analysis that may assist the EAC and the states as they explore policies to balance the goals of ballot integrity and ballot access.

The statistical analysis describes one possible way to estimate what might be the incremental effect on voters’ access to the ballot of an increase in the rigor of voter identification requirements. We do not offer this statistical analysis as the last word, but rather as a preliminary word on the subject. Its findings must be regarded as tentative; the information that might permit greater certainty is simply not available. Indeed, as our recommendations indicate, the next step to improve understanding of the effects of stricter voter identification on turnout and on vote fraud is to collect more information on both topics systematically and regularly.
Making a statistical estimate of the effect of voting regulations on turnout is difficult. The dynamics of turnout are complex, much studied, and only partially understood. Some agreement exists, however, that three factors that exert substantial influence on voter turnout are: the socioeconomic status of the potential voter; legal requirements to vote; and the political context of the election. By focusing on how voters identify themselves at the polls, this report emphasizes legal requirements. The statistical analysis also considers some of the socioeconomic, racial, and age characteristics of the electorate, as well as the political context in 2004 (such as whether a state was a battleground in the presidential race).

Examining tradeoffs between ballot security and ballot access requires some measure of the effectiveness of voter ID requirements in reducing multiple voting or voting by ineligible voters. The existing evidence on the incidence of vote fraud, especially on the kind of vote fraud that could be reduced by requiring more rigorous voter identification, is not sufficient to evaluate those tradeoffs. Assessing the effectiveness of voter ID as a way to protect the integrity of the ballot should logically include an estimate of the nature and frequency of vote fraud. This research does not include consideration of vote fraud, nor does it estimate the possible effectiveness of various voter ID regimes to counter attempts at vote fraud. Our analysis also cannot take into account how many potential voters who did not turn out under comparatively stricter voter ID requirements might have been ineligible or eligible to vote.

Despite these qualifications regarding the quality of the available data and the limitations of statistical analysis, however, although it used different statistical methods and two different sets of data on turnout in 2004 election, it points to the same general finding. As discussed at greater length in the appendix to this report, stricter voter identification requirements were correlated with reduced turnout in the models employed. As explained below, these models find that a statistically significant relationship exists, even when controlling for other factors (such as whether the election was in a battleground state) that might affect turnout. Without knowing more about the effects of stricter voter ID on reducing multiple voting or voting by ineligible voters...

---

1 See, for example, Tom William Rice and Patrick J. Kenney, "Voter Turnout in Presidential Primaries." 1985. Political Behavior, 7: 101-112. Identification requirements are not the only legal restrictions on voting. States also differ, for example, in their registration requirements (including how long before the election registration must take place and the identity documents required register).
2 The EAC has contracted with other researchers to study vote fraud issues.

voters, however, the tradeoffs between ballot security and ballot access cannot be assessed fully.

**Methodology**

The report includes detailed information on the nature of the statutory requirements across the country in 2004 and on the statutes and court decisions that provide the legal context for the voter ID debate. We gathered information on the requirements in effect in the 50 states and the District of Columbia in that year. Based on our interpretation of state statutes, supplemented in some cases by conversations with state election officials, we divided the states' ID requirements into five categories. We believe each category is more rigorous than the one preceding, based on the demands they make on voters. The categories range from “Stating Name” which we judge to be somewhat less demanding than “Signing Name.” “Signature Match” requires poll workers to examine the signature and compare it to a sample, which is slightly more demanding that the voter simply signing. “Present ID” requires voters to offer some documentary evidence of their identity, ranging from a utility bill to a passport. It is more demanding than the previous three categories because it requires that the voter remember to bring this documentation to the polls. (Even a simple ID, such as a utility bill, may not be available to some renters or, say, those in group housing.) We regard a government “Photo ID” as the most rigorous requirement. Such identity documents may not be uniformly and conveniently available to all voters.

For each state, we identified both the “maximum” and “minimum” identification requirements. The term “maximum” refers to the most that voters may be asked to do or show at the polling place (putting aside cases in which particular voter's eligibility may be questioned pursuant to a state challenge process). The term “minimum,” on the other hand, refers to the most that voters can be required to do or show, in order to cast regular ballot (again leaving aside a state challenge process). We have included “maximum” requirements in our analysis, and not simply “minimum” requirements, because simply asking voters to produce particular identifying information may have a deterrent effect, even if voters are ultimately allowed to cast a regular ballot without that identification. For example, in a state where voters are asked to show photo ID at the polling place, but still allowed to vote by completing an affidavit confirming their eligibility, the “maximum” of being asked to show photo ID may deter some voters even though the “minimum” would allow them to vote without photo ID.

---

4 Even the most relaxed provisions for identification at the polls—anything stricter than the honor system used in North Dakota—will impose some burden on particular voters. Harvard Law Review 119:1146.
REVISED FINAL DRAFT
For review by the EAC’s Advisory Boards

It is worth emphasizing that, at the time of the 2004 election, there was no state that had a “minimum” requirement of showing photo ID – in other words, there was no state that required voters to show photo ID in order to cast a regular ballot. For this reason, our report does not measure the impact of laws, like those recently enacted in Indiana and Georgia, which require voters to show photo ID in order to cast a regular ballot without an affidavit exception.

To examine the potential variation on turnout rates associated with each type of voter ID requirements in effect on Election Day 2004, the statistical analysis drew on two sets of data. These were, first, aggregate turnout data at the county level for each state and, second, the reports of individual voters collected in the November 2004 Current Population Survey by the U.S. Census Bureau. Using two different data sets makes it possible to check the validity of one analysis against the other. It also provides insights not possible using only one of the data sets. The aggregate analysis cannot provide valid estimates on the effects of different ID requirements on particular demographic groups (e.g., the old, the young, African-Americans, the poor, or high school graduates). The Current Population Survey data does permit that kind of analysis, although it has the disadvantage of relying on self-reports by respondents about their registration status and experience in the polling place.

To understand legal issues that have been raised in recent litigation over voter ID requirements, we collected and analyzed the few major cases that have been decided so far on this issue. The decisions so far provide some guidance on the constitutional and other constraints as to voter ID requirements.

Summary of Findings
As voter identification requirements vary, voter turnout varies as well. This finding emerged from both the statistical analysis’s aggregate data and the individual-level data, although not always for both the maximum and minimum sets of requirements. The overall relationship between the stringency of ID requirements and turnout was fairly small, but still statistically significant.

In the model used with the aggregate data in the statistical analysis, the match signature requirement, the provide a non-photo ID requirement, and the photo ID requirement were all correlated with lower turnout compared to requiring that voters state their names. With the addition of the registration closing data to the aggregate analysis, photo id is no longer a
significant predictor of turnout. Signature match and non-photo id remain significant and negative predictors in the model.

The reduction in turnout was not the same for all demographic groups in the citizen voting age population.

The non-photo identification requirement showed the most significant and consistent correlation with reduced turnout. This result may be surprising given the intense debates surrounding photo identification requirements. The effect of photo ID requirements cannot, however, be assessed from the data the statistical analysis examined, since none of the states had laws in 2004 that conditioned voting on presentation of photo ID. Each of the five states that had photo ID as a “maximum” requirement (i.e., the most that voters could be asked to show at the polls) accepted another type of identification or an affidavit as a “minimum” requirement in the 2004 election (i.e., they were allowed to cast a regular ballot with something less than photo ID).

Significant questions about the relationship of voter identification requirements to turnout remain unanswered. The data examined in this project could not capture the dynamics of how identification requirements might lower turnout. If ID requirements dampen turnout, is it because individuals are aware of the requirements and stay away from the polls because they cannot or do not want to meet the requirements? Or, do the requirements result in some voters being turned away when they cannot meet the requirements on Election Day? Other factors that may also be correlated with stricter ID laws – such as less user-friendly voter registration systems – may actually be causing lower turnout. The CPS data do not include the information needed to answer this question. Knowing more about the “on the ground” experiences of voters concerning identification requirements could guide policy-makers at the state and local level in determining whether and at what point in the electoral cycle a concerted public information campaign might be most effective in helping voters to meet identification requirements. Such knowledge also could help in designing training for election judges to handle questions about, and potential disputes over, voter identification requirements.

Our analysis of litigation suggests that the courts will look more strictly at requirements that voters produce a photo ID in order to cast a regular ballot, than at non-photo ID laws. The courts have used a balancing test to weigh the legitimate interest in preventing election fraud against the citizen’s right to privacy (protecting social security numbers from public disclosure, for
example) and the reasonableness of requirements for identity documents. To provide both the clarity and certainty in administration of elections needed to forestall destabilizing challenges to outcomes, a best practice for the states may be to limit requirements for voter identification to the minimum needed to prevent duplicate registration and ensure eligibility.

The current lack of understanding of precisely how voter ID requirements affect turnout could be ameliorated by requiring the collection and reporting of additional data, including the reasons potential voters are required to cast a provisional ballot and the reasons for rejecting provisional ballots during the 2006 and subsequent elections. Also useful would be the results of surveys of voters on their experiences in meeting voter ID requirements and on what type of ballot they cast. And, of course, more information is needed on the incidence and varieties of vote fraud, but that inquiry is outside the scope of this report.

Recommendations for consideration and action by the EAC
The dynamics of Voter ID requirements –how more rigorous voter ID requirements may affect the decision by potential voters to go or stay away from the polls-- are not perfectly understood. This lack of understanding should be recognized in the policy process in the states. The debate over voter ID in the states would be improved by additional research sponsored by the EAC.

The EAC should consider the following actions to improve understanding of the relationship between voter ID requirements and the two important goals of ensuring ballot access and ensuring ballot integrity.

1. Encourage or sponsor further research to clarify the connection between Voter ID requirements and the number of potential voters actually able to cast a ballot that is actually counted.

2. Recommend as a best practice the publication of a “Voting Impact Statement” by states as they assess their voter ID requirements to protect the integrity of the ballot. The analysis will help ensure that efforts to increase ballot security have a neutral effect on electoral participation by eligible voters. The Voter Impact Statement would estimate the number and demographics of 1) eligible, potential voters that may be kept from the polls'
or permitted to cast a provisional ballot by a stricter ID requirement; and 2) and assess
the number of ineligible voters who will be prevented from voting by the stricter ID
requirements.

3. Encourage or require the states in the 2006 election and beyond, to collect and report
reliable, credible information on the relationship between ballot access and ballot
security. EAC should publish an analysis of this information to provide a sound factual
basis for the states to consider as they estimate the incidence of the kinds of vote fraud
that more stringent ID requirements may prevent. The analysis should describe the
dynamics of the voter ID process in preserving the security of the ballot. EAC can also
use this information to encourage the states to assess the effectiveness of programs to
ensure that all eligible voters have required ID and are permitted to vote in future
elections. Well-designed longitudinal studies in the states can show the results of
changing voter ID requirements on electoral participation over time. The studies should
include precinct-level data to provide the fine-grained analysis that can provide a solid
foundation for policy.

I. Useful information could be supplied by state-sponsored surveys of voters by local
election officials. It would make clear why those who cast a provisional ballot were
found ineligible to cast a regular ballot. The answers would illuminate the frequency
with which ID issues divert voters into the provisional ballot line.

II. Surveys to ask voters what they know about the voter ID requirements would also
provide useful context for evaluating the effect of various voter ID requirements on
electoral participation.

III. Spot checks by state election officials on how the identification process works at
polling places could provide information on how closely actual practice tracks
statutory or regulatory requirements. Such reports should be available to the
public.

4. Encourage states to examine the time period allowed for voters who cast a provisional
ballot because they lacked required ID to return with their identification. In eleven states,
voters who had to cast a provisional ballot because they lacked the ID required for a
regular ballot were permitted to return later with their ID. Their provision of this ID is the
critical step in evaluating the ballots. The length of the period in which the voter may
return with ID is important. In setting the time period for return, which now varies among
the states from the same day to about two weeks, states should consider three factors:
the convenience of the voter, the total time allowed to evaluate ballots, and the safe
harbor provision in presidential elections.

5. Recommendations to the states from EAC should reflect current judicial trends.
   Requirements that voters provide some identifying documentation have been upheld, where
   photo ID is not the only acceptable form. Whether laws requiring photo ID will be upheld is
   more uncertain.

SUMMARY OF RESEARCH

Background and Approach of the Study

Voter ID requirements are just one set of rules governing voting that may affect turnout. Social
scientists have long studied how election rules affect participation in elections. The general view
today is that the individual citizen makes the choice of whether the vote in a way similar to other
decisions that a rational citizen makes, by comparing costs and benefits. The benefits of voting
are fairly stable and hard to specify given the remote probability that any one vote will make a
difference in an election. But whatever the benefit as perceived by an individual voter, as the
costs of voting (for example, time, hassle, acquisition of information) increase, the likelihood that
a citizen will vote decrease. Not all groups in the population calculate the cost of participation in
the same way, so that election laws (such as registration or identification requirements) may
affect different groups differently.

A short summary of some of the social science literature illustrates what may be a broad
consensus that the rules of elections affect turnout, but note the important differences in the
details of what groups may be most affected.

- Bowler, Brockington and Donovan in “Election Systems and Voter Turnout: Experiments
  in the United States”. The Journal of Politics, 63:3 (August 2001) concluded that
electoral systems help shape turnout by altering the benefits perceived by voters. For
example, cumulative voting systems have 5% greater turnout than plurality systems
- The effect of registration systems has been the subject of many studies over the last 40
  years. Kelley, Ayres, and Bowen in "Registration and Voting: Putting First Things First."
  American Political Science Review. 61:2 (June 1967) found that local variations in the

\[^6\] Our research on provisional voting reveals that states that provide more than a week to evaluate
provisional ballots end up counting substantially more of those ballots than states that provide less than a
week.
rate of voting are most directly tied to variations in the rate of registering to vote, and that 
the rate of registering to vote in localities is most directly related to the laws and 
administration of the registration process. They concluded that the decline in voting over 
the past 80 years was due, in part, to the rise of registration laws.

- Brians and Grofman in "Election Day Registration's Effect on U.S. Voter Turnout." 
  Social Science Quarterly. 82:1 (March 2001), found that relaxing registration laws 
  produces higher turnout. In particular, they observed that relaxing registration laws is 
  more likely to promote voter turnout among those with medium levels of income and 
  education, rather than those at the lowest levels. Highton in "Easy Registration and 
  Voter Turnout," Journal of Politics. 59:2 (May 1997), concluded similarly that registration 
  laws affect voter turnout, but also observed that easier registration promotes turnout 
  among those in lower socio-economic status.

- Mitchell and Wlezien. "The Impact of Legal Constraints on Voter Registration, Turnout, 
  and the Composition of the American Electorate," Political Behavior. 17:2 (June 1995) 
  agreed that easier registration promotes higher turnout, but also concluded that higher 
  turnout from easier registration would be unlikely to change the composition of the 
  electorate. Nagler in "The Effect of Registration Laws and Education on U.S. Voter 
  Turnout." American Political Science Review. 85:4 (December 1991) found that 
  registration laws decrease voter turnout by depressing the eligible electorate, but that 
  lower educated people are not disproportionately impacted by these laws. But 
  Rosenstone and Raymond E. Wolfinger in "The Effect of Registration Laws on Voter 
  Turnout." American Political Science Review. 72:1 (March 1978) found that while 
  registration laws did affect both voter turnout and the composition of the electorate, the 
  sharpest effect of these restrictions was felt in the South and among the least educated.

- Squire, Wolfinger, and Glass in "Residential Mobility and Voter Turnout." American 
  Political Science Review. 81:1 (March 1987) found that people who move constitute a 
  major demographic group affected by registration laws. They estimated that altering laws 
  to facilitate voting by recently moved people could increase turnout by 9%. Highton in 
  "Residential Mobility, Community Mobility, and Voter Turnout." Political Behavior. 22:2 
  (June 2000) also found that people who move have lower turnout than stable residents, 
  and estimated that the decline was more a result of registration laws than a loss of social 
  connections.
Highton and Wolfinger in "Estimating the Effects of the National Voter Registration Act of 1993." *Political Behavior.* 20:2 (June 1998) concluded that the Motor Voter laws led to a significant increase in voting; that eliminating voter purges for not voting also increases voting; and that these effects are felt most heavily by the young (under 30) and the mobile (moved within past 2 years). Knack, in "Does 'Motor Voter' Work? Evidence from State-Level Data." *Journal of Politics.*, 57:3 (August 1995), also found that motor voter does lead to increased registration and voting, but that other parts of NVRA of 1993, like mail-in registrations, agency-based registrations, and limitations on voter purges had not been as influential two years after the passage of the act.

While voter ID may not have been the subject of as much research as the registration process, establishing the eligibility of a person to vote has long been part of the electoral process. Voters may have to identify themselves twice in the electoral process: when registering to vote and then when casting a ballot. The pressures felt by the voter arising from the need to check ID, even so simple a check as a signature match, can be greater at the polls on Election Day than at the time of registration. Poll workers may feel under pressure when faced with long lines and limited time.

**Voter ID requirements on Election Day**

This analysis focuses on ID requirements on Election Day, but with an appreciation that the ID requirements at time of registration and on Election Day are inter-related. The emphasis in this report is on Voter ID requirements on Election Day and afterwards as election judges evaluate provisional ballots. This is the critical period for the electoral system, the time when ballot access and ballot security are in the most sensitive balance.

The report looks at voter ID issues that go beyond the rather narrow identification requirements in HAVA. Much of the current debate in state legislatures over voter ID ranges beyond HAVA to require more rigorous documentation of identity for all would-be voters, not just those who had not registered in person and are casting a ballot for the first time. Current controversies in the states over voter ID seems to have been sparked in part by the HAVA requirements, but goes beyond those requirements, and sets the context for the analysis here.

---

7 As the Carter-Baker Commission noted, photo ID requirements for in-person voting do little to address the problem of fraudulent registration by mail, especially in states that do not require third-party organizations that register voters to verify ID. Commission on Federal Election Reform, pp 46-47.

8 Harvard Law Review 119:1127: "Legislators hoping to stiffen their state antifraud laws have taken their cue from identification provisions buried in HAVA."
We recognize that the previously technical, rather dull subject of voter ID requirements has become fiercely partisan and divisive in many states. The polarization of the debate has raised the stakes over this issue, making dispassionate analysis both more valuable and more rare. Voter ID is often described as the critical step in protecting the integrity of the ballot, the process to ensure that the potential voter is eligible and, if eligible, is permitted to cast one ballot and one ballot only. Truly protecting the integrity of the ballot, however, requires a perspective that takes in the entire voting process. It demands more than preventing the ineligible from voting, and should also ensure that all those who are eligible and want to vote can cast a ballot that counts. The protection effort must embrace all forms of voting, including absentee ballots, and consider each step in the process from registration through vote counting.

A voting system that requires voters to produce an identity document or documents may prevent the ineligible from voting. It may also prevent the eligible from casting a ballot. If the ID requirements block ineligible voters from the polls at the cost of preventing eligible voters who cannot obtain or have left at home the required forms of identification, the integrity of the ballot may not have been improved; the harm may be as great as the benefit. Ultimately, a normative evaluation of whether a state should adopt a stricter voter ID requirement (and, if so, what particular form that new requirement should take) will weigh value judgments as well as available factual evidence. Nonetheless, this report has proceeded on the premise that increased understanding of the factual evidence relating to the imposition of voter ID requirements, based on available data and statistical analysis of that data, can help inform the policy process.

Assessing the effectiveness of voter ID as a way to protect the integrity of the ballot should logically include an estimate of the nature and frequency of vote fraud. The EAC has commissioned a separate analysis of the incidence of vote fraud. Consequently, this research does not include consideration of vote fraud nor the possible effectiveness of various voter ID regimes to counter attempts at vote fraud. As a result, our study of the possible effects of voter ID requirements does not consider vote fraud.

---

9 "Of the various electoral procedure laws passed in the fifty states since the 2000 and 2004 presidential elections and those still being debated in state legislatures and local media, few arouse more potent partisan feelings than voter identification laws." Harvard Law Review 119:1144. John Fund’s 2004 book, Stealing Elections: How Voter Fraud Threaten Our Democracy, cites (pages 16 – 17) a Rasmussen Research poll that asked respondents if they were more concerned with voting by ineligible participants or with disenfranchisement of eligible voters. Sixty-two percent of Kerry supporters, but only 18 percent of Bush supporters, worried more about disenfranchisement; 56 percent of Bush supporters, but only 19 percent of Kerry supporters were more concerned with voter fraud.
ID requirements on turnout cannot take into account how many potential voters who did not turn out under comparatively stricter voter ID requirements might have been ineligible or eligible to vote.

In some states, voters lacking required ID, or who have ID that does not reflect their current address, are able to vote only by casting a provisional ballot. Voter ID requirements that require voters to bring a document to the polls — rather than simply sign their names — may divert more voters to the provisional ballot. Requiring poll workers to request and check ID, can put stress on the already demanding environment of the polling place. Scrutiny of ID can create lines at the polling places. Further delays can result when voters cast a provisional ballot and fill out the ballot envelope. Voters who cast a provisional ballot because they lack their ID on Election Day, and who then fail to return with the needed document or documents, will have their ballot rejected. And, of course, the cost of processing provisional ballots is greater than the cost of regular ballots.

Each of these potential consequences of more elaborate voter identification processes can increase the chance of litigation. Long lines will, at best, discourage voters and at worst make voting seem a hassle, an impression that could keep more citizens (even those with ID) from the polls.

Evaluating the effect of different Voter ID regimes can be most effective when based on clear standards — legal, equitable, practical. The standards outlined here might be described as questions policy-makers should ask about Voter ID requirements. We suggest 7 questions that address important dimensions of the problem.

1. Is the Voter ID system designed on the basis of valid and reliable empirical studies of the incidence of the sorts of vote fraud it is designed to prevent?

10 For example, the Florida voter ID law adopted after the 2004 election and pre-cleared by the Department of Justice, permits voters who cannot meet the ID requirements to sign an affidavit on the envelope of a provisional ballot, which will be counted if the signature matches that on the voter's registration form.

11 The EAC's Election Day Study found "improper ID," to be the third most common reason for a provisional ballot to be rejected. "Improper ID" was cited by 7 states responding to the survey, compared to 14 mentions for voting in the wrong precinct. Election Day Study, Chapter 6, p. 5.

12 "Often where the battle over voter identification is most heated, real evidence of voter fraud proves scarce: in Georgia, for example, the Secretary of State averred that she had never encountered a single instance of voter impersonation at the polls. State laws might sometimes impose tighter restrictions on in-person voting than on absentee ballots, which yield the greatest incidence of, and provide the easiest avenue for, voter fraud. . ." Harvard Law Review 127:1144 (2006)
REVISED FINAL DRAFT
For review by the EAC's Advisory Boards

2. How effective is the ID requirement in increasing the security of the ballot? How well can it be coordinated with a statewide voter database?13

3. How practical is the requirement? (Can it be administered smoothly by the staff and budget likely to be made available? How much additional training of polling place workers might be required?) Is it simple enough or can it be defined with sufficient clarity that poll workers throughout the state can administer it uniformly and with a minimum of local interpretation made on the fly under the pressure of Election Day?14

4. How cost-effective is the system? Does it demonstrably increase the security of the ballot affordably, measured in both monetary and other costs? To improve understanding of the non-monetary component of the costs, conducting a voter impact study might be appropriate. The voter impact study would examine, before the adoption of the regulation, the cost of compliance by the voter (such as the cost in time and money of acquiring a photo ID card), any offsetting benefits to voters, and the possible disparate effects of the regulation on various groups of voters.15 A thorough, objective impact statement that demonstrated the nexus between the identification regime and the integrity of the ballot could provide protection against inevitable legal challenges.

5. If a side effect of the Voter ID regulation is likely to reduce turnout, generally or among particular groups, is it possible to take other steps to ameliorate the adverse consequences?16

6. Does it comply with the letter and spirit of Voting Rights Act?

7. The seventh question is the most difficult to answer. How neutral is the effect of the Voter ID requirement on the composition of the qualified and eligible electorate? Might it,

---

13 See the final section of this report for a brief overview of possible effects of a statewide voter database on voter identification issues.

14 In New York, in 2004, disparities in training and voting information were made apparent in a study finding elections officials had wildly varying interpretations of what the state's voter identification requirement actually was. Tova Wang, "Warning Bell in Ohio," December 5, 2005. Website, the Foundation for National Progress.

15 "Absent clear empirical evidence demonstrating widespread individual voter fraud, legislatures need to fashion narrowly tailored voter identification provisions with an eye toward the inevitable and well-grounded constitutional challenges that will arise in the courts. Only as states grow more adept at administering elections will courts likely demonstrate greater willingness to uphold strict identification requirements." Harvard Law Review 127:1144 (2006)

16 For example, the Carter-Baker Commission coupled its recommendation for a national voter ID card to a call for an affirmative effort by the states to reach out and register the unregistered, that is, to use the new Voter ID regime as a means to enroll more voters. Similarly, Richard Hasen has suggested combining a national voter ID with universal registration. See his "Beyond the Margin of Litigation: Reforming U.S. Election Administration to Avoid Electoral Meltdown," 62 Washington and Lee Law Review 937 (2005).
intentionally or unintentionally, reduce the turnout of particular groups of voters or supporters of one party or another without an offsetting decrease in vote fraud?

Voter ID and Turnout

Based on research for this study by the Moritz College of Law, states had one of five types of maximum requirements in place on Election Day 2004. These are shown in Table 1, Voter ID Requirements. The five categories: at the polling place, voters were asked to either: state their names (10 states); sign their names (13 states and the District of Columbia); sign their names, to be matched to a signature on file (seven states); provide a form of identification that did not necessarily include a photo (15 states); or provide a photo identification (five states). Using this information made it possible to code the states according to these requirements, and examine the assumption that voter identification requirements would pose an increasingly demanding requirement in this order: stating one’s name, signing one’s name, matching one’s signature to a signature on file, providing a form of identification, and providing a form of photo identification, however, in all “photo ID” states in 2004, voters without photo ID could cast a regular ballot after signing an affidavit concerning their identity and eligibility or provide other forms of ID). The report refers to this set of ID requirements as “maximum,” the most rigorous ID the voter can be asked to present at the polling place in order to cast a regular ballot.\(^{18}\)

Election laws in several states offer exceptions to these requirements if potential voters lack the necessary form of identification. Laws in those states set a minimum standard – that is the minimum requirement that a voter may be required to satisfy in order to vote using a regular ballot. States can be categorized based on the minimum requirement for voting with a regular ballot. In 2004 the categories were somewhat different compared to the maximum requirement, in that none of the states required photo identification as a minimum standard for voting with a regular ballot. That is, voters who lacked photo ID would still be allowed to vote in all states, if able to meet another requirement. Four states required voters to swear an affidavit as to their identity (Florida, Indiana, Louisiana, and North Dakota). The five categories for minimum requirements were: state name (12 states), sign name (14 states and the District of Columbia), match one’s signature to a signature on file (six states), provide a non-photo identification (14 states), or swear an affidavit (four states). The analysis also examined this array of minimum

\(^{17}\) Oregon conducts elections entirely by mail. Voters sign their mail-in ballots, and election officials match the signatures to signatures on file. For the purposes of this analysis, Oregon is classified as a state that requires a signature match.

\(^{18}\) As noted above, our analysis does not consider additional requirements that particular voters may be subjected to as part of an official challenge process, in the event that their eligibility is called into question.
identification requirements to assess how they correlated with turnout: state name, sign name, match signature, provide non-photo identification, and, given the potential legal consequences for providing false information, swearing an affidavit. As noted above, no state had a “minimum” requirement of showing photo ID. This analysis therefore cannot estimate the effect of laws, such as those recently enacted in Indiana and Georgia that require voters to show photo ID in order to cast a regular ballot without an affidavit or other exception.

We recognize the difficulties in summarizing each state’s voter ID requirements. The problem is illustrated by the number of footnotes to Table 1 below. The variety of statutory and regulatory details among the states is complex.

Moving beyond the statutes and regulations, we also recognize that the assignment of each state to one category may fail to reflect actual practice at many polling places. As in any system run by fallible humans, the voter ID process is subject to variation in practice. Voters may have been confronted with demands for identification different from the directives in state statutes or regulation. It seems reasonable to conclude, however, that while actual practices may vary, the variance is around each state’s legal requirement for ID. The analysis of the effect of state requirements on turnout must be viewed with some caution. We believe that the categories used in this report provide an acceptable level of discrimination among voter identification regimes.

---

19 One state election official told us that, “We have 110 election jurisdictions in Illinois, and I have reason to believe [the voter ID requirements] are administered little bit differently in each one. We wish it weren’t that way, but it probably is.”

20 See Appendix 1 for a more detailed summary, including citations and statutory language, of the identification requirements in each state.
Relationship of Voter ID requirements to Turnout

The statistical analysis examined the potential variation in turnout rates based on the type of voter identification required in each state on Election Day 2004 using two sets of data: aggregate turnout data at the county level for each state, as compiled by the Eagleton Institute of Politics, and individual-level survey data included in the November 2004 Current Population Survey conducted by the U.S. Census Bureau.

The statistical analysis examined turnout among U.S. citizens of voting age in both the aggregate and the individual-level data. Determining citizenship status in the individual-level data simply involved restricting the analyses to individuals who identified themselves as citizens in the November 2004 Current Population Survey. (Those who said they were not citizens did not have the opportunity to answer the supplemental voting questions contained in the Current Population Survey.)
Findings of the statistical analysis
The analysis looked at the voter identification requirements in two ways, as a continuous variable and as a series of discrete variables. As a continuous variable the maximum voter identification requirements are ranked according to how demanding they were judged to be, with photo ID as the most demanding requirement. As discrete variables, the statistical analysis assume that stating name is the least demanding ID requirement and compare each other requirement to it.

The analysis treating the requirements as a continuous variable offers some statistical support for the premise that as the level of required proof increases, turnout declines. Averaging across counties in each state, statewide turnout is negatively correlated with maximum voter identification requirements ($r = -.30, p < .05$). In considering the array of minimum requirements, with affidavit as the most demanding requirement, however, the correlation between voter identification and turnout is negative, but it is not statistically significant ($r = -.20, p = .16$). This suggests that the relationship between turnout rates and minimum requirements may not be linear. Breaking down the turnout rates by type of requirement reveals in greater detail the relationship between voter identification requirements and voter turnout.

This table displays the mean turnout using the aggregate county level data for each state in 2004.

The aggregate data show that 60.9 percent of the estimated citizen voting age population voted in 2004. Differences in voter turnout at the state level in 2004 varied based on voter identification requirements. Taking into account the maximum requirements, an average of 64.6 percent of the voting age population turned out in states that required voters to state their names, compared to 58.1 percent in states that required photo identification. A similar trend...
emerged when considering minimum requirements. Sixty-three percent of the voting age population turned out in states requiring voters to state their names, compared to 60.1 percent in states that required an affidavit from voters. Given the lack of a clear, consistent linear relationship between turnout and minimum identification requirements, however, we opted to treat the voter identification requirements as a series of dichotomous variables in subsequent analyses.\(^{21}\)

Voter identification requirements are just one factor that may affect voter turnout. Multivariate models that take into account other predictors of turnout can paint a more complete picture of the relationship between voter identification requirements and turnout. This analysis estimated the effects of voter identification requirements in multivariate models that also took into account the electoral context in 2004 and demographic characteristics of the population in each county. While the model takes account of several important variables, statistical models do not capture all the messiness of the real world. It is a simplification of a complex reality, and its results should be treated with appropriate caution.

The model also took into account such variables as:

- Was the county in a presidential battleground state?
- Was the county was in a state with a competitive race for governor and/or the U.S. Senate?
- Percentage of the voting-age population in each county that was Hispanic or African-American\(^ {22}\)
- Percentage of county residents age 65 and older
- Percentage of county residents below the poverty line

Another contextual factor to consider is voter registration requirements, such as the deadline for registration. As states set the deadline farther away from Election Day, the task of remembering to register to vote becomes more challenging. Thus our model takes into account the number of days between each state's registration deadline and the election.

\(^{21}\) The voter identification requirements are coded as a series of dummy variables, coding each variable as one if the requirement existed in a given state, and zero otherwise. This yielded five dichotomous variables for maximum requirements (state name, sign name, match signature, non-photo identification, or photo identification), and five dichotomous variables for minimum requirements (state name, sign name, match signature, non-photo identification, or providing an affidavit). Omitted is the variable for stating one's name so that it could serve as the reference category in comparison with the other four identification requirements in each of the statistical analyses.

\(^{22}\) The U.S. Census projections for 2003 provided the data for the percentage of the voting-age population in each county that was Hispanic or African-American and for the percentage of county residents age 65 and older.
The dependent variable in each model was voter turnout at the county level, with turnout calculated as the percentage of the citizen voting-age population that voted in the 2004 election.

The results of this modeling suggest that voter identification requirements such as signature matching, a non-photo ID or a photo ID are associated with lower turnout than in states that required voters to simply state their name, holding constant the electoral context and demographic variables.

Contextual factors, such as whether the county was in a battleground state or whether that state had a competitive race for governor and/or U.S. Senate, were associated with increased voter turnout. The time between the closing date for registration and the election was correlated with a slight negative effect on turnout. As the percentage of Hispanics in the county's population increased, turnout declined. The percentage of senior citizens in the county and household median income were associated with higher turnout. The percentage of African-Americans in the county did not have a significant effect in the model. The percentage of senior citizens in the county and household median income showed a positive correlation with turnout. In this aggregate model, the percentage of African-Americans in the county was not associated with a significant difference in turnout.

The relationship of the minimum voter identification requirements to turnout was not demonstrated. None of the dummy variables for voter identification requirements were statistically significant. Being a battleground state and having a competitive statewide race were significant and positive, as was the percentage of senior citizens in the county and household median income. The percentage of Hispanics in the county's population continued to be associated with reduced turnout, as was the number of days between the closing date for registration and the election.  

Analysis of the aggregate data at the county level generates some support for the hypothesis that stricter identification requirements are correlated with lower turnout. For the maximum

---

23 This test incorporated a series of interactions between the maximum and minimum voter identification requirements and the percentage of African-Americans and Hispanics living in the counties. In each case the interactions did not improve the fit of the models to the data. See tables A-1 and A-2 in the appendix of Vercellotti’s paper in the appendices.
requirements, a signature match, non-photo identification or photo identification were correlated with lower turnout in 2004, compared to requiring that voters simply state their names.

Aggregate data, however, cannot fully capture the individual demographic factors that may figure into the decision to turn out to vote. Voter identification requirements could have a relationship to the turnout of particular groups of voters, in ways that county-level aggregate data on turnout would not capture. To explore the effects of voter identification requirements on turnout more completely, it is important to examine individual-level data as well.

Individual-level Analysis

Individual-level turnout data exists in the November 2004 Current Population Survey conducted by the U.S. Census Bureau. The Census Bureau conducts the CPS monthly to measure unemployment and other workforce data, but the bureau adds a battery of voter participation questions to the November survey in even-numbered years to coincide with either a presidential or midterm Congressional election.

One of the of the CPS is the sheer size of the sample. The survey's Voting and Registration Supplement consisted of interviews, either by telephone or in person, with 96,452 respondents. The large sample size permits analyses of smaller groups, such as Black or Hispanic voters or voters with less than a high school education. The statistical analysis in relying on the CPS is based on reports from self-described registered voters. Omitted are those who said they were not registered to vote, as are those who said they cast absentee ballots because the identification requirements for absentee ballots may differ from those required when one votes in person. Eliminated from the sample are respondents who said they were not U.S. citizens; the questionnaire design skipped those individuals past the voter registration and turnout questions in the survey. In addition to the voter identification requirements, the models include other socioeconomic, demographic, and political environment factors that might have

---

24 For example, previous research has found that education is a powerful determinant of turnout (Wolfinger and Rosenstone 1980, but see also Nagler 1991). Married people also are more likely to vote than those who are not married (Alvarez and Ansolabehere 2002; Alvarez, Nagler and Wilson 2004; Fisher, Kenny, and Morton 1993).

25 It is important to note that the Census Bureau allows respondents to answer on behalf of themselves and others in the household during the interview. While proxy reporting of voter turnout raises the possibility of inaccurate reports concerning whether another member of the household voted, follow-up interviews with those for whom a proxy report had been given in the November 1984 CPS showed 99 percent agreement between the proxy report and the information given by the follow-up respondent (U.S. Census Bureau 1990).
influenced turnout in 2004. The dependent variable in these analyses is whether a respondent said he or she voted in the November 2004 election.

In the model, three of the voter identification requirements have a statistically significant correlation with whether survey respondents said they had voted in 2004. That is, compared to states that require voters only to state their names, the requirement to sign one's name, provide a non-photo ID, or photo ID in the maximum requirements or affidavit in the minimum is associated with lower turnout.

Of the other state factors, only the competitiveness of the presidential race showed a significant, correlation with increased turnout. In terms of demographic influences, African-American voters were more likely than white voters or other voters to say they had cast a ballot, while Asian-Americans were less likely than white or other voters to say they had turned out. Hispanic voters were not statistically different from white or other voters in terms of reported turnout. Consistent with previous research, income, and marital status all were positive predictors of voting. Women also were more likely to say they voted than men. Among the age categories, those ages 45 to 64 and 65 and older were more likely than those ages 18 to 24 to say they voted. Respondents who had earned a high school diploma, attended some college, graduated from college or attended graduate school were all more likely to say they voted than those who had not finished high school.

While the probit models provide statistical evidence for the relationship of voter identification requirements and other variables to turnout, probit coefficients do not lend themselves to intuitive interpretation. Table 3 below shows predicted probabilities (calculated from the probit coefficients) of voting for each level of voter identification requirements while holding all other independent variables in the models at their means.

---

26 The models are estimated using probit analysis, which calculates the effects of independent variables on the probability that an event occurred – in this case whether a respondent said he or she voted and using robust standard errors to control for correlated error terms for observations from within the same state.

27 The U.S. Census Bureau reported, based on the November 2004 CPS, that 89 percent of those who identified themselves as registered voters said they voted in 2004 (U.S. Census Bureau 2005). Previous research has shown that, generally speaking, some survey respondents overstate their incidence of voting. Researchers speculate that over-reports may be due to the social desirability that accompanies saying one has done his or her civic duty, or a reluctance to appear outside the mainstream of American political culture (U.S. Census Bureau 1990). It is also possible that voting is an indication of civic engagement that predisposes voters to agree to complete surveys at a higher rate than non-voters (Flanigan and Zingale 2002). Hence the voter turnout rates reported in the CPS tend to be up to 10 percentage points higher than the actual turnout rate for the nation (Flanigan and Zingale 2002). Even with this caveat, however, the CPS serves as a widely accepted source of data on voting behavior.

28 A probit model is a popular specification of a generalized linear regression model, using the probit link function.

29 In the case of dichotomous independent variables, holding them at their mean amounted to holding them at the percentage of the sample that was coded 1 for the variable (Long 1997).

Figures represent the predicted probability of registered voters saying they voted as the identification requirement varies stating one's name to providing photo identification or an affidavit, with all other variables held constant. N.S. = nonsignificant coefficient in the probit model.

Taking into account that signature matches were not a predictor of turnout, the differences in predicted probability decline from stating one's name to providing a photo identification or affidavit. Voters in states that required photo identification were 2.7 percent less likely to vote than voters in states where individuals had to give their names. In terms of the minimum requirement, voters in states that required an affidavit at minimum were 4 percent less likely to turn out than voters in states where they had to give their names.

The differences were more pronounced for those lower in education. Constraining the model to show predicted probabilities only for those with less than a high school diploma, the probability of voting was 5.1 percent lower in states that required photo identification as the maximum requirement and 7 percent lower in states that required an affidavit as the minimum requirement compared to states where stating one's name was the maximum or minimum requirement.

---

30 The voter turnout percentages may seem disproportionally high compared to the turnout rates reported in the aggregate data analysis. It is important to consider that the turnout rates in the aggregate data were a proportion of all citizens of voting-age population, while the turnout rates for the individual-level data are the proportion of only registered voters who said they voted.
Race and ethnicity have generated particular interest in the debate over voter ID requirements. The analysis using the aggregate data shed no light on the association between voter ID requirements and turnout for African-American and Hispanic voters. But in the models using the individual data, some significant relationships emerged for African-American, Hispanic and Asian citizens. For the entire population, the signature, non-photo identification and photo identification requirements all were associated with lower turnout compared to the requirement that voters simply state their names. These correlations translated into reduced probabilities of voting of about 3 to 4 percent for the entire sample, with larger differences for specific subgroups. For example, the predicted probability that Hispanics would vote in states that required non-photo identification was about 10 percentage points lower than in states where Hispanic voters gave their names. The difference was about 6 percent for African-Americans and Asian-Americans, and about 2 percent for white voters.

The model also showed that Hispanic voters were less likely to vote in states that required non-photo identification as opposed to stating one's name. Hispanic voters were 10 percent less likely to vote in non-photo identification states compared to states where voters only had to give their name.

Varying voter identification requirements were associated with lower turnout rates for Asian-American voters as well. Asian-American voters were 8.5 percent less likely to vote in states that required non-photo identification compared to states that require voters to state their names under the maximum requirements, and they were 6.1 percent less likely to vote where non-photo identification was the minimum requirement.

**Conclusions of the Statistical Analysis**

The statistical analysis found that, as voter identification requirements vary, voter turnout varies as well. This finding emerged from both the aggregate data and the individual-level data, although not always for both the maximum and minimum sets of requirements. The overall relationship between ID requirements and turnout for all registered voters was fairly small, but still statistically significant.

31 Incorporating discrete variables for Hispanics, African-Americans, and Asian-Americans into one model carries the implicit assumption that the remaining variables, including education and income, will influence each of these groups in a similar manner in terms of deciding whether to vote. These assumptions are not always born out by the data (see Leighley and Vedlitz, 1999.) To isolate the effects of voter identification and other variables on voter turnout within specific racial and ethnic groups, the sample is divided into sub-samples and the model re-run to calculate the data discussed and shown in Tables 5, 6, and 7 in Appendix C.
In the aggregate data, the match signature requirement, the provide a non-photo ID requirement, and the photo ID requirement were all correlated with lower turnout compared to requiring that voters state their names.

The signature, non-photo ID, and photo ID requirements were all correlated with lower turnout compared to the requirement that voters simply state their names. That the non-photo identification requirement was the most consistent in terms of statistical significance across the groups is intriguing given the intense debates surrounding photo identification requirements.

Significant questions about the relationship between voter identification requirements and turnout remain unanswered. The data examined in the statistical analysis could not capture the dynamics of how identification requirements might lower turnout, nor could they rule out that other attributes of a state’s electoral system might explain the statistically significant correlations that the study found. If ID requirements dampen turnout, is it because individuals are aware of the requirements and stay away from the polls because they cannot or do not want to meet the requirements? Or, do the requirements result in some voters being turned away when they cannot meet the requirements on Election Day, or forced to cast a provisional ballot that is not ultimately counted? The CPS data do not include measures that can answer this question. Knowing more about the “on the ground” experiences of voters concerning identification requirements could guide policy-makers at the state and local level in determining whether and at what point in the electoral cycle a concerted public information campaign might be most effective in helping voters to meet identification requirements. Such knowledge also could help in designing training for election judges to handle questions about, and potential disputes over, voter identification requirements.

Litigation Over Voter ID Requirements

A handful of cases have challenged identification requirements in court in recent years. In general, requirements that voters provide some identifying documentation have been upheld, where photo ID is not the only acceptable form. Whether laws requiring photo ID will be upheld is more doubtful. To date, only two cases have considered laws requiring voters to show photo ID (Common Cause v. Billups and Indiana Democratic Party v. Rokita). Cases challenging the mandatory disclosure of voters’ Social Security numbers on privacy grounds have yielded mixed results.

Non-photo identification. For the most part, courts have looked favorably on requirements that voters present some form of identifying documents if the photo identification is not the
only form accepted. In Colorado Common Cause v. Davidson, No. 04CV7709, 2004 WL 2360485, at *1 (Colo. Dist. Ct. Oct. 18, 2004), plaintiffs challenged a law requiring all in-person voters to show identification (not just first-time registrants). The court upheld this requirement against a constitutional challenge. Similarly, in League of Women Voters v. Blackwell, 340 F. Supp. 2d 823 (N.D. Ohio 2004), the court rejected a challenge to an Ohio directive requiring first-time voters who registered by mail to provide one of the HAVA-permitted forms of identification, in order to have their provisional ballots counted. Specifically, the directive provided that their provisional ballots would be counted if the voter (a) orally recited his driver's license number or the last four digits of his social security number or (b) returned to the polling place before it closed with some acceptable identification (including reciting those identification numbers). Id. This was found to be consistent with HAVA.

Photo ID. Since the 2004 election, two states have adopted laws requiring photo identification at the polls in order to have one's vote counted, without an affidavit exception: Georgia and Indiana. Both these requirements were enacted in 2005 and both have been challenged in court. The Georgia law required voters attempting to cast a ballot in person present a valid form of photographic identification. O.C.G.A. § 21-2-417. On October 18, 2005, the District Court granted the plaintiffs' motion for a preliminary injunction, enjoining the application of the new identification requirements on constitutional grounds. In granting the injunction, the court held that plaintiffs' claims under both the Fourteenth Amendment (equal protection) and Twenty-Fourth Amendment (poll tax) had a substantial likelihood of succeeding on the merits at trial (Common Cause v. Billups, Prelim. Inj. 96, 104). In January 2006, Georgia enacted a modified version of its photo ID law, which the court has not yet ruled on. In the other state that has enacted a photo ID requirement (Indiana), legal challenges have also been filed. (Indiana Democratic Party v. Rokita and Crawford v. Marion County Election Board). On April 14, 2006, the district court granted defendants' motion for summary judgment, concluding that plaintiffs had failed to produce evidence showing that the state's ID law would have an adverse impact on voters. Another case of significance, for purposes of photo ID requirements, is American Civil Liberties Union of Minnesota v. Kiffmeyer, No. 04-CV-4653, 2004 WL 32

32 Indiana's law does allow voters without ID to cast provisional ballots, and then to appear before the county board of elections to execute an affidavit saying that they are indigent and unable to obtain the requisite ID without payment of a fee. But in contrast to other states, voters cannot cast a ballot that will be counted by submitting an affidavit at the polls, affirming that they are the registered voter and are otherwise eligible to vote.
REVISED FINAL DRAFT
For review by the EAC's Advisory Boards

2428690, at *1 (D. Minn. Oct. 28, 2004). In that case, the court enjoined a Minnesota law that permitted the use of tribal photo ID cards, only for an Indian who lived on the reservation. 2004 WL 2428690, at *1. The Court found no rational basis for distinguishing based on whether or not the cardholder lives on the reservation. Id. at *1.

3. These decisions indicate that courts are likely to carefully scrutinize the evidence regarding the impact of photo ID requirements.

Privacy. In Greidingen v. Davis, 988 F.2d 1344 (4th Cir. 1993), the court struck down on due process grounds a Virginia law requiring disclosure of voters' social security numbers for voter registration. The social security numbers recorded in voter registration lists had been disclosed to the public and political parties that had requested the lists. The court found that the requirement to give the social security number effectively conditioned rights on the consent to an invasion of privacy. It concluded that this public disclosure of the social security numbers was not necessary to achieve the government's interest in preventing fraud. On the other hand, in McKay v. Thompson, 226 F.3d 752 (6th Cir. 2000), the court rejected privacy challenges based on both the Constitution and federal statutes, to a Tennessee law requiring social security numbers for voter registration since 1972. 226 F.3d at 755. Second, the NVRA only permits requiring the minimum amount of information necessary to prevent duplicate voter registration and to determine eligibility. The distinction appears to be between the use of Social Security numbers for internal purposes only, which was deemed permissible, and the disclosure of those numbers to the public which was not.

These decisions suggest that the courts will carefully scrutinize the evidence, where states require that voters produce a photo ID in order to cast a regular ballot. The courts have used a balancing test to weigh the legitimate interest in preventing election fraud against the citizen's right to privacy (protecting social security numbers from public disclosure, for example) and the reasonableness of requirements for identity documents. To provide both the clarity and certainty in administration of elections needed to forestall destabilizing challenges to outcomes, these early decisions suggest that best practice may be to limit requirements for voter identification to the minimum needed to prevent duplicate registration and ensure eligibility.

Developments since 2004
Since the passage of HAVA, with its limited requirements for voter identification, and following the 2004 election, debate over voter ID has taken place in state legislatures across the country. That debate has not been characterized by solid information on the consequences of tightening requirements for voters to identify themselves before being permitted to cast a regular, rather than a provisional, ballot.

Better information might improve the quality of the debate. Answers to the following key questions are not available in a form that might satisfy those on both sides of the argument.

- What is the overall incidence of vote fraud?
- How does fraud take place in the various stage of the process: registration, voting at the polls, absentee voting, or ballot counting?
- What contribution can tighter requirements for voter ID make to reducing vote fraud?
- What would be the other consequences of increasingly demanding requirements for voters to identify themselves? This is the question addressed, within the limits of the available data, in the analysis in this report.

Answering these questions would provide the information needed for more informed judgment in the states as they consider the tradeoffs among the competing goals of ballot integrity, ballot access, and administrative efficiency. The Carter-Baker Commission recognized the tradeoffs when it tied recommendation for national ID to an affirmative effort by government to identify unregistered voters and make it easy for them to register.

State Voter Databases and Voter ID

With the implementation of the HAVA Computerized Statewide Voter Registration List, an application for voter registration for an election for Federal office may not be accepted or processed unless the application includes a driver’s license number or last four digits of the Social Security number on the voter registration form. This information can be used to verify the identity of the registrant through interfacing with lists maintained by the Motor Vehicle office and Social Security office. If registrants do not have either a driver’s license or Social Security number, the State will assign a unique identifier number to that person.

Some states are wrestling now with these unresolved issues. In New Jersey, for example, pending legislation would require that voters must be able to confirm their registration through a secure access to the Statewide Voter Registration List. It also requires voters to present ID at
the polls in order to cast a regular ballot if the numbers recorded on the registration have not been verified (or if no verifiable number appears on the registration). It recognizes the HAVA requirement that if the number provided by the voter has not been verified and if the voter does not present ID at the polls, that voter may cast a provisional ballot. The bill does not specify they have to provide ID within 48 hours in order for their vote to count, as is the case with first-time mail-in registrants.

As some states gain experience in this area, the EAC would perform a useful service by making timely recommendations of best practices for all states to consider.

Conclusions

The analysis of voter ID requirements is complex. It takes into account important values associated with an electoral process, such as ballot access and integrity. The continuing effort to understand how voter ID requirements may affect turnout and the integrity of the ballot could benefit from additional factual information, including statistical analyses. Our research includes a statistical study of this kind. It indicated that the level of voter turnout in a state is correlated with the stringency of the voter ID requirement imposed by that state. Additional empirical research of this nature, with additional data collected by or for the EAC, would further illuminate the relationship between stricter voter ID rules and turnout, perhaps explaining if awareness of a strict ID requirement tends to discourage would-be voters from going to the polls. Or, additional research may shed light on whether, if voters did go to the polls, stricter Voter ID requirements will divert more voters into the line for provisional ballots. The consequence of increased reliance on provisional ballots can be longer lines at the polls and confusion, without necessarily a clear demonstration that the security of the ballot is correspondingly increased. 33

The debate over voter ID in the states would be improved by additional research sponsored by the EAC. That might include longitudinal studies of jurisdictions that have changed voter ID requirements, as well as precinct-level analyses that would allow more finely tuned assessment of the correlation between stricter identification requirements and turnouts. Further research could also identify methods to eliminate the need for voters to bring specific identity documents.

33 In this connection, the Brennan Center's response to the Carter-Baker Commission report observes that, "while it might be true that in a close election "a small amount of fraud could make the margin of difference," it is equally true that the rejection of a much larger number of eligible voters could make a much bigger difference in the outcome." Response to the Report of the 2005 Commission on Federal Election Reform, The Brennan Center for Justice at NYU School of Law and Spencer Overton, On Behalf Of The National Network on State Election Reform, September 19, 2005
with them to the polls, while assuring that each voter who casts a ballot is eligible and votes only once.
Thanks Adam. I've been trying to get Tim Storey about this, but with no luck so far. Any news with you?

Tova

Subject: FYI

I don't know if you had heard about this but in NCSL's annual conference, they're having a piece on Voter ID and fraud issues. I don't know who's on that panel, but I thought I would let you know, since so much of that work is being done through the state legislatures. Hope all is well, and thanks for the updates....

10:15 am - 5:15 pm   Redistricting & Elections Committee

Supremes Rule on Re-Redistricting of Texas
10:15 am - 11:30 am
Three years after the highly publicized redrawing of Texas congressional districts, the U.S. Supreme Court ruled in June on whether the Legislature acted unconstitutionally. How will the decision alter the redistricting process? What subtle, but critical, lines were buried in the text of the opinions?

Legislative Competition and the role of Gerrymandering?

11:30 am - 12:45 pm
Are legislative elections really less competitive today than in the past? Is gerrymandering the culprit or one of many reasons. New research helps put the redistricting factor in perspective.

Are Voters Who they Say they Are?

1:00 pm - 2:00 pm
Many states continue to look at the issue of voter ID and struggle with balancing the need for maximum access to the polls with trying to eliminate any possible fraud. How big is this problem and what are states doing about it?

Will Fall Elections Run like Clockwork?

2:00 pm - 3:00 pm
Since the controversial 2000 election debacle, most states have implemented key election
reforms to shore up the system and respond to federal legislation. Will this fall's 2006 election go off without a hitch or will new problems emerge in the voting process?

What's Next in Redistricting Technology

3:15 pm - 4:15 pm
Redistricting software vendors will preview and demonstrate what they are planning for 2010. They will discuss things like the next generation of redistricting technology with support for desktop, Web based and PDA/Cellular applications.

Countdown to Census 2010

4:15 pm - 5:15 pm
Speakers: Linda Franz, Geographer, U.S. Census Bureau, Washington, D.C.
Bob LaMacchia, Chief, Geography Division, U.S. Census Bureau, Washington, D.C.
Cathy McCully, Chief, Census Redistricting Data Office, U.S. Census Bureau, Washington, D.C.

Wednesday, August 16, 2006
10:15 am - 11:30 am  Redistricting & Elections Committee

Are 527s Here to Stay?

In many states, the so-called 527 groups are likely to play a major part in this fall's campaigns. What are they? Should they be regulated? Can they be regulated? What are states doing in this area?

2:45 pm - 4:15 pm  Money and Politics

As ethical scandals over campaign contributions and influence-buying swirl around Washington, D.C., states once again take the lead in finding new solutions to an old problem. This session will highlight states' innovative ideas for regulating money in politics and the role of lobbyists in fundraising and campaigns.

Friday, August 18, 2006
8:30 am - 10:00 am  General Session and Breakfast

SPEAKERS:

Peter Hart has been one of the country's leading public opinion analysts for more than 27 years. He conducts all public opinion polling for NBC News and The Wall Street Journal. His focus is public policy, cultural and social issues, and strategic consulting for corporations, including Time Warner, Microsoft, Kodak to name a few.

Frank Luntz is one of the most honored communications professionals in America today. Named one of the four Top Research Minds by Business Week magazine, he pioneered the Instant Response focus group research technique, and won an Emmy Award in 2001 for his 100 Days, 1000 Voices segments on NBC's primary and election night coverage.
I am currently in Europe on official DOJ business. Please call Nancy Simmons, 202-514-1440. We have what you request -- I think, and if we do she can e-mail it to you.

Subject: State election fraud statute collection?

Dear Craig:

Hope is well with you. Hoping that you can help us out with a quick request from a member of congressional committee. They would like to know if there exists a list (compendium or index) of state election laws on crime and fraud specifically. They are trying to get access to such a list as soon as possible, for a Congressional hearing on Thursday. If no list exists to your knowledge, that's great. If it does exists, and we can get access to it, please let me know.

Thanks so much, Craig. I hope all is well.
Best,
Adam

Thad-

I've forwarded your message to each of the Commissioners' Special Assistants-
Amie Sherill (deGregorio),
Adam Ambrogi (Martinez)
Sheila Banks (Hillman)
Eileen Collver (Davidson).

They will be back in touch with you regarding the best address and method of contacting each of them.

Regards-

Karen Lynn-Dyson
Research Manager
U.S. Election Assistance Commission

--- Forwarded by Karen Lynn-Dyson/EAC/GOV on 02/18/2005 03:50 PM ---

Commissioners-

As was discussed during our session on February 17, 2005, please review and provide your approval, disapproval or amendments to the following items by Friday, February 25, 2005:

1. The attached Scope of Work which outlines the tasks related to contract work around projects relating to voluntary guidance on provisional voting and voter identification procedures.

2. The proposal will be advertised beginning February 28, 2005.

3. The deadline for submitting proposals will be March 14, 2005.

4. Proposal review will be completed by EAC staff by March 17, 2005

5. Staff will recommend a contractor to the Commissioners on March 18, 2005.

6. Commissioners will be asked for their decisions no later than Tuesday, March 22, 2005

Karen Lynn-Dyson/EAC/GOV
Thank you for your help and attention to this matter.

Providing EAC Assistance in Developing Voluntary Guidance on Provisional Voting and Voter Identification Procedures

0.0 Contract Title: Assistance to the U.S. Election Assistance Commission in the Development of Guidance on Provisional Voting and Voter Identification Procedures

1.0 Background: Sec. 302(a) of HAVA requires that all States allow the casting of provisional ballots in instances where a voter declares their eligibility to vote but their name does not appear on the official list of eligible voters, or an election official asserts that a voter is not eligible to vote. This section describes several requirements for implementation of provisional voting, but the States have considerable latitude in specifying how to carry out these requirements. The EAC seeks to examine how provisional voting was implemented in the 2004 general election and to prepare guidance for the States on this topic for the 2006 Federal elections.

HAVA Sec. 303(b) mandates that first time voters who register by mail are required to show proof of identity before being allowed to cast a ballot. The law prescribes certain requirements concerning this section, but also leaves considerable discretion to the States for its implementation. The EAC seeks to examine how these voter identification requirements were implemented in the 2004 general election and to prepare guidance for the States on this topic for the 2006 elections.

One of the remedies for a voter not having an acceptable proof of identity is to allow the voter to cast a provisional ballot, either at the polling place or by mail. This linkage between these two HAVA sections provides a rationale for conducting research on these topics in parallel. However, it is anticipated that two separate guidance documents will result.

2.0 Objective: The objective of this contract is for EAC to obtain assistance with the collection, analysis and interpretation of information regarding HAVA provisional voting and voter identification requirements for the purpose of drafting guidance on these topics for promulgation to the States in time for implementation for the 2006 Federal elections. The anticipated outcome of this activity is the generation of concrete policy recommendations to be issued as voluntary guidance for States.

3.0 Scope: In general the Contractor shall be responsible for all research and analysis activities, including the conduct of public hearings for fact finding and public comment purposes. However, in light of the urgent need to get this work underway, the EAC has scheduled a public hearing on February 23, 2005, on the topic of provisional voting.
An initial framework for provisional voting policy has been set by the court decisions rendered on the election procedures utilized in the 2004 election. The 6th Circuit decision, in particular, has drawn some boundaries which must be given due regard in the course of considering future policy alternatives for provisional voting.

Notice of public meetings and hearings is required to be published in the Federal Register. The Contractor shall be responsible for preparing the notice documents, and the EAC will submit the notices and cover the cost of publication. In addition, draft guidance documents must be published in the Federal Register to obtain public comment prior to their adoption. Again, the Contractor will work with the EAC to prepare the draft documents for publication, which the EAC will submit and cover the cost of publication. Comments received will be provided to the Contractor for analysis and incorporation into the final guidance documents, as appropriate.

4.0 Specific Tasks

For ease of reference, following task 4.3 the remaining tasks are listed separately under the headings of Provisional Voting and Voter Identification Requirements. It is understood that the work on these two topics will be conducted essentially concurrently, with Voter Identification activities starting approximately one month after Provisional Voting.

4.1 Prepare a project work plan. The Contractor shall prepare and deliver a brief Project Plan not later than 10 days after contract award. This plan shall describe how the Contractor will accomplish each of the project tasks, including a timeline indicating major milestones. A single document will be prepared to include both provisional voting and voter identification tasks. The Plan shall be presented at a project kickoff meeting with the EAC Project Manager.

4.2 Submit monthly progress reports. The Contractor shall submit a monthly progress report within 2 weeks of the end of each month. This report shall provide a brief summary of activities performed and indicate progress against the timeline provided in the Project Plan. Any issues that could adversely affect schedule should be identified for resolution. Budget status should also be provided.

4.3 Conduct periodic briefings for the EAC. The Contractor shall periodically meet with the EAC Project Manager and the lead Commissioner for this work to discuss research findings and progress. The Project Plan should make allowance for this activity. The number and frequency of briefings will be determined by the Contractor Project Manager and the EAC Project Manager as the work progresses. The Contractor may also be required to periodically brief the full Commission on their work.

Provisional Voting

4.4 Collect and analyze State legislation, administrative procedures, and court cases. An understanding of the disparities and similarities of how provisional
voting was implemented around the country will provide a baseline for the consideration of future approaches. Seventeen States never had provisional voting before HAVA was enacted, while many other States did. A State-by-State compendium of the legislation, procedures, and litigation reviewed shall be delivered along with the analysis results.

4.5 Recommend alternative approaches for future implementation of provisional voting. The Contractor shall conduct a literature review to identify other research results and data available on this topic. The EAC Election Day Survey, for example, contained several questions on provisional voting. The EAC will make these survey data available to the Contractor. Based on their analysis of available research and the results of Task 4.5, the Contractor shall diagnose the problems and challenges of provisional voting implementation and hypothesize alternative approaches.

The Contractor shall assess the efficacy of these alternatives in relation to the following inter-related policy objectives: (1) enabling the maximum number of eligible voters to cast ballots that will be counted; (2) providing procedural simplicity for voters, poll workers, and election officials; (3) minimizing opportunity for voter fraud; and (4) maintaining a reasonable workload for election officials and poll workers. Additional policy considerations may be identified in the course of this research effort. The Contractor shall document and brief these alternatives to the Commission.

4.6 Prepare preliminary draft guidance document. Based on the feedback received from the Commission, the Contractor shall prepare a draft guidance document for review and comment by the EAC Board of Advisors. EAC will convene a Board of Advisors meeting or teleconference for the discussion of this document. The Contractor shall provide the document in advance and participate in the Board meeting to answer questions and record comments.

4.7 Revise draft guidance for publication in the Federal Register. The Contractor shall revise the guidance document as appropriate to reflect the comments of the EAC and the Board of Advisors and provide the draft guidance for publication in the Federal Register by the EAC.

4.8 Arrange one public hearing for receiving public comment on draft guidance. This hearing should be scheduled 30 days after the initial publication date. The Contractor shall select the location in consultation with the EAC. No speakers will be required. EAC will handle publicity for the meeting.

4.9 Prepare final guidance document for EAC adoption. Review all comments received in response to Federal Register publication and at public hearing and revise guidance document as appropriate. Provide final version to EAC for adoption.
Voter Identification Requirements

4.10 Collect and analyze State legislation, administrative procedures, and court cases. It is assumed that the collection of information for analysis of voter identification requirements will be performed concurrently with the research for Task 4.5. An understanding of the disparities and similarities of how voter identification requirements were implemented around the country will provide a baseline for the consideration of future approaches. A State-by-State compendium of the legislation, procedures, and litigation reviewed shall be delivered along with the analysis results.

4.11 Convene a half day public hearing on the topic of voter identification requirements. The Contractor shall be responsible for all aspects of planning and conducting this hearing in consultation with the EAC. The Contractor shall identify three panels of three to four speakers each. The Contractor shall arrange for speaker attendance to include travel and per diem expenses. The EAC will provide publicity for the hearing. The Contractor shall prepare a document summarizing the proceedings and containing all testimony provided.

4.12 Recommend alternative approaches for future implementation of HAVA voter identification requirements. The Contractor shall conduct a literature review to identify other research results and data available on this topic. Based on their analysis of available research and the results of Task 5.11, the Contractor shall diagnose the problems and challenges of voter identification and hypothesize alternative approaches. The Contractor shall coordinate with the EAC to identify appropriate policy objectives by which to assess these alternatives. The Contractor shall document and brief these alternatives to the Commission.

4.13 Prepare preliminary draft guidance document. Based on the feedback received from the Commission, the Contractor shall prepare a draft guidance document for review and comment by the EAC Board of Advisors. EAC will convene a Board meeting or teleconference for the discussion of this document. The Contractor shall provide the document in advance and participate in the Board meeting to answer questions and record comments.

4.14 Revise draft guidance for publication in the Federal Register. The Contractor shall revise the guidance document as appropriate to reflect the comments of the EAC and the Board of Advisors and provide the draft guidance for publication in the Federal Register by the EAC.

4.15 Arrange one public hearing for receiving public comment on the draft guidance. This hearing should be scheduled 30 days after the initial publication date. The Contractor shall select the location in consultation with the EAC. No speakers will be required. EAC will handle publicity for the hearing.

4.16 Prepare final guidance document for EAC adoption. Review all comments received in response to Federal Register publication and at public hearing and revise guidance document as appropriate. Provide final version to EAC for adoption.
**Contract Type.** The contract type will be Time and Materials with a ceiling of

6.0 **Place of performance.** The principal place of performance will be the Contractor’s place of business. Meetings and occasional work efforts may be performed at the EAC offices.

7.0 **Period of Performance.** The period of performance is from date of award until October 28, 2005.

8.0 **Schedule of Deliverables:**
- Project plan – 10 days after contract award
- Progress reports – monthly
- Briefings – as required
- Analysis report on provisional voting - TBD
- Alternatives report on provisional voting – TBD
- Preliminary draft guidance on provisional voting - TBD
- Draft guidance on provisional voting for publication – 8/2005
- Public hearing on draft guidance – 30 days after publication
- Final guidance on provisional voting for EAC adoption – 9/2005
- Analysis report on voter identification requirements – TBD
- Public hearing on voter identification requirements – TBD
- Summary of voter identification requirements hearing - TBD
- Alternatives report on voter identification requirements - TBD
- Preliminary draft guidance on voter identification requirements - TBD
- Draft guidance on voter identification requirements for publication – 9/2005
- Public hearing on draft guidance – 30 days after publication
- Final guidance on voter identification requirements to EAC for adoption – 10/2005

REMAINING STANDARD CONTRACT TERMS TO BE PROVIDED.
I understand that the Commissioners will consider this latest draft of the research plan at next Tuesday’s meeting.

Enclosed please find the latest version in which approximately $2.5 million in funds are appropriated. As always, this is a draft, working document from which to deliberate.

Tom-

Had a very good review and discussion of the PRG at this morning's Commissioner meeting.

Also, the Commissioners have marked their calendars for a conference call with the Eagleton/Moritz team on July 12 at 9:30 AM.

Several concerns were raised about the composition of the PRG and, after some discussion, I indicated that Eagleton will provide the EAC with a revised participant list, and with a more detailed description of the PRG's mission, goals, objectives, workplan and timelines for accomplishing its work.

The Vice Chair is concerned that there is not sufficient conservative representation on the PRG. I would suggest the team do more research to identify well-recognized conservative academics to put on the Group.

Further, the Commissioners recommend a tiered process in which the PRG will prepare a "dispassionate" analysis of the issues and draw some tentative conclusions. This analysis and these conclusions will then be vetted with a defined/select group of local election officials, and then, with a defined/select group of advocacy organizations.

It was also suggested that a final round of focus group meetings be held with a cross-section of these election officials, advocates and academics for an overall interactive reaction to the analysis and recommendations.

Hope this helps clarify concerns; I look forward to sharing your revisions to the PRG with them.

Subject: Re: Peer Review Group

Tom-

I will be back to you early next week with EAC's feedback on this.

Our initial reaction is that the group needs to include some local and/or state-level election officials, who have first-hand experience with these issues.

We will get you additional names and reactions by mid-week next week.

Thanks
K

Karen Lynn-Dyson
Research Manager
U.S. Election Assistance Commission

Washington, DC 20005
tel:202-566-3123

Karen,

As you probably recall, one of the features of our proposal was the creation of a Peer Review Group to look over our findings, conclusions and draft reports before we prepare final drafts for the EAC's review. The EAC asked that before recruiting members of the PRG we submit names for EAC's review. The aim, course, is to assemble a panel that is experienced, informed, and
balanced.

Attached is a list of potential PRG members drawn from academia, the law, and non-profit organizations with interests in this area. Please look it over.

We may conclude that the PRG should also include two or three former government officials now in academia or related fields. We have a conference call with our partners at Moritz planned for tomorrow or Friday to decide a) if former officials should be included in the PRG and b) if so, who they should be. I'll keep you informed of our thinking as it develops.

Tom
Tom mentioned you needed to provide him a potential name for the 'intimidation' side of the fraud/intimidation project. Do you have someone in mind, or do you want me to look into it on the 'net?

Adam

Ms. Dyson,

Attached please find the June 2005 Progress Report for the project entitled, “Contract to Provide Research Assistance to the EAC for the Development of Voluntary Guidance on Provisional Voting and Voter Identification Procedures.” If you have any questions regarding any part of this document please direct them to Tom O’Neill at: or (908)794-1030.

The financial reporting for this project is performed by the Division of Grant and Contract Accounting at Rutgers University. A copy of this report was not made available to us in an electronic format. Hard copies of the Progress Report and Financial Report have been Fedex’ed to you this afternoon and should arrive to your attention tomorrow morning. Please let me know if you do not receive this package by tomorrow afternoon.

Thank you for your time, have a great evening.

Best,
Lauren Vincelli

New Brunswick, NJ 08901-8557
OUTLINE

• Introduction

• Provisional Voting
  o Task 3.4

• Voter Identification Requirements
  o Task 3.10
  o Task 3.11

• Project Management
  o Task 3.1

• Financial Report

INTRODUCTION

This report describes our progress from the start of the project on May 26 through June 30, 2005. It includes brief descriptions of key tasks; progress made; challenges encountered or anticipated; milestones reached; and projections for work to be completed in the coming month.

The objective of the contract is to assist the EAC in the collection, analysis and interpretation of information regarding HAVA provisional voting and voter identification requirements on which to base policy recommendations as guidance for the states in the conduct of the 2006 elections. The work has begun well, thanks to the clarity of the EAC’s expectations and the strong collaboration by the scholars and staff at the Eagleton Institute of Politics at Rutgers, The State University of New Jersey, and the Moritz College of Law at the Ohio State University.

The document report is divided into 4 sections that cover: Provisional Voting, Voter Identification Requirements, Project Management, and the Financial Report. Each section references the specific tasks described in paragraph 3 of the contract.

Please direct any questions or comments about this report to Tom O’Neill at: tom_oneill@verizon.net or (908) 794-1030.
PROVISIONAL VOTING

Tasks 3.4 – 3.9 in our contract relate to provisional voting. Work on the first of these must be complete before proceeding to later tasks. The work plan provides for two months to complete Task 3.4. Work on this task is on schedule.

Task 3.4: Collect and analyze state legislation, administrative procedures, and court cases. Understand the disparities and similarities of how provisional voting was implemented around the country.

LEGISLATION, REGULATIONS, AND LITIGATION

The research team at the Moritz College of Law has the lead responsibility for the collection and analysis of legislation, administrative procedures and litigation. When complete, this information will constitute the compendium of legislation, administrative regulations, and case law called for under this task. It also will provide a base of understanding for the analysis of states’ actual experience with provisional voting in 2004, for which the Eagleton team has lead responsibility.

Description: The Moritz team includes faculty, an executive administrator, a reference librarian, and several research assistants. It began immediately to compile statutes, case law and administrative procedures regarding Provisional Voting. The team has created a 50 state chart to summarize information on provisional voting. Categories for which state statutes and administrative procedures are being reviewed include:

- When did the state create a system compliant with the HAVA provisional ballot requirements?
- Who may be eligible to cast a provisional ballot? and
- What is the process for discovering whether your provisional ballot was counted in the election?

Progress: Initial research for 27 states, including the collection of provisional voting statutes is complete. This phase of the work is on schedule for completion by August 1. By the beginning of the week of July 11, Moritz’s full time research assistant will move from voter identification research to gathering and organizing case law on provisional voting.

Challenges: Identifying the relevant statutes has been challenging; states use different terminology to codify provisional voting issues. Many states have scattered election law provisions throughout their codes. This variation from state to state makes creating a snapshot view across states a challenge. The team is meeting this challenge, and the work is on schedule.
PREPARATION FOR AND EXPERIENCE WITH PROVISIONAL VOTING

The Eagleton team is constructing a narrative description for each state of the 50 states and the District of Columbia. It is also surveying a stratified random sample of county election officials to improve its understanding of actual practice in administering provisional voting.

Description: To construct the narratives, a researcher is examining newspaper accounts, state websites, and reports from third-party organizations to determine what information is publicly available about these issues during the 2004 election. To organize the information derived from this examination, we are creating an information system that will make it possible to catalog the basic information about the states (i.e. whether a state was new to provisional voting, the percentage of provisional votes counted, the method of notifying voters if their vote was counted, etc.) and combine it with Moritz’s collection and analysis of statutes, regulations and litigation. The information system will make it possible to provide answers to such topics of particular interest listed in the contract as: How did preparation for provisional voting vary between states that had some form of provisional voting and those that did not?” and “How did litigation affect implementation?”

Progress: The researcher in this area has identified sources of information for every state and the collection process is well underway. Verified database entries for 24 states are complete, as are two state narrative summaries. This phase of the research is on schedule for completion by the end of July.

Challenges: A key challenge is determining just what states actually did in practice to verify and count provisional ballots. A second challenge has been determining the variations in policy within individual states. We are still wrestling with resolving this challenge, but the work is on schedule.

Work Plan: By the end of the July, the compilation of statutes, administrative regulations, and litigation will be complete and ready to be combined with the state-by-state narrative compiled by Eagleton. That will form the basis for the analysis and recommendation of alternative approaches for provisional voting required under Task 3.5.

SURVEY OF COUNTY ELECTION OFFICIALS

This survey will help the research team understand more about such key topics of interest as:

- “How did the experience of provisional voting vary between states that previously had some form of provisional voting and those where provisional voting was new in 2004?”

- “Did state and local processes provide for consistent counting of provisional ballots?”

- “Did local officials have a clear understanding of how to implement provisional voting?”

The survey results will supplement the information on these topics from the compilation of statutes, regulations and cases and from the narrative we are constructing for each state.
Description: The Center for Public Interest Polling (CPIP) at Eagleton is conducting a national survey of county election officials to measure several aspects of provisional voting. The survey is designed to determine the following factors related to provisional voting at the county level:

- The content and quality of instructions provided to county officials by the states
- The steps taken by county officials to pass information on to poll workers;
- Differences in experience between states new to provisional voting and those that had some form of provisional ballot before HAVA; and
- Recommendations to improve and/or reduce the need for provisional voting

Progress: The survey instrument is complete. CPIP has compiled a list of election officials at the county level and at the municipal or regional level for states that do not assign the election responsibility to counties. It was forwarded to the call center, Schulman, Ronca & Bucuvalas Inc., (SRBI) the week of July 5, 2005. A sample will be drawn the week of July 12. Human Subjects Approval from Rutgers University was granted July 12. Pre-notification letters will be sent to election officials around July 12-13, 2005. The EAC has reviewed a draft of this letter, which we have now revised to make clear that the survey will increase our understanding of the provisional voting process, but is not being conducted on behalf of the EAC.

Challenges: We made special efforts to expedite Human Subject Approval to meet the schedule in the work plan. In the absence of an existing, reliable database of local election officials, we had to create one especially for this project. In order to provide a valid comparison between the states new to provisional voting with those that previously had some form of provisional ballot we doubled the sample size from 200 to 400. This increase will require an increase in the budget for the survey from $15,000 to about $24,000. We intend to reallocate costs within the existing budget to make this improvement possible, and will submit a letter describing the reallocation to the EAC in mid-July.

The sample has been, and will continue to represent the biggest challenge in this survey. Compiling the sample required substantial coordination and research to determine the accuracy of the identity and contact information for potential respondents. The difficulty in determining the appropriate contact is attributed to variation in county election officials’ titles, jurisdiction types, and state and county election structures across the country. In addition to the potential pitfalls of reaching the appropriate county official, another factor in actually making contact with this special population will be dependent upon the hours that they keep, and may be hindered by the summer season.

Work Plan: This questionnaire will be pre-tested by July 15, and will field July 18 through August 5, 2005. This is somewhat later than projected in the revised work plan, but the information will arrive in time to be considered in drafting the analysis and alternatives document required under Task 3.5.
VOTER IDENTIFICATION REQUIREMENTS

The contract lists 7 tasks (3.10 – 3.16) related to Voter Identification Requirements. During the reporting period, we have made substantial progress in the first two tasks, which constitute the information-gathering phase of the work on Voter ID. The research of Voter ID requirements is proceeding concurrently with our work on the experience of provisional voting.

Task 3.10: Legislation, regulations, and litigation

The research team at the Moritz College of Law has the lead responsibility for the collection and analysis of legislation, administrative procedures and litigation. When complete, this information will constitute the compendium of legislation, administrative regulations, and case law called for under this task.

**Description:** A team of Election Law@Moritz faculty, executive administrator, a reference librarian, and several research assistants is compiling statutes on Voter Identification, and providing a summarized analysis of this research.

**Progress:** The Moritz team has created a 50-state chart to record data on voter identification. Categories for which state statutes and administrative regulations are being reviewed include: “Who is required to present ID”, “Types of ID required”, and “Consequences of having no ID”. We have completed the initial research for 45 states and have collected the voter identification statutes for those states. An Election Law@Moritz Fellow is conducting an academic literature review on voter identification. This literature review will help shape the analytical framework that will guide us when the compendium of statutes and administrative regulations is complete.

**Challenges:** Identifying the relevant statutes has been challenging because of the different terminology used from state to state to codify voter identification issues, and because many states have scattered election law provisions throughout their codes. This variety from state to state makes creating a snap-shot view across states a challenge.

**Projections:** At the current rate, a draft of the voter identification chart should be complete on schedule, by the end of July. Work on the literature review will continue into August, but will be available to inform the analysis of alternative approaches for voter identification called for by Task 3.12 of the contract.

SUPPLEMENTS TO LEGAL ANALYSIS

To supplement the legal analysis, the Eagleton team is undertaking two research efforts: First, compiling information on the debate over voter in the states; and second, estimating the effect on turnout of voter id requirements. Tracking the continuing political debate over voter identification reveals that the relatively narrow HAVA requirements for voter identification have apparently sparked in many states a broader concern with more rigorous identification requirements for all voters. We are following these developments both to
monitor possible secondary effects of HAVA on voter ID, and to provide a rich collection of alternative approaches for consideration.

Individual narratives for the states with significant activity in voter ID will provide a resource for understanding the wide range of experience in the 2004 election. The narratives will include an appraisal of the prevalence and nature of vote fraud, a focus of the concern with increasing the rigor of voter ID requirements. This work is on schedule to be completed by the end of July. The next key milestones will be the completion of the state database and drafting the first narratives.

**VOTER ID AND TURNOUT ANALYSIS**

The second supplemental analysis will provide objective information on a contentious feature of the debate over voter ID in the states: the effects of more rigorous voter ID regimes on voter turnout and the relationship between the voter ID regime and vote fraud. As part of this effort, Eagleton is undertaking a statistical analysis to gauge the effect of a state's voter ID regime on turnout, especially turnout by minority and elderly voters.

**Description:** We are creating a database and gathering statistics on the effects of state-level voter identification requirements on voter turnout at the county-level in the 2004 election. Analysis on the county-level will enable us to estimate the influence of ID requirements on various age groups, races, ethnicities and gender groups. We are compiling data from both the 2000 and 2004 Presidential elections to measure the effect that changes in ID requirements may have had on voter turnout through two national election cycles.

**Progress:** The structure of the database is complete. It contains demographic information from the Census, and turnout data from various sources. The researcher assigned to this task is devising the syntax that will be required to run the statistics when the dataset is complete. The methodology for this part of the study is complete, and the actual data collection will soon be finished.

**Projection:** We are waiting for the Census Bureau to release the 2004 County Demographic Estimates. We have ordered and await the arrival of 2 datasets that contain voter turnout and voter registration numbers on the county-level for both the 2000 and 2004 elections. Once these two sources of information are received, the researcher will insert this information into the existing database, clean up the dataset, and begin to run the statistics. By that point, the researcher will have separated the states into various ID-requirement groupings that have been determined by the team, which will require coordination with several other parts of the study. This work is on schedule. By the end of July, the researcher should have county-level and state-level statistics on the impact of each ID system upon turnout, analyzed through various demographic features on the county-level.
**Task 3.11 Public meeting on Voter Identification Requirements**

**Description:** We are working closely with EAC staff, particularly the General Counsel, to plan a half day public meeting on Voter ID requirements. Presentations at the meeting will form an important part of the information we are compiling about Voter ID requirements and the strengths and shortcomings of a range of alternative approaches.

**Progress:** We have recommended a focus on the debate over Voter ID now underway in the states. To provide a vivid picture of the debate, we have recommended that one panel include legislators on opposite sides of the issue from two different states. Our research identified Mississippi and Wisconsin as two states to focus on, and we have recommended specific legislators from each. We have discussed with staff adding a researcher to the panel to put the debate in Wisconsin and Mississippi in either a national or historic context. We also recommended two researchers from contrasting points of view, to address the effects of Voter ID provisions under HAVA and broader provisions that are now the subject of national debate. EAC staff recommended a panel of two state election directors to address the interaction of Voter ID with HAVA. We are awaiting a decision on our recommendations from EAC staff. We have no reason not to believe that the work is on schedule to be completed in time to organize a productive meeting on July 28.

**Challenges:** The date and location of this hearing has been changed twice since the beginning of the project. It was originally scheduled to take place in late June, but was rescheduled for July to allow the June hearing to focus on voting machine technology. The regular meeting was rescheduled for July 26 in Minneapolis, and was recently changed to July 28 in Pasadena. The changes in the scheduling of the July meeting have complicated our choice of panelists. More seriously, the changes mean that information from the hearing will not be available as early in the research process as contemplated in the contract. This timeframe will now require the team to summarize the hearing events at the same time that we are drafting the analysis and alternatives paper in early August.

Additionally, while our contract states that the "Contractor shall be responsible for all aspects of planning and conducting this hearing in consultation with the EAC," we have been asked only to make recommendations of topics and panelists, and the arrangements for the organization of the hearing are in other hands. This lack of clarity has caused some confusion and has delayed invitations to panelists. Thanks to frequent communication with members of the EAC, the process now seems to be working smoothly.

**Projection:** We believe the work is on schedule for completion in time to recruit the panelists for the July 28 hearing. Preparation of the hearing summary will likely be delayed because of the need to complete the analysis and alternatives paper.
Immediately after announcement of the award of the contract, Eagleton and Moritz began supplementing the core group that had prepared to proposal to building a highly qualified team to undertake the work. That team was in place by mid June, just a few weeks after the contract award.

As described in the proposal, the direction of the project is the responsibility of a five-person committee of faculty and staff from Eagleton and Moritz, chaired by Dr. Ruth Mandel, Director of the Eagleton Institute of Politics. Project Director Thomas O'Neill, a consultant to Eagleton, reports to this team and provides day-to-day guidance and coordination for the research. A weekly meeting of all the researchers engaged in the project if the primary means of coordinating the work. We have recently added an internal website to facilitate the review and revision of written materials.

**Task 3.1 Update the Work Plan**

The first task was completed on time with the submission of a detailed work plan and timeline. EAC staff requested that the work plan be supplemented with a Gantt chart created on MS Project, and we submitted that a few days later.

**Peer Review Group**

**Description:** A feature of our proposal was the creation of a Peer Review Group (PRG). The EAC indicated at our first meeting in May that it would review our recommendations for members of the PRG. Our initial vision of the PRG was a small group of scholars and representatives of advocacy organizations that would comment on the research design, review drafts of our analyses and reports, and, in general, identify areas of the research that should be strengthened and help us improve the breadth, depth and clarity of reports based on that research.

**Progress:** Upon reflection, the project team agreed that the PRG should not include representatives of advocacy groups. We concluded, as representatives they would feel obligated to act as advocates for positions already taken by their groups. While advocacy organizations should be consulted as stakeholders during the course of our work, they were unlikely to achieve the goals we had in mind for the PRG as a source of advice on research design, methodology, and analysis. We submitted a revised list of potential members, substantially comprised of academics, to EAC for review.

The EAC responded with suggestions concerning both the balance of the PRG’s membership and the creation of additional committees to review our work. We answered with an analysis of the cost and time involved adopting the EAC’s suggestions as well as with suggestions for a balanced selection of academics for the Peer Review Group. We have not received response on this correspondence from the EAC, and the recruitment of the group is on hold.
Challenges: Communications on this issue with the EAC have not been clear or timely. The PRG should be in place now to comment on our research design while there is still time to refine it. While we are confident in the quality of our work, the wisdom and perspective of the outstanding candidates we have proposed for membership would strengthen the analysis and reports of our work.

Projections: We have effectively brought these challenges to the attention of EAC staff and look forward to a resolution speedy enough to allow recruitment of the PRG's members before the end of the month. If we meet that goal, the work of the PRG will be about 2 weeks behind the milestones indicated in the work plan.

COORDINATION AND INFORMATION MANAGEMENT

Collecting and merging information and data from myriad sources is a demanding requirement of this research. We have developed two principal mechanisms to facilitate the analysis of the material collected or created in the project: an information system and a website for easy access to drafts and reports.

INFORMATION SYSTEM

Description: The statutory data and reports prepared by the Moritz College of Law will be merged with the political and procedural data and analysis prepared by the Eagleton Institute of Politics to provide a cohesive final product to the EAC, which will include a compendium of case law and statutes regarding provisional voting and voter identification.

Progress: The Moritz team has provided Eagleton staff with samples of the work that they are performing. An Eagleton staff member will be reviewing the content and formats of data from all supporting research and (re-)formatting once the work has been completed. The researchers and staff at Eagleton have created a shared folder on the Institute's server for the safe storage of work and access for those staff members. All of this work is being reviewed by the project team to ensure that a broad survey is being performed.

Challenges: There are no evident challenges to this task at this time.

Projections: By the end of July 2005, much of the above referenced research will have been completed with respective materials and charts near completion. At that time, staff at Eagleton will review, combine and format all documents and materials in preparation for our final reporting to the EAC.

INTRANET

Description: A trial Intranet for the project became available during the week of June 26. The Intranet will facilitate the exchange of information and collaboration among project participants.

Progress: After meetings with staff members of Rutgers University Computer Services (RUCS) and subsequent submission of a proposal by RUCS for technical support and hosting of the Intranet and the evaluation of alternative commercial services, the project team decided at its June 28th meeting to publish the Intranet through www.intranets.com.
one of the leading commercial services. This decision was based on lower costs and earlier publication schedules than offered under the RUCS proposal. The Intranet services were evaluated during a free trial period, which demonstrated the ease of design and navigation of the proposed service.

**Challenges:** There are no immediate challenges to completion of this task by the timeframe specified below.

**Projections:** Design, testing and publication of initial content of the Intranet service is continuing, with all participants expected to be provided access by July 8, 2005.

---

**FINANCIAL REPORT**

The financial reporting for this project is supervised and prepared by the Division of Grant and Contract Accounting (DGCA) at Rutgers. Financial reporting on grant accounts is limited to actual expenses that have been incurred during the reporting period. Given that the report reflects the first month of the project, several procedures for payment of subcontractors on the project were initiated. Expenses related to those members of the team are not reflected in this report because they have not yet been incurred.

Our contact at DGCA is: Constance Bornheimer, (732) 932-0165, EXT. 2235.

A detail of expenses incurred from project inception through June 30, 2005, is attached.
I write to see if you might be available to come to Washington on Monday, August 1 to meet with several EAC staff and Commissioners to discuss the voter fraud/voter intimidation project and your possible work as a consultant on the project.

I'd like to schedule this 1-2 hour meeting for sometime between 1 and 3 in the afternoon.

Might you be available to come to Washington for this?

Regards-

Karen Lynn-Dyson
Research Manager
U.S. Election Assistance Commission
1225 New York Avenue, NW Suite 1100
Washington, DC 20005
tel:202-566-3123
Hi All-

Well, I have the unhappy task of trying to identify a date and time when we might schedule a series of conference calls with the consultants we've identified as possible candidates to work on the voter fraud/intimidation project.

Since August is impossible and horrible in terms of everyone being in the same place, I thought it might be easier to try and schedule three calls—one hour each in duration—in which the Commissioners could talk to these candidates.

I'd like to "start the bidding" for the week of August 15.

Actually, I happen to know that all of the candidates could be available August 22 or 23 at some point in the day.

Let me know if your folks could be available by phone at any of these days and times.

Thanks

K

Karen Lynn-Dyson
Research Manager
U.S. Election Assistance Commission
1225 New York Avenue, NW Suite 1100
Washington, DC 20005
tel:202-566-3123
Mea culpa-

Well, you can take this off of your to-do list.

Tom Wilkey and I will be meeting with the consultant and doing the interviewing. We will keep the Commissioners apprised of our progress on this project.

Thanks all-

Karen Lynn-Dyson
Research Manager
U.S. Election Assistance Commission
1225 New York Avenue, NW Suite 1100
Washington, DC 20005
tel:202-566-3123
Tom-

I will be in touch shortly with possible dates in very late August or early September, when EAC staff might be available to meet with Eagleton to discuss the project’s research results and next steps.

In the meantime, I thought it was important to follow up on the issues Vice Chair DeGregorio raised while we were in Pasadena.

To be certain that I have the latest information, could you send to me the final list of the Eagleton/Moritz Peer Review Group and the list of organizations that Eagleton will be contacting for input?

Regards-

Karen

Research Manager
U.S. Election Assistance Commission
1225 New York Avenue, NW Suite 1100
Washington, DC 20005
tel: 202-566-3123

Karen,

Thanks for the email. No need to resend the original email from Washington. I received that shortly after you sent it. That email let us know that EAC would not need the research on ballot design that Tom Wilkey suggested we undertake and that you asked us to submit a proposal for. But the ballot-design issue was only one of the two topics raised by my email to you. The other question concerned a date to meet with EAC staff to discuss the forthcoming draft of our Analysis and Alternatives paper and an outline for the Preliminary Guidance Document. From our conversation yesterday, I understand that August 26, the date suggested, will not work because of the EAC's travel schedule. Please let me know if August 30, 31 or September 1 are possible for a meeting between the project team and EAC in Washington. The meeting would require perhaps 2 hours.

Tom O'Neill

-----Original Message-----
Tom O'Neill-

I'd like to propose the Eagleton/Moritz meeting for September 6 at 1:00 PM at the EAC's offices.

If that date works, please be certain to reply to all on this e-mail, as I will be out of the office.

Regards-

"Tom O'neill" <tom_oneill@verizon.net>
Ms. Dyson,

Attached please find the July 2005 Progress Report for the project entitled, "Contract to Provide Research Assistance to the EAC for the Development of Voluntary Guidance on Provisional Voting and Voter Identification Procedures." If you have any questions regarding any part of this document please contact Tom O'Neiil at: (908)794-1030.

The financial reporting for this project is performed by the Division of Grant and Contract Accounting at Rutgers University. A copy of this report was not made available to us in an electronic format. Hard copies of the Progress Report and Financial Report have been Fedex'ed to you this afternoon and should arrive to your attention tomorrow morning. Please let me know if you do not receive this package by tomorrow afternoon.

Thank you for your time, have a great evening.

Best,
Lauren Vincelli
Contract to Provide Research Assistance to The EAC
For the Development of Voluntary Guidance on
Provisional Voting and Voter Identification Procedures

OUTLINE

• Introduction

• Provisional Voting
  o Task 3.4

• Voter Identification Requirements
  o Task 3.10
  o Task 3.11

• Project Management
  o Task 3.1

• Financial Report

INTRODUCTION

This report describes our progress from July 1 through July 31, 2005. It includes brief descriptions of key tasks; progress made; challenges encountered or anticipated; milestones reached; and projections for work to be completed in the coming month.

The effort this month continued to focus on research for the analysis and alternatives paper, including the compilation of Provisional Voting statutes, regulations, and litigation from the 50 states. We also prepared and delivered testimony at the EAC’s regular monthly meeting in Pasadena on July 28.

The data collection, analysis, and compilation are all on schedule. Because of delays in agreeing on the composition of the Peer Review Group with EAC, however, the actual completion and submission of the analysis and alternatives paper to the EAC will most likely be delayed about a week beyond the target date in the work plan. We are scheduled to discuss the draft paper and guidance document prior to submission, with the EAC on September 6, and the final draft cannot be completed until several days after that date.

The document report is divided into 4 sections that cover: Provisional Voting, Voter Identification Requirements, Project Management, and the Financial Report. Each section references the specific tasks described in paragraph 3 of the contract.

Please direct any questions or comments about this report to Tom O’Neill at: tom_oneill@verizon.net or (908) 794-1030.
PROVISIONAL VOTING

Tasks 3.4 – 3.9 in our contract relate to provisional voting. Work on the first of these must be complete before proceeding to later tasks. Task 3.4 was completed this month.

Task 3.4: Collect and analyze state legislation, administrative procedures, and court cases. Understand the disparities and similarities of how provisional voting was implemented around the country.

LEGISLATION, REGULATIONS, AND LITIGATION

The research team at the Moritz College of Law has the lead responsibility for the collection and analysis of legislation, administrative procedures and litigation. This information constitutes the compendium of legislation, administrative regulations, and case law called for under this task. It also will provide a base of understanding for the analysis of states’ actual experience with provisional voting in 2004, for which the Eagleton team has lead responsibility.

Description: The Moritz team has created a 50-state chart to summarize information on provisional voting, compiled statutes, case law and administrative procedures regarding Provisional Voting.

Progress: The 50-state (plus District of Columbia) chart created to collect data on provisional voting is complete. We have collected the statutes for all states. State by state summaries of provisional voting have been written for 47 states and D.C. A memorandum summarizing provisional voting litigation is complete. The collection of the documents associated with the litigation is nearing completion.

Challenges: The variety in the form of provisional voting legislation from state to state makes creating a snap-shot view across states a challenge.

Work Plan: The remaining 3 state summaries of provisional voting will be completed by August 8. Analysis of all the information, data, and survey results concerning provisional voting data will be performed in August.

PREPARATION FOR AND EXPERIENCE WITH PROVISIONAL VOTING

The Eagleton team has researched and compiled a narrative of each state’s experience with provisional voting in 2004. At the end of July the survey of 400 local election officials was nearing its end, and – as of this writing – is now complete with an analysis and report in draft form. We will rely on the survey results to improve our understanding of actual practice in administering provisional voting, including the steps local officials took to prepare for the election.
PROVISIONAL VOTING NARRATIVES

Description: To construct the narratives, a researcher examined newspaper accounts, state websites, and reports from third-party organizations to gather information on the experience with provisional voting in the 2004 election. To organize the information derived from this examination, we created an information system that catalogues information about the states (i.e. whether a state was new to provisional voting, the percentage of provisional votes counted, the method of notifying voters if their vote was counted, etc.) and combined it with Moritz's collection and analysis of statutes, regulations and litigation.

Progress: The state-by-state database is complete, as is a first draft of all state narratives. This work has been shared with the larger team and is being reviewed currently in preparation for constructing analysis and recommendation of alternative approaches for provisional voting required under Task 3.5.

Work Plan: In the next month, revisions of the narratives will be complete. In addition to this research, we will expand upon vote fraud research and examine further the relationship between instances of vote fraud and ensuing election reforms.

SURVEY OF COUNTY ELECTION OFFICIALS

Description: The Center for Public Interest Polling (CPIP) at Eagleton conducted a national survey of county election officials to measure several aspects of provisional voting. The survey was designed to determine the following factors related to provisional voting at the county (or equivalent election jurisdiction) level:

• The content and quality of instructions provided to county officials by the states;
• The steps taken by county officials to pass information on to poll workers;
• Differences in experience between states new to provisional voting and those that had some form of provisional ballot before HAVA; and
• Recommendations to improve and/or reduce the need for provisional voting.

Progress: The fielding and initial analysis of the survey results are complete.

Work Plan: The information derived from the survey will be considered in drafting the analysis and alternatives document required under Task 3.5.
VOTER IDENTIFICATION REQUIREMENTS

The contract lists 7 tasks (3.10 – 3.16) related to Voter Identification Requirements. During the reporting period, we have completed tasks 3.10 and 3.11. The research on Voter ID requirements is proceeding concurrently with our work on the experience of provisional voting.

Task 3.10: Legislation, regulations, and litigation

The research team at the Moritz College of Law has the lead responsibility for the collection and analysis of legislation, administrative procedures and litigation with regard to Voter Identification Requirements. When complete, this information will constitute the compendium of legislation, administrative regulations, and case law called for under this task.

Description: The Moritz team has compiled statutes on Voter Identification, and will provide a summarized analysis of this research to the project team for review.

Progress: The chart created to collect data on voter identification is complete and is now being reviewed. Voter identification statutes are being collected.

Challenges: Identifying the relevant statutes has been challenging because of the different terminology used from state to state to codify voter identification issues, and because many states have scattered election law provisions throughout their codes. This variety from state to state makes creating a snapshot view across states a challenge.

Work Plan: Review of the voter identification chart, the collection of the voter identification statutes, and the writing of the state by state summaries will be completed by the end of August.

SUPPLEMENTS TO LEGAL ANALYSIS

To supplement the legal analysis, the Eagleton team is undertaking two research efforts: First, compiling information on the debate over voter ID in the states; and second, estimating the effect on turnout of voter ID requirements. Tracking the continuing political debate over voter identification reveals that the relatively narrow HAVA requirements for voter identification have apparently sparked in many states a broader concern with more rigorous identification requirements for all voters. We are following these developments both to monitor possible secondary effects of HAVA on voter ID, and to provide a rich collection of alternative approaches for consideration.

Individual narratives for the states with significant activity in voter ID will provide a resource for understanding the wide range of experience in the 2004 election. The narratives will include an appraisal of the prevalence and nature of vote fraud, a focus of the concern.
with increasing the rigor of voter ID requirements. The next key milestones will be the completion of the state database and drafting the first narratives.

**VOTER ID AND TURNOUT ANALYSIS**

The second supplemental analysis will provide objective information on a contentious feature of the debate over voter ID in the states: the effects of more rigorous voter ID regimes on voter turnout and the relationship between the voter ID regime and vote fraud. As part of this effort, Eagleton is undertaking a statistical analysis to gauge the effect of a state's voter ID regime on turnout, especially turnout by minority and elderly voters.

**Description:** We are creating a database and gathering statistics on the effects of state-level voter identification requirements on voter turnout at the county-level in the 2004 election.

**Progress:** The collection of data for the Voter ID-Turnout analysis is complete. The assembled database contains population demographic data, voter registration data and voter turnout data from all 50 states, 3113 Counties, and the District of Columbia. It also contains exit poll data from the 50 states, providing demographic data of voter turnout. The analysis of that data is well underway.

**Challenges:** The initial methodology that was devised to investigate the questions involved in this part of the study proved insufficient, as the necessary data was unobtainable (the Census Bureau has not yet released their 2004 data). After re-developing an appropriate methodology, the necessary data has been assembled, we have resumed the analysis of this data.

**Projection:** The analysis of the impact that voter identification requirements have upon voter turnout should be completed around mid-August.

**Task 3.11 Public meeting on Voter Identification Requirements**

**Description:** In early July, we continued our efforts to identify specific Voter ID topics or issues and panelists who could shed light on them. We recommended a focus on the debate over Voter ID now underway in the states. To provide a vivid picture of the debate, we recommended that one panel include specific legislators on opposite sides of the issue from two different states, Mississippi and Wisconsin. We also discussed adding a researcher to the panel in order to place the debate in a national or historical context. We also recommended a panel of two academic researchers with contrasting points of view, to address the effects of Voter ID provisions under HAVA. In response to our suggestions, EAC staff recommended a panel of two state election directors to address the interaction of Voter ID with HAVA.

By mid-July, the EAC had decided which topics and speakers should be invited, however most of those speakers proved unable to attend.
Progress: Tom O'Neill and Dan Tokaji attended the EAC Public Meeting held in Pasadena on July 28. Their presentations at the meeting described the progress of the research and our developing perspective on how to assess the quality of the provisional voting process in the states and identify possible steps for improvement.

Challenges: The changes in the scheduling of the July meeting delayed and ultimately made it impossible to assemble a panel, from which we could derive substantive insight into voter identification issues as they are playing out in the states. Additionally, due to the date of the hearing, the information from the hearing was not available as early in the research process as contemplated in the contract.

Projection: Preparation of the hearing summary will likely be delayed, due to the team’s focus on preparation of the analysis and alternatives paper.

**PROJECT MANAGEMENT**

**PEER REVIEW GROUP**

Description: A feature of our proposal was the creation of a Peer Review Group (PRG). The EAC indicated at our first meeting in May that it would review our recommendations for members of the PRG. Our initial vision of the PRG was a small group of scholars and representatives of advocacy organizations that would comment on the research design, review drafts of our analyses and reports, and, in general, identify areas of the research that should be strengthened and help us improve the breadth, depth and clarity of reports based on that research.

Progress: Upon reflection, the project team agreed that the PRG should not include representatives of advocacy groups. We concluded that as representatives they would feel obligated to act as advocates for positions already taken by their groups. While advocacy organizations might be consulted as stakeholders during the course of our work, they were unlikely to achieve the goals we had in mind for the PRG as a source of advice on research design, methodology, and analysis. We submitted a revised list of potential members, substantially comprised of academics, to the EAC for review.

The EAC responded with suggestions concerning both the balance of the PRG’s membership and the creation of additional committees to review our work. We provided an analysis of the cost and time involved in adopting the EAC’s suggestions as well as with suggestions for a balanced selection of academics for the Peer Review Group. In the end, the EAC determined that Eagleton should appoint a balanced Peer Review Group of its own choosing. Initial phone calls were made to all members of that group by the end of July, and written invitations and descriptions of the process have gone to all possible members who had indicated their interest in serving.

Challenges: Communications on this issue with the EAC were not clear or timely. The purpose of the PRG is to review our work, and to comment on our research design, which is well underway. We had planned to have the PRG in place early enough in the project to enable them to provide feedback, including the research design. While we are
confident in the quality of our work, the experience and perspective of the Peer Review Group will strengthen our analysis and recommendations as we find a way to receive its critique in the more limited time now available. The delay in creating the Peer Review Group will result in a delay in the completion of the final draft of the analysis and alternatives paper and in the preliminary guidance document.

**Projections:** The work of the PRG will be about 2 weeks behind the milestones indicated in the work plan.

**COORDINATION AND INFORMATION MANAGEMENT**

Collecting and merging information and data from myriad sources is a demanding requirement of this research. We have developed two principal mechanisms to facilitate the analysis of the material collected or created in the project: an information system and an internal website for easy access to drafts and reports.

**INFORMATION SYSTEM**

**Description:** The statutory data and reports prepared by the Moritz College of Law will be merged with the political and procedural data and analysis prepared by the Eagleton Institute of Politics to provide a cohesive final product to the EAC, which will include a compendium of case law and statutes regarding provisional voting and voter identification.

**Progress:** The Moritz team has provided Eagleton staff with all completed work. An Eagleton staff member reviews the content and formats of data from all supporting research and will (re-)format once the work has been completed for the compendium and reports submitted to the EAC. The researchers and staff at Eagleton have created a shared folder on the Institute's server for the safe storage of work and access for those staff members. All of this work is being reviewed by the project team to ensure that a broad survey is being performed.

**Projections:** By the end of July 2005, much of the above referenced research has been completed. The entire project team has begun the process of reviewing all work, and will combine and format all documents and materials in preparation for our final reporting to the EAC.

**INTRANET**

**Description:** All project team members have signed on to the Intranet site. The Intranet facilitates the exchange of information and collaboration among project participants.

**Progress:** Project team members regularly post drafts, completed materials and spreadsheets online for internal review. The intranet has been extremely helpful to team members and serves as an internal website with announcements and important documents readily available to all team members.
The financial reporting for this project is supervised and prepared by the Division of Grant and Contract Accounting (DGCA) at Rutgers. Financial reporting on grant accounts is limited to actual expenses that have been incurred during the reporting period. Our contact at DGCA is: Constance Bornheimer, (732) 932-0165, EXT. 2235.

A detail of expenses incurred from project inception through June 30, 2005, is attached.
Commissioners-

As mentioned in this morning's meeting, Eagleton/Moritz project staff are scheduled to come to Washington in early September to brief EAC staff on the project's progress to date.

Let me know if you would like to attend or if you will send someone in your place.

Regards-

Karen Lynn-Dyson
Research Manager
U.S. Election Assistance Commission
1225 New York Avenue, NW Suite 1100

Mr. O'Neill,

Just a quick note to remind you that your meeting with EAC is confirmed for September 6 at 1 p.m. in Washington. The purpose of this meeting will be to review the draft of your analysis and alternatives paper with EAC and discuss the outline and direction of the Preliminary Guidance Document.

Regards,

Nicole K. Mortellito
Assistant to the Executive Director - Thomas R. Wilkey
U.S. Election Assistance Commission
1225 New York Avenue - Suite 1100
Washington, DC
202.566.3114 phone
202.566.3127 fax
Tom-

Thank you for sharing this list of your Peer Review Group members, to-date. I will share this list with the Commissioners and will be certain to let your know of their feedback, if any.

I will also be back in touch regarding Eagleton's research around voter fraud and the research project EAC will be undertaking this fall, around voting fraud and voter intimidation. The EAC is presently in the process of finalizing a work and staff plan for this project and once it is completed, I will be certain to brief you on it.

In the meantime, EAC staff and several of the Commissioners looks forward to meeting with the Eagleton/Moritz team on September 6 at 1:30 PM.

Regards-

Karen Lynn-Dyson

"Tom O'neill"

Attached is a report on the status of recruitment of members of the Peer Review Group. We extended 9 invitations. We have four confirmed members, one reluctant turn-down, one who has yet to respond to an initial inquiry, and are awaiting confirmation from 3 others who initially agreed. Please let me know if you need additional information.

Hi Karen,

Attached is the August progress report in fulfillment of our Contract to Provide Research Assistance to the EAC for the Development of Voluntary Guidance on Provisional Voting and Voter Identification Procedures. Please note, as per your instructions earlier this month, that the financial report will be sent via Fedex under separate cover to: Ms. Dianna Scott, Administrative Officer, EAC. Also attached to the progress report is a finalized list of our Peer Review Group members. If you have any questions regarding this report, please contact Tom O'Neill at (908) 794-1030.

Have a great day,

MONTHLY PROGRESS REPORT
AUGUST 2005

For
UNITED STATES ELECTION ASSISTANCE COMMISSION
1225 New York Avenue N.W., Suite - 1100
Washington, DC 20005

September 15, 2005

Prepared by:
Eagleton Institute of Politics
Rutgers, The State University of New Jersey
191 Ryders Lane
New Brunswick, NJ 08901-8557
INTRODUCTION

This report describes our progress from August 1 through August 31, 2005. It includes brief descriptions of key tasks; progress made; challenges encountered or anticipated; milestones reached; and projections for work to be completed in the coming month.

Research on Provisional Voting and a draft of reports on the analysis and alternatives were substantially completed in preparation for the September 6 briefing for the EAC. Important reports such as the National Survey of Local Election Officials' Experience with Provisional Voting; Statistical Review Provisional Voting in the 2004 Election; State-by-state Narrative of Developments in Provisional Voting; and the compilation of Provisional Voting statutes, regulations, and litigation from the 50 states, were all completed in August.

We made further progress on recruiting a balanced and authoritative Peer Review Group (which, as this report is written, is receiving all the documents listed above for review). Ingrid Reed of Eagleton will coordinate the work of the Peer Review Group. A list of the members of the Peer Review Group is attached.

This report is divided into 3 sections: Provisional Voting, Voter Identification Requirements, and Project Management. Each section references specific tasks described in paragraph 3 of the contract. The Financial Report will be sent separately by the Rutgers Division of Grant and Contract Accounting.

Please direct questions or comments about this report to Tom O'Neill at: tom_oneill@verizon.net or (908) 794-1030.
PROVISIONAL VOTING

Tasks 3.4 – 3.9 in our contract relate to provisional voting. Work on the first of these must be complete before proceeding to later tasks. Task 3.4 was completed in August, and Task 3.5 is well underway.

Task 3.5: Analysis and Alternative Approaches. Assess the potential, problems, and challenges of provisional voting and develop alternative means to achieve the goals of provisional voting.

LEGISLATION, REGULATIONS, AND LITIGATION

The research team at the Moritz College of Law has the lead responsibility for the collection and analysis of legislation, administrative procedures and litigation. This information constitutes the compendium of legislation, administrative regulations, and case law called for under this task. It has provided a base of understanding for the analysis of states’ actual experience with provisional voting in 2004, for which the Eagleton team has lead responsibility.

Description: The Moritz team has created a 50-state chart to summarize information on provisional voting, compiled statutes, case law and administrative procedures regarding Provisional Voting and is near completion with this research.

Progress: We completed the state by state summaries of provisional voting in August. Also complete is a memorandum outlining provisional voting legislative changes since the 2004 election. This material was sent to the EAC as part of the package for briefing on September 6.

Challenges: The variety in the form and frequency of provisional voting legislation from state to state makes creating a snap-shot view across states a challenge.

Work Plan: The analysis of all the information, data, and survey results concerning provisional voting data will be completed in September, on schedule. The alternatives document should also be complete in September, pending response from the EAC on which direction those alternatives should follow.

PREPARATION FOR AND EXPERIENCE WITH PROVISIONAL VOTING

The Eagleton team has researched and compiled a narrative of each state’s experience with provisional voting in 2004. The report findings from the survey of 400 local election officials is now complete. The survey results improve our understanding of actual practice in administering provisional voting, including the steps local officials took to prepare for the election.
PROVISIONAL VOTING NARRATIVES

Description: To construct the narratives, a researcher examined newspaper accounts, state websites, and reports from third-party organizations to gather information on the experience with provisional voting in the 2004 election. To organize the information derived from this examination, we created an information system that catalogues information about the states (i.e. whether a state was new to provisional voting, the percentage of provisional votes counted, the method of notifying voters if their vote was counted, etc.) and combined it with Moritz's collection and analysis of statutes, regulations and litigation.

Progress: A state-by-state narrative of developments in Provisional Voting is complete and has been distributed to the EAC and the Peer Review Group. This work has been crucial to the process of constructing our draft analysis and recommendation of alternative approaches for provisional voting required under Task 3.5.

Challenges: The primary obstacle to constructing the narratives was difficulty in communicating and obtaining necessary information from various state officials. As a result, the narratives underwent multiple revisions in order to incorporate the most up-to-date material available. Had the Election Day Study been available, this task would probably have been simplified considerably.

Work Plan: We completed revisions of the narratives.

SURVEY OF COUNTY ELECTION OFFICIALS

Description: The Center for Public Interest Polling (CPIP) at Eagleton conducted a national survey of county election officials to measure several aspects of provisional voting.

Progress: The analysis of the survey results and findings report are complete.

Work Plan: We used the information from the survey in drafting the analysis and alternatives document required under Task 3.5.
VOTER IDENTIFICATION REQUIREMENTS

The contract lists 7 tasks (3.10 – 3.16) related to Voter Identification Requirements. The research on Voter ID requirements is proceeding concurrently with our work on the experience of provisional voting, and is becoming the principal focus of our research.

Task 3.10: Legislation, regulations, and litigation

The research team at the Moritz College of Law has the lead responsibility for the collection and analysis of legislation, administrative procedures and litigation with regard to Voter Identification Requirements. This collection of material is nearing completion. It will constitute the compendium of legislation, administrative regulations, and case law called for under this task.

Description: The Moritz team has compiled statutes on Voter Identification, and will provide a summarized analysis of this research to the project team for review.

Progress: We are refining the 50 state (plus District of Columbia) chart of data on voter identification. So far collected are voter identification statutes for 35 states. Summaries of the existing voter identification statutes have been written for forty states.

Challenges: Identifying the relevant statutes has been challenging because of the different terminology used from state to state to codify voter identification issues, and because many states have scattered election law provisions throughout their codes. This variety from state to state states makes creating a snap-shot view across states a challenge.

Work Plan: The state by state voter identification statute summaries will be completed for the remaining ten states and D.C. and the review of the chart will be completed. Analysis of voter identification data will begin.

SUPPLEMENTS TO LEGAL ANALYSIS

To supplement the legal analysis, the Eagleton team is undertaking two research efforts: First, compiling information on the debate over voter ID in the states; and second, estimating the effect on turnout of different voter ID regimes. Tracking the continuing political debate over voter identification reveals that the relatively narrow HAVA requirements for voter identification have apparently sparked in many states a broader concern, and a sharp political debate over rigorous identification requirements for all voters. The research follows these developments both to monitor possible secondary effects of HAVA on voter ID, and to provide a rich collection of alternative approaches for consideration.

Individual narratives for the states with significant activity in voter ID will provide a resource for understanding the wide range of experience in the 2004 election. The narratives will include an appraisal of the prevalence and nature of vote fraud, a focus of the concern with
increasing the rigor of voter ID requirements. The next key milestones will be the completion of the state database and drafting the first narratives.

**VOTER ID AND TURNOUT ANALYSIS**

The second supplemental analysis will provide objective information on a contentious feature of the debate over voter ID in the states: the effects of more rigorous voter ID regimes on voter turnout and the relationship between the voter ID regime and vote fraud. As part of this effort, Eagleton is undertaking a statistical analysis to gauge the effect of a state's voter ID regime on turnout, especially turnout by minority and elderly voters.

**Description:** We are creating a database and gathering statistics on the effects of state-level voter identification requirements on voter turnout at the county-level in the 2004 election.

**Progress:** The collection of data for the Voter ID-Turnout analysis is complete. The assembled database contains population demographic data, voter registration data and voter turnout data from all 50 states, 3113 Counties, and the District of Columbia. We have also utilized exit poll data collected on Election Day 2004 as a resource for understanding the demographics of voter turnout. The analysis of that data is underway.

**Challenges:** The main challenges to this task include gathering the complete set of changes to Voter ID laws over the past 5 years, and then incorporating those changes into a sound statistical methodology.

**Projection:** We will continue to work towards resolving the methodology issue, and ultimately produce a final report on this subject. The analysis of the impact that voter identification requirements have upon voter turnout should be completed around mid-September.
PROJECT MANAGEMENT

PEER REVIEW GROUP

Description: A feature of our proposal was the creation of a Peer Review Group (PRG). The Peer Review Group will review our research and methodology and provide valuable feedback and suggestions for the direction of our work.

Progress: The composition of the Peer Review Group has been determined and the membership has been submitted to the EAC. Additionally, as of the date of this report all PRG members have received their first mailing, which included several reports from our research, and a draft of our analysis and alternatives outline for their review.

Challenges: Our timeline for circulating and discussing our research with the PRG has been compromised due to delays in completing the recruitment of members of the group.

Projections: We are in the process of scheduling our first conference call with PRG members for the week of Sept. 19, 2005.

COORDINATION AND INFORMATION MANAGEMENT

Collecting and merging information and data from myriad sources is a demanding requirement of this research. We have developed two principal mechanisms to facilitate the analysis of the material collected or created in the project: an information system and an internal website for easy access to drafts and reports.

INFORMATION SYSTEM

Description: The statutory data and reports prepared by the Moritz College of Law is being merged with the political and procedural data and analysis prepared by the Eagleton Institute of Politics to provide a cohesive final product to the EAC, which will include a compendium of case law and statutes regarding provisional voting and voter identification.

Progress: At this point in the research process, many documents are complete after a lengthy process of circulating drafts among team members. As we near the end of the Provisional Voting research and move into the Voter Identification research, we will re-evaluate the volume of files contained in the Information System and update the system.

Projections: The entire project team continues to review all project drafts, and will staff members combine and format all documents and materials in preparation for our final reporting to the EAC.

INTRANET

Description: All project team members have signed on to the Intranet site. The Intranet facilitates the exchange of information and collaboration among project participants.
Progress: Project team members regularly post drafts, completed materials and spreadsheets online for internal review. The intranet has been extremely helpful to team members and serves as an internal website with announcements and important documents readily available to all team members.

FINANCIAL REPORT

The financial reporting for this project is supervised and prepared by the Division of Grant and Contract Accounting (DGCA) at Rutgers. Financial reporting on grant accounts is limited to actual expenses that have been incurred during the reporting period. Our contact at DGCA is: Constance Bornheimer, (732) 932-0165, EXT. 2235.

A detail of expenses incurred from project August 1 - August 31, 2005, will be sent under separate cover to: Ms. Dianna Scott, Administrative Officer, EAC.

Eagleton/Moritz team-

I'd like to propose a conference call with EAC Commissioner Martinez, General Counsel, Juliet Thompson, Research Manager Karen Lynn-Dyson and your team for either 10:30 or 1:30 on Friday, September 30.

This will be to discuss the draft guidance and final report you will be producing for the EAC.

Please let me know which time works for you.

Regards,
Karen Lynn-Dyson
Research Manager
U.S. Election Assistance Commission
1225 New York Avenue, NW Suite 1100
Washington, DC 20005
tel:202-566-3123
Karen - Let's do it on Friday at 1:30. From my initial polling, at least Tom O'Neill, Ingrid Reed and I will be available. Since we will not all be at the same location, would you like us to initiate a conference call from here and give you a number to call in to?

Subject Re: EAC Conference Call - Friday 9/30

Karen - Let's do it on Friday at 1:30. From my initial polling, at least
Tom O'Neill, Ingrid Reed and I will be available. Since we will not all
be at the same location, would you like us to initiate a conference call
from here and give you a number to call in to?

Keith,

Hope you're well. Ray told me you were able to catch up on the array of exciting events here at the EAC. I wanted to pass along a 'marked up' copy of the contracts we approved for the end of the Fiscal Year. If you have any questions about the substance of the contracts, pls let me know. Take care.

Adam

Hi Adam,

It was great meeting you at the UDC Law Symposium last week. I wanted to let you know that we are having a meeting about the voter fraud and intimidation meeting at 10 AM on October 28 at the EAC, and it would be great if you and Commissioner Martinez could be there. Let me know, and let's stay in touch. Thanks so much.

Tova:

I was about to email you as well. It was certainly good to meet you last week, as I've heard about your work through numerous sources, and am glad we have finally been able to chat. As with many things (we started to discuss), the EAC is doing a lot of these projects for the first time. And unlike a thinktank, or nonprofit, we are constrained in a number of ways, and there are "sensitivities" that exist. Of course, there are benefits to not being a nonprofit, as well.

I'll state that at least myself, but hopefully Cmsr. Martinez will be at the kickoff meeting. You may do this already, but I would attempt to lay out the ideal structure for your involvement in the contract, and perhaps communicate this to Karen and the other contractor immediately before the meeting. That will frame this contract structure (beyond the terms of the agreement) to your liking.

Obviously a suggestion. However, I think that the goal is good, efficient research that is unimpeachable in partisan or methodological grounds—that will then be submitted to the Commission for it approval (and actually getting its approval).

Feel free to call me anytime. If you're in DC before then, and have some time, let's get Cmsr Martinez, you and I together for lunch or coffee.

Best,
Adam

Adam,

Just to make sure we're talking about the same thing, I'm actually not going to be at the "kick-off" on the 14th. This is a meeting just about our project on the 28th. The project is already underway and the contracts finalized.

Since the meeting I refer to on the 28th is from 10-12, is there any possibility of the three of us having lunch after that?

Tova

Let's put it down as a tentative. I'll talk to him in a bit and finalize. There will be so many folks at the 14th meeting that I don't see that as an official 'kickoff.'

Thanks-
Adam

Karen:

I enjoyed the discussion too. I really think that this project will be of national importance and can positively affect elections administration while providing an answer to the handling of the vote fraud problem for the future.

On another note, why don't you leave an evening free while I am there for dinner. I am trying to bring my wife along. If you can bring your husband it could make for an interesting evening.

Regards,

Job

Summary of Election Activities of Job Serebrov

Background to Election Problems in Arkansas

Ever since Reconstruction, Arkansas has had a history of election problems. The election fraud that gave rise to the Brooks-Baxter War in Arkansas in the 1870s involved people from both sides of the aisle voting more than once, the dead rising to cast a ballot or two, destroying ballots, creating ballots and making ballot boxes disappear. A strong one-party system
In 1995, I met with Arkansas Supreme Court Justice Tom Glaze to discuss voting issues and my efforts to clean up the electoral process. Although supportive, Justice Glaze encouraged me to proceed with caution. Before being elected to the Supreme Court, Justice Glaze had been employed in the 1960s by Gov. Win Rockefeller to clean up ballot fraud throughout Arkansas. He was nearly disbarred in the process by those involved in ballot fraud in a small, rural county.

Shortly after my discussion with Justice Glaze, I discovered how pervasive the election problems were in the state. For instance, ballot boxes were stuffed or disappeared into the night only to return altered. Contrary to state law, county sheriffs running in contested elections maintained custody of the ballot boxes. In one instance, 20 voted ballot boxes were found in the attic of a sheriff's deputy after he died.

In my private practice as an attorney, I represented numerous clients in county election contests throughout Arkansas. I also represented clients in matters before the Federal Election Commission. I have never lost an election case. Finally, I was hired as a consultant to a major nonprofit legal organization to review and summarize the 2002 amendments to federal election laws and apply the new law to 10 scenarios.

Member, Washington County Board of Election Commissioners, Fayetteville, Arkansas (1990-1996)

This board consisted of three commissioners; I was the lone Republican. We were charged with supervising the training of poll workers, evaluating voting systems and then purchasing an optical scan system to be used countywide, preparing and justifying our annual budget before the Washington County Quorum Court, hiring and supervising staff and sitting as an administrative tribunal.

When I first came on the board, Washington County was primarily a one-party county and the Democrats were used to running elections according to tradition rather than the law. I had to battle with the two Democrats on the board to enforce election laws within the county. As I started to force the issue in the courts, the Republican Party gained strength. Four years later and after outlasting eight Democrat commissioners, I was able to work with new Democrat commissioners who recognized the need to enforce the law. At this point, the commission requested that I draft administrative regulations for the board. These remain in place today.
Founder, President, General Counsel; Arkansans for Fair Elections (1994-1999)

In 1994, Gov. Mike Huckabee (R), then a candidate for lieutenant governor, asked me to serve as his general counsel for ballot fraud protection. Thinking it best to act independently of any candidate, I formed Arkansans for Fair Elections. I served as the organization's president and, later, general counsel. This group launched a statewide educational campaign to train poll watchers to recognize irregular or fraudulent electoral procedures; this included the creation of literature and a video. Our extensive public relations campaign brought media attention to the issue. We also organized a statewide team of citizen poll watchers and attorneys to ensure that the election laws were fairly enforced. We were so successful in the lieutenant governor's race that Arkansans for Fair Elections was asked to continue the effort until 1999 when I moved to Louisiana.

General Counsel - Ballot Fraud Protection Committee, Republican Party of Arkansas (1995-1999)

In late 1995, Asa Hutchinson, chairman of the Republican Party of Arkansas, appointed me as general counsel for the newly formed Ballot Fraud Protection Committee of the state party. I retained this position until 1999. I was responsible for coordinating statewide enforcement efforts and directing a legal team to respond to problematic situations prior to and on election day.

(Through my role with Arkansans for Fair Elections and the Ballot Fraud Protection Committee, I successfully sued or negotiated a settlement in more than two-thirds of the 75 counties in Arkansas over electoral irregularities.)

Legal Consultant to Republican Members of the Arkansas General Assembly (1994-1996)

Republicans in the General Assembly requested that I review and draft suggested changes to Arkansas election law. Based on my personal experience as an election commissioner and as an election attorney, I identified a number of areas of concern and drafted new statutes modeled on the best examples that I could find from other states. My proposal was not passed by the Democrat-controlled General Assembly as a package, however, several of its components were passed into law.

Consultant to the Arkansas Court of Appeals Redistricting Commission (1996-1999)

I drafted five redistricting bills and maps for the
constitutionally required redistricting of the Arkansas Court of Appeals. These bills were based on current U.S. Supreme Court precedent regarding gerrymandering. I had to present each bill and give supporting testimony to the commission.

Director of International Development - Louisiana State University, Baton Rouge, Louisiana (2000-2003)

Part of my duties as director was to develop international cooperative projects. The theme of several of these proposals was democratization. In each case, I required review of the national election code of the country involved.

My activities in Namibia led to a request by the director of the Namibian Election Commission, Joram Rukambe and the Speaker of the Namibian National Assembly, Dr. Mose Tjitendero to review and suggest changes to the Namibian election code. This review took three months and resulted in proposed alterations a number of code sections. These suggestions were considered by the Namibian National Assembly and a number were incorporated into the code revisions. Additionally, I drafted legislation for the Speaker to guarantee voting rights to agricultural workers that were being denied by the owners of the farms. This legislation also was passed into law.

During this time, I was qualified as an election expert and placed on an election consultant list by the United Nations, IFES and the Electoral Institute of Southern Africa.

Related Memberships

- Republican Party of Arkansas (1990-1999)
- Benton County, Arkansas, Republican Committee (1996-1999)
- Washington County, Arkansas, Republican Committee (1990-1996)

(When we moved to Louisiana in 1999, the party was in such turmoil that it was difficult to get involved. This past year, I have been prohibited by the Hatch Act from participating in partisan politics. This prohibition ends August 19 when my judicial clerkship ends.)

Related Education

- Graduate certificate in electoral governance, Griffith University, Queensland, Australia (2003)

Subject: October Progress Report

Karen,
Attached is the Progress Report for October. Please note that this report includes an attachment showing how our study classifies each state on key variables, such as counting out-of-precinct ballots, requirements for ballot evaluation, and other variables. It also displays how the data we used differs for some states for the vote counts reported by the Election Day Survey. We believe that our data is more accurate and complete (see for example the data for New Mexico and Pennsylvania).

I look forward to responding to any questions or concerns you or others at the EAC may have.

Tom O'Neill

OUTLINE

- Introduction

- Provisional Voting
  - Task 3.5

- Voter Identification Requirements
  - Task 3.10
  - Task 3.11

- Project Management
  - Task 3.1

- Financial Report

INTRODUCTION

This report describes our progress from October 1 through October 31, 2005. It includes brief descriptions of key tasks; progress made; challenges encountered or anticipated; milestones reached; and projections for work to be completed in the coming month.

In October we focused on finalizing our Provisional Voting analysis paper, including the development of recommendations to the EAC for a draft guidance document and best practices. These policy prescriptions are based on our research and the comments of the Peer Review Group. We completed a careful review of our data to reconcile it with other sources and identify the latest, most reliable information to use in the analysis. (See the attachment to this Progress Report for the details.) The importance of this demanding effort was described in September's Progress Report.

Also in October we revised the schedule for the project in light of the additional time that has been needed for review of earlier drafts by the EAC and the late completion of the Election Day Study. We will seek a meeting with the EAC in the next several weeks to confer about the schedule to complete the project and alternative approaches that could speed the conclusion of our work.

We will submit to the EAC a final draft of our report, a preliminary guidance document, and draft best practices before Thanksgiving. We project that EAC will take 3 to 4 weeks to review and react to that final draft. And we understand that after its review, the EAC will decide if it should move towards issuing a Guidance Document or recommending best practices. If the EAC does decide to issue a Guidance Document on Provisional Voting, the time needed for a review by the advisory boards is likely to delay a public hearing until early February.
This report is divided into 3 sections: Provisional Voting, Voter Identification Requirements, and Project Management. Each section references specific tasks described in paragraph 3 of the contract. The Financial Report will be sent separately by the Rutgers Division of Grant and Contract Accounting.

Please direct questions or comments about this report to tom_oneill@verizon.net or by telephone at (908) 794-1030.

**PROVISIONAL VOTING**

Tasks 3.4 – 3.9 in our contract relate to Provisional Voting. Work on the first of these must be complete before proceeding to later tasks. Task 3.4 was completed in August, Tasks 3.5 and 3.6 are nearing completion.

**Task 3.5: Analysis and Alternative Approaches.** Assess the potential, problems, and challenges of Provisional Voting and develop alternative means to achieve the goals of Provisional Voting.

**LEGISLATION, REGULATIONS, AND LITIGATION**

The research team at the Moritz College of Law has the lead responsibility for the collection and analysis of legislation, administrative procedures and litigation. This information constitutes the compendium of legislation, administrative regulations, and case law called for under this task. It has provided a base of understanding for the analysis of states’ actual experience with Provisional Voting in 2004, for which the Eagleton team has lead responsibility.

**Description:** The Moritz team has created a 50-state chart to summarize information on Provisional Voting, compiled statutes, case law and administrative procedures regarding Provisional Voting and has completed this research.

**Progress:** We have completed the memorandum outlining Provisional Voting legislative changes since the 2004 election and we are continuing to clarify the laws prior to these changes.

**Challenges:** The variety in the form and frequency of Provisional Voting legislation from state to state makes creating a snap-shot view across states a challenge.

**Work Plan:** The final analysis will be sent to the EAC by Thanksgiving.
PREPARATION FOR AND EXPERIENCE WITH PROVISIONAL VOTING

The Eagleton team has researched and compiled a narrative of each state's experience with Provisional Voting in 2004. The report findings from the survey of 400 local election officials are now complete. The survey results have proven to be instrumental in shaping our understanding of actual practice in administering Provisional Voting, including the steps local officials took to prepare for the election.

PROVISIONAL VOTING NARRATIVES

Description: To construct the narratives, a researcher examined newspaper accounts, state websites, and reports from third-party organizations to gather information on the experience with Provisional Voting in the 2004 election. To organize the information derived from this examination, we created an information system that catalogues information about the states (i.e. whether a state was new to Provisional Voting, the percentage of provisional votes counted, the method of notifying voters if their vote was counted, etc.) and combined it with Moritz's collection and analysis of statutes, regulations and litigation.

Progress: We completed a state-by-state narrative of developments in Provisional Voting and distributed it to the EAC and the PRG. This work has been helpful in understanding the context of the data collected on provisional voting from the states.

Challenges: The primary obstacle to constructing the narratives was difficulty in communicating and obtaining necessary information from various state officials. As a result, the narratives underwent several revisions to incorporate up-to-date and reliable information. Now that so many other analyses, including the Election Day Survey, have been released, we were challenged by different interpretations of the same basic facts. But the reconciliation of interpretation and data collection has been invaluable in establishing rigor in our report.

Work Plan: We completed revisions of the narratives incorporating comments from the PRG and addressing any discrepancies between our findings and other interpretations of similar information included in other studies.

PROVISIONAL VOTING STATISTICAL ANALYSIS

Description: During October the Eagleton research team continued to check its statistical analysis, and worked to reconcile the classifications of this analysis (such as states counting only those provisional ballots cast within the proper precinct versus states that counted ballots cast within the proper county) with the classification made in other parts of this study or in other studies (such as the Election Day Study or Electionline reports).

Progress: The effort to double check all of the classifications used in the study is complete. The results of this effort are displayed in the attachment to this progress report, "Characteristics of the Provisional Voting Process -- Classification of the States,"
beginning on page 9. Only Delaware and Arkansas remain unclear in regard to one of the
measures, and both states have been contacted to receive clarification in this area.

Challenges: The difficulties encountered have been a result of communication
delays and time constraints. Some states have been more responsive to our inquiries about
their practices than others. Overall, this is not an irresolvable problem but it does slow the
process of completion down.

Work Plan: By early-November the final revision of the statistical analysis, which
includes full reconciliation of all data within the study, will be complete. The reconciliation
of data is displayed in the attachment to this progress report.

**SURVEY OF COUNTY ELECTION OFFICIALS**

Description: The Eagleton Center for Public Interest Polling (CPIP) conducted a
national survey of county election officials to measure several aspects of Provisional Voting.

Progress: The analysis of the survey results and findings report is complete. As a result
of the critique by the PRG, the research team is revising and clarifying the descriptions of
the survey design and sample selection process to make the research methods more
transparent.

Work Plan: We used the information from the survey in drafting the analysis and
alternatives document required under Task 3.5. We will include necessary clarifications
regarding survey design and sample selection in the final analysis and alternatives document.

**Task 3.6: Prepare preliminary draft guidance document.**

The report and recommendations now nearing completion constitutes the draft
preliminary guidance document. Based on our conversation with the EAC, the draft gives
the EAC the option of proceeding with a guidance document or issuing recommendations
to the state for best practices, recommendations that would not constitute voluntary
guidance. Before proceeding to Task 3.7 (revise the guidance document for publication)
or 3.8 (arrange a public hearing on the draft guidance), we will await the EAC’s decision
on how to proceed.
VOTER IDENTIFICATION REQUIREMENTS

The contract lists 7 tasks (3.10 – 3.16) related to Voter Identification Requirements. The research on Voter ID requirements is proceeding concurrently with our work on the experience of Provisional Voting, and is becoming the principal focus of our research.

Task 3.10: Legislation, regulations, and litigation

The research team at the Moritz College of Law has the lead responsibility for the collection and analysis of legislation, administrative procedures and litigation with regard to Voter Identification Requirements. This collection of material is nearing completion. It will constitute the compendium of legislation, administrative regulations, and case law called for under this task.

Description: The Moritz team has compiled statutes on Voter Identification, and will provide a summarized analysis of this research to the project team for review.

Progress: The 50 State (plus the District of Columbia) chart has been completed, the voter identification statutes have been collected for all states and D.C., and summaries of the existing voter identification statutes have been written for all states and D.C.

Challenges: Identifying the relevant statutes has been challenging because of the different terminology used from state to state to codify voter identification issues, and because many states have scattered election law provisions throughout their codes. This variety from state to state makes creating a snapshot view across states a challenge.

Work Plan: Analysis of voter identification data has begun and will increasingly become the central focus of our work.

SUPPLEMENTS TO LEGAL ANALYSIS

To supplement the legal analysis, the Eagleton team is undertaking two research efforts: First, compiling information on the debate over voter ID in the states; and second, estimating the effect on turnout of different voter ID regimes. Tracking the continuing political debate over voter identification reveals that the relatively narrow HAVA requirements for voter identification have apparently sparked in many states a broader concern and a sharp political debate over rigorous identification requirements for all voters. The research follows these developments both to monitor possible secondary effects of HAVA on voter ID, and to provide a rich collection of alternative approaches for consideration.
VOTER ID AND TURNOUT ANALYSIS

The second supplemental analysis will provide objective information on a contentious feature of the debate over voter ID in the states: the effects of more rigorous voter ID regimes on voter turnout and the relationship between the voter ID regime and vote fraud. As part of this effort, Eagleton is undertaking a statistical analysis to gauge the effect of a state's voter ID regime on turnout, especially turnout by minority and elderly voters.

Description: We have created a database and gathered statistics on the effects of state-level voter identification requirements on voter turnout at the county-level in the 2004 election.

Progress: The collection of data for the Voter ID-Turnout analysis is complete. The assembled database contains population demographic data, voter registration data and voter turnout data from all 50 states, 3113 Counties, and the District of Columbia. We have also used exit poll data collected on Election Day 2004 as a resource for understanding the demographics of voter turnout.

Challenges: The analysis of these data had been postponed until the data reconciliation of Provisional Voting is complete. As a result of the extensive revision and data reconciliation efforts aimed at the Provisional Voting section of our work VID had been temporarily placed on hold. We are now beginning data analysis on the impact of voter identification requirements on voter turnout.

Work Plan: The analysis of the impact that voter identification requirements have upon voter turnout should be completed by early December. Early January is our target to deliver the draft report and outline of alternative policies to the Peer Review Group. In mid January, the EAC would receive a draft report and recommendations that take into account the comments of the PRG.

PROJECT MANAGEMENT

PEER REVIEW GROUP

Description: A feature of our proposal was the creation of a Peer Review Group (PRG). It reviews our research and methodology and provides valuable feedback and suggestions for the direction of our work.

Progress: Eagleton has stayed in touch with members of the Peer Review Group since the September 21st conference call, and has solicited their final comments on the Provisional Voting research. During October, we telephoned two members who did not participate in the conference call to confirm their commitment to serving as members of the Peer Review Group. Profess Guy Charles affirmed his interest. Professor Pamela Karlan did not return the call. The revisions in the schedule for the project have now made it possible to begin the process of scheduling a meeting of the PRG to consider our draft report and recommendations on Voter Identification Issues. We anticipate that meeting will take place the second week of January.
Challenges: No new challenges were encountered during October.

COORDINATION AND INFORMATION MANAGEMENT

Collecting and merging information and data from myriad sources is a demanding requirement of this research. We have developed two principal mechanisms to facilitate the analysis of the material collected or created in the project: an information system and an internal website for easy access to drafts and reports.

INFORMATION SYSTEM

Description: The statutory data and reports prepared by the Moritz College of Law is being merged with the political and procedural data and analysis prepared by the Eagleton Institute of Politics to provide a cohesive final product to the EAC, which will include a compendium of case law and statutes regarding Provisional Voting and voter identification.

Progress: At this point in the research process, many documents are complete after a lengthy process of circulating drafts among team members. We have reorganized our system by separating final drafts from earlier versions of documents, discarding dated files contained in the Information System, and updating the system as a whole. Upon their completion, new documents continue to be added.

Projections: The entire project team continues to use the Information System which contains the above referenced research, in working toward the preparation for our final reports to the EAC.

INTRANET

Description: All project team members have signed on to the Intranet site, and regularly post drafts, completed materials and spreadsheets online for internal review. The Intranet facilitates the exchange of information and collaboration among project participants.

FINANCIAL REPORT

The financial reporting for this project is supervised and prepared by the Division of Grant and Contract Accounting (DGCA) at Rutgers. Financial reporting on grant accounts is limited to actual expenses that have been incurred during the reporting period. Our contact at DGCA is: Constance Bornheimer, (732) 932-0165, EXT. 2235.

A detail of expenses incurred from project October 1- October 31, 2005, will be sent under separate cover to: Ms. Dianna Scott, Administrative Officer at the EAC.
Characteristics of the Provisional Voting Process
Classification of the States

Our research on provisional voting divided the various states into several categories to allow an assessment of how different factors may have influenced the process of casting and counting provisional ballots. This analysis was conducted before the release of the Election Day Study, and the categories we used may differ in some respects from its work. The categories analyzed here are:

1. New vs. Old (states that used a provisional ballot before the 2004 election)

2. Use of a statewide database of registered voters vs. no use of a statewide database

3. Counting out-of-precinct ballots vs. not counting out-of-precinct ballots

4. Voter identification requirements

5. Method used to verify provisional ballots

6. Levels of provisional ballots cast and counted

We first assigned states within these categories based on classifications done by Electionline.org in its studies. The Electionline data was the only published information available at the time of our research. We reviewed the Electionline data carefully, and, in select cases, updated it with new, detailed information that had become available after its publication. The changes we made are explained below.

Please note that:

--Idaho, Maine, Minnesota, New Hampshire, Wisconsin and Wyoming were excluded from our analysis. They have election-day registration systems, and did not need to use HAVA-compliant provisional ballots.

--North Dakota does not register voters, so it also was excluded from HAVA requirements and did not use provisional voting.

--Mississippi has not reported its provisional voting results and could not be included in our analysis, though it was compliant in 2004.

--Pennsylvania did not report its totals for the Election Day Study, but we obtained information on Pennsylvania and did include it in our analysis.
New vs. Old States

We classified states as "new" or "old" based on the 2001 Electionline study of provisional voting\(^1\) and condensing its classifications into a single dichotomous variable, new/old with all other cases excluded. The Electionline study divided states into five categories of their use of provisional ballots in the 2000 election:

1. Use of provisional ballots (P)
2. Limited use of provisional ballots (LP)
3. Affidavit ballots (A)
4. No system in place (N)
5. Unnecessary/Not Applicable (U/NA)

We collapsed all of the states listed as using provisional ballots, limited use of provisional ballots or affidavit ballots as "old" states, because the states in all three categories would have been familiar with key aspects of provisional voting. States that had no provisional voting system in place for the 2002 election, and were HAVA compliant in 2004, were listed as "new" states, as 2004 would have been the first year in which they would be offering the option of provisional voting. States that were listed as unnecessary or not applicable were excluded from this study, as they were exempt from the HAVA regulations in 2004 because they either allowed same-day registration or did not register voters.

Rhode Island is the only state categorized as an old state by Electionline that we moved into the list of new states. Electionline's map shows Rhode Island as a state that used provisional voting in 2000, but in the state description, it is listed as having no system in place. We learned from the Rhode Island Board of Elections that the state had previously permitted potential voters to sign an affidavit if they did not appear on a precinct's list of registered voters, but felt they were registered to vote. Based on the signed affidavit, the election official would then contact a county official to see if the voter was on a more complete registration list. If the voter's name was on the complete list, that voter was permitted to cast a regular ballot. As this process did not grant the voter a provisional ballot, but served as a different type of administrative failsafe, we concluded that Rhode Island's first use of provisional voting was in 2004 and, therefore, classified the state as "new" to the system of provisional balloting.

\(^1\) This study can be found at: http://electionline.org/Portals/1/Publications/Provisional\%20Voting.pdf.

## Statewide List of Registered Voters

The Electionline preview of the 2004 Election\(^2\) was the starting point for compiling a list of states that had a statewide database of registered voters. That study listed 34 States that did not have their statewide database systems complete, and 16 that did, including the District of Columbia. North Dakota does not register voters, so does not need to compile such a database. Electionline’s criterion for concluding that a state had a statewide list was that the state have participation from all jurisdictions in a statewide system. We added Oklahoma to the list of states with statewide databases

---

because we found they had met the Electionline criteria by the 2004 election, albeit too late for inclusion in the Electionline survey.

Minnesota has a statewide database but was excluded from the analysis because it did not offer provisional ballots and was exempt from the HAVA requirements.

**Out-of-Precinct Ballots**

We based our classification of states that allow the counting of ballots cast outside the correct precinct on the data in the 2004 Electionline preview of the 2004 election. States that evaluated ballots cast in a precinct where the voter was not registered were categorized as “out-of-precinct.” States that invalidated such ballots were categorized as “In-precinct only.”

**Voter Identification**

We relied on Electionline studies, including the Voter Identification study[^3] and the 2004 Election Preview, to classify the states on their requirements for voter identification. Each state's categorization is taken directly from the Electionline studies except Hawaii.[^4] The five different, and increasingly rigorous, categories are: Give Name (8 states), Sign Name (14 states), Match Signature (8 states), Provide ID (15 states), and Photo ID (5 states).

[^3]: This study can be found at: [http://electionline.org/Portals/1/Publications/Voter%20Identification.pdf](http://electionline.org/Portals/1/Publications/Voter%20Identification.pdf)

[^4]: In 2004, ElectionLine listed Hawaii as requiring identification. Our review of statutes revealed that Hawaii could require photo ID. Since that is the most rigorous form of identification that may be required of voters, we classified Hawaii under this category.
Table 4
CATEGORIZATION OF STATES -- Forms of Identification Required

South Dakota complicates the effort to assign each state to a category. It permits voters to sign an affidavit that would allow them to vote without presenting photo ID. While Hawaii did not normally require photo ID, its statutes gave challenged voters the opportunity to respond by producing a photo ID.

Verification Method

We identified four different ways states assessed provisional ballots to determine if they should be counted: signature match, match voter data, signed affidavits, and bringing back identification later. We gathered information about these verification techniques by checking state websites and consulting journalistic accounts. We consulted state legislation to provide further information where needed.

Data Collection
To assemble our data for analysis, we began by using the data on provisional votes cast and counted reported by Electionline. To increase the accuracy of this data, we surveyed each state’s election websites for updated data, and for reported numbers on the county level. We then sent emails to 49 (we excluded Alaska, see below) states and the District of Columbia, requesting updated data on the number of provisional votes cast and counted by county. We received information from 25 states by our cut-off date of August 25, 2005.

* North Carolina lacked clear standards to evaluate provisional ballots and is excluded from this analysis.

---

\(^5\) Alaska was not contacted via email, as the state does not have voting districts comparable to counties in other states and could not be matched with comparable census data.

\(^6\) Maryland reported provisional ballots that were counted per county, but not number cast.

\(^7\) Nebraska reported an incomplete list of provisional ballots cast and counted by county, but designated counties by number, rather than by name.
Data Differences with Election Day Study

The data used in this study differs from the data reported in the Election Day Study for 19 states. The Election Day Study was not completed until well after our statistical analysis of provisional voting was finished, on the schedule laid out in our work plan. Where there are differences, they are typically very small, usually fewer than 100 votes either cast or counted. Of the 9 states that have differences of more than 100 votes cast or counted, 7 have reported their numbers directly to us and can be considered updated data that EDS had not obtained. For one of those states, New Mexico, EDS had incomplete data, and for another, Pennsylvania, EDS had no data at all. The data that we have collected reflects updated numbers from the states that have changed following recounts and litigation that altered how ballots were evaluated.

Subject Re: Provisional Voting Report Status and Request for Advice

John-

Many thanks for getting this draft document to us.

Over the next day or so I will spend time with key EAC staff reviewing the document and considering your questions. As you may recall, Commissioner Martinez has taken a prominent role in the review of your initial work and I am certain he will continue to do so. Sadly, the Commissioner lost his mother two weeks ago and, consequently, will not return to the office until next week.

It is likely that EAC staff will not be able to give you a definitive answer on some of your questions until the Monday after Thanksgiving. I will, however, try to answer some of the administrative questions before that time.

Regards-

"John Weingart" <john.weingart@rutgers.edu>
Karen - We would like to talk with you about the process and schedule for completing our work in a way that is most useful to the EAC. I am attaching a draft timeline for the completion of this work and listing below five specific questions we need to resolve as quickly as possible. I would appreciate it if you would call me to discuss how best to address these matters - whether by telephone or by coming to meet in Washington.

We are planning to submit our report on Provisional Voting to the EAC by November 18th. Although it is not required in our contract, we will at the same time give copies to the members of the Peer Review Group offering them the opportunity to send us any additional corrections or other comments.

We are considering making all our recommendations for both Provisional Voting and Voter ID in the form of Best Practices. Some of them might well lend themselves to Guidance, but our discussion of the earlier draft with the EAC left us with the clear impression that on this topic the preference was for recommendations for Best Practices rather than a Guidance document. The calendar also argues for the Best Practices route to enable the EAC to give states advice they can use in 2006. (The attached draft timeline would need to be revised if the EAC prefers to propose some of the recommendations as Guidance.)

QUESTIONS:
1. Does the EAC agree with the approach described above to make all recommendations in the form of Best Practices rather than Guidance?

2. How long will it take the EAC to review and return comments on our draft Provisional Voting document? Is our attached revised schedule realistic in anticipating EAC comments no later than the week of December 12th on the report we send you at the end of this week?

3. After we revise our report on Provisional Voting to reflect any comments we receive from the EAC, and follow a similar process for our report on Voter Identification, what further steps would the Commission like us to take? Would you want us to conduct a review with your Board of Advisors and/or hold public hearings even though these steps are, we understand, required only for a Guidance Document? A review by the Board of Advisors would offer the opportunity to solicit suggestions for Best Practices from its members, thus strengthening the document and building a constituency for their adoption. (The attached draft timeline does not include such additional reviews.)

4. In any case, we will need a no-cost extension to the contract to carry us past December 31st. How do we make that request?

5. Assuming that we conduct fewer public hearings than we had anticipated, can we reallocate funds we had budgeted for that purpose to cover the higher than anticipated personnel and consultant costs we will be incurring after the first of the year?
We look forward to discussing these matters with you.

Thanks, John

Dear Commissioners:

The consultants' contracts for EAC's voting fraud and voter intimidation project require Tova Wang and Job Serebrov to work in consultation with EAC staff and the Commissioners "to identify a working group of key individuals and representatives of organizations knowledgeable about the topics of voting fraud and voter intimidation". The contracts do not specify the number of working group members but, as EAC has to pay for the group's travel and we want the size of the group to be manageable, I recommend that we limit the number to 6 or 8. Please let me know if you think that this limit is too conservative.

Attached for your review and comment are two lists of potential working group members for this project. One list was submitted by Job, the other by Tova. Tova and Job have provided brief summaries of each candidate's relevant experience and have placed asterisks next to the names of the individuals whom they particularly recommend. I can provide more extensive biographies of these individuals, if you need them. If EAC agrees that the recommended working group members are acceptable, an equal number may be selected from each list in order to maintain a balanced perspective.

Absent from the attached lists is the name of a representative from the U.S. Department of Justice's Election Crimes Branch. At this time, I am working through the DOJ bureaucracy to determine to what degree Craig Donsanto will be permitted to participate. If he cannot be named as a working group member, we may still be able to use him as a resource.

Please provide your feedback to me no later than Monday, November 28. I am available to meet with you if you would like to discuss this matter further.

Peggy Sims
Research Specialist

Possible Working Group Members - Serebrov.doc  Possible Working Group Members - Wang.doc
Possible Working Group Members - Serebrov

I recommend the first four with an *

*Mark (Thor) Hearne II*- Counsel to Republican National Committee; National Counsel to American Center for Voting Rights; National election counsel to Bush-Cheney, '04; Testified before U.S. House Administration Committee hearings into conduct of Ohio presidential election; Academic Advisor to Commission on Federal Election Reform (Baker-Carter Commission).

*Todd Rokita*- Secretary of State, Indiana; Secretary Rokita strives to reform Indiana’s election practices to ensure Indiana’s elections are as fair, accurate and accessible as possible; Secretary Rokita serves on the nine-member Executive Board of the Election Assistance Commission Standards Board, charged by federal law to address election reform issues.

*Patrick J. Rogers*- Partner/Shareholder, Modrall, Sperling, Roehl, Harris and Sisk, P.A., Albuquerque, New Mexico; 1991-2003 General Counsel to the New Mexico Republican Party; Election cases: The Coalition to Expose Ballot Deception, et al v. Judy N. Chavez, et al; Second Judicial District Court of Bernalillo County, New Mexico (2005); represented plaintiffs challenging petition procedures; Miguel Gomez v. Ken Sanchez and Judy Chaves; Second Judicial District Court of Bernalillo County, New Mexico (2005); residency challenge; Moises Griego, et al v. Rebecca Vigil-Giron v. Ralph Nader and Peter Miguel Camejo, Supreme Court for the State of New Mexico (2004); represented Ralph Nader and Peter Camejo, ballot access issues; Larry Larrañaga, et al v. Mary E. Herrera and Rebecca Vigil-Giron, Supreme Court of New Mexico (2004); voter identification and fraudulent registration issues; Decker, et al v. Kunko, et al; District Court of Chaves County, New Mexico (2004); voter identification and fraudulent registration issues; Kunko, et al v. Decker, et al; Supreme Court of New Mexico (2004); voter identification and fraudulent registration issues; In the Matter of the Security of Ballots Cast in Bernalillo County in the 2000 General Election; Second Judicial District Court of Bernalillo County, New Mexico (2000); voting and counting irregularities and fraud.

*David A. Norcross*- Partner, Blank Rome LLP, Trenton NJ, Washington D.C.; Chairman, New Jersey Republican State Committee, 1977 – 1981; General Counsel, Republican National Committee, 1993 – 1997; General Counsel, International Republican Institute; Counsel, The Center for Democracy; Vice Chairman, Commission on Presidential Debates; Executive Director, New Jersey Election Law Enforcement Commission

Benjamin L. Ginsberg-Served as national counsel to the Bush-Cheney presidential campaign; He played a central role in the 2000 Florida recount; He also represents the campaigns and leadership PACs of numerous members of the Senate and House, as well as the Republican National Committee, National Republican Senatorial Committee and
National Republican Congressional Committee; His expertise is more in campaign finance.

**Cleta Mitchell**-Partner in the Washington, D.C. office of Foley & Lardner LLP; She advises corporations, nonprofit organizations, candidates, campaigns, and individuals on state and federal election and campaign finance law, and compliance issues related to lobbying, ethics and financial disclosure; Ms. Mitchell practices before the Federal Election Commission and similar federal and state enforcement agencies; Her expertise is more in campaign finance law.

**Mark Braden**-Of counsel at Baker & Hostetler; He concentrates his work principally on election law and governmental affairs, including work with Congress, the Federal Election Commission, state campaign finance agencies, public integrity issues, political broadcast regulation, contests, recounts, the Voting Rights Act, initiatives, referendums and redistricting; His expertise is mainly outside of the voter fraud area.
To: Peggy Sims  
From: Tova Wang  
Re: Working Group Recommendations  
Date: November 12, 2005

*Wendy R. Weiser, Associate Counsel in the Democracy Program at the Brennan Center for Justice at NYU School of Law and an expert in federal and constitutional law, has done a great deal of research, writing, speaking, and litigating on voting rights and election law issues. As part of the Brennan Center’s wide ranging activities in the area of democracy, Ms. Weiser is currently overseeing an analysis and investigation of recent allegations of voter fraud throughout the country.

*Barbara Arnwine is Executive Director of the Lawyers Committee for Civil Rights Under Law, an organization that for four decades has been at the forefront of the legal struggle to secure racial justice and equal access to the electoral process for all voters. Notably, Ms. Arnwine and the organization have led the Election Protection program for the last several years, a nationwide grassroots education and legal effort deploying thousands of volunteers and using a nationally recognized voter hotline to protect voters’ rights on election day.

*Daniel Tokaji, professor and associate director of the Election Law Center at the Moritz College of Law at the Ohio State University, is one of the nation’s foremost experts in election law and reform and ensuring equality in the voting system. Professor Tokaji frequently writes and speaks on democracy related issues at academic and practitioner conferences, on such issues as voting technology, fraud, registration, and identification requirements, as well as the interplay between the election administration practices and voting rights laws.

Donna Brazile is Chair of the Democratic National Committee’s Voting Rights Institute, the Democratic Party’s major initiative to promote and protect the right to vote created in response to the irregularities of the 2000 election, and former Campaign Manager for Gore-Lieberman 2000 (the first African American to lead a major presidential campaign.) Brazile is a weekly contributor and political commentator on CNN’s Inside Politics and American Morning, a columnist for Roll Call Newspaper and a contributing writer for Ms. Magazine.

Wade Henderson is the Executive Director of the Leadership Conference on Civil Rights (LCCR) and Counsel to the Leadership Conference on Civil Rights Education Fund (LCRCREF), an organization at the forefront of defending voting rights for the last fifty years. Prior to his role with the Leadership Conference, Mr. Henderson was the Washington Bureau Director of the National Association for the Advancement of Colored People (NAACP).

Robert Bauer is the Chair of the Political Law Practice at the law firm of Perkins Coie, National Counsel for Voter Protection, Democratic National Committee, Counsel to the Democratic Senatorial and Congressional Campaign Committees and Co-Author, Report 028861

Deliberative Process Privilege
of Counsel to the Senate Rules and Administration Committee in the Matter of the United States Senate Seat from Louisiana in the 105th Congress of the United States, (March 27, 1997). He is the author of United States Federal Election Law, and one of the foremost attorneys in the country in the area of federal/state campaign finance and election laws.

Laughlin McDonald has been the executive director of the Southern Regional Office of the ACLU since 1972 and as the Director of the ACLU Voting Rights Project, McDonald has played a leading role eradicating discriminatory election practices and protecting the gains in political participation won by racial minorities since passage of the 1965 federal Voting Rights Act. During the past two decades, McDonald has broken new ground by expanding ACLU voting rights cases to include representation of Native Americans in various western states, and written innumerable publications on voting rights issues.

Joseph E. Sandler is a member of the firm of Sandler, Reiff & Young, P.C., in Washington, D.C., concentrating in campaign finance and election law matters, and general counsel to the Democratic National Committee. As an attorney he has handled campaign finance and election law matters for Democratic national and state party organizations, Members of Congress, candidates and campaigns. He served as general co-counsel of the Association of State Democratic Chairs, as general counsel for the Democratic Governors' Association and as counsel to several state Democratic parties.

Cathy Cox is serving her second term as Georgia's Secretary of State, having first been elected in 1998. In 2002 she earned re-election with over 61 percent of the vote, winning 146 out of 159 counties. Because of Secretary Cox’s efforts Georgia has become a national leader in election reform. Her initiative made Georgia the first state in America to deploy a modern, uniform electronic voting system in every county.
John-

We'll try and get you an answer on some of these by tomorrow.

Hey-

I've had a chance to take a close look at the Eagleton Best Practices document.

I find it very confusing (to say the least) and think it is a very long way from a Best Practices document we would want to or could use for our constituency.

Look forward to you all's thoughts and insights about next steps.

Contract to Provide Research Assistance to the EAC For the Development of Voluntary Guidance on Provisional Voting and Voter Identification Procedures

MONTHLY PROGRESS REPORT
November 2005

For
UNITED STATES ELECTION ASSISTANCE COMMISSION
1225 New York Avenue N.W., Suite - 1100
Washington, DC 20005

December 15, 2005

Prepared by:
Eagleton Institute of Politics
Rutgers, The State University of New Jersey
191 Ryders Lane
New Brunswick, NJ 08901-8557
INTRODUCTION

This report describes our progress from November 1 through November 30, 2005. It includes brief descriptions of key tasks; progress made; challenges encountered or anticipated; milestones reached; and projections for work to be completed in the coming month.

In November we completed and submitted our Provisional Voting analysis paper, including recommendations to the EAC for best practices. These policy prescriptions are based on our research and the comments of the Peer Review Group on that research. We completed a careful review of our data to reconcile it with other sources and identify the latest, most reliable information to use in the analysis. The importance of this demanding effort was described in October’s Progress Report. We continue to await the EAC’s comments on that final draft.

Also in November we revised the schedule for the project in light of the additional time that has been needed for review of earlier drafts by the EAC and the late completion of the Election Day Study. We made a written request to the EAC for a no-cost extension of the contract through the end of February which we understand is likely to be approved before Christmas.

Since the submission of our Provisional Voting report to the EAC on November 28, 2005, our efforts have been entirely aimed at the completion of the voter identification research. We have been advised that EAC will take several weeks to review and react to our final draft on provisional voting. As we await a January meeting on that topic, we are moving ahead
quickly on the statistical analysis of voter identification data and summarizing the legal research that was completed earlier.

This Monthly Progress Report is divided into 3 sections: Provisional Voting, Voter Identification Requirements, and Project Management. Each section references specific tasks described in paragraph 3 of the contract. The Financial Report will be sent separately by the Rutgers Division of Grant and Contract Accounting.

Please direct questions or comments about this report to tom_oneill@verizon.net or by telephone at (908) 794-1030.

**PROVISIONAL VOTING**

Tasks 3.4 – 3.9 in our contract relate to Provisional Voting. Task 3.4 was completed in August, and Tasks 3.5 and 3.6 were completed in November.

**Task 3.6: Prepare preliminary draft guidance document.**

The report and recommendations which were sent to the EAC on November 28, 2005 recommends against the adoption of a guidance document per se and advises that the EAC adopt its recommendations as best practices. That recommendation followed agreement by the EAC with that course of action. The submission of that report and recommendations, however, constitutes the document required under this task. Before proceeding to Task 3.7 (revise the guidance document for publication) or 3.8 (arrange a public hearing on the draft guidance), we await the EAC’s decision on how to proceed.
VOTER IDENTIFICATION REQUIREMENTS

The contract lists 7 tasks (3.10 – 3.16) related to Voter Identification Requirements. The research on Voter ID requirements is proceeding concurrently with our work on the experience of Provisional Voting, and is the principal focus of our research at this time.

Task 3.10: Legislation, regulations, and litigation

The research team at the Moritz College of Law has the lead responsibility for the collection and analysis of legislation, administrative procedures and litigation with regard to Voter Identification Requirements. This collection of material is nearing completion. It will constitute the compendium of legislation, administrative regulations, and case law called for under this task.

Description: The Moritz team has compiled statutes on Voter Identification, and will provide a summarized analysis of this research to the project team for review.

Progress: The 50 state (plus District of Columbia) chart has been completed, the voter identification statutes have been collected for all states and D.C., and summaries of the existing voter identification statutes have been written for all states and D.C. Moritz has completed its review of voter identification litigation. Moritz and Eagleton have worked together to review the research, clarify the categorization of that research on our charts, and reconcile the data developed in our two different research techniques categorizations.

Challenges: The biggest challenge facing the reconciliation process of research findings, descriptions and categorizations is that it is being done by two different teams (Moritz and Eagleton) who rely on different primary source materials. Despite the necessity this has created to reconcile conflicting data from time to time, the collaboration has also been very beneficial because it has made our research efforts more rigorous.

Work Plan: During December we will conclude our reconciliation and continue analysis of voter identification research, including an analysis of the most important issues and trends in voter identification litigation.

SUPPLEMENTS TO LEGAL ANALYSIS

To supplement the legal analysis, the Eagleton team is undertaking two research efforts: First, compiling information on the debate over voter ID in the states; and second, estimating the effect on turnout of different voter ID regimes. Tracking the continuing political debate over voter identification reveals that the relatively narrow HAVA requirements for voter identification have apparently sparked in many states a broader concern and a sharp political debate over rigorous identification requirements for all voters. The research follows these developments both to monitor possible secondary effects of HAVA on voter ID, and to provide a rich collection of alternative approaches for consideration.
During the month of November, we developed narratives to establish how laws were passed, looking at when they were proposed and when they were eventually enacted. In the upcoming month, Eagleton will examine voter registration forms across the states to see what forms of identification are requested from mail-in registrants. The difficulty will be determining the 2004 status of the states.

**VOTER ID AND TURNOUT ANALYSIS**

Now under way is a statistical analysis to gauge the effect of a state’s voter ID regime on turnout, especially turnout by minority and elderly voters.

**Description:** We have created a database and gathered statistics on the effects of state-level voter identification requirements on voter turnout at the county-level in the 2004 election. In November, we have analyzed both aggregate- and individual-level data to determine whether there is any relationship between voter turnout and the various forms of voter identification states require.

**Progress:** Analysis is under way for two data sets: County-level data that includes registration and turnout rates for 2000 and 2004, as well as Census measures and indicators of the type of voter identification requirements that were in existence at the time of the 2004 presidential election. The second data set consists of the voter supplement to the November 2004 Current Population Survey. This data set allows for testing of the same hypotheses at the individual level. Preliminary findings from the aggregate data set suggest that voter ID requirements have their greatest effect at the registration stage, as opposed to the turnout stage. This is a first cut at the data, however, and we will be adding a number of control variables to the analysis to see if the relationship holds.

**Challenges:** These analyses use hierarchical linear modeling. Because voter identification requirements vary by state, one must pay special attention to other, unseen state-level influences on the data. The models are difficult to run and interpret, so the analyses are time-consuming.

**Work Plan:** The statistical analyses will continue during the month of December, and a draft of the findings is anticipated by the end of the month.

**PROJECT MANAGEMENT**

**PEER REVIEW GROUP**

**Description:** A feature of our proposal was the creation of a Peer Review Group (PRG). It reviews our research and methodology and provides valuable feedback and suggestions for the direction of our work.
**Progress:** During the month of November, Eagleton contacted the PRG Members on two occasions. First, all members received the final draft provisional voting report that was submitted to the EAC. Further comments are welcome but not expected from the PRG. Second, we have asked PRG members to reserve two dates in mid-January for potential conference call sessions to review the voter identification report.

**Challenges:** No new challenges were encountered during November.

**COORDINATION AND INFORMATION MANAGEMENT**

Collecting and merging information and data from myriad sources is a demanding requirement of this research. We have developed two principal mechanisms to facilitate the analysis of the material collected or created in the project: an information system and an internal website for easy access to drafts and reports.

**INFORMATION SYSTEM**

**Description:** The statutory data and reports prepared by the Moritz College of Law is being merged with the political and procedural data and analysis prepared by the Eagleton Institute of Politics to provide a cohesive final product to the EAC, which will include a compendium of case law and statutes regarding Provisional Voting and voter identification.

**Progress:** At this point in the research process, many documents are complete after a lengthy process of circulating drafts among team members. We have reorganized our system by separating final drafts from earlier versions of documents, discarding dated files contained in the Information System, and updating the system as a whole. Upon their completion, new documents continue to be added.

**Projections:** The entire project team continues to use the Information System which contains the above referenced research, in working toward the preparation for our final reports to the EAC.

**INTRANET**

**Description:** All project team members have signed on to the Intranet site, and regularly post drafts, completed materials and spreadsheets online for internal review. The Intranet facilitates the exchange of information and collaboration among project participants.

**FINANCIAL REPORT**

The financial reporting for this project is supervised and prepared by the Division of Grant and Contract Accounting (DGCA) at Rutgers. Financial reporting on grant accounts is limited to actual expenses that have been incurred during the reporting period. Our contact at DGCA is: Constance Bornheimer, (732) 932-0165, EXT. 2235.
A detail of expenses incurred from project November 1 - November 30, 2005, will be sent under separate cover to: Ms. Dianna Scott, Administrative Officer at the EAC.
Tom-

I will begin to poll the Commissioners to get a sense of when they might be available to do a "close out" meeting with Eagleton.

Karen Lynn-Dyson

Karen, 

The Eagleton-Moritz team would like to schedule a meeting with the EAC in March. It would be the final substantive meeting on our contract, which expires at the end of March.

The agenda would include:

1. Brief the Commission on the principal findings and recommendations of the Voter ID research and hear questions and comments on that work.
2. Discuss the changes we made to the Provisional Voting paper as a result of comments and questions from the Commission.
3. Explore the Commission's intentions for the use of our work as recommendations for best practices or otherwise.
I believe the meeting should take place after you receive the Voter ID paper from us in the first week of March, and ideally after the Commission staff has had enough time for a preliminary review of it.

The earlier we could set a date for this meeting, the more key members of the team would be able to participate.

Tom O'Neill
Hey Adam

Here's my Howard draft on preclearance. I'm also attaching something I just wrote for SCLR on the application of Section 2 of the VRA to election administration inequalities. Comments welcome.

Subject: Re: PV and ID provisions

Sounds like you're really swamped-- and I'm not going to put anything more on your plate--- when you get to it, that'll be fine.

While I have not heard in the press about the Cameron Quinn issue, it has become commonly known enough that you could discuss it without it getting back to me.

Hope all is well-- good luck with the law review articles.

Hi Adam: I've honestly not had a chance to look at this. I'm in the midst of trying to meet a couple of LR deadlines this week. But I do plan to turn to the ID draft by Monday of next week. I'm actually in CA right now and don't have the PV piece with me -- if you can email a copy, I'll try to give it another read-through by tomorrow. Dan

Commissioner-

Given travels costs and the number of persons involved from the Eagleton/Moritz team, the idea was to do the two meetings in the same day.

However, I could ask Nicole to determine if there is a day in March that might work with your schedule.

I am very reluctant to schedule a meeting later in April as the contract is technically over March 31 (a Friday). April 3 is the following Monday.

Please advise. Thanks

I thought we were doing two separate time slots so that Eagleton would brief only two commissioners at a time?
Commissioners-

Attached please find a copy of the draft Voter ID best practices paper which Eagleton submitted to me last evening.

I will confer with Tom regarding when you would like this put on your Commissioner meeting agenda.

Regards-

Karen,

Attached is the final draft of the Voter ID paper, with recommendations for the EAC to consider promulgating as best practices. Two appendices are included as part of the draft and a third, the statistical analysis of the effects of different voter ID requirements on turnout, is attached separately to this email.

We look forward to discussing this final draft with you and with the commissioners on April 3. I'll be preparing a Powerpoint presentation for that meeting. Any guidance you can give me later this month on particular questions that briefing should address would be appreciated.

The Moritz-Eagleton team will be meeting next Tuesday at 9:30 a.m. If you have preliminary comments you would like us to consider, that meeting would be a most convenient occasion to
discuss them.

Tom O'Neill

ReportFinalDraft.doc
As you know Eagleton is finishing up their project and would like to give us a final report on it.

Are your Commissioners and Tom available to meet on any of the following days from 1:00-2:30:

March 23
March 29
March 30

Thanks

MEMORANDUM

TO: MEMBERS OF EAC STANDARDS BOARD  
FROM: PEGGY NIGHSWONGER, CHAIR, EXECUTIVE BOARD  
        RAY MARTINEZ, EAC COMMISSIONER  
DATE: APRIL 28, 2006  
SUBJECT: UPCOMING MEETING OF STANDARDS BOARD, MAY 23-24, 2006

The next meeting of the EAC Standards Board (to be held jointly with the EAC Board of Advisors) will be held in Washington, D.C. on Tuesday, May 23 and Wednesday, May 24, 2006 at the Hamilton Crown Plaza hotel. We hope you will be able to attend this important meeting, which will focus on consideration and discussion of a number of ongoing election administration research projects currently underway by the EAC. Additionally, there will also be an update and discussion regarding recent work conducted by the National Institute of Standards and Technology (NIST) on the voluntary voting system guidelines. (Please see the draft agenda attached for additional information.)

As was the case with our previous meetings of the EAC Standards Board, the EAC will pay the cost of travel, hotel and a Federal per diem for any member of the Standards Board wishing to attend the May 2006 meeting. Upon receipt of this memorandum, please contact the EAC's travel agent, Adventure Travel, at (877) 472-6718 to make your travel arrangements. Additionally, if you have any questions or need assistance in making your travel plans, please call __________________________ (email address is __________________________).

Thank you in advance for you willingness to join us in Washington, D.C. We look forward to seeing you soon.

Standards Board Meeting Agenda
Washington, D.C.
May 23 – 24, 2006

Tuesday, May 23, 2006

NOON – 1:15 P.M.  LUNCHEON

Brief Welcoming Remarks
Commissioner Ray Martinez III

EAC Staff Presentations:
Design for Democracy (improvements to ballot design, national voter registration mail-in form and polling place signage) (Karen Lynn-Dyson);
Legal On-Line Information Clearinghouse (Julie Thompson-Hodgkins);
Public Access Portals (Edgard Cortes);
Katrina Voting Assistance Relief (Edgardo Cortes).

1:15 – 1:30 P.M.  BREAK

1:30 – 2:30 P.M.  STANDARDS BOARD PLENARY SESSION
Session Chaired by Peggy Nighswonger
Chair, Executive Board

• Appointment of Parliamentarian

• Adoption of Agenda

• Review of Meeting Book Materials

• Presentation of Proposed Permanent Bylaws
  Kevin Kennedy, Executive Director, State Elections Board, Wisconsin
  Joanne Armbruster, Atlantic County Superintendent of Elections, New Jersey

• Election of Executive Board Vacancy
2:30 – 4:00 P.M. DISCUSSION: DRAFT REPORT ON PROVISIONAL VOTING

Presentors:
Thomas O’Neil: Project Manager, EAC Provisional Vote Study
Edward Foley: Director, Election Law@Moritz (The Ohio State University)
EAC Resource Person: Julie Thompson-Hodgkins

4:00 – 4:15 P.M. BREAK

4:15 – 5:30 P.M. DISCUSSION: DRAFT REPORT ON POLL WORKER RECRUITMENT, TRAINING AND RETENTION (INCLUDING COLLEGE POLL WORKERS)

Presentors:
Jennifer Collins-Foley, EAC Consultant
Dora Rose, Center for Election Integrity, Cleveland State University
EAC Resource Person: Karen Lynn-Dyson

NOTE: Attendees on their own for dinner.

Wednesday, May 24, 2006

8:00 – 8:30 A.M. CONTINENTAL BREAKFAST

8:30 – 9:15 A.M. BRIEFING: PROPOSED MANAGEMENT GUIDELINES

Presentors:
Connie Schmidt, EAC Consultant
Brit Williams, EAC Consultant
EAC Resource Person: Brian Hancock

9:15 – 10:00 A.M. BRIEFING: DRAFT REPORT ON VOTE COUNT/RECOUNT

Presentors:
Dr. Thad Hall, Assistant Professor of Political Science, University of Utah
Doug Chapin, EAC Consultant
EAC Resource Person: Julie Thompson-Hodgkins, EAC

10:00 – 10:15 A.M. BREAK

10:30 – 11:00 A.M. DISCUSSION: DRAFT REPORT ON IMPROVING DATA COLLECTION

Presentors:
11:00 – 11:55 P.M. BRIEFING: DRAFT REPORT ON VOTER FRAUD/VOTER INTIMIDATION

Presentors:
Job Serebrov, Associate, The Nixon Law Firm
Tova Wang, Democracy Fellow, The Century Foundation
EAC Resource Person: Juliet Thompson, EAC General Counsel

NOON – 1:30 P.M. JOINT LUNCHEON

EAC Activities Update

Brief Remarks by: Chairman Paul DeGregorio
Commissioner Gracia Hillman

Presentation: General Update on NIST/TGDC Activities

Introduction of Speakers: Commissioner Donetta Davidson

Presentors:
John Wack, NIST

1:40 – 2:45 P.M. DISCUSSION: DRAFT REPORT ON VOTER IDENTIFICATION

Presentors:
Thomas O'Neil: Project Manager, EAC Voter I.D. Study
Edward Foley, Director, Election Law@Moritz, The Ohio State University
EAC Resource Person: Juliet Thompson-Hodkins

2:45 – 3:00 P.M. BREAK

3:00 – 5:00 P.M. STANDARDS BOARD PLENARY SESSION

Session Chaired by Peggy Nighswonger, Chair, Executive Board

Discussion and consideration of Standards Board business.

5:00 P.M. ADJOURN
I have taken a look at the agendas. My questions start with assignment as resource person. Is Peggy going to be present for the Vote Fraud and Intimidation presentation? I have not been the person refereeing between Job and Tova, nor am I up to date on what their findings and work are. If I am just there to support the meeting, that’s great, but Peggy should be there to make any substantive comments. I suffer from a similar problem with regard to the Eagleton presentation (other than what I gathered from their presentation a few weeks ago).

Perhaps what I need to know is what is the "resource person" supposed to do?

As a second question, do we know whether this lunch on Tuesday is “set”. The hotel contract will have to be amended to include this lunch. I don’t want to move forward on setting that up if it is not approved by the two Boards or it is otherwise not going to occur.

Third issue is that last time the Standards Board wanted a parliamentarian -- not volunteering, but that should be considered in terms of how our staff is assigned.

Amie J. Sherrill/EAC/GOV

May 2006 Board of Advisors Agenda.doc
Amie J. Sherrill
Special Assistant to Chairman Paul S. DeGregorio
U.S. Election Assistance Commission
1225 New York NW - Suite 1100
Washington, DC  20005
(202) 566 3106
Julie, in response to your questions:

The first response is that we've placed you as a resource person for only the ID, Provisional ballot, and then your presentation on legal clearinghouse website. So that's changed. The EAC reference person is not supposed to really interact, but be able to respond to the Board if they have questions regarding EAC processes in conducting the research. The panelists should start and lead the discussion. (i.e. for the breakout sessions on VVSG, I only answered procedural questions from the crowd). The ID and PV issues are inherently legal, so we wanted you to be on hand to explain those items.

As to the second issue, I'm copying Ray, because I believe that the lunch has the Executive Board's approval to alter the contract to provide for a lunch. They had requested an earlier start that day, and this is an effort to accommodate that request. If he disagrees, then I can do what is necessary to get approval for that lunch officially.

Third issue, we may need a parliamentarian for the SB, however, that role might be filled by Bill Campbell as the new role of secretary, or as one of the other SB members appointed. Do you believe we need a line in the first plenary session to appoint the parliamentarian? Maybe Gavin's interested? Ray, any thoughts?

Thanks,
Adam

Subject BoA agenda
Dear Commissioners:

This is to let you know that the Working Group for our Voting Fraud and Voter Intimidation preliminary research project is scheduled to meet in EAC's large conference room the afternoon of Thursday, May 18. I will provide more information about this meeting to you later.

Peggy Sims
Election Research Specialist
To help guide our thoughts for those of us working on the 1 PM meeting on what materials will be available for the SB/BOA meeting, I have drawn up a "comment" version of the SB agenda, which indicates, for each agenda item present, what materials will be available, and when. This is a preliminary agenda, and I realize we'll discuss these issues at the meeting today, but I thought it would be better to see this in written form, so we can identify potential problem areas. I'd like to work from this, modify this document, as we make our determinations as when, and in what form we will be providing materials to the Boards.

Again-- you all are the experts as to what stage these projects are at-- so I apologize if there's missing or incomplete information here.

Thanks,
Adam

**5:00 P.M. ** ADJOURN
Attached, please find draft letter to be sent to the Commissioners. Any comments or corrections, please make them and send them back to Amie and myself. We hope to send this email by 3 PM today, so please take a look quickly-- for your projects.

Commissioners:

Peggy, Edgardo, Karen, Laiza, Adam and Amie met this afternoon to discuss what materials will be ready to present to the Standards Board and Board of Advisors members during the meetings later this month. Listed below is what we have determined to be available for their review and feedback. Please review this list and offer your feedback.

Also, attached is an updated SB agenda with "comments" on work product for each project to be discussed.

Design for Democracy - exhibits to be on display for board member review and feedback; Ric Grefe will be present with KLD to discuss the processes used to get to these specific examples; Preliminary Design Report (dated April 10, 2006) to be delivered electronically to the members for their review prior to the meeting

Legal Information Clearinghouse - demo version of the website will be available to show

Public Access Portals - there is a conference scheduled for June 16-18; a tentative agenda and, if desired, a list of participants will be made available to the members for their review and feedback; also future steps can also be outlined for their feedback

Katrina Voting Assistance Relief - due to the limited amount of information that we can offer, we propose eliminating this topic and substituting discussions on our Language Working Group meetings

Language Working Groups - the members will be updated on our two working group meetings and the information received at both, as well as our next steps

Provisional Voting - a draft of the final report is to be delivered to the 4 C's by 5/11 for their review and feedback; product following 4C review will be available 5/17 for electronic distribution to board members

Poll Worker R T & R (including College Pollworker) - reports as they stand now are not ready to be presented, according the KLD; Peggy and Karen to communicate to project managers the need for a report by 5/11 for review by the 4 C's

Proposed Management Guidelines - Connie, Brit, and Brian to determine on 5/10 what materials are ready for presentation to board members; currently a 3 page overview briefing of guideline principles and a 20 page chapter on security principles have been prepared

Vote Count/Recount - materials to be delivered to board members include the public testimony given by Thad Hall and Doug Chapin at our Seattle public meeting and several case studies outlining examples

EAC Election Day Survey - draft report with changes/updates highlighted and website application clips to be presented (Ready).
Voting Fraud/Voter Intimidation - a summary of the preliminary research and a recap of the discussions of the May 18 working group meeting offering brainstorming ideas, not advice.

NIST/TGDC activities - Allan Eustis states that NIST is working to provide their summary of materials to be provided, and that they will get that to us ASAP.

Voter Identification - a PowerPoint presentation outlining the process and a summary of findings. Peer review group to occur May 11th, with final Draft due the 15th. At this time, Commissioners can determine whether Draft Report is ready to submit to the SB and BOA.

Research Work Product AGENDA 2006.doc

Adam D. Ambrogi
Special Assistant to Commissioner Ray Martinez III

Adam:

J.R. Perez's resume is attached, and I have forwarded my last explanatory email to Job in answer to his concerns. I will tell Tova not to contact Ray, but that she may talk with you about this issue. Thanks! --- Peggy

--- Forwarded by Margaret Sims/EAC/GOV on 05/09/2006 02:45 PM ---

As you may recall, the Commissioners directed me to find a nonpartisan local election official to serve on the Working Group. The three of us discussed the desirability of having a Hispanic. I proposed that I find someone from Texas because of that State's colorful history of voting fraud and their innovative approaches to combat it. In those Texas counties that hire Election Administrators to run elections, rather than having elected officials do so (Tax Assessor for voter registration; County Clerk for balloting), the Election Administrator is hired by the County Election Commission and is supposed to perform his or her duties in a nonpartisan manner. (See attached excerpts from Texas Election Code regarding election administrator hiring and restrictions on partisan activity.) Any experienced Texas election official will be familiar with voting fraud and voter intimidation schemes used in that State. Mr. Perez has over 13 years experience as a county Election Administrator in Texas. You won't find many news articles mentioning him because he has kept his nose clean. (The Texas press, as in many other parts of the country, prefers to report bad news.) Mr. Perez is plugged into the association of Texas election officials and the two largest organizations of election officials in this country: the International Association of Clerks, Recorders, Election Officials and Treasurers (IACREOT); and The Election Center. He is a past President and past Chairman of the Legislative Committee for the Texas Association of Election Administrators. He currently serves on IACREOT's Election Officials Committee, which plans the educational sessions for election officials that are conducted at that organization's conferences. His peers in IACREOT and The Election Center have selected his submissions on web presentations (IACREOT) and his professional practices papers (Election Center) for awards. Mr. Perez also has access to information from other States through his membership in IACREOT and The Election Center. He also has a sense of humor, which you will note if you access the staff web page on the Guadalupe County Elections web site and hear the Mission Impossible theme. something that might be useful in the upcoming meeting.

Guadalupe County is small but growing. In 2004, the county had over 65 thousand registered voters (a number more than doubled the number of registered voters in 1988). A third of the county's population claims Hispanic or Latino origin, according to the U.S. Census Bureau. The county is in south central Texas and is bordered by Comal, Hays, Cladwell, Gonzales, Wilson, and Bexar counties. In the 1980s, the county was predominately a farming community; but in recent years, many people have moved from
San Antonio (Bexar County) to Guadalupe County, preferring to live in Guadalupe County and work in Bexar County.

--- Peggy

---

Peggy:

What political party is Perez with? How political is he? Is the position in Texas neutral or political? Who appointed Perez?

As to Pat I will contact him but I can't promise anything. If Pat can't come, who is getting knocked off Tova's list?

Job
We are still on for 4 PM. Ray is out of the office due to a family emergency, so I suggest you NOT contact him. You may contact his Special Assistant, Adam Ambrogi (aambrogi@eac.gov or 202-566-3105), who also hails from Texas. --- Peggy

"Tova Wang" <wang@tcf.org>

We are still doing the 4 pm call, right? We can discuss it more then. Would it be OK if I see if Ray knows this person? Thanks. Tova

Adam:

Regarding the **Vote Count/Recount** contract, I am trying to schedule a teleconference with Thad for tomorrow. We will discuss preparations for his presentation, among other things. He may suggest additional materials, other than the testimony, that may be acceptable to us.

Regarding the **Vote Fraud/Voter Intimidation** project, I don't think the materials will include a written recap of the Working Group meeting, scheduled for May 18, if we have to have the materials to you NLT COB May 17. I can provide a verbal recap at the meeting. I may be able to pull together a written recap after May 18, but it won't be available much earlier than the week of the meetings.

Let me know if you have any questions. --- Peggy

Subject: Materials for Standards Board (DRAFT)

Attached, please find draft letter to be sent to the Commissioners. Any comments or corrections, please make them and send them back to Amie and myself. We hope to send this email by 3 PM today, so please take a look quickly-- for your projects.

Commissioners:

Peggy, Edgardo, Karen, Laiza, Adam and Amie met this afternoon to discuss what materials will be ready to present to the Standards Board and Board of Advisors members during the meetings later this month. Listed below is what we have determined to be available for their review and feedback. Please review this list and offer your feedback.

Also, attached is an updated SB agenda with "comments" on work product for each project to be discussed.

**Design for Democracy** - exhibits to be on display for board member review and feedback; Ric Grefe will be present with KLD to discuss the processes used to get to these specific examples; Preliminary Design Report (dated April 10, 2006) to be delivered electronically to the members for their review prior to the meeting.
Legal Information Clearinghouse - demo version of the website will be available to show

Public Access Portals - there is a conference scheduled for June 16-18; a tentative agenda and, if desired, a list of participants will be made available to the members for their review and feedback; also future steps can also be outlined for their feedback

Katrina Voting Assistance Relief - due to the limited amount of information that we can offer, we propose eliminating this topic and substituting discussions on our Language Working Group meetings

Language Working Groups - the members will be updated on our two working group meetings and the information received at both, as well as our next steps

Provisional Voting - a draft of the final report is to be delivered to the 4 C's by 5/11 for their review and feedback; product following 4C review will be available 5/17 for electronic distribution to board members

Poll Worker R T & R (including College Pollworker) - reports as they stand now are not ready to be presented, according the KLD; Peggy and Karen to communicate to project managers the need for a report by 5/11 for review by the 4 C's

Proposed Management Guidelines - Connie, Brit, and Brian to determine on 5/10 what materials are ready for presentation to board members; currently a 3 page overview briefing of guideline principles and a 20 page chapter on security principles have been prepared

Vote Count/Recount - materials to be delivered to board members include the public testimony given by Thad Hall and Doug Chapin at our Seattle public meeting and several case studies outlining examples

EAC Election Day Survey - draft report with changes/updates highlighted and website application clips to be presented (Ready).

Voting Fraud/Voter Intimidation - a summary of the preliminary research and a recap of the discussions of the May 18 working group meeting offering brainstorming ideas, not advice

NIST/TGDC activities - Allan Eustis states that NIST is working to provide their summary of materials to be provided, and that they will get that to us ASAP.

Voter Identification - a PowerPoint presentation outlining the process and a summary of findings. Peer review group to occur May 11th, with final Draft due the 15th. At this time, Commissioners can determine whether Draft Report is ready to submit to the SB and BOA.

Commissioners:

Peggy, Edgardo, Karen, Laiza, Adam and Amie met yesterday afternoon to discuss what materials will be ready to present to the Standards Board and Board of Advisors members during the meetings later this month. Listed below is what the Research Team has determined to be available for their review and feedback. It looks like the much of the information needed will be able to be sent to Adventure travel for their preparation in binders on May 17th.

Please review this list and offer your feedback.

Also, attached is an updated SB agenda with "comments" on work product for each project to be discussed.

Design for Democracy - exhibits to be on display for board member review and feedback; Ric Grefe will be present with KLD to discuss the processes used to get to these specific examples; Preliminary Design Report (dated April 10, 2006) to be delivered electronically to the members for their review prior to the meeting

Legal Information Clearinghouse - Information about contract, potentially a demo website to show members functionality (tentative).

Public Access Portals - there is a conference in June; a tentative agenda will be made available to the members for their review and feedback; also future steps can also be outlined for their feedback; we will include a timeline for when draft documents will be submitted so we can send them out via email for feedback before finalizing the project.

Katrina Voting Assistance Relief - due to the limited amount of information that we can offer, EC strongly proposes eliminating this topic and substituting discussions on our Language Working Group meetings

Language Working Groups - the members will be updated on our two working group meetings and the information received at both, as well as our next steps for development of programs

Provisional Voting - a draft of the final report is to be delivered to the 4 C's by 5/11 for their review and feedback; product following 4C review will be available 5/17 for electronic distribution to board members

Poll Worker R T & R (including College Pollworker) - reports as they stand now are not ready to be presented, according the KLD; Peggy and Karen to communicate to project managers the need for a report by 5/11 for review by the 4 C's

Proposed Management Guidelines - Connie, Brit, and Brian to determine on 5/10 what materials are ready for presentation to board members; currently a 3 page overview briefing of guideline principles and a 20 page chapter on "security principles" have been prepared

Vote Count/Recount - materials to be delivered to board members include the public testimony given by Thad Hall and Doug Chapin at our Seattle public meeting and several case studies outlining examples. Peggy will discuss on 5/10 with Prof. Hall regarding other materials that may be presented.

EAC Election Day Survey - draft report with changes/updates highlighted and website application clips to
be presented (Ready).

Voting Fraud/Voter Intimidation - a summary of the preliminary research and initial feedback from the May 18 working group meeting offering brainstorming ideas, not formal advice.

NIST/TGDC activities - Allan Eustis states that NIST is working to provide their summary of materials to be provided, and that they will get that to us ASAP.

Voter Identification - a PowerPoint presentation outlining the process and a summary of findings. Peer review group to occur May 11th, with final Draft due the 15th. At this time, Commissioners can determine whether Draft Report is ready to submit to the SB and BOA.
Tom-

It is my understanding that Adam Ambrogi has been in touch with Ned Foley and, in turn, Dan Tokaji to indicate that you and Dan will present the information on the Voter ID project, while you and Ned will present the information on the Provisional Voting project.

Adam Ambrogi can also clarify your presentations. As I understand it, you will present your Voter ID and Provisional Voting projects to the Standards Board. You will then present your Voter ID and Provisional Voting Projects to the Board of Advisors.

I believe Adventure Travel handles hotel and travel arrangements.

I do not believe accommodations have been made for other members of the project team to attend. I will ask Adam Ambrogi, who is the principal point of contact on these meetings, to clarify this.

Regards-

Karen Lynn-Dyson

"Tom O'Neill" <tom_oneill@verizon.net>

Karen,

As we discussed last week, the Eagleton-Moritz team making the presentations at the advisory board meetings will include others in addition to Ned and me. While Ned and I will handle the briefing on the provisional voting report, the team for the briefing on the Voter ID report will include Dan Tokaji and Tim Vercellotti.
Just to understand what Adventure Travel is to provide: will its services include hotel reservations and travel, or does it have a more limited mission?

Thanks,

Tom O'Neill

Subject: Re: Travel arrangement for the EAC Board of Advisors and Standards Board meeting

Tom O' Neill and Ned Foley-

As you know you are scheduled to make two presentations to the EAC Board of Advisors and Standards Board on Tuesday May 23, 2006 from 2:30-4:00 PM (on Provisional Voting ) and on Wednesday ,May 24th from 1:40-2:45 PM ( on Voter Identification )

If you have not already done so, please make your hotel and travel arrangements through Adventure Travel, Judy Mays 205-444-4833 (judy.mays@adtrav.com)

These reservations should be made no later than tomorrow COB.

Please indicate to Judy Mays that you are a contractor, who is scheduled to make a presentation at the meeting.

Thanks

These are the only publicly released agendas yet-- The discussion, and modification that was done last week as to what products are being produced are not reflected-- but will in the final version. These were distributed because of numerous Staff questions as to time and place issues.

We'll forward around the final draft info when available.

Peggy- any word yet on what's up for Voting Fraud issue for the meeting(I know you have that WG in two days, but....)?
Thanks,
Adam

Margaret Sims/EAC/GOV

These agendas still indicate that draft reports on the Vote Count/Recount and the Voting Fraud-Voter Intimidation research projects will be presented for consideration. In neither case is this true. Reports from these projects are unavailable or not ready for prime time.

Thad Hall and Doug Chaping will have a PowerPoint presentation on the Vote Count/Recount project (and we can make copies of their testimony in Seattle available) and I will have a status report on the Voting Fraud-Voter Intimidation project for the boards. --- Peggy

Adam Ambrogi/EAC/GOV
Dear Staff
While the final version will be sent later this week, attached is the current agendas for the Standards and Advisory Boards, so the staff will know when (or if) they have to be present.

Thanks,
Adam Ambrogi
Tuesday, May 23, 2006

Noon – 1:15 P.M. LUNCHEON

Brief Welcoming Remarks
EAC Chairman Paul DeGregorio
Board of Advisors Chair Beverly Kaufman

EAC Staff Presentations:

Katrina Voting Assistance Relief (Edgardo Cortes);
Public Access Portals (Edgardo Cortes);
Legal On-Line Information Clearinghouse (Julie Thompson-Hodgkins);
Design for Democracy (improvements to ballot design, national voter registration mail-in form and polling place signage) (Karen Lynn-Dyson)

NOTE: The EAC Standards Board will be meeting simultaneously.

1:15 – 1:30 P.M. BREAK

1:30 – 2:30 P.M. BOARD OF ADVISORS PLENARY SESSION
Session Chair by Beverly Kaufman, Chair

- Appointment of Parliamentarian
- Call of Roll and Appointment of Proxy Committee
- Appointment of Resolutions Committee
- Review of Meeting Book Materials
- Report of Proxy Committee to establish voting strength
- Adoption of Agenda
- Adoption of Minutes of August 2005 Meeting
2:30 – 4:00 P.M. PRESENTATION AND CONSIDERATION OF DRAFT REPORT ON POLL WORKER RECRUITMENT, TRAINING AND RETENTION (INCLUDING COLLEGE POLL WORKERS)

Presenters:
Jennifer Collins-Foley, Pollworker Institute
Abby Horn, Cleveland State University
Resource Person: Karen Lynn-Dyson, EAC

4:00 – 4:15 P.M. BREAK

4:15 – 5:30 P.M. PRESENTATION AND CONSIDERATION OF DRAFT REPORT ON VOTE COUNT/RECOUNT

Presenters:
Dr. Thad Hall, Assistant Professor of Political Science, University of Utah
Doug Chapin, EAC Consultant
Resource Person: Julie Thompson-Hodgkins, EAC

NOTE: Attendees on their own for dinner.

Wednesday, May 24, 2006

8:00 – 8:30 A.M. CONTINENTAL BREAKFAST

8:30 – 9:15 A.M. PRESENTATION AND CONSIDERATION OF DRAFT REPORT ON PROVISIONAL VOTING

Presenters:

EAC Boards VF-VI Status Report.doc  Best Practices STANDARDS.ppt  Best Practices Advisors.ppt
Status Report on the
Voting Fraud-Voter Intimidation Research
Project

May 17, 2006
INTRODUCTION

Section 241 of the Help America Vote Act of 2002 (HAVA) requires EAC to conduct research on election administration issues. Among the tasks listed in the statute is the development of:

- nationwide statistics and methods of identifying, deterring, and investigating voting fraud in elections for Federal office [section 241(b)(6)]; and
- ways of identifying, deterring, and investigating methods of voter intimidation [section 241(b)(7)].

EAC's Board of Advisors recommended that the agency make research on these matters a high priority.

FOCUS OF CURRENT RESEARCH

In September 2005, the Commission hired two consultants with expertise in this subject matter, Job Serebrov and Tova Wang, to:

- develop a comprehensive description of what constitutes voting fraud and voter intimidation in the context of Federal elections;
- perform background research (including Federal and State administrative and case law review), identify current activities of key government agencies, civic and advocacy organizations regarding these topics, and deliver a summary of this research and all source documentation;
- establish a project working group, in consultation with EAC, composed of key individuals and representatives of organizations knowledgeable about the topics of voting fraud and voter intimidation;
- provide the description of what constitutes voting fraud and voter intimidation and the results of the preliminary research to the working group, and convene the working group to discuss potential avenues for future EAC research on this topic; and
- produce a report to EAC summarizing the findings of the preliminary research effort and working group deliberations that includes recommendations for future research, if any;

As of the date of this report, the consultants have drafted a definition of election fraud, reviewed relevant literature and reports, interviewed persons from government and private sectors with subject matter expertise, analyzed news reports of alleged election fraud, reviewed case law, and established a project working group.
DEFINITION OF ELECTION FRAUD

The consultants drafted a definition of election fraud that includes numerous aspects of voting fraud (including voter intimidation, which is considered a subset of voting fraud) and voter registration fraud, but excludes campaign finance violations and election administration mistakes. This draft will be discussed and probably refined by the project working group, which is scheduled to convene on May 18, 2006.

LITERATURE REVIEW

The consultants found many reports and books that describe anecdotes and draw broad conclusions from a large array of incidents. They found little research that is truly systematic or scientific. The most systematic look at fraud appears to be the report written by Lori Minnite, entitled “Securing the Vote: An Analysis of Election Fraud”. The most systematic look at voter intimidation appears to be the report by Laughlin McDonald, entitled “The New Poll Tax”. The consultants found that books written about this subject all seem to have a political bias and a pre-existing agenda that makes them somewhat less valuable.

Moreover, the consultants found that reports and books make allegations but, perhaps by their nature, have little follow up. As a result, it is difficult to know when something has remained in the stage of being an allegation and gone no further, or progressed to the point of being investigated or prosecuted or in any other way proven to be valid by an independent, neutral entity. This is true, for example, with respect to allegations of voter intimidation by civil rights organizations, and, with respect to fraud, John Fund’s frequently cited book, “Stealing Elections”.

Consultants found that researchers agree that measuring something like the incidence of fraud and intimidation in a scientifically legitimate way is extremely difficult from a methodological perspective and would require resources beyond the means of most social and political scientists. As a result, there is much more written on this topic by advocacy groups than social scientists.

Other items of note:

- There is as much evidence, and as much concern, about structural forms of disenfranchisement as about intentional abuse of the system. These include felon disenfranchisement, poor maintenance of databases and identification requirements.

- There is tremendous disagreement about the extent to which polling place fraud, e.g. double voting, intentional felon voting, noncitizen voting, is a serious problem. On balance, more researchers find it to be less of a problem than is commonly described in the political debate; but some reports say it is a major problem, albeit hard to identify.

EAC-3
• There is substantial concern across the board about absentee balloting and the opportunity it presents for fraud.

• Federal law governing election fraud and intimidation is varied and complex and yet may nonetheless be insufficient or subject to too many limitations to be as effective as it might be.

• Deceptive practices, e.g. targeted flyers and phone calls providing misinformation, were a major problem in 2004.

• Voter intimidation continues to be focused on minority communities, although the American Center for Voting Rights uniquely alleges it is focused on Republicans.

Recommendations

The consultants recommend that subsequent EAC research include a follow up study of allegations made in reports, books and newspaper articles. They also suggest that the research should focus on filling the gap between the lack of reports based on methodical studies by social or political scientists and the numerous, but less scientific, reports published by advocacy groups.

INTERVIEWS

The consultants jointly selected experts from the public and private sector for interviews. The consultants’ analysis of their discussions with these members of the legal, election official, advocacy, and academic communities follows.

Common Themes

• There is virtually universal agreement that absentee ballot fraud is the biggest problem, with vote buying and registration fraud coming in after that. The vote buying often comes in the form of payment for absentee ballots, although not always. Some absentee ballot fraud is part of an organized effort; some is by individuals, who sometimes are not even aware that what they are doing is illegal. Voter registration fraud seems to take the form of people signing up with false names. Registration fraud seems to be most common where people doing the registration were paid by the signature.

• There is widespread but not unanimous agreement that there is little polling place fraud, or at least much less than is claimed, including voter impersonation, “dead” voters, noncitizen voting and felon voters. Those few who believe it occurs often enough to be a concern say that it is impossible to show the extent to which it happens, but do point to instances in the press of such incidents. Most people believe that false registration forms have not resulted in polling place fraud,
although it may create the perception that vote fraud is possible. Those who believe there is more polling place fraud than reported/investigated/prosecuted believe that registration fraud does lead to fraudulent votes. Jason Torchinsky from the American Center for Voting Rights is the only interviewee who believes that polling place fraud is widespread and among the most significant problems in the system.

- Abuse of challenger laws and abusive challengers seem to be the biggest intimidation/suppression concerns, and many of those interviewed assert that the new identification requirements are the modern version of voter intimidation and suppression. However there is evidence of some continued outright intimidation and suppression, especially in some Native American communities. A number of people also raise the problem of poll workers engaging in harassment of minority voters. Other activities commonly raised were the issue of polling places being moved at the last moment, unequal distribution of voting machines, videotaping of voters at the polls, and targeted misinformation campaigns.

- Several people – including representatives from the Department of Justice (DOJ) - indicate that, for various reasons, DOJ is bringing fewer voter intimidation and suppression cases now, and has increased its focus on matters such as noncitizen voting, double voting, and felon voting. While DOJ’s Voting Section, Civil Rights Division, focuses on systemic patterns of malfeasance, the Election Crimes Branch, Public Integrity Section, has increased prosecutions of individual instances of felon, alien, and double voting at the same time as it maintains an aggressive pursuit of systematic schemes to corrupt the electoral process.

- The problem of badly kept voter registration lists, with both ineligible voters remaining on the rolls and eligible voters being taken off, remains a common concern. A few people are also troubled by voters being on registration lists in two states. They said that there was no evidence that this had led to double voting, but it opens the door to the possibility. There is great hope that full implementation of the new requirements of HAVA – done well, a major caveat – will reduce this problem dramatically.

**Common Recommendations:**

- Many of those interviewed recommend better poll worker training as the best way to improve the process; a few also recommended longer voting times or voting on days other than election day (such as weekends) but fewer polling places so only the best poll workers would be employed.

- Many interviewed support stronger criminal laws and increased enforcement of existing laws with respect to both fraud and intimidation. Advocates from across the spectrum expressed frustration with the failure of the Department of Justice to pursue complaints.
With respect to DOJ’s Voting Section, Civil Rights Division, John Tanner indicated that fewer cases are being brought because fewer are warranted – it has become increasingly difficult to know when allegations of intimidation and suppression are credible since it depends on one’s definition of intimidation, and because both parties are doing it. Moreover prior enforcement of the laws has now changed the entire landscape – race based problems are rare now. Although challenges based on race and unequal implementation of identification rules would be actionable, Mr. Tanner was unaware of such situations actually occurring and his office has not pursued any such cases.

Craig Donsanto of DOJ’s Election Crimes Branch, Public Integrity Section, says that while the number of election fraud related complaints have not gone up since 2002, nor has the proportion of legitimate to illegitimate claims of fraud, the number of cases DOJ is investigating and the number of indictments his office is pursuing are both up dramatically. Since 2002, DOJ has brought more cases against alien voters, felon voters and double voters than ever before. Mr. Donsanto would like more resources so that his agency can do more and would like to have laws that make it easier for the federal government to assume jurisdiction over voter fraud cases.

- A couple of interviewees recommend a new law that would make it easier to criminally prosecute people for intimidation even when there is not racial animus.
- Several advocate expanded monitoring of the polls, including some associated with the Department of Justice.
- Almost everyone hopes that administrators will maximize the potential of statewide voter registration databases to prevent fraud.
- Challenge laws, both with respect to pre-election day challenges and challengers at the polls, need to be revised by all states to ensure they are not used for purposes of wrongful disenfranchisement and harassment.
- Several people advocate passage of Senator Barak Obama’s “deceptive practices” bill.
- There is a split on whether it would be helpful to have nonpartisan election officials – some indicated they thought even if elections officials are elected as non partisan officials, they will carry out their duties in biased ways nonetheless. However, most agree that elections officials pursuing partisan agendas are a problem that must be addressed in some fashion. Suggestions included moving election responsibilities out of the secretary of states’ office; increasing transparency in the process; and enacting conflict of interest rules.
- A few recommend returning to allowing use of absentee ballots “for cause” only if it were politically feasible.
• A few recommend enacting a national identification card, including Pat Rogers, an attorney in New Mexico, and Jason Torchinsky from ACVR, who advocates the proposal in the Carter-Baker Commission Report.

• A couple of interviewees indicated the need for clear standards for the distribution of voting machines

NEWS ARTICLES

Consultants conducted a Nexis search of related news articles published between January 1, 2001 and January 1, 2006. A systematic, numerical analysis of the data collected during this review is currently being prepared. What follows is an overview of these articles provided by the consultants.

Absentee Ballots

According to press reports, absentee ballots are abused in a variety of ways:

• Campaign workers, candidates and others coerce the voting choices of vulnerable populations, usually elderly voters.

• Workers for groups and individuals have attempted to vote absentee in the names of the deceased.

• Workers for groups, campaign workers and individuals have attempted to forge the names of other voters on absentee ballot requests and absentee ballots and thus vote multiple times.

It is unclear how often actual convictions result from these activities (a handful of articles indicate convictions and guilty pleas), but this is an area in which there have been a substantial number of official investigations and actual charges filed, according to news reports where such information is available. A few of the allegations became part of civil court proceedings contesting the outcome of the election.

While absentee fraud allegations turn up throughout the country, a few states have had several such cases. Especially of note are Indiana, New Jersey, South Dakota, and most particularly, Texas. Interestingly, there were no articles regarding Oregon, where the entire system is vote by mail.
Voter Registration Fraud

According to press reports, the following types of allegations of voter registration fraud are most common:

- Registering in the name of dead people;
- Fake names and other information on voter registration forms;
- Illegitimate addresses used on voter registration forms;
- Voters being tricked into registering for a particular party under false pretenses;
- Destruction of voter registration forms depending on the party the voter registered with.

There was only one self evident instance of a noncitizen registering to vote. Many of the instances reported included official investigations and charges filed, but few actual convictions, at least from the news reporting. There have been multiple reports of registration fraud in California, Colorado, Florida, Missouri, New York, North Carolina, Ohio, South Dakota and Wisconsin.

Voter Intimidation and Suppression

This is the area which had the most articles, in part because there were so many allegations of intimidation and suppression during the 2004 election. Most of these remained allegations and no criminal investigation or prosecution ensued. Some of the cases did end up in civil litigation.

This is not to say that these alleged activities were confined to 2004 – there were several allegations made during every year studied. Most notable were the high number of allegations of voter intimidation and harassment reported during the 2003 Philadelphia mayoral race.

A very high number of the articles were about the issue of challenges to voters’ registration status and challengers at the polling places. There were many allegations that planned challenge activities were targeted at minority communities. Some of the challenges were concentrated in immigrant communities.

However, the tactics alleged varied greatly. The types of activities discussed also include the following:

- Photographing or videotaping voters coming out of polling places;
- Improper demands for identification;
• Poll watchers harassing voters;
• Poll workers being hostile to or aggressively challenging voters;
• Disproportionate police presence;
• Poll watchers wearing clothes with messages that seemed intended to intimidate; and
• Insufficient voting machines and unmanageably long lines.

Although the incidents reported on occurred everywhere, not surprisingly, many came from “battleground” states. There were several such reports out of Florida, Ohio and Pennsylvania.

“Dead Voters and Multiple Voting”

There were a high number of articles about people voting in the names of the dead and voting more than once. Many of these articles were marked by allegations of big numbers of people committing these frauds, and relatively few of these allegations turning out to be accurate according to investigations by the newspapers themselves, elections officials, and criminal investigators. Often the problem turned out to be a result of administrative error, poll workers mis-marking voter lists, a flawed registration list and/or errors made in the attempt to match names of voters on the list with the names of the people who voted. In a good number of cases, there were allegations that charges of double voting by political leaders were an effort to scare people away from the voting process.

Nonetheless there were a few cases of people actually being charged and/or convicted for these kinds of activities. Most of the cases involved a person voting both by absentee ballot and in person. A few instances involved people voting both during early voting and on Election Day, which calls into question the proper marking and maintenance of the voting lists. In many instances, the person charged claimed not to have voted twice on purpose. A very small handful of cases involved a voter voting in more than one county and there was one substantiated case involving a person voting in more than one state. Other instances in which such efforts were alleged were disproved by officials.

In the case of voting in the name of a dead person, the problem lay in the voter registration list not being properly maintained, i.e. the person was still on the registration list as eligible to vote, and a person took criminal advantage of that. In total, the San Francisco Chronicle found five such cases in March 2004; the AP cited a newspaper analysis of five such persons in an Indiana primary in May 2004; and a senate committee found two people to have voted in the names of the dead in 2005.
As usual, there were a disproportionate number of such articles coming out of Florida. Notably, there were three articles out of Oregon, which has one hundred percent vote-by-mail.

**Vote Buying**

There were a surprising number of articles about vote buying cases. A few of these instances involved long-time investigations concentrated in three states (Illinois, Kentucky, and West Virginia). There were more official investigations, indictments and convictions/pleas in this area.

**Deceptive Practices**

In 2004 there were numerous reports of intentional disinformation about voting eligibility and the voting process meant to confuse voters about their rights and when and where to vote. Misinformation came in the form of flyers, phone calls, letters, and even people going door to door. Many of the efforts were reportedly targeted at minority communities. A disproportionate number of them came from key battleground states, particularly Florida, Ohio, and Pennsylvania. From the news reports found, only one of these instances was officially investigated, the case in Oregon involving the destruction of completed voter registration applications. There were no reports of prosecutions or any other legal proceeding.

**Non-citizen Voting**

There were surprisingly few articles regarding noncitizen registration and voting – just seven all together, in seven different states across the country. They were also evenly split between allegations of noncitizens registering and noncitizens voting. In one case, charges were filed against ten individuals. In another case, a judge in a civil suit found there was illegal noncitizen voting. Three instances prompted official investigations. Two cases, from this Nexis search, remained just allegations of noncitizen voting.

**Felon Voting**

Although there were only thirteen cases of felon voting, some of them involved large numbers of voters. Most notably, of course, are the cases that came to light in the Washington gubernatorial election contest (see Washington summary) and in Wisconsin (see Wisconsin summary). In several states, the main problem was the large number of ineligible felons that remained on the voting list.

**Election Official Fraud**

In most of the cases in which fraud by elections officials is suspected or alleged, it is difficult to determine whether it is incompetence or a crime. There are several cases of ballots gone missing, ballots unaccounted for and ballots ending up in a worker’s possession. In two cases workers were said to have changed peoples’ votes. The one
instance in which widespread ballot box stuffing by elections workers was alleged was in Washington State. The judge in the civil trial of that election contest did not find that elections workers had committed fraud. Four of the cases are from Texas.

**Recommendation**

The consultants recommend that subsequent EAC research should include a Nexis search that specifically attempts to follow up on the cases for which no resolution is evident from this particular initial search.

**CASE LAW RESEARCH**

After reviewing over 40,000 cases from 2000 to the present, the majority of which came from appeals courts, the consultants found comparatively few applicable to this study. Of those that were applicable, the consultants found that no apparent thematic pattern emerges. However, it appears to them that the greatest areas of fraud and intimidation have shifted from past patterns of stealing votes to present problems with voter registration, voter identification, the proper delivery and counting of absentee and overseas ballots, provisional voting, vote buying, and challenges to felon eligibility.

**Recommendation**

Because so few cases provided a picture of these current problems, consultants suggest that subsequent EAC research include a review of state trial-level decisions.

**PROJECT WORKING GROUP**

Consultants and EAC worked together to select members for the Voting Fraud-Voter Intimidation Working Group that included election officials and representatives of advocacy groups and the legal community who have an interest and expertise in the subject matter. (See Attachment A for a list of members.) The working group is scheduled to convene at EAC offices on May 18, 2006 to consider the results of the preliminary research and to offer ideas for future EAC activities concerning this subject.

**FINAL REPORT**

After convening the project working group, the consultants will draft a final report summarizing the results of their research and the working group deliberations. This report will include recommendations for future EAC research related to this subject matter. The draft report will be reviewed by EAC and, after obtaining any clarifications or corrections deemed necessary, will be made available to the EAC Standards Board and EAC Board of Advisors for review and comment. Following this, a final report will be prepared.

Voting Fraud-Voter Intimidation Project Working Group

The Honorable Todd Rokita
Indiana Secretary of State
Member, EAC Standards Board and the Executive Board of the Standards Board

Kathy Rogers
Georgia Director of Elections, Office of the Secretary of State
Member, EAC Standards Board

J.R. Perez
Guadalupe County Elections Administrator, TX

Barbara Arnwine
Executive Director, Lawyers Committee for Civil Rights Under Law
Leader of Election Protection Coalition
(To be represented at May 18, 2006 meeting by Jon M. Greenbaum, Director of the Voting Rights Project for the Lawyers Committee for Civil Rights Under Law)

Robert Bauer
Chair of the Political Law Practice at the law firm of Perkins Coie, DC
National Counsel for Voter Protection, Democratic National Committee

Benjamin L. Ginsberg
Partner, Patton Boggs LLP
Counsel to national Republican campaign committees and Republican candidates

Mark (Thor) Hearne II
Partner-Member, Lathrop & Gage, St Louis, MO
National Counsel to the American Center for Voting Rights

Barry Weinberg
Former Deputy Chief and Acting Chief, Voting Section, Civil Rights Division, U.S. Department of Justice

EAC Invited Technical Advisor:

Craig Donsanto
Director, Election Crimes Branch, U.S. Department of Justice
Best Practices in Vote Counts, Recounts, and Challenges

Presentation to
EAC Standards Board
May 24, 2006
Research Team

- Thad Hall, University of Utah
- R. Michael Alvarez, Caltech
- Kim Brace, Election Data Services
- Doug Chapin, electionline.org
Requirement for Study

- Section 241 of the HAVA requires the EAC to conduct a study examining vote counting and recounting.
- Identify methodology for studying best practices
- Examine election laws and regulations in all 50 states and the District
Study Overview

- Identified best practice methodologies
- Developed criteria for evaluating practices
- Presented the most common practices for vote counting and recounts.
- Identified "benchmark" practices that exceed the most common practices in states.
- Identified best practices for vote counts and recounts that have been implemented.
Criteria for Studying Vote Counting and Recounting
GAO Best Practice Methodology

- Document existing process
- Research literature; talk to practitioners and experts
- Select comparative entities for review
- Collect data from selected entities
- Identify barriers to change
- Compare/contrast processes; develop implementation recommendations
Best Practice Study

- Researched existing literature on vote counting
- Developed baseline of existing activity
- Developed benchmarks for practices that exceed baseline
- Identified potential best practices for review by the EAC Commissioners
- States and localities have to do the hard work: Implementation
International Principles for Vote Counting

IFES, (IDEA), and the United Nations election project states:

to establish and maintain public confidence in the electoral process, vote counting systems and procedures should incorporate the [eight] fundamental principles of vote counting in a democratic election.
Eight Principles for Vote Counting

- Transparency
- Security
- Professionalism
- Accuracy
- Secrecy
- Timeliness
- Accountability
- Equality
**Common International Practice**

- All ballots should be reconciled against the number of voters who cast ballots.
- Ballots are initially counted at the precinct where the vote was cast.
- There are explicit legal requirements for securing ballots.
- Recounts are allowed by request; five countries conduct 100 percent audits.
- Convenience voting is everywhere.
Evaluating State Practices in Statute and Regulation
Developing National Baseline

- Survey of state laws and regulations
  - Security
  - Pre-election procedures
  - Election ballot procedures
  - End of Election Procedures
  - Definition of "What Constitutes A Vote"
  - Counting and Accounting
  - Recounting
  - Challenges
Developing National Baseline

- Survey of state laws and regulations
  - Identified Specific Questions
  - Reviewed Survey with EAC, Election Officials, and Outside Experts

- Collected Data
  - Statutory or Regulatory Language
  - Legal Citation
Key Findings

- Three issues with great variation in coherence and completeness
  - Ballot Accounting
  - Ballot Security
  - What Constitutes a Vote
Survey Next Steps

- Each report is being carefully reviewed and edited

- Submit surveys to states for review

- States will have interactive online survey form to note problems
Benchmarking Election Law
Benchmarking

- Common in public and private sectors
- How does your performance stack up to similar organizations? OR
- How does your performance stack up to a pre-selected target?

- GOAL: Think about your practices.
Benchmarking Practices

- Using the survey data, we have identified most common practices
- For many activities, we will propose "benchmark" practices
  - Clearer,
  - More detailed, or
  - More comprehensive
Benchmarking Example: Ballot Accounting

- Most Common Practice: No Standard
- Benchmark: The counting board shall count all ballots to ensure that the total number of ballots corresponds with the total number of names in the poll book. If [they] cannot reconcile... [they] shall submit... a written report stating how many ballots were missing or in excess and any reason ...for the discrepancy.
Benchmarking Limitations

- Not all activities can be benchmarked
- Some activities reflect political and cultural decisions by the state. For example:
  - Absentee voting
  - Handling of recounts and challenges
Best Practices in Election Law
What are Best Practices

- Best practices refer to the processes, practices, and systems identified in organizations that performed exceptionally well and are widely recognized as improving an organization's performance and efficiency in specific areas.
Effective Best Practices

- Address a complete process
- Have been carefully charted
- Often come from organizations with similar characteristics
Best Practices Examined

- What Constitutes a Vote
- Accounting
- Auditing
- Security
- Transparency

- Issues in Challenges and Recounts
Best Practices in Vote Counts, Recounts, and Challenges

I am told that a Wordperfect copy of the Provisional document will be fine.

EAC staff will convert it to a PDF file. Please sent the final drafts of the reports ASAP.

Also, you are correct to note the changes in the time allotments. Please divide the time among your staff as you deem appropriate.

K

Karen Lynn-Dyson
Research Manager
U.S. Election Assistance Commission
1225 New York Avenue, NW Suite 1100
Washington, DC 20005
tel:202-566-3123

Karen, I don’t have the capacity to produce a PDF copy of the report. (I thought we discussed this last week and you agreed that the word document would suffice.) Someone at Eagleton could surely covert the DOC file to PDF, but since I just read your email now (4:50), we could not provide a PDF copy today. Please let me know if you want me to pursue this tomorrow.

Thanks for the schedule below. But it raises a question. Earlier this week you told me that the Commissioners asked that we limit our presentation to 10 minutes and leave the rest of the time for questions and comments. As I noted in my response, condensing our reports to 10 minutes poses a challenge. Is the 10 minute limit no longer operative?

Tom O’Neill
Tom-

Look forward to getting a PDF copy of the final versions of the Voter ID paper and the Provisional Voting Paper by COB today.

Here is the timing breakdown for next week's presentations:

**EAC Standards Board (137 members)**

- **Tuesday, May 23, 2006**
  - 2:30-4:00 PM
  - Hamilton Ballroom
  - Provisional Voting
  - 45 minutes for presentation
  - 45 minutes for questions and answers

- **Wednesday, May 24, 2006**
  - 1:40-2:45 PM
  - Hamilton Ballroom
  - Voter Identification
  - 40 minutes for presentation
  - 25 minutes questions and answers

**EAC Board of Advisors (36 members)**

- **Wednesday, May 24, 2006**
  - 8:30-9:15 AM
  - Lafayette Park Ballroom
  - Provisional Voting
  - 20 minutes for presentation
  - 25 minutes questions and answers

- **Wednesday, May 24, 2006**
  - 11:00-11:55 PM
  - Lafayette Ballroom
  - Voter Identification
  - 30 minutes presentation
  - 25 minutes questions and answers

**EAC General Counsel Julie Thompson - Hodgkins will facilitate/moderate all of your sessions**

Will be in touch tomorrow after the Commissioners have met.
Here is the report to be included

Subject PV Final Draft for Review by Advisory and Standards Boards

Karen,

Attached is the Final Draft of our report on Provisional Voting for review by the Advisory Board and the Standards Board. I understand from our conversation earlier today that it will be reviewed by the Commissioners at their meeting next week, and, if approved by them, distributed to the boards in advance of their meetings on May 23 and 24. This report will form the basis of our PowerPoint briefing for the boards at those meetings. I will not have hard copies of those PowerPoint presentations for distribution to the boards until the day of the meeting.

We intend to have the Final Draft Voter ID Report to you in time for review by the Commissioners at their second meeting next week.

Thanks for your guidance.

Tom O'Neill

The Research Team

This research report on Provisional Voting in the 2004 election is part of a broader analysis that also includes a study of Voter Identification Requirements, a report on which is forthcoming. Conducting the work was a consortium of The Eagleton Institute of Politics of Rutgers, The State University of New Jersey, and The Moritz College of Law of The Ohio State University.

The Eagleton Institute explores state and national politics through research, education, and public service, linking the study of politics with its day-to-day practice. It focuses attention on how contemporary political systems work, how they change, and how they might work better. Eagleton regularly undertakes projects to enhance political understanding and involvement, often in collaboration with government agencies, the media, non-profit groups, and other academic institutions.

The Moritz College of Law has served the citizens of Ohio and the nation since its establishment in 1891. It has played a leading role in the legal profession through countless contributions made by graduates and faculty. Its contributions to election law have become well known through its Election Law @ Moritz website. Election Law @ Moritz illuminates public understanding of election law and its role in our nation's democracy.

The Peer Review Group improved the quality of our work by critiquing drafts of our analysis, conclusions and recommendations. While the Group as a whole and the comments of its members individually contributed generously to the research effort, any errors of fact or weaknesses in inference are the responsibility of the Eagleton-Moritz research team. The members of the Peer Review Group do not necessarily share the views reflected in the policy recommendations of the report.
EXECUTIVE SUMMARY

Background and Methodology

This report to the United States Election Assistance Commission (EAC) presents recommendations for best practices to improve the process of provisional voting. It is based on research conducted by the Eagleton Institute of Politics at Rutgers, the State University of New Jersey, and the Moritz College of Law at Ohio State University under contract to the EAC, dated May 24, 2005.

The Help America Vote Act of 2002 (HAVA, Public Law 107-252) authorizes the EAC (SEC. 241, 42 USC 15381) to conduct periodic studies of election administration issues. The purpose of these studies is to promote methods for voting and administering elections, including provisional voting, that are convenient, accessible and easy to use; that yield accurate, secure and expeditious voting systems; that afford each registered and eligible voter an equal opportunity to vote and to have that vote counted; and that are efficient. Section 302(a) of HAVA required states to establish provisional balloting procedures by January 2004. The process HAVA outlined left considerable room for variation among the states, arguably including such critical questions as who qualifies as a registered voter eligible to cast a provisional ballot that will be counted and in what jurisdiction (precinct or larger unit) the ballot must be cast in order to be counted.

The general requirement for provisional voting is that, if a registered voter appears at a polling place to vote in an election for Federal office, but either the potential voter’s name does not appear on the official list of eligible voters for the polling place, or an election official asserts that the individual is not eligible to vote, that potential voter must be permitted to cast a provisional ballot. In some states, those who should receive a provisional ballot include, in the words of the EAC’s Election Day Survey, “first-time voters who registered by mail without identification and cannot provide identification, as required under HAVA…” HAVA also provides that those who vote pursuant to a court order keeping the polls open after the established closing hour shall vote by provisional ballot. Election administrators are required by HAVA to notify individuals of their opportunity to cast a provisional ballot.

---

1 The Election Center’s National Task Force Report on Election Reform in July 2001 had described provisional ballots as providing “voters whose registration status cannot be determined at the polls or verified at the election office the opportunity to vote. The validity of these ballots is determined later, thus ensuring that no eligible voter is turned away and those truly ineligible will not have their ballots counted.” It recommended “in the absence of election day registration or other solutions to address registration questions, provisional ballots must be adopted by all jurisdictions.” See www.electioncenter.org.

2 The 2004 election saw at least a dozen suits filed on the issue of whether votes cast in the wrong precinct but the correct county should be counted. One federal circuit court decided the issue in Sandusky County Democratic Party v. Blackwell, 387 F.3d565 (6th Cir. 2004), which held that votes cast outside the correct precinct did not have to be counted. The court relied on the presumption that Congress must be clear in order to alter the state-federal balance; thus Congress, the court concluded would have been clearer had it intended to eliminate state control over polling location (387 F.3d at 578). An alternative argument, that HAVA’s definition of “jurisdiction” incorporates the broader definition in the National Voting Rights Act, however, has not been settled by a higher court. But for now states do seem to have discretion in how they define “jurisdiction” for the purpose of counting a provisional ballot.

3 The definition of who was entitled to a provisional ballot could differ significantly among the states. In California, for example, the Secretary of State directed counties to provide voters with the option of voting on a provisional paper ballot if they felt uncomfortable casting votes on the paperless e-voting machines. “I don’t want a voter to not vote on Election Day because the only option before them is a touch-screen voting machine. I want that voter to have the confidence that he or she can vote on paper and have the confidence that their vote was cast as marked,” Secretary Shelley said. See http://wired.com/news/evote/0,2645,63298,00.html. (Our analysis revealed no differences in the use of provisional ballots in the counties with these paperless e-voting machines.) In Ohio, long lines at some polling places resulted in legal action directing that voters waiting in line be given provisional ballots to enable them to vote before the polls closed. (Columbus Dispatch, November 3, 2004.)
Our research began in late May 2005. It focused on six key questions raised by the EAC.

1. How did the states prepare for the onset of the HAVA provisional ballot requirement?
2. How did this vary between states that had previously had some form of provisional ballot and those that did not?
3. How did litigation affect implementation?
4. How effective was provisional voting in enfranchising qualified voters?
5. Did state and local processes provide for consistent counting of provisional ballots?
6. Did local election officials have a clear understanding of how to implement provisional voting?

To answer those questions, we:

1. Surveyed 400 local (mostly county) election officials to learn their views about the administration of provisional voting and to gain insights into their experience in the 2004 election.
2. Reviewed the EAC's Election Day Survey, news and other published reports in all 50 states to understand the local background of provisional voting and develop leads for detailed analysis.
3. Analyzed statistically provisional voting data from the 2004 election to determine associations between the use of provisional voting and such variables as states' experience with provisional voting, use of statewide registration databases, counting out-of-precinct ballots, and use of different approaches to voter identification.
4. Collected and reviewed the provisional voting statutes and regulations in all 50 states.
5. Analyzed litigation affecting provisional voting or growing out of disputes over provisional voting in all states.

Our research is intended to provide EAC with a strategy to engage the states in a continuing effort to strengthen the provisional voting process and increase the consistency with which provisional voting is administered, particularly within a state. As EAC and the states move forward to assess and adopt the recommendations made here, provisional voting merits continuing observation and research. The situation is fluid. As states, particularly those states that did not offer a provisional ballot before 2004, gain greater experience with the process and as statewide voter databases are adopted, the provisional voting process will demand further, research-based refinement.

KEY FINDINGS

Variation among the states
In the 2004 election, nationwide about 1.9 million votes, or 1.6% of turnout, were cast as provisional ballots. More than 1.2 million, or just over 63%, were counted. Provisional ballots accounted for a little more than 1% of the final vote tally. These totals obscure the wide variation in provisional voting among the states.  

4 Attachment 1 provides detailed information on how this study classifies the states according to the characteristics of their provisional voting procedures. It also describes how the data used in the statistical analysis may differ from the data in the Election Day Survey, which became available as our research was concluding. 

5 HAVA allows the states considerable latitude in how to implement provisional voting, including deciding who beyond the required categories of voters should receive provisional ballots and how to determine which provisional ballots should be counted.
Six states accounted for two-thirds of all the provisional ballots cast.\textsuperscript{6}

The percentage of provisional ballots in the total vote varied by a factor of 1,000 -- from a high of 7\% in Alaska to Vermont's 0.006\%.

The portion of provisional ballots cast that were counted ranged from 96\% in Alaska to 6\% in Delaware.

States with voter registration databases counted, on average, 20\% of the provisional ballots cast.

States without databases counted ballots at more than twice that rate: 44\%.\textsuperscript{7}

States that provided more time to evaluate provisional ballots counted a greater proportion of those ballots. Those that provided less than one week counted an average of 35.4\% of their ballots, while states that permitted more than 2 weeks, counted 60.8\%.

An important source of variation among states was a state's previous experience with provisional voting. The share of provisional ballots in the total vote was six times greater in states that had used provisional ballots before than in states where the provisional ballot was new. In the 25 states that had some experience with provisional voting before HAVA, a higher portion of the total vote was cast as provisional ballots and a greater percentage of the provisional ballots cast were counted than in the 18 new to provisional balloting.\textsuperscript{8}

Variation within states
Within states, too, there was little consistency among different jurisdictions. Of the 20 states for which we have county-level provisional ballot data, the rate of counting provisional ballots varied by as much as 90\% to 100\% among counties in the same state. This suggests that additional factors (including the training of election judges or poll workers) beyond statewide factors, such as experience or the existence of voter registration databases, also influence the use of provisional ballots.

In Ohio some counties counted provisional ballots not cast in the assigned precinct even though the state’s policy was to count only those ballots cast in the correct precinct.

Some counties in Washington tracked down voters who would otherwise have had their provisional ballots rejected because they had failed to complete part of their registration form, gave them the chance to correct those omissions, and then counted the provisional ballot.

Resources available to administer provisional voting varied considerably among and within states. Differences in demographics and resources result in different experiences with provisional voting. For example, the Election Day Survey found that staffing problems appeared to be particularly acute for jurisdictions in the lowest income and education categories. Small, rural jurisdictions and large, urban jurisdictions tended to report higher rates of an inadequate number of poll workers within polling places or precincts.

Jurisdictions with lower education and income tend to report more inactive voter registrations, lower turnout, and more provisional ballots cast.

\textsuperscript{6} California, New York, Ohio, Arizona, Washington, and North Carolina. The appearance of Arizona, Washington and North Carolina on this list shows that the number of provisional ballots cast depends on factors other than the size of the population.

\textsuperscript{7} As the Carter-Baker Commission report put it, “provisional ballots were needed half as often in states with unified databases as in states without.” Report on the Commission on Federal Election Reform, “Building Confidence in U. S. Elections,” September 2005, p. 16.

\textsuperscript{8} See the appendix for our classification of “old” and “new” states and explanation of why the total is less than.
Jurisdictions with higher levels of income and education reported higher average numbers of poll workers per polling place or precinct and reported lower rates of staffing problems per precinct.

In precincts located in districts where many voters live in poverty and have low levels of income and education, the voting process, in general, may be managed poorly. Provisional ballots cannot be expected to work much better. In these areas, the focus should be on broader measures to improve the overall functionality of struggling voting districts, although improving the management of provisional balloting may help at the margin.

The lessons of litigation
Successful legal challenges highlight areas where provisional voting procedures were wanting. A flurry of litigation occurred around the country in October 2004 concerning the so-called “wrong precinct issue” — whether provisional ballots cast by voters in a precinct other than their designated one would be counted for statewide races. Most courts, including the U.S. Court of Appeals for the Sixth Circuit (the only federal appeals court to rule on the issue), rejected the contention that HAVA requires the counting of these wrong-precinct provisional ballots. This litigation was significant nonetheless.

- First, the Sixth Circuit decision established the precedent that voters have the right to sue in federal court to remedy violations of HAVA.
- Second --and significantly-- the litigation clarified the right of voters to receive provisional ballots, even though the election officials were certain they would not be counted. The decision also defined an ancillary right --the right to be directed to the correct precinct. There voters could cast a regular ballot that would be counted. If they insisted on casting a provisional ballot in the wrong precinct, they would be on notice that it would be a symbolic gesture only.
- Third, these lawsuits prompted election officials to take better care in instructing precinct officials on how to notify voters about the need to go to the correct precinct in order to cast a countable ballot.

States move to improve their processes
Shortly after the 2004 election, several states came to the conclusion that the administration of their provisional voting procedures needed to be improved, and they amended their statutes. The new legislation highlights areas of particular concern to states about their provisional voting process.

- Florida, Indiana, Virginia, and Washington have clarified or extended the timeline to evaluate the ballots.
- Colorado, New Mexico, North Carolina, and Washington have passed legislation focused on improving the efficacy and consistency of the voting and counting process.
- Colorado, Arkansas, and North Dakota took up the issue of counting provisional ballots cast in the wrong precinct.

The wide variation in the implementation of provisional voting among and within states suggests that EAC can help states strengthen their processes. Research-based recommendations for best, or at least better, practices that draw on the experience gained in the 2004 election can be useful in states’ efforts to achieve greater consistency in the administration of provisional voting. The important effect of experience on the administration of the provisional ballot process indicates that the states have much they can learn from each other.
SUMMARY OF RECOMMENDATIONS FOR BEST PRACTICES

State efforts to improve the provisional voting process have been underway since the 2004 election. By recommending best practices, the EAC will offer informed advice while respecting diversity among the states.

Take a quality-improvement approach
Defining what constitutes a successful provisional voting system is difficult. Defining quality requires a broad perspective about how well the system works, how open it is to error recognition and correction, and how well provisional voting processes are connected to the registration and voter identification regimes. A first step is for states to recognize that improving quality begins with seeing the provisional voting process as a system and taking a systems approach to regular evaluation through standardized metrics with explicit goals for performance. EAC can facilitate action by the states by recommending as a best practice that:

- Each state collect data systematically on the provisional voting process to permit evaluation of its voting system and assess changes from one election to the next. The data collected should include: provisional votes cast and counted by county; reasons why provisional ballots were not counted, measures of variance among jurisdictions, and time required to evaluate ballots by jurisdiction.

Emphasize the importance of clarity
Above all else, the EAC should emphasize the importance of clarity in the rules by which each state governs provisional voting. As state legislators and election officials prepare for the 2006 election, answers to the questions listed in the recommendation section of this report could be helpful. Among those questions are:

- Does the provisional voting system distribute, collect, record, and tally provisional ballots with sufficient accuracy to be seen as procedurally legitimate by both supporters and opponents of the winning candidate?
- Do the procedural requirements of the system permit cost-efficient operation?
- How great is the variation in the use of provisional voting in counties or equivalent levels of voting jurisdiction within the state? Is the variation great enough to cause concern that the system may not be administered uniformly across the state?

Court decisions suggest areas for action
The court decisions following the 2004 election also suggest procedures for states to incorporate into their procedures for provisional voting. EAC should recommend to the states that they:

- Promulgate clear standards for evaluating provisional ballots, and provide training for the officials who will apply those standards.
- Provide effective materials to be used by local jurisdictions in training poll workers on such procedures as how to locate polling places for potential voters who show up at the wrong place.
- Make clear that the only permissible requirement to obtain a provisional ballot is an affirmation that the voter is registered in the jurisdiction and eligible to vote in an election for federal office. Poll workers need appropriate training to understand their duty to give such voters a provisional ballot.

Assess each stage of the provisional voting process
Beyond the procedures suggested by court decisions, states should assess each stage of the provisional voting process. They can begin by assessing the utility and clarity of the information for voters on their websites and by considering what information might be added to sample ballots mailed to voters before elections. The better voters understand their rights and obligations, the easier the system will be to manage, and the more legitimate the appearance of the process.

Avoiding error at the polling place will allow more voters to cast a regular ballot and all others who request it to cast a provisional ballot. Our recommendations for best practices to avoid error at the polling place include:

- The layout and staffing of the multi-precinct polling place is important. States should ensure that training materials distributed to every jurisdiction make poll workers familiar with the options available to voters.
- The provisional ballot should be of a design or color sufficiently different from a regular ballot to avoid confusion over counting and include take-away information for the voter on the steps in the ballot evaluation process.
- Because provisional ballots offer a fail-safe, supplies of the ballots at each polling place should be sufficient for all the potential voters likely to need them. Best practice would be for states should provide guidelines (as do Connecticut and Delaware) to estimate the supply of provisional ballots needed at each polling place.

The clarity of criteria for evaluating voter eligibility is critical to a sound process for deciding which of the cast provisional ballots should be counted.

- State statutes or regulations should define a reasonable period for voters who lack the HAVA-specified ID or other information bearing on their eligibility to provide it in order to facilitate the state's ability to verify that the person casting the provisional ballot is the same one who registered. At least 11 states allow voters to provide ID or other information one to 13 days after voting. Kansas allows voters to proffer their ID by electronic means or by mail, as well as in person.
- More provisional voters have their ballots counted in those states that count ballots cast outside the correct precinct. While HAVA arguably leaves this decision up to the states, pointing out the effect of the narrower definition on the portion of ballots counted could be useful to the states in deciding this question. States should be aware, however, of the additional burden placed on the ballot-evaluation process when out-of-precinct ballots are considered. And tradeoffs are involved if out-of-precinct voters are unable to vote for the local offices that might appear on the ballot in their district of residence.
- If a state does require voters to appear at their assigned precinct, where the same polling site serves more than one precinct, a voter's provisional ballot should count so long as the voter cast that ballot at the correct polling site even if at the wrong precinct within that location. While the best practice might be for poll workers to direct the voter to correct precinct poll workers' advice is not always correct, and the voter should be protect against ministerial error.
- Officials should follow a written procedure, and perhaps a checklist, to identify the reason why a provisional ballot is rejected. Colorado's election rules offer particularly clear guidance to the official evaluating a provisional ballot.

In verifying provisional ballots, the time by which election officials must make their eligibility determinations is particularly important in presidential elections because of the need to certify electors to the Electoral College. Our research did not identify an optimum division of the five weeks available.
The best practice here is for states to consider the issue and make a careful decision about how to complete all steps in the evaluation of ballots and challenges to those determinations within the five weeks available.

After the election, timely information to voters about the disposition of their provisional ballot can enable voters to determine if they are registered for future elections and, if not, what they need to do to become registered.

Best practice for the states is to establish mechanisms to ensure that voters casting provisional ballots are informed whether they are now registered for future elections and, if not, what they need to do to become registered.

Final observation
The detailed examination of each stage in the provisional voting process can lay the foundation each state needs to improve its system. Efforts to improve provisional voting may be most effective as part of a broader effort by state and local election officials to strengthen their systems. Collecting and analyzing data about those systems will enable states to identify which aspects of the registration and electoral system are most important in shunting voters into the provisional ballot process. Responsible officials can then look to their registration system, identification requirements or poll worker training as ways to reduce the need for voters to cast their ballots provisionally.
Provisional Voting in 2004

In the 2004 election, nationwide about 1.9 million votes, or 1.6% of turnout, were cast as provisional ballots. More than 1.2 million or just over 63% were counted. Provisional ballots accounted for a little more than 1% of the final vote tally.

These totals obscure the wide variation in provisional voting among the states. Six states accounted for two-thirds of all the provisional ballots cast. State by state, the percentage of provisional ballots in the total vote varied by a factor of 1,000 -- from a high of 7% in Alaska to Vermont's 0.006%. The portion of provisional ballots cast that were actually counted also displayed wide variation, ranging from 96% in Alaska to 6% in Delaware. States with voter registration databases counted, on average, 20% of the provisional ballots cast. Those without databases counted provisional ballots at more than twice that rate, 44%.

An important source of variation was a state's previous experience with provisional voting. The share of provisional ballots in the total vote was six times greater in states that had used provisional ballots before than in states where the provisional ballot was new. In the 25 states that had some experience with provisional voting before HAVA, a higher portion of the total vote was cast as provisional ballots and a greater percentage of the provisional ballots cast were counted than in the 18 new to provisional balloting.

- The percentage of the total vote cast as provisional ballots averaged more than 2% in the 25 experienced states. This was 4 times the rate in states new to provisional voting, which averaged 0.47%. To compensate for the wide differences in vote turnout among the 50 states the average figures here are calculated as the mean of the percent cast or counted rather than from the raw numbers of ballots cast or counted.
- The experienced states counted an average of 58% of the provisional ballots cast, nearly double the proportion in the new states, which counted just 33% of cast provisional ballots.
- The combined effect of these two differences was significant. In experienced states 1.53% of the total vote came from counted provisional ballots. In new states, provisional ballots accounted for only 0.23% of the total vote.

Those voting with provisional ballots in experienced states had their ballots counted more frequently than those in the new states. This experience effect is evidence that there is room for improvement in provisional balloting procedures, especially in those states new to the process. That conclusion gains support from the perspectives of the local election officials revealed in the survey conducted as a part of this research. Local (mostly county level) election officials from "experienced" states were more likely to:

9 HAVA allows the states considerable latitude in how to implement provisional voting, including deciding who beyond the required categories of voters should receive provisional ballots and how to determine which provisional ballots should be counted.
10 California, New York, Ohio, Arizona, Washington, and North Carolina. The appearance of Arizona, Washington and North Carolina on this list shows that the number of provisional ballots cast depends on factors other than the size of the population.
11 See the appendix for our classification of "old" and "new" states and explanation of why the total is less than 50.
12 To compensate for the wide differences in vote turnout among the 50 states the average figures here are calculated as the mean of the percent cast or counted rather than from the raw numbers of ballots cast or counted.
13 Managing the provisional voting process can strain the capacity election administrators. For example, Detroit, counted 123 of the 1,350 provisional ballots cast there in 2004. A recent study concluded that Detroit's "6-day time limit to process provisional ballots was very challenging and unrealistic. To overcome this challenge, the entire department's employees were mobilized to process provisional ballots." (emphasis added.) GAO Report-05-997, "Views of Selected Local Officials on Managing Voter Registration and Ensuring Citizens Can Vote," September 2005.
Be prepared to direct voters to their correct precincts with maps;
Regard provisional voting as easy to implement;
Report that provisional voting sped up and improved polling place operations
Conclude that the provisional voting process helped officials maintain accurate registration databases.

Officials from “new” states, on the other hand, were more likely to agree with the statement that provisional voting created unnecessary problems for election officials and poll workers.

If experience with provisional voting does turn out to be a key variable in performance, that is good news. As states gain experience with provisional ballots their management of the process could become more consistent and more effective over subsequent elections. Further information from the EAC on best practices and the need for more consistent management of the election process could sharpen the lessons learned by experience. The EAC can facilitate the exchange of experience among the states and can offer all states information on more effective administration of provisional voting.

Concluding optimistically that experience will make all the difference, however, may be unwarranted. Only if the performance of the “new” states was the result of administrative problems stemming from inexperience will improvement be automatic as election officials move along the learning curve. Two other possibilities exist. Our current understanding of how provisional voting worked in 2004 is not sufficient to determine unambiguously which view is correct.

1. “New” states may have a political culture different from “old” states. That is, underlying features of the “new” states political system may be the reason they had not adopted some form of provisional voting before HAVA. The “new” states may strike a different balance among the competing objectives of ballot access, ballot security and practical administration. They may ascribe more responsibility to the individual voter to take such actions as registering early, finding out where the right precinct is, or re-registering after changing address. They may value keeping control at the local level, rather than ceding authority to state or federal directives. The training they offer poll workers about provisional ballots may not be as frequent or effective as in other states. If the inconsistent performance in the “new” states arises out of this kind of political culture, improving effectiveness in the use of the provisional ballots -- as measured by intrastate consistency in administration--- will be harder and take longer to achieve.14

2. “Old” states may devote fewer resources to updating their registration files or databases because they consider provisional ballots as a reasonable fail safe way for voters with registration problems a way to cast a ballot. The adoption of statewide voter registration databases in compliance with HAVA therefore may reduce the variation in the use of provisional ballots among the states.

Other influences decreasing consistency among the states include:

14 Despite differing political cultures among states and the latitude HAVA provides states, the statute does, indeed impose some degree of uniformity on issues that Congress thought essential. For example, before HAVA, took effect, “no state gave the voter the right to find out the status of their ballot after the election.” Now all offer that opportunity. See Bali and Silver, “The Impact of Politics, Race and Fiscal Strains on State Electoral Reforms after Election 2000,” manuscript, Department of Political Science, Michigan State University. Resisting HAVA’s mandates through foot-dragging lacks any legitimate foundation in law or policy.
The more rigorous the verification requirements, the smaller the percentage of provisional ballots that were counted. Some states verified provisional ballots by comparing the voter’s signature to a sample, some matched such identifying data as address, birth date, or social security number, others required voters who lacked ID at the polling place to return later with the ID to evaluate the provisional ballot, and some required provisional voters to execute an affidavit.  

- In the 4 states that simply matched signatures, nearly 3.5% of the total turnout consisted of provisional ballots, and just under three-fourths of those ballots (73%) were counted.
- In the 14 states that required voters to provide such additional information as address or date of birth just over 1.5% of the total turnout consisted of provisional ballots, and 55% of those ballots were counted.
- In the 14 states that required an affidavit (attesting, for example, that the voter was legally registered and eligible to vote in the jurisdiction) just over one-half of a percent (0.6%) of turnout came from provisional ballots, and less than one-third of those (30%) were counted. (But note that HAVA requires all voters to certify that they are eligible and registered in order to cast a provisional ballot, which is functionally an affidavit. The 14 states described here used an explicit affidavit form.)
- In the 10 states that required voters to return later with identifying documents just under 1.5% of the total turnout came from provisional ballots, and more than half (52%) of these were counted. Voters apparently found this requirement less onerous than the affidavit, even though it required a separate trip to a government office.

- Voter registration databases provided information that reduced the number of provisional ballots counted. In states using provisional voting for the first time, states with registered-voter databases counted only 20% of the ballots that were cast. States without such databases counted more than double that rate (44%). As HAVA’s requirement for adoption of statewide databases spreads across the country, this variation among states is likely to narrow. Real-time access to a continually updated, statewide list of registered voters should reduce the number of provisional ballots used and reduce the percentage counted since most of those who receive them will be less likely to be actually registered in the state.

- States that counted out-of-precinct ballots counted 56% of the provisional ballots cast. States that counted ballots cast only in the proper precinct counted an average of 42% of provisional ballots.

---

15 See Table 2 in Appendix 2 for information on the verification method used in each state.
16 The Election Day Survey found that states using statewide voter registration databases reported a lower incidence of casting provisional ballots than states without voter registration databases, suggesting that better administration of voter registration rolls might be associated with fewer instances where voters would be required to cast a provisional ballot due to a problem with their voter registration.
17 The Election Day Survey concluded that: “Jurisdictions with jurisdiction-wide provisional ballot acceptance reported higher rates of provisional ballots cast, 2.09 percent of registration or 4.67 percent of ballots cast in polling places, than those with in-precinct-only acceptance, 0.72 and 1.18 percent, respectively. Predictably, those jurisdictions with more permissive jurisdiction-wide acceptance reported higher rates of counting provisional ballots, 71.50 percent, than other jurisdictions, 52.50 percent.”
In experienced states, the disparity was even more pronounced: 52% of provisional ballots cast were counted in states requiring in-district ballots, while 70% were counted in those allowing out-of-precinct ballots.
- If all states had counted out-of-precinct ballots, perhaps 290,000 more provisional ballots would have been counted across the country.\(^\text{18}\)

- States that provide a longer the time to evaluate provisional ballots counted a higher proportion of those ballots.\(^\text{19}\)
  - Fourteen states permitted less than one week to evaluate provisional ballots, 15 states permitted between one and two weeks, and 14 states permitted greater than two weeks.\(^\text{20}\)
  - Those states that permitted less than one week counted an average of 35.4% of their ballots.
  - States that permitted between one and two weeks counted 47.1%.
  - States that permitted more than 2 weeks, counted 60.8% of the provisional ballots cast.\(^\text{21}\)
  - The effect of allowing more time for evaluation is felt most strongly in states where more than 1% of the overall turnout was of provisional ballots. In states where provisional ballots were used most heavily, those that permitted less than one week to evaluate ballots counted 58.6% while those that permitted one to two weeks counted 65.0% of ballots, and those states that permitted greater than three weeks verified the highest proportion of provisional ballots, at 73.8%.

Variation Within States
Not only was there little consistency among states in the use of provisional ballots, there was also little consistency within states. This was true in both new and old states. Of the 20 states for which we have county-level provisional ballot data, the rate of counting provisional ballots varied by as much as 90% to 100% among counties in the same state. This suggests that additional factors beyond statewide factors, such as verification requirements or the time provided for ballot evaluation, also influence the provisional voting process. Reacting to the lack of consistency within states, the Carter-Baker Commission) recommended that "states, not counties or municipalities, should establish uniform procedures for the verification and counting of provisional ballots, and that procedure should be applied uniformly throughout the state."\(^\text{22}\)

Election Line reported that:

\(^{18}\) This estimate is a rough approximation. States that recognize out-of-precinct ballots counted, on average, 56% of the provisional votes cast. Applying that ratio to the 1.9 million provisional ballots cast nationwide would result in 1.1 million provisional ballots that would have been counted if all states accepted out-of-precinct votes. States that did not recognize out-of-precinct ballots counted 42% of the provisional ballots cast, or about 813,000 ballots, for a difference of about 290,000 votes.

\(^{19}\) See Appendix __, Relationship Between Time Allotted to Verify Provisional Ballots and the Level of Ballots that are Verified, David Andersen, The Eagleton Institute of Politics

\(^{20}\) Many thanks to Ben Shepler, of the Moritz College of Law, for assembling complete data on the time requirements states permitted for the counting of provisional ballots.

\(^{21}\) 43 states are included in this analysis, including Washington D.C. The 7 election-day registration states are omitted, as is Mississippi, which never provided data on provisional ballots. North Carolina is also omitted from the regressions, as it does not have a statewide policy on how it verifies provisional ballots.

\(^{22}\) Recommendation 2.3.2 of the Report of the Commission on Federal Election Reform, "Building Confidence in U.S. Elections," September 2005, p.16. The report also observed that, "... different procedures for counting provisional ballots within and between states led to legal challenges and political protests. Had the margin of victory for the presidential contest been narrower, the lengthy dispute that followed the 2000 election could have been repeated."
In Ohio some counties counted provisional ballots not cast in the assigned precinct even though the state's policy was to count only those ballots cast in the correct precinct. Some counties in Washington tracked down voters who otherwise would have had their provisional ballots rejected because they had failed to complete part of their registration form, gave them the chance to correct those omissions, and then counted the provisional ballot. This would probably not have come to light except for the sharp examination caused by the very close election for governor.

Resources available to administer provisional voting varied considerably among and within states. The result is that differences in demographics and resources result in different experiences with provisional voting. For example, the Election Day Survey found that:

- Jurisdictions with lower education and income tend to report more inactive voter registrations, lower turnout, and more provisional ballots cast.
- Jurisdictions with higher levels of income and education reported higher average numbers of poll workers per polling place or precinct and reported lower rates of staffing problems per precinct.
- Staffing problems appeared to be particularly acute for jurisdictions in the lowest income and education categories. Small, rural jurisdictions and large, urban jurisdictions tended to report higher rates of an inadequate number of poll workers within polling places or precincts.
- Predominantly non-Hispanic, Black jurisdictions reported a greater percentage of polling places or precincts with an inadequate number of poll workers. Predominantly non-Hispanic, Native American jurisdictions reported the second highest percentage of staffing problems.

The conclusions to be drawn from these findings are clear. In voting districts with lower education levels, poverty, and inadequately staffed polling places, the voting process is unlikely to function well. More people will end up casting provisional ballots. That makes the provisional voting process especially important in such districts. But if jurisdictions struggle with regular voting, how well are they likely to do with the more complicated provisional balloting process? In precincts where the voting process, in general, is managed poorly, provisional ballots cannot be expected to work much better. In these areas, the focus should be on broader measures to improve the overall functionality of struggling voting districts, although improving the management of provisional balloting may help at the margin.

Effectiveness of Provisional Voting
The certainty of our conclusions about the effectiveness of provisional voting is limited because of the complexity of the problem and a lack of important information. An ideal assessment of how well provisional ballots worked in 2004 would require knowing the decisions of local officials in 200,000 precincts on how to inform voters about provisional voting; their performance in providing a provisional ballot to those qualified to receive one, and their decisions whether to count a provisional ballot. Information needed about the eligibility or registration status of provisional voters is also not available.

We see no automatic correlation between the quality of a state's voting system and either the number of provisional ballots cast or counted. Low numbers could reflect accurate statewide voting data and good voter education. Or they could suggest that provisional ballots were
made easily available. High numbers could be seen as signifying an effective provisional voting system or a weak registration process. But we do know that in 2004 provisional ballots allowed 1.2 million citizens to vote, citizens who would otherwise have been turned away from the polls.

Since we do not know the total number of registered voters who might have voted but could not makes a precise, quantitative estimate of the effectiveness of provisional voting impossible. The Cal Tech – MIT Voting Technology Project, however, estimated that 4 – 6 million votes were lost in the 2000 presidential election for the reasons shown in Table 1 below. The estimate is an approximation, but it may provide data good enough for a general assessment of the size of the pool of potential voters who might have been helped by the provisional ballot process.

*Table 1 Cal Tech – MIT Voting Technology Project Estimates*

4 – 6 million votes are lost in presidential elections due to the causes shown in the table. Registration mix-ups (e.g., name not on list) and polling place operations (e.g., directed to wrong precinct) are the causes most likely to be remedied by provisional voting.

The table shows that the universe of voters who could be helped by provisional voting might be 2.5 – 3 million voters. In 2004, about 1.2 million provisional voters were counted. A rough estimate, then, of the effectiveness of provisional voting in 2004, then, might be 40% to 50% (ballots counted/votes lost)\(^{23}\). Whatever the precise figure, it seems reasonable to conclude that there is considerable room for improvement in the administration of provisional voting.

**Legislative Response**

Indeed, several states\(^{24}\) came to the conclusion that the administration of their provisional voting procedures needed to be improved and amended their statutes after the 2004 election. State legislation adopted since the election points to particular areas of concern.

---

\(^{23}\) Another interpretation of the data should be considered. The Census Bureau’s Current Population Survey (CPS) developed the category of “registration mix-ups” to assess the states’ registration systems. After each election the CPS asks people if they were registered and if they voted. The CPS gives breakdowns of reasons why people did not vote. Survey responders tend to deflect blame when answering questions about voting. In the narrow context of provisional ballots, ‘registration problems’ would cover only voters who went to the polls where the determination that they were not registered was wrong or they were registered, but in the wrong precinct. If they were in the wrong precinct, provisional voting can help them in only 17 states. In 2004, only 6.8% of those not voting and registered blamed registration problems, while 6.9% reported so in 2000.

\(^{24}\) Twelve states made statutory or regulatory changes: Arizona, Arkansas, Colorado, Florida, Georgia, Indiana, Louisiana, Montana, New Mexico, North Carolina, Virginia and Wyoming. See Table 4 in Appendix 2.
Not enough time to examine and count the provisional ballots. Florida, Indiana, Virginia, and Washington all have clarified or extended the timeline to evaluate the ballots. But taking more time can prove a problem, particularly in presidential elections with the looming deadline to certify the vote for the Electoral College.  

Lack of uniform rules for counting ballots and effective training of the election officials in interpreting and applying those rules to determine the validity of ballots. Colorado, New Mexico, North Carolina, and Washington have all passed legislation focused on improving the efficacy and consistency of the voting and counting process.

Litigation
Successful legal challenges to the process highlight areas where provisional voting procedures were wanting. A flurry of litigation occurred around the country in October 2004 concerning the so-called “wrong precinct issue” – whether provisional ballots cast by voters in a precinct other than their designated one would be counted for statewide races. These lawsuits were largely unsuccessful in their stated goal: most courts, including the U.S. Court of Appeals for the Sixth Circuit (the only federal appeals court to rule on the issue), rejected the contention that HAVA requires the counting of these wrong-precinct provisional ballots.

This litigation was significant nonetheless.

- First, the Sixth Circuit decision established the precedent that voters have the right to sue in federal court to remedy violations of HAVA.
- Second –and significantly– the litigation clarified the right of voters to receive provisional ballots, even though the election officials were certain they would not be counted. The decision also defined an ancillary right –the right to be directed to the correct precinct. There voters could cast a regular ballot that would be counted. If they insisted on casting a provisional ballot in the wrong precinct, they would be on notice that it would be a symbolic gesture only.
- Third, these lawsuits prompted election officials to take better care in instructing precinct officials on how to notify voters about the need to go to the correct precinct in order to cast a countable ballot – although the litigation regrettably came too late to be truly effective in this regard. In many states, on Election Day 2004, the procedures in place for notifying voters about where to go were less than ideal, reflecting less-than-ideal procedures for training poll workers on this point.

There was also pre-election litigation over the question whether voters who had requested an absentee ballot were entitled to cast a provisional ballot. In both cases (one in Colorado and one, decided on Election Day, in Ohio), the federal courts ruled that HAVA requires that these voters receive a provisional ballot. Afterwards, it is for state officials under state law to

---

25 The resources available to evaluate and count provisional ballots within a tight schedule may not be easily available. The General Accounting Office reports that Detroit, where 1,350 provisional ballots were cast and 123 counted, found the 6-day time frame for processing provisional ballots “very challenging and unrealistic. To overcome this challenge, the entire department’s employees were mobilized to process provisional ballots.” The report also found that in Los Angeles County, “staff had to prepare duplicate ballots to remove ineligible or invalid contests when voters cast their ballots at the wrong precinct. To overcome this challenge, staffing was increased to prepare the duplicate ballots.” In a close, contested election, “duplicate” ballots would doubtless receive long and careful scrutiny.” See Appendix 7, GAO, “Views of Selected Local Election Officials on Managing Voter Registration and Ensuring Eligible Citizens Can Vote,” September 2005. (GAO Report-05-997)
determine whether these provisional ballots will be counted, in part by determining if these provisional voters already had voted an absentee ballot (in which case one ballot should be ruled ineligible, in order to avoid double voting). These decisions confirm the basic premise that provisional ballots should be available whenever voters believe they are entitled to them, so that their preferences can be recorded, with a subsequent determination whether these preferences count as valid votes.

RECOMMENDATIONS

Because every provisional ballot counted represents a voter who, if the system had worked perfectly, should have voted by regular ballot, the advent of statewide registration databases is likely to reduce the use of provisional ballots. The one area in which such databases may not make a difference is for those who voted by provisional ballot because they did not bring required identification documents to the polling place. The statewide voter registration database will facilitate verifying that ballot, but the voter will still have vote provisionally. Beyond that exception, even with statewide registries in every state, provisional voting will remain an important failsafe, and voters should have confidence that the failsafe will operate correctly.

The wide variation in the implementation of provisional voting among and particularly within states suggests that EAC can help states strengthen their processes. Research-based recommendations for best, or at least better, practices based on the experience gained in the 2004 election can be useful in states’ efforts to achieve greater consistency in the administration of provisional voting.

Recommendations for Best Practices

Recent legislative activity shows that state efforts to improve the provisional voting process are underway. Those states, as well as others that have not yet begun to correct shortcomings that became apparent in 2004, can benefit from considering the best practices described here. By recommending best practices, the EAC will offer informed advice while respecting diversity among the states. One way to strengthen the recommendations and build a constituency for them would be for EAC to ask its advisory committee members to recommend as best practices procedures that have worked in their states.

Self-evaluation of Provisional Voting –4 Key Questions

The first need to achieve greater consistency within each state is to think about provisional voting systematically. As legislators, election officials, and citizens in the states prepare for the 2006 election, they should ask themselves these questions about their provisional voting systems.

1. Does the provisional voting system distribute, collect, record, and tally provisional ballots with sufficient accuracy to be seen as procedurally legitimate by both supporters and opponents of the winning candidate? Does the tally include all votes cast by properly registered voters who correctly completed the steps required?

2. Is the provisional voting system sufficiently robust to perform well under the pressure of a close election when ballot evaluation will be under scrutiny and litigation looms?

3. Do the procedural requirements of the system permit cost-efficient operation? Are the administrative demands of the system reasonably related to the staff and other resource requirements available?
4. How great is the variation in the use of provisional voting in counties or equivalent levels of voting jurisdiction within the state? Is the variation great enough to cause concern that the system may not be administered uniformly across the state?

If the answers to these questions leave room for doubt about the effectiveness of the system or some of its parts, the EAC’s recommendation of best practices should provide the starting point for a state’s effort to improve its provisional voting system.

Best Practices For Each Step In The Process
We examined each step of the provisional voting process to identify specific areas where the states should focus their attention to reduce the inconsistencies noted in our analysis. We offer recommendations in each area appropriate to the responsibilities that HAVA assigns the EAC for the proper functioning of the provisional voting process.

The Importance of Clarity
The EAC should emphasize above all else the importance of clarity in the rules governing every stage of provisional voting. As the Century Foundation’s recent report observed, “Close elections increasingly may be settled in part by the evaluating and counting of provisional ballots. . . To avoid post election disputes over provisional ballots—disputes that will diminish public confidence in the accuracy and legitimacy of the result—well in advance of the election, states should establish, announce, and publicize clear statewide standards for every aspect of the provisional ballot process, from who is entitled to receive a provisional ballot to which ones are counted.”

Litigation surrounding the 2004 election resulted in decisions that, if reflected in state statutes or regulations and disseminated in effective training for poll workers, can increase the clarity of provisional ballot procedures, increase predictability, and bolster confidence in the system. By taking the following steps, states can incorporate those court rulings into their procedures.

- Promulgate, ideally by legislation, clear standards for evaluating provisional ballots, and provide training for the officials who will apply those standards. For example, in Washington State, the court determined that an election official’s failure in evaluating ballots to do a complete check against all signature records is an error serious enough to warrant recanvassing. Clear direction by regulation or statute on what records to use in evaluating ballots could have saved precious time and effort and increased the reliability of the provisional voting system.

- States should provide poll workers standard information resources for the training of poll workers by local jurisdictions. Training materials might include, for example, maps or databases with instruction on how to locate polling places for potential voters who show up at the wrong place. Usable and useful information in the hands of poll workers can protect voters from being penalized by ministerial errors at the polling place.

---

27 See Washington State Republican Party v. King County Division of Records, 103 P3d 725, 727-728 (Wash. 2004)
28 See Panio v. Sunderland 824 N.E.2d 488, 490 (NY, 2005) See also Order, Hawkins v. Blunt, No.04-4177-CV-C-RED (W.D. Mo. October 12, 2004). While rejecting the notion that all ballots cast in the wrong precinct should be counted, the court ruled that provisional votes cast in the wrong precinct should be thrown out provided that the voter had been directed to the correct precinct. This meant that provisional votes cast in the wrong precinct (and even the
State training materials provided to local jurisdictions should make clear that the only permissible requirement to obtain a provisional ballot is an affirmation that the voter is registered in the jurisdiction and eligible to vote in an election for federal office. Recent legislation in Arizona indicates that recommendations should emphasize HAVA's requirement that persons appearing at the polling place claiming to be registered voters cannot be denied a ballot because they do not have identification with them. Poll workers may need appropriate training to understand their duty to give such voters a provisional ballot.

A. Registration and Pre-Election Information for Voters

Providing crisp, clear information to voters before the election is important to the success of the provisional voting process. The better voters understand their rights and obligations, the easier the system will be to manage, and the more legitimate the appearance of the process. States can begin by assessing the utility and clarity of the information for voters on their websites and by considering what information might be added to sample ballots mailed to voters before elections. Best practices in this area would include:

1. If states require identification at the time of registration, the kind of IDs required should be stated precisely and clearly and be publicly and widely available in a form that all voters can understand. For example, "You must bring your driver's license. If you don't have a driver's license, then you must bring an ID card with your photograph on it and this ID card must be issued by a government agency." 31

2. The process to re-enfranchise felons should be clear and straightforward. To avoid litigation over the registration status of felons, best practice should be defined as making re-enfranchisement automatic, or no more burdensome than the process required for any new registrant. 32

3. State or county websites for voters should offer full, clear information on boundaries of precincts, location of polling places, requirements for identification, and other necessary guidance that will facilitate registration and the casting of a regular ballot. An 800 number should also be provided. Models are available: the statewide databases in Florida and Michigan provide voters with provisional voting information, registration verification and precinct location information.

B. At the Polling Place

wrong polling place) would count if there were no evidence that the voter had been directed to a different polling place. The court placed a duty upon election officials to make sure the voters were in the correct locations. Note that this question would not arise in a state that counted ballots cast in the wrong polling place but within the correct county.

30 The Florida Democratic Party v. Hood, 342 F. Supp. 2d 1073, 1075-76 (N.D. Fla. 2004). The court explained that provisional voting is designed to correct the situation that occurs when election officials do not have perfect knowledge and when they make incorrect determinations about eligibility (the "fail-safe" notion). Denying voters provisional ballots because of on-the-spot determinations directly contradicts this idea. Even before the cited decision, the Florida Secretary of State's office had determined that any voter who makes the declaration required by federal law is entitled to vote a provisional ballot, even if the voter is in the wrong precinct.

31 Websites in 29 states describe, with varying degrees of specificity, the identification voters may need. In 18 states voters can learn something about the precinct in which they should vote. And in 6 states (California, District of Columbia, Kentucky, Michigan, North Carolina, and South Carolina) they can verify their registration on the website.
32 The Century Foundation, op. cit.
Avoiding error at the polling place will allow more voters to cast a regular ballot and all others who request it to cast a provisional ballot.

1. The layout and staffing of the polling place, particularly the multi-precinct polling place is important. Greeters, maps, and prominently posted voter information about provisional ballots, ID requirements, and related topics can help the potential voters cast their ballot in the right place. States should require poll workers to be familiar with the options and provide the resources needed for them to achieve the knowledge needed to be helpful and effective. Colorado has clear regulations on polling place requirements, including HAVA information and voting demonstration display. 33 Many states require training of poll workers. In some states that requirement is recent: after the 2004 election, New Mexico adopted a requirement for poll workers to attend an “election school.” 34 A state statutory requirement for training could facilitate uniform instruction of poll workers in those states that do not already provide it.

2. The provisional ballot should be of a design or color sufficiently different from a regular ballot to avoid confusion over counting, as occurred in Washington State. The ballot might include a tear-off leaflet with information for voters such as: “Reasons Why Your Provisional Ballot Might Not Be Counted” on one side and “What to Do if My Provisional Ballot Is Not Counted” on the other.

3. Because provisional ballots offer a fail-safe, supplies of the ballots at each polling place should be sufficient for all the potential voters likely to need them. In 2004, some polling places ran out of ballots, with unknown effects on the opportunity to vote. In Middlesex County, New Jersey, for example, on Election Day the Superior Court ordered the county clerk to assure that sufficient provisional ballots were available at several heavily used polling places, and it authorized the clerk “in the event additional provisional ballots are required ... to photocopy official provisional ballots.” 35 At least two states, Connecticut and Delaware, provide guidelines to local election officials on how to estimate the demand for provisional ballots. Connecticut sets the number at 1% of the voters in the district, Delaware at 6%. 36 States that do not offer a practical method to guide the supply of provisional ballots at polling places should consider doing so. The guideline should take into account both the number of voters in the district and the number of provisional ballots actually cast in recent elections.

4. To achieve the procedural clarity needed to forestall disputes, states should establish a clear chain of custody for the handling of provisional ballots from production through distribution, collection and, finally, evaluation. A number of states have clear procedures for at least parts of this chain of custody. All states should examine their chain-of-custody requirements for clarity. Illinois includes the potentially beneficial requirement that ballots be transported by bi-partisan teams, which offers the potential to avoid some charges of election fraud.

34 2005 N.M. Laws 270 page no. 4-5.
35 Voting Order, November 2, 2004, Superior Court of New Jersey, Law Division, Middlesex County.
36 Connecticut: “Equal to or not less than 1% of the number of electors who are eligible to vote in any given district, or such other number as the municipal clerk and the registrars agree is sufficient to protect voting rights. Conn. Gen. Stat. Ann. § 9-232j. Delaware: Each County Department of Elections Office is required to provide to each election district a number of provisional ballots equal to 6% of registered voters in that district, with a minimum allocation of 15 ballots. Additional supplies to be delivered when the supply becomes "very low." Del.Code Ann. Tit 15 § 4948(e).
C. Evaluating Voter Eligibility and Counting Provisional Ballots

The clarity of criteria for evaluating voter eligibility is critical to a sound process for deciding which of the cast provisional ballots should be counted. Public recognition of the validity of those criteria is important to establishing the legitimacy of the system as a whole. The experience in 2004 in North Carolina, Washington, and Ohio underlines the importance of clear criteria. As the Century Foundation report put it, “Whatever procedures the states choose [to determine if a provisional ballot should be counted], the paramount consideration—as with all others concerning provisional voting—is that they be clear and thus not susceptible to post-election manipulation and litigation.” Nonetheless, the Panio v. Sutherland decision in New York shows the difficulty of defining the range of administrative errors from which the provisional voters should be held harmless. Even when the standard is “clerical error” judges can differ over what that means exactly. Possibly a state law might be able to clarify a definition by giving examples of clerical errors, but even then the definition is unlikely to be perfect.

1. State statutes or regulations should define a reasonable period for voters who lack the HAVA-specified ID or other information bearing on their eligibility to provide it in order to facilitate the state’s ability to verify that the person casting the provisional ballot is the same one who registered. While there may be a concern to ensure that the individual who returns with the ID may not be the same individual who cast the provisional ballot, the spirit of HAVA demands that the opportunity to prove identity be provided after Election Day. A signature match can go far in establishing that the individual who voted and the individual returning later with identification is, in fact, the same person. Encouraging a voter who lacks ID on Election Day to return later to help the verification process by providing proper identification will strengthen the system and increase public confidence in the electoral process. Our data indicate that some voters would prefer to return with ID rather than to sign an affidavit, perhaps because of uncertainty about the legal process involved in the affidavit. At least 11 states allow voters to provide ID or other information one to 13 days after voting. Of particular interest is Kansas, which allows voters to proffer their ID by electronic means or by mail, as well as in person.

2. More provisional ballots are counted in those states that verify ballots cast outside the correct precinct. While HAVA arguably leaves this decision up to the states, pointing out the effect of the narrower definition on the portion of ballots counted could be useful to the states in deciding this question. States should be aware, however, of the

---

37 The Century Foundation, op. cit.
39 In Kansas, the voter can provide ID to a County Election Officer any time before the County Board of Canvassers meets to count provisional ballots. KS. ST. 25-1122(d). ID can be presented in person, OR via mail or electronic means. Id. The Board must meet either on the Friday or Monday following a Tuesday election. Id. at 25-3104.
40 Deadlines in other states are: Alabama — 5:00 P.M. on the Monday following the election AL ST § 17-10A-2(c).Florida: until 5:00 P.M. on the third day following the election. Fla. Stat. Ann. § 101.046 (adopted after the 2004 election).Georgia—no later than 2 days after the election. GA ST § 21-2-417; 419. Illinois- 2 days to submit additional information 10 Ill. Comp. Stat. Ann. 5/18A-15(d); Indiana— In 2004 the deadline was the close of the polls IN. ST. § 3-11.7-5-2(a). The time period was extended to 13 days by the adoption of Indiana Code 3-11-8, Section 25, Subsection (f); Maryland—until the meeting of the Election Board; MD ELEC LAW § 11-303. New Jersey— until the close of business on the second day after the election 19:53C-3(i); Nevada— until 5:00 P.M. on the Friday following the election NV ST 293.3085; New Mexico—until 7:00 P.M. on Election Day NM ADC 1.10.22 (g) (H).
41 See Andersen, op. cit, pgs. 23 — 24 for an analysis of the significant effect of counting out-of-precinct ballots. The Election Day Survey found that, “Most notably, jurisdictions that permitted jurisdiction-wide acceptance of provisional ballots reported higher rates of provisional ballots being cast, but also reported a much higher incidence of provisional ballots being counted, than other jurisdictions.”

---
additional burden placed on the ballot-evaluation process when out-of-precinct ballots are considered. And tradeoffs are involved if out-of-precinct voters are unable to vote for the local offices that might appear on the ballot in their district of residence. One option for states is to involve the voters in the decision by pointing out that voters who cast their provisional ballots in the wrong precinct may not be able to participate in the local election. The voter could then decide to go to the correct precinct or vote provisionally for the higher offices at the top of the ticket only.

3. Alternatively, if a state chooses to require voters to appear at their assigned precinct, where the same polling site serves more than one precinct, a voter’s provisional ballot should count so long as the voter cast that ballot at the correct polling site even if at the wrong precinct within that location. Ideally the voter could be directed to the correct machine, but poll worker advice will not always be correct. One way to assess the balance of issues here is to consider that, if a voter in a multi-precinct polling place is sent to the wrong machine, the error is probably the poll worker’s, and the voter should not be penalized.

4. Officials should follow a written procedure, and perhaps a checklist, to identify the reason why a provisional ballot is rejected (e.g., check the applicable box “unregistered voter”; “lack of signature match” “wrong precinct,” etc.) Those forms should be disclosed publicly when completed. Colorado’s election rules offer particularly clear guidance to the official evaluating a provisional ballot.

Colorado Rejection Codes (Any ballot given a rejection code shall not be counted):

<table>
<thead>
<tr>
<th>Code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>RFS</td>
<td>Rejection federal or state; No federal or state candidates or issues to duplicate.</td>
</tr>
<tr>
<td>RNS</td>
<td>Rejection not signed; Provisional Ballot Affidavit not signed.</td>
</tr>
<tr>
<td>RIN</td>
<td>Rejection incomplete information provided; Required information is incomplete and the designated election official is unable to confirm voter’s eligibility.</td>
</tr>
<tr>
<td>RNR</td>
<td>Rejection not registered; Voter did not register by the voter registration deadline or by emergency registration, Colorado voter registration record was not found, or voter was previously cancelled and has not been reinstated pursuant to 1-2-605(10). C.R.S.</td>
</tr>
<tr>
<td>REE</td>
<td>Rejection envelope empty; Provisional ballot envelope is empty.</td>
</tr>
<tr>
<td>RAB</td>
<td>Rejection voter voted absentee; Designated election official has confirmed that voter voted an absentee ballot.</td>

41 Chances are administrative error accounts for the voter being directed to the wrong precinct under these circumstances.

42 8 CCR 1505-1, at 26.5.4, adopted august 4, 2005. See also 1-2-509(3) C.R.S.
registered by mail or through a voter registration drive, is tagged as id deficient, and did not provide id at the time of voting.

RRD (Rejection registration deficient) Voter had deficient or incomplete registration and required information was not provided prior to or at the time of filling in the provisional ballot envelope. Voter's eligibility cannot be established.

D. Verification of Provisional Ballots

1. States that use the information on the provisional ballot to permit voters who have changed their addresses to update their registrations should adopt clear procedures on that process and specify how the new information will be communicated between different Boards of Elections.

2. In verifying provisional ballots, the time by which election officials must make their eligibility determinations is particularly important in presidential elections because of the need to certify electors to the Electoral College. States should consider in particular how to divide the time allowed them by the safe-harbor provisions that apply in presidential elections to the certification to the Electoral College. Some part of this five-week period will be consumed by the eligibility evaluation, but states should take care to provide a sufficient period of time as well for challenges. If a state consumes 21 days following the election in the eligibility evaluations, only two weeks will remain for legal challenges to be concluded. Is that sufficient? Or should the state provide the resources needed to complete the eligibility determinations in 10 days or two weeks, leaving three weeks or more for legal challenges in a close election? Our research did not identify an optimum division of the five weeks available. The prudent course here would be to encourage states to consider the issue and then make a careful decision about how to complete all steps in the evaluation of ballots and challenges to those determinations within the five weeks available.

E. Post-election Information for Voters

Timely information to voters about the disposition of their provisional ballot will provide helpful feedback and more important enable voters to determine if they are registered for future elections and, if not, what they need to do to become registered.

1. Establish mechanisms to ensure that voters casting provisional ballots are informed whether they are now registered for future elections and, if not, what they need to do to become registered.

F. State Laws Governing Litigation over Provisional Voting

1. Establish special, streamlined litigation procedures for Election Day complaints that individuals are being denied the right to cast a provisional ballot.

Broader Considerations

G. Integrity and the Appearance of Integrity

1. State laws or regulations providing for non-partisan or bi-partisan bodies to make a public determination of the validity of provisional ballots would increase confidence in the system.
2. To improve transparency, state laws or regulations should require the purging process for registration to be public and with an opportunity for voters to correct an erroneous determination that they should be purged.

3. State laws or regulation should require the evaluation process for provisional ballots to be public, while protecting the names of those who voted provisionally.

H. Continuous Assessment of the Provisional Ballot -- Process and Performance

Defining what makes for a successful provisional voting system is difficult. The most successful system is probably not the one with the most provisional votes cast (that could indicate problems with the registration system). Nor is the system with the greatest number counted or with the fewest counted necessarily superior because the evaluation process could be flawed.

Defining quality requires a broad perspective about how well the system works, how open it is to error recognition and correction, and how well provisional voting processes are connected to the registration and voter identification regimes. The EAC should consider engaging one of the national quality organizations or processes, such as Six Sigma or the Baldridge Quality process to evaluate the provisional ballot process. Pending such a review, the EAC can recommend that states take the following actions.

1. Recognize that the first step to improving quality is to see the provisional voting process as a system and take a systems approach to regular evaluation through standardized metrics with explicit goals for performance.

2. States should begin by collecting data systematically on the provisional voting process so that they can evaluate their voting system and assess changes from one election to the next. The effort should start in the 2006 election, and the data collected should include:

   -- Provisional votes cast and counted by jurisdiction, say counties, with details on why the voter had to vote provisionally (lack of ID, not on list, challenged at polling place, issued absentee ballot, etc) and number of ballots actually counted in each category.

   -- Reasons why provisional ballots were not counted, using categories such as those that have been adopted by Colorado, described earlier in this report.

   -- Measures of variance among jurisdictions.

   -- Number of poll workers trained in administration of provisional voting by polling place

   -- Number of jurisdictions posting information on provisional voting in the polling place

   -- Time required to evaluate ballots by jurisdiction

43 Six Sigma is a measure of quality that strives for near perfection. Six Sigma is a disciplined, data-driven approach and methodology for eliminating defects (driving towards six standard deviations between the mean and the nearest specification limit) in any process -- from manufacturing to transactional and from product to service.

44 The Baldrige Criteria for Performance Excellence provide a systems perspective for understanding performance management. They reflect validated, leading-edge management practices against which an organization can measure itself. With their acceptance nationally and internationally as the model for performance excellence, the Criteria represent a common language for communication among organizations for sharing best practices. The Criteria are also the basis for the Malcolm Baldrige National Quality Award process.
Improving understanding of the provisional voting process through analysis of detailed information will enable state and local election officials to strengthen their systems. By collecting and analyzing this data states can identify which aspects of the registration and electoral system are most important in shunting voters into the provisional ballot process. Responsible officials can then look to their registration system, identification requirements or poll worker training as a way to reduce the need for voters to cast their ballots provisionally.
ATTACHMENT 1 – Data Sources for Classification of the States

Our research on provisional voting divided the various states into several categories to allow an assessment of how different factors may have influenced the process of casting and counting provisional ballots. This analysis was conducted before the release of the Election Day Study, and the categories we used may differ in some respects from its work. The variables used to analyze a state’s use of provisional ballots:

1. New vs. Old (states that used a provisional ballot before the 2004 election)
2. Use of a statewide database of registered voters vs. no use of a statewide database
3. Counting out-of-precinct ballots vs. not counting out-of-precinct ballots
4. Voter identification requirements
5. Method used to verify provisional ballots
6. Levels of provisional ballots cast and counted

We first assigned states within these categories based on classifications done by Electionline.org in its studies. The Electionline data was the only published information available at the time of our research. We reviewed the Electionline data carefully, and, in select cases, updated it with new, detailed information that had become available after its publication. The changes we made are explained below.

--Idaho, Maine, Minnesota, New Hampshire, Wisconsin and Wyoming were excluded from our analysis. They have election-day registration systems, and did not need to use HAVA-compliant provisional ballots.

--North Dakota does not register voters, so it also was excluded from HAVA requirements and did not use provisional voting.

--Mississippi has not reported its provisional voting results and could not be included in our analysis, though it was compliant in 2004.

--Pennsylvania did not report its totals for the Election Day Study, but we obtained information on Pennsylvania and included it in our analysis.

New vs. Old States

We classified states as “new” or “old” based on the 2001 Electionline study of provisional voting,45 but condensed its classifications into a single dichotomous variable, new/old with all other cases excluded. The Electionline study divided states into five categories of their use of provisional ballots in the 2000 election:

1. Use of provisional ballots (P)
2. Limited use of provisional ballots (LP)
3. Affidavit ballots (A)
4. No system in place (N)
5. Unnecessary/Not Applicable (U/NA)

We included in the list of “Old States” all states listed as using provisional ballots, limited use of provisional ballots or affidavit ballots. States in all three categories would have been familiar with key aspects of provisional voting. States that had no provisional voting system in place for the 2002 election, and were HAVA compliant in 2004, were listed as “new” states, as 2004 would have been the first year in which they would be offering the option of provisional voting. States that were listed as unnecessary or not applicable were excluded from this study, as they...

45 This study can be found at: http://electionline.org/Portals/1/Publications/Provisional%20Voting.pdf.
were exempt from the HAVA regulations in 2004 because they either allowed same-day registration or did not register voters.

Rhode Island is the only state categorized as an old state by Electionline that we moved into the list of new states. Electionline’s map shows Rhode Island as a state that used provisional voting in 2000, but in the state description, it is listed as having no system in place. We learned from the Rhode Island Board of Elections that the state had previously permitted potential voters to sign an affidavit if they did not appear on a precinct’s list of registered voters, but felt they were registered to vote. Based on the signed affidavit, the election official would then contact a county official to see if the voter was on a more complete registration list. If the voter’s name was on the complete list, that voter was permitted to cast a regular ballot. As this process did not grant the voter a provisional ballot, but served as a different type of administrative failsafe, we concluded that Rhode Island’s first use of provisional voting was in 2004 and, therefore, classified the state as “new” to the system of provisional balloting.

Statewide List of Registered Voters

The Electionline preview of the 2004 Election\(^6\) was the starting point for compiling a list of states that had a statewide database of registered voters. That study listed 34 States that did not have their statewide database systems complete, and 16 that did, including the District of Columbia. North Dakota does not register voters, so does not need to compile such a database. Electionline’s criterion for concluding that a state had a statewide list was that the state have participation from all jurisdictions in a statewide system. We added Oklahoma to the list of states with statewide databases because we found it had met the Electionline criteria by the 2004 election, albeit too late for inclusion in the Electionline survey.

Out-of-Precinct Ballots

We based our classification of states that allow the counting of ballots cast outside the correct precinct on the data in the 2004 Electionline preview of the 2004 election\(^5\). States that evaluated ballots cast in a precinct where the voter was not registered were categorized as "out-of-precinct." States that invalidated such ballots were categorized as "In-precinct only."

\(^5\) "Election Preview 2004: What’s changed, What Hasn’t and Why”. This study can be found at: http://electionline.org/Portals/1/Publications/Election.preview.2004.report.final.update.pdf

\(^47\) In Illinois, it is not clear that all counties followed this procedure. Some counties may not have counted out-of-precinct ballots.
Verification Method

We identified four different ways states assessed provisional ballots to determine if they should be counted: signature match, match voter data, signed affidavits, and bringing back identification later. We gathered information about these verification techniques by checking state websites and consulting journalistic accounts. We consulted state legislation to provide further information where needed.

* North Carolina lacked clear standards to evaluate provisional ballots and is excluded from this analysis.*
Data Collection

To assemble our data for analysis, we began by using the data on provisional votes cast and counted reported by Electionline. To increase the accuracy of this data, we surveyed each state's election websites for updated data, and for reported numbers on the county level. We then sent emails to 49 (we excluded Alaska, see below) states and the District of Columbia, requesting updated data on the number of provisional votes cast and counted by county. We received information from 25 states by our cut-off date of August 25, 2005.

26 States 25 States

\(^{48}\) Alaska was not contacted via email, as the state does not have voting districts comparable to counties in other states and could not be matched with comparable census data.

\(^{49}\) Maryland reported provisional ballots that were counted per county, but not number cast.

\(^{50}\) Nebraska reported an incomplete list of provisional ballots cast and counted by county, but designated counties by number, rather than by name.
Data Differences

The data used in this study differ from the data reported in the Election Day Study for 19 states. The Election Day Study was not completed until well after our statistical analysis of provisional voting was finished. Where there are differences, they are typically very small, usually fewer than 100 votes either cast or counted. Of the 9 states that have differences of more than 100 votes cast or counted, 7 have reported their numbers directly to us and can be considered updated data that EDS had not obtained. For one of those states, New Mexico, EDS had incomplete data, and for another, Pennsylvania, EDS had no data at all. The data that we have collected reflects updated numbers from the states that have changed following recounts and litigation that altered how ballots were evaluated.

Tom-

As was just discussed, the EAC's Commissioners have elected to delay a presentation of Eagleton's
report on Voter Identification to the EAC Board of Advisors and Standards Board, at this time.

The Commissioners will spend time over the next several weeks reviewing and considering this report in
great detail and will make a determination, shortly thereafter, regarding how they wish to proceed with the
issuance of an EAC report on this study.

Many thanks to you and your staff for the work that has been done. We look forward to next week's
presentation of the Eagleton/Moritz study of provisional voting.

Regards-

Subject  Voter ID Report and Appendices

Karen,

Attached for review by the Commissioners is the Voter ID Report and its appendices. The appendices are
lengthy, but I believe Appendix A should be included in the report sent to the Advisory Boards for review.

Thanks for your forbearance.

Tom O'Neill
Commissioner:

Hope all is going well in your new position— I wanted to get to you the agenda for the Standards Board meetings next week. The Board of Advisors is occurring concurrently, so you can feel free to wander, or to stay at one of the meetings— the same information will be presented in each meeting.

Let me know if you have any questions.

Best regards,

Adam

Theresa:

Questions/Issues: (Sorry they're a little late)

There have been concerns about both machine failure and pollworker training in the recent primary in Chicago-- what is the EAC doing to focus on these concerns, and how do you believe local election officials are meeting the challenge, and what can ordinary citizens do to assist the process.

What can voters do best to protect their right to vote on election day? What should they bring with them and what information should they know?

(There is, of course the voter identification issues that have been debated on the country with conservatives largely concerned about voting fraud, and liberals largely concerned about voter access. Can you comment on this debate?)

I've heard about a new requirement for provisional voting? What does this mean, and if I'm a voter, and told I can't vote, how do I cast a provisional vote?

You recently authored a New York Times opinion piece (along with Fair Vote President John Anderson) recommending that all high school graduates be registered to vote (to be effective on their 18th birthday). What do you think can be done with that recommendation in the states, and why did you come to that opinion.

You were recently in Ohio to observe the federal primary. Do you see different issues in different states, or are the problems based on the technology used or procedures promulgated?

Tuesday, August 15, 2006
10:15 am - 5:15 pm Redistricting & Elections Committee

Supremes Rule on Re-Redistricting of Texas
10:15 am - 11:30 am
Three years after the highly publicized redrawing of Texas congressional districts, the U.S. Supreme Court ruled in June on whether the Legislature acted unconstitutionally. How will the decision alter the redistricting process? What subtle, but critical, lines were buried in the text of the opinions?

Legislative Competition and the role of Gerrymandering?
11:30 am - 12:45 pm
Are legislative elections really less competitive today than in the past? Is gerrymandering the culprit or one of many reasons. New research helps put the redistricting factor in perspective.

Are Voters Who they Say they Are?
1:00 pm - 2:00 pm
Many states continue to look at the issue of voter ID and struggle with balancing the need for maximum access to the polls with trying to eliminate any possible fraud. How big is this problem and what are states doing about it?

Will Fall Elections Run like Clockwork?
2:00 pm - 3:00 pm
Since the controversial 2000 election debacle, most states have implemented key election reforms to shore up the system and respond to federal legislation. Will this fall's 2006 election go off without a hitch or will new problems emerge in the voting process?

What's Next in Redistricting Technology
3:15 pm - 4:15 pm
Redistricting software vendors will preview and demonstrate what they are planning for 2010. They will be discuss things like the next generation of redistricting technology with support for desktop, Web based and PDA/Cellular applications.

Countdown to Census 2010
4:15 pm - 5:15 pm
Speakers: Linda Franz, Geographer, U.S. Census Bureau, Washington, D.C.
Bob LaMacchia, Chief, Geography Division, U.S. Census Bureau, Washington, D.C.
Cathy McCully, Chief, Census Redistricting Data Office, U.S. Census Bureau, Washington,
Wednesday, August 16, 2006
10:15 am - 11:30 am  Redistricting & Elections Committee

Are 527s Here to Stay?

In many states, the so-called 527 groups are likely to play a major part in this fall's campaigns. What are they? Should they be regulated? Can they be regulated? What are states doing in this area?

2:45 pm - 4:15 pm  Money and Politics

As ethical scandals over campaign contributions and influence-buying swirl around Washington, D.C., states once again take the lead in finding new solutions to an old problem. This session will highlight states' innovative ideas for regulating money in politics and the role of lobbyists in fundraising and campaigns.

Friday, August 18, 2006
8:30 am - 10:00 am  General Session and Breakfast

SPEAKERS:

Peter Hart has been one of the country's leading public opinion analysts for more than 27 years. He conducts all public opinion polling for NBC News and The Wall Street Journal. His focus is public policy, cultural and social issues, and strategic consulting for corporations, including Time Warner, Microsoft, Kodak to name a few.

Frank Luntz is one of the most honored communications professionals in America today. Named one of the four Top Research Minds by Business Week magazine, he pioneered the Instant Response focus group research technique, and won an Emmy Award in 2001 for his 100 Days, 1000 Voices segments on NBC's primary and election night coverage.

Legislative Competition and the role of Gerrymandering?

11:30 am - 12:45 pm
Are legislative elections really less competitive today than in the past? Is gerrymandering the culprit or one of many reasons. New research helps put the redistricting factor in perspective.

Are Voters Who they Say they Are?

1:00 pm - 2:00 pm
Many states continue to look at the issue of voter ID and struggle with balancing the need for maximum access to the polls with trying to eliminate any possible fraud. How big is this problem and what are states doing about it?

Will Fall Elections Run like Clockwork?

2:00 pm - 3:00 pm
Since the controversial 2000 election debacle, most states have implemented key election
reforms to shore up the system and respond to federal legislation. Will this fall's 2006 election go off without a hitch or will new problems emerge in the voting process?

**What's Next in Redistricting Technology**

3:15 pm - 4:15 pm
Redistricting software vendors will preview and demonstrate what they are planning for 2010. They will be discuss things like the next generation of redistricting technology with support for desktop, Web based and PDA/Cellular applications.

**Countdown to Census 2010**

4:15 pm - 5:15 pm
Speakers: Linda Franz, Geographer, U.S. Census Bureau, Washington, D.C.
Bob LaMacchia, Chief, Geography Division, U.S. Census Bureau, Washington, D.C.
Cathy McCully, Chief, Census Redistricting Data Office, U.S. Census Bureau, Washington, D.C.

**Wednesday, August 16, 2006**

10:15 am -11:30 am Redistricting & Elections Committee

**Are 527s Here to Stay?**

In many states, the so-called 527 groups are likely to play a major part in this fall's campaigns. What are they? Should they be regulated? Can they be regulated? What are states doing in this area?

2:45 pm - 4:15 pm Money and Politics

As ethical scandals over campaign contributions and influence-buying swirl around Washington, D.C., states once again take the lead in finding new solutions to an old problem. This session will highlight states' innovative ideas for regulating money in politics and the role of lobbyists in fundraising and campaigns.

**Friday, August 18, 2006**

8:30 am - 10:00 am General Session and Breakfast

**SPEAKERS**:

Peter Hart has been one of the country's leading public opinion analysts for more than 27 years. He conducts all public opinion polling for NBC News and The Wall Street Journal. His focus is public policy, cultural and social issues, and strategic consulting for corporations, including Time Warner, Microsoft, Kodak to name a few.

Frank Luntz is one of the most honored communications professionals in America today. Named one of the four Top Research Minds by Business Week magazine, he pioneered the Instant Response focus group research technique, and won an Emmy Award in 2001 for his 100 Days, 1000 Voices segments on NBC's primary and election night coverage.
Dear Craig:

Hope is well with you. Hoping that you can help us out with a quick request from a member of congressional committee. They would like to know if there exists a list (compendium or index) of state election laws on crime and fraud specifically. They are trying to get access to such a list as soon as possible, for a Congressional hearing on Thursday. If no list exists to your knowledge, that's great. If it does exists, and we can get access to it, please let me know.

Thanks so much, Craig. I hope all is well.

Best,
Adam

Subject: Fw: list of state election crimes

Tom:

Doesn't look like there's a state list of fraud statutes-- there's a federal one.
(See below.)
It's something we have planned to do, but have not completed. What's your timeline and priority? I could pull something together...

Adam, Craig thought you were looking for a list of federal statutes, which are discussed in our election fraud manual. We don't have lists of state election crimes. Craig suggests that you contact Peggy Sims at the EAC -- she's a wonderful resource, and I'm including her in my reply. Good luck.

Nancy
Thanks! Do you or Joyce have the one from the 24th??
Thanks much,
Adam

Subject: Martinez ELJ Submission

Profs. Hasen, Lowenstein, and Tokaji:

Attached please find the submission of the Martinez Submission to the Election Law Journal’s Mortiz Edition.

We apologize for turning in this paper late; we have unfortunately been occupied with a series of fast-moving election administration events (largely beyond our control). That said, we believe this to be a strong, well researched piece that makes an important statement, and are proud to submit it for consideration.

We are, of course, open to any edits that you may have to this papers, and as to structure, or footnoting improvements. I will provide your staff with any items that you may need to keep “on file” that are not readily available in the public for the cited material. I have taken the opportunity to do a generic law review style format, but you can obviously alter that as per ELJ’s specifications. I have limited the “short cite” format—because the piece isn’t terribly long, but I have attempted to follow the Bluebook as much as possible.

Again, I know that Commissioner Martinez truly appreciates the opportunity to write for the ELJ, and the encouragement that you all have provided him to get this piece done. We welcome your comments, and will be happy to work with you on further improving this piece.

Very truly yours,  
Adam Ambrogi

1S-2.025 Voter Fraud Complaints.

(1) The Division of Elections is charged with maintaining a voter fraud hotline, pursuant to Section 97.012(12), F.S. Any person that contacts the voter fraud hotline will be asked if he wishes to file a complaint alleging voter fraud. For purposes of this rule, "voter fraud" means intentional misrepresentation, trickery, deceit, or deception, arising out of or in connection with voter registration or voting, and the prescribed offenses set forth in Chapter 104, F.S. "Voter fraud" does not include violations of Chapter 106, F.S.

(2) A person acts "intentionally" if he knew or reasonably should have known that the act in question constitutes voter fraud and is prohibited by Chapter 104, F.S.

(3) Any person alleging voter fraud may file a written complaint with the Division using Form DS-DE 34, titled "Complaint, Voter Registration or Voting" (Eff. 9/98), which is hereby incorporated by reference and available from the Division at Room 316, R.A. Gray Building, 500 South Bronough Street, Tallahassee, Florida 32399-0250. To be legally sufficient, a complaint must:
   (a) Allege an act or acts of voter fraud as defined in subsection (1) above; and
   (b) Contain allegations that have been stated with particularity. Mere recitation of statutory language, vague generalizations, absence of specific facts, or hearsay will not support a legally sufficient complaint.

(4) If the Division determines that the complaint is legally sufficient, it shall forward the complaint to the Florida Department of Law Enforcement for further investigation. Otherwise, the Division shall dismiss the complaint for legal deficiency.

Specific Authority 106.22(9) FS. Law Implemented 97.012(12), 106.22(11) FS. History—New 9-21-98.
Florida Voter Fraud Issues
An FDLE Report And Observations
January 5, 1998

Overview:

With the passage of the 1993 National Motor Voter Law followed by Florida's own implementation legislation (Chapter 94-224, Laws of Florida) to comply with the National Motor Voter Law, the process by which one may register to vote or update one's registration has been greatly simplified. Unfortunately, the simplifications implemented also make it easier for possible fraud since once one is registered, the Motor Voter Laws also made absentee ballots available for any reason. The nation and this state must now reconcile the clash between the philosophy of the Motor Voter laws in promoting virtually "no questions asked" voter registration and voting, with the significant potential for fraud and corruption such a system has promoted.

The Department of Law Enforcement is not charged with principal responsibility to monitor Florida election issues, and does not hold itself out to be the expert agency on election law issues. The Department has, in the past several years, been called upon several times to conduct criminal investigations of specific allegations of election fraud or other misconduct, and has noted basic "trends" in election fraud both within Florida and across the nation.

The following is offered by FDLE to prompt debate and consideration of the issue whether, based on the nation's and Florida's experience since 1993, more protections to help prevent fraud are needed in our election laws. Recognizing that Florida's options may be somewhat restricted by the national law's requirement, and concerns about avoiding a "dual registration system" in which certain standards apply for state elections while others apply for federal elections, FDLE suggests that more registration and absentee ballot integrity protections are required if Florida voter fraud is to be reduced.

The Basic Types Of Fraud Encountered:
FDLE's experience in recent years, including cases predating the 1993 and 1994 "Motor Voter" changes, suggests the areas that are "ripe" for potential fraud fall primarily into these categories:

- **Voter Registration Fraud:** Minimal identification and citizenship proof requirements provide ample opportunity for voter registration fraud. This includes specialized "changes of address" done solely to allow a vote in a particular election, when in fact, no actual change of address has occurred.

- **Absentee Ballot Fraud:** The desire to facilitate the opportunity for each person to vote has resulted in increased opportunity to use absentee ballots improperly. (Once one has registered fraudulently, he or she can obtain an absentee ballot for every election thereafter if he or she wishes. The lack of "in-person, at-the-polls" accountability makes absentee ballots the "tool of choice" for those inclined to commit voter fraud.)

- **Illegally or Improperly "Assisting" Others To Vote Their Absentee Ballot:** Those inclined to do so can capitalize on others' access to an absentee ballot by voting their ballot for them, often with the actual voter not knowing what has occurred. This offers tremendous opportunity for vote fraud, particularly to those who have access to the ill or infirm or those who do not have the ability to resist the influence of another as they are urged to vote in a "required" manner. It also encourages those inclined to commit voter fraud to seek to utilize absentee ballots provided to those whose interest in voting is marginal or non-existent.

- **Vote-Buying:** Securing votes by payment or other "rewards" or the "selling of one's vote"—is an age-old problem that still exists.

This report does not address campaign financing concerns. The Florida Legislature through CS/HB 461, 281 and 75 (Chapter 97-13, Laws of Florida), implemented several campaign finance reforms. These reforms were a step in the right direction, and while more campaign finance reform may be desirable, the focus of this report is on voter fraud concerns.

We are not alone in experiencing voter fraud problems. The State of California has been dealing with similar issues, as has the State of Georgia, among other states. Some of the potential responses under consideration in those states will be identified for consideration of whether they should be implemented in Florida.

**A Realization—Voter Fraud Has Greater Impact On Local Elections But It Affects The Integrity Of Our Democracy In All Elections.**
The impact of fraud on elections is more often and most significantly felt in local elections. It is in municipal or county elections that the difference of a relatively small number of ballots can change the election results. It is in such elections that anyone prone to committing fraud can anticipate that the fraudulent activity may pay off with his or her candidate of choice being elected by reason of the activity. However, many national elections or statewide elections have been settled by a relatively small vote margin. If the options for fraud are not adequately preempted by criminal sanctions, greater voter registration integrity efforts, or other steps, the public's confidence in the integrity of our free election system could be lost. Few issues strike so closely to the heart of our democracy as does the issue of maintaining fair and legitimate elections.

In a 1975 case involving an election whose outcome hinged on the validity of absentee ballots, the Florida Supreme Court discussed the basic issues of preserving the sanctity of the ballot and the integrity of our elections process. The Court's discussion remains as timely as ever. In Boardman v. Esteva, 323 So.2d 259 (1975) the Court included at page 269 of its opinion a review of the essentials necessary to maintain a valid election:

In summary, we hold that the primary consideration in an election contest is whether the will of the people has been effected. In determining the effect of irregularities on the validity of the absentee ballots cast, the following factors shall be considered:

(a) the presence or absence of fraud, gross negligence, or intentional wrong doing;

(b) whether there has been substantial compliance with the essential requirements of the absentee voting law; and

(c) whether the irregularities complained of adversely affect the sanctity of the ballot and the integrity of the election.

The underlying concern of the election officials in making the initial determination as to the validity of the absentee ballots is whether they were cast by qualified registered voters, who were entitled to vote absentee and did so in a proper manner. (Emphasis added.)

Indeed, the essential responsibility in Florida elections is to assure that ballots are cast by qualified registered voters, who were entitled to vote, and who have done so in a proper manner. With the continued movement toward more relaxed voting standards and methods, it is important that Florida also realistically addresses the potential for fraud in a manner that assures this responsibility is met.

**FDLE's Historical Perspective—A Brief Review of Cases of Interest**

MIAMI, November, 1997, Mayoral Elections. This case is still active and details of the investigation cannot be revealed. However, the basic allegations of
election misconduct are known and can be generally discussed. The primary allegation is that absentee ballots were being made available for sale and that absentee ballots were being purchased by person(s) supporting one or more candidates in the election. By reason of the investigation into the specific allegations that surfaced, FDLE determined there appeared to be widespread absentee ballot voter fraud in the City elections.

The types of absentee ballot voter fraud alleged to have occurred include:

- Someone voting on behalf of someone else.
- The purchasing or selling of absentee ballots or another's vote.
- Non-City of Miami residents voting.
- Changing of ballots.
- False statements or information being provided with regard to address information or changes of addresses on voter registrations.
- Possible use of certain addresses within the City limits as the "new address" for persons not residing within the City; done with the apparent sole purpose of permitting voting in the municipal election.
- Voting by absentee ballots under the name of deceased persons.
- Voting in the election by non-U.S. citizens.

The allegations currently under investigation could constitute criminal violations, including, but not necessarily limited to, these violations of Chapter 104:

- False swearing; submission of false voter registration information (a 3rd Degree felony; F.S. 104.11);
- Changing an elector's ballot (a 3rd Degree felony, F.S. 104.021);
- Fraud in connection with casting of a vote (a 3rd Degree felony, F.S. 104.041);
- Corruptly influencing voting (a 1st Degree felony, F.S. 104.061);
- Voting a fraudulent ballot (a 3rd Degree felony, F.S. 104.16);
- Perjury-related violations (1st Degree misdemeanor, F.S. 837.012)

While not engaged in the criminal investigation, the Dade County Grand Jury is reviewing the matter with an intent to recommend improvements in the local elections process. A challenge seeking to overturn the recent election is pending in court in Miami. After the fact that the Miami election was under investigation became known, similar allegations regarding other elections held in Dade County have been received by FDLE and are under review. Two arrests have been made in the subject investigation, with further arrests anticipated.

**HIALEAH 1993 November Mayoral Elections:** Allegations were made regarding the use of absentee ballots which were cast during the 1993 runoff election, and with regard to particular campaign workers who witnessed the ballots. The basic misconduct alleged was that campaign workers were witnessing ballots that were not completed in their presence, and that campaign workers were completing ballots or causing ballots to be completed without the actual voter's knowledge or assent for the vote as cast. The matter was reviewed by the Dade State Attorney's Office, which obtained a transfer to the Palm Beach State Attorney's Office pursuant to an Executive Order of the Governor on the
basis of a conflict by reason of a personal relationship between one of the subjects of the allegation and the State Attorney. The matter was also reviewed by the U.S. Attorney's Office.

No criminal charges were filed, but the election was invalidated by a civil court. A final report issued on September 30, 1996, by the Palm Beach State Attorney's Office included in its summary this finding:

The decision not to file charges should not be considered as an endorsement of the conduct of this election. However, it is not within the jurisdiction of this office to condemn the actions of campaign workers who may have engaged in unethical conduct. We leave for others to determine whether this is conduct that we want to condone in our society. Until such time as the legislature addresses the inadequacies of the present legislative authority, the State is not authorized to address this matter in criminal court....

DAYTONA BEACH 1993 Commission Election: FDLE's investigation established grounds to believe that campaign supporters obtained a number of absentee ballots and solicited votes prior to election day. The investigation led FDLE to believe that the candidate himself distributed the ballots, influenced the marking of ballots and obtained signatures of persons as witnesses who did not actually witness the elector's casting and signing of his or her absentee ballot. Some ballots were witnessed only by one witness. A Volusia County Grand Jury heard the case and issued a Presentment, while not indicting any persons involved. The Grand Jury expressed concerns that conduct such as the witness irregularities, the number of absentee ballots outstanding, the direct handling of such ballots by a candidate and his campaign workers, were not more specifically prohibited by Florida law.

HARDEE COUNTY 1992 Sheriff's Election: FDLE's investigation established grounds to believe that three campaign supporters obtained a quantity of absentee ballots on behalf of their candidate and subsequently solicited votes prior to the election. A number of these ballots were found to contain irregularities involving the witnessing. In some cases, the actual vote (via a punch out ballot) was completed by the campaign supporter. A Hardee County Grand Jury reviewed the case that no criminal intent was involved. A new election was ordered, however.

DIXIE COUNTY 1992 Sheriff's Election: FDLE's investigated allegations that a campaign supporter obtained a number of absentee ballots and then took them to sick and elderly throughout the county and "assisted" them in voting. During the process they were encouraged to vote for a specific candidate. The worker then allegedly took the ballots and later had them falsely witnessed. No compensation for the "votes" was made. No one was arrested in this matter.

BAKER COUNTY 1990 School Board Election: One arrest and conviction resulted from this investigation which demonstrated that a campaign supporter
recruited and transported voters to the County Courthouse where they obtained an absentee ballot to be marked in accordance with the worker's directions. In return, each such voter was paid $10 by the campaign supporter.

**DIXIE COUNTY 1988 Supervisor of Elections Election:** One arrest and conviction in federal court resulted from this investigation. The investigation established that the Supervisor of Elections, herself a candidate, gave groups of absentee ballots to selected supporters. These were taken to poor and infirm voters where, in exchange for $10 to $20, the voters' votes were secured. The absentee ballots were witnessed by campaign workers and then returned to the candidate, the Supervisor of Elections.

**LAFAYETTE COUNTY 1984 County Commission Election:** Five arrests and convictions in federal court resulted from this vote-buying investigation. The supporter of a candidate secured a large number of absentee ballots and took them to the poorer sections of the county. For a payment of $25 to $35 and a bottle of whiskey, supplied by the candidate, a voter's vote was "bought." The voter completed the absentee ballot, and the candidate's worker would have the ballots falsely witnessed later prior to return to the Supervisor of Elections.

### Observations and Concerns Derived From FDLE's Investigations

- The absentee ballot is the "tool of choice" for those who are engaging in election fraud.

The absentee ballot's very nature makes it the mechanism to use when trying to capitalize on a voter's infirmities or desire to make some quick money. Both federal and Florida law make absentee ballots available to anyone who seeks them, with no requirement of "justification" for not appearing in person at the polls. Given this easy access to absentee ballots, the "tool of choice" will remain popular among those who corrupt the elections process.

- The absentee ballot's integrity is only as good as the weakest link in the voter registration process, and the voter registration process is extremely open to fraud and abuse.

Once registered to vote, any person may request and utilize an absentee ballot without ever having to appear in person to vote. If the voter registration process does not require significant proof of citizenship, address, and identity, then those inclined to commit fraud will capitalize on the process by successfully registering those who have no right to vote, and then "facilitate" their (illegal) vote by absentee ballot.

- Voter registration and absentee ballot fraud can be expected to increase unless steps are taken to stop it.
Voter registration fraud is occurring throughout the nation. The National Center For Policy Analysis' "Policy Digest" for December 1996-February 1997 related that multi-state voting, fake registrations, and repeat voting by an individual in the same election are becoming problems. It reports that in Chicago, 150,000 voters registered more than once, with 90,000 registering three or more times. Thousands of mentally handicapped voters were assisted in registering in Illinois. In reality, it appears that Florida's ability to maintain the integrity of its voter registration rolls may be no better than Illinois'. If this is the case, then perhaps Florida should review how truly effective its current efforts at maintaining voter registration integrity are, and consider options such as specialized audits of registration rolls or other efforts to avoid problems like those encountered in Chicago. While the national Motor Voter Law may restrict the state's ability to "cull" its voter registration rolls to the extent the rolls once were reviewed and updated, focused efforts to assure integrity may still be done.

- The elderly are often exploited by others to commit absentee ballot fraud.

It appears that the elderly voter or elderly witness to another's absentee ballot are often targeted for use in fraud schemes, perhaps because some of these voters may be easily manipulated or influenced by those in whom they have previously placed their trust. Such persons might be a condominium association representative, a community "leader," or even just a stranger who approaches an elderly person with an absentee ballot in hand.

- Those fighting fraud should utilize the sense of community identity and pride to make citizens more aware of how they can help prevent voter fraud.

Many Floridians may not be aware of how their timely report of suspected wrongdoing could facilitate the discovery of voter fraud before it occurs or as it is occurring. Such timely reporting could stop problems before they grow to the point that an entire election's integrity is questioned. A greater emphasis on promoting a "zero tolerance" to voter fraud in all of Florida is needed, with an appeal to each voter's sense of community and civic pride as a means of motivating citizen interest in assisting in the state's anti-fraud efforts. An explanation of why a zero tolerance is so important could help citizens understand their responsibilities in fighting fraud.

- Under current law, there is little effective review of what is claimed on one's registration form.

Relatively easy change-of-address procedures, implemented by the motor voter laws, makes it easy to "move" into an election zone for the express purpose of voting in a particular local election, with little or no scrutiny of whether the "move" is truly legitimate or not. Indeed, the recent changes in the registration
requirements have eliminated virtually any ability by Supervisors of Elections to independently verify whether the information provided on a registration form is in fact, accurate.

- **Additional steps to prevent absentee ballot fraud are needed.**

In 1996, Florida made numerous revisions to Chapter 101, attempting to address absentee ballot fraud and related issues. A limit of no more than two absentee ballots per election may be secured by a third party other than a member of one’s immediate family. F.S. 101.62(4)(b). However, under F.S. 101.62(1), a person may request, *with no verification*, in person, by phone or by mail a personal absentee ballot. Under F.S. 101.64, the requirement that an absentee ballot be witnessed by a notary or two separate witnesses has been eliminated. Now, only one witness need to sign an absentee ballot. With no more scrutiny or justification for such a ballot than is provided by current law, easy access to absentee ballots remains a reality in Florida. Any person may pick up the phone and request an absentee ballot, no questions asked. Unfortunately, any person inclined to use that ballot fraudulently, may now do so with less fear of becoming known than in the past when tighter standards were applied.

- **Florida's present registration and absentee ballot procedures lack safeguards that could help prevent fraud.**

To a great extent, Florida's absentee voting and voter registration is based on a "trust me" level of scrutiny. While the goal of incorporating more voters into the process is laudatory, perhaps we have begun to see that the "Motor Voter" approach is in need of returning some "common sense" safeguards to the registration and absentee ballot process. Those inclined to defraud the process are capitalizing on the philosophy of "easy registration and easy voting" under our current laws. It makes good sense that safeguards be implemented that recognize the potential for fraudulent exploitation of the elections process. If a ballot is only as good as the weakest link in the registration process, then should not Florida seek to better regulate, monitor, audit and investigate its voter registration process?

- **Florida requires little verification of registration information.**

Florida currently does not require a voter registrant to provide a Social Security number or Florida Driver's License number. In fact, in 1997, Florida dropped the requirement that a registrant provide gender, race or ethnicity information when registering. When registering, Florida requires merely an "indication" that the registrant is a U.S. Citizen, is not a convicted felon, or is not adjudicated mentally incapacitated. While submitting a false voter registration application is a third degree felony (as of 1/1/98), the current trend to require little if any verifying information at the time one registers makes effective auditing, review, or investigative follow-up virtually useless to pursue. (Florida law allows the
applicant to volunteer the information, but does not require that it be provided as a requisite for registration.) In reality, Florida has implemented a standard that is in essence little more than "trust me at my word alone" in registering to vote.

- Non-Citizens registering to vote and voting is a national problem, and has been alleged to have occurred in Florida.

The FBI and the U.S. Attorneys office in Dallas are examining whether non-U.S. citizens are on Dallas County's roll of registered voters, according to an Associated Press article by Michelle Mittelstadt, dated 9/19/97. The article reports that the investigation has been slowed because INS officials in Washington are refusing to cooperate with investigators. U.S. Attorney Michael Uhl sought INS assistance by comparing the computerized tape containing the names of those who voted in the Dallas County November, 1996 and May, 1997 elections against INS' computerized records to determine if voting by foreigners occurred. Assuming that cooperation between the INS and the U.S. Attorney's office can be restored, the results of Dallas' inquiry are worth watching.

Non-U.S. citizens have registered, and have been found to have voted in other states. Florida could be experiencing the same problem. (Non-citizen voting is one of the several allegations currently under investigation in regard to the Miami mayoral election.) The federal Illegal Immigration Reform and Immigrant Responsibility Act (Title 18 U.S. Code, Section 611) makes it a federal crime for noncitizens to vote in federal elections, with maximum penalties of deportation or imprisonment. Likewise, Florida requires its registered voters to be United States citizens (F.S. 97.041) and criminalizes making a false voter registration (F.S. 104.011—a 3rd degree felony as of 1/1/98) but unless Florida (and other states) have a way to truly verify a registrant's eligibility with something more than the basic "trust me at what I've said" level of accountability, state and local officials can do little to stop the potential registration (and subsequent voting) fraud. In addressing this concern, Florida should consider requiring documented proof of one's citizenship when registering to vote.

- Florida should consider capitalizing on its coming "centralized statewide voter file," by implementing significant additional safeguards.

Florida has moved toward implementing a centralized statewide voter file. It is to be established and run by the Division of Elections as implemented under Chapter 97-13, Laws of Florida, which became effective 1/1/98. If, and when, all of Florida's voter registration records could be centrally housed in this file, then any polling place or registration processing site could maintain on-line access the central file to determine whether a person has already voted in a particular election or whether the person is registered to vote in more than one jurisdiction. If sufficient identifying information were available in the voter file, the file could be "run" against other state and federal databases to determine whether deceased
persons, convicted felons, or others appear to have been inappropriately maintained on the state's voter registration rolls. If sufficient identifying information were available in the voter file, routine audits of registration rolls could be performed to help identify areas of potential fraud concern.

However, since Florida's registration requirements do not include essential verifying information such as a Social Security Number, Florida Driver's License number, proof of becoming a naturalized U.S. citizen, or even race, gender, or ethnicity, the ability of any reviewer to truly determine one's identity in the voter file will be severely hampered, if not completely defeated. Consequently, if the voter file is to reach its full potential for fighting fraud, a requirement of significant registration verification information must be returned to Florida's voter registration procedures.

- At-the-poll identity verification standards should be reviewed to determine if enhancement is warranted.

Actual false impersonation at the polls continues to occur regularly, although use of absentee ballots appears to be the preferred method of committing fraud. While false impersonation is a felony, being able to prove the conduct is difficult. A poll worker's ability to recognize the person who showed up and voted under another's name is severely compromised by the sheer number of faces that poll worker will encounter on election day. Making a crucial identification of a perpetrator is a task that would tax virtually any person's memory or ability to recall. Poll workers are not experts at handwriting analyses, and most will confess that if a signature on a poll registry resembles the signature on a voter registration card or other signed identification, the presumption is that the person is in fact who he or she purports to be. There is no method of conducting even a cursory follow-up check on persons suspected by a poll worker.

Some system of identity verification should be warranted. When we seek to utilize a credit card, we may be asked a crucial piece of information normally known only to a few people, such as our mother's maiden name. Yet no such "identity check" verification option is included in our elections process. Poll workers have no "confidential" verification information upon which to rely when they suspect someone is not who he or she claims to be. Some sort of readily usable "verification" of identity information would greatly reduce the chances of one successfully voting under a false identity. Perhaps some sort of enhanced identity verification information could be incorporated in Florida's voter registration process.

California has encountered similar problems. Their frustration with the present system appears to have reached a degree of crisis greater than Florida has expected to date. Among California's proposed or implemented responses are:
"Zero tolerance to voter fraud." Bill Jones, Secretary of State in California has established a goal of "100 percent participation by all eligible California voters with a tough zero tolerance policy for fraud."  

"Voter Fraud Hotline" and "Handbook." As part of California's anti-voter fraud efforts, a statewide Voter Fraud Hotline (1-800-345-VOTE) has been established to allow any person to report any witnessed suspected election fraud or campaign abuses. The Secretary of State's Office in California has printed a small, pocket sized, "Voter Fraud Prevention Handbook" that briefly describes the requirements under law for registering to vote, voting at a poll, voting by absentee ballot, and "campaign do's and don'ts." Included in the book's responses regarding "Absentee Ballots" is this advice: "...your vote is secret and you should not let anyone handle your ballot in any way...Pay close attention to deadlines, and under no circumstances permit any campaign workers to handle your ballot or fill in your choices. Be sure to refuse any offer from them to return your ballot for you. If they offer to do so, they are breaking the law. (EC Section 18371, 18403, 18577)." Florida is in need of similar and repeated advice to its citizens.  

"Voter Eligibility Verification Act." In April, 1997, California saw introduced the "Voter Eligibility Verification Act." It seeks to provide local election officials the authority to make inquiries with the Social Security Administration and the Immigration and Naturalization Service to verify the citizenship of people who have submitted a voter registration application.  

Aggressive Anti-Fraud Efforts By The California Secretary of State: In 1996, the California Secretary of State's Office uncovered evidence of voter fraud and dropped 727 noncitizens from the voter rolls. A few months later it discovered voting irregularities and ordered a complete review of Orange County, California's 1.3 million residents registered to vote in the state's general election.  

Federal elections subject to alleged fraud, too. For example, in November, 1996, California Republican Representative Bob Dornan was deposed by Democrat Loretta Sanchez in an election determined by only a 984 vote margin. Doman has alleged the crucial "upset" total resulted from "noncitizen voting."  

Georgia's response to voter fraud: In a press release dated January 7, 1997, Georgia Secretary of State Lewis Massey announced his proposal of several anti-election fraud measures, including a provision which will require citizens to present identification before receiving a ballot at their polling place. Other changes proposed included making all election code violations a felony, increasing the maximum fine and imprisonment that could be imposed for such violations, including a printed warning to all absentee ballot instructions and return envelopes describing the penalties for vote buying or selling, and implementation of the U.S. Postal Service's National Change of Address or alternative database systems to insure the accuracy and timeliness of the state's voters list.  

Louisiana experiences: Louisiana State Representative Louis "Woody" Jenkins has charged that 2,600 "phantom voters" and 10,000 more questionable ballots were cast in his U.S. Senate race, which he lost by 5,788 votes.
• **Illinois' experience:** As noted earlier in this report, Chicago has to deal with the reality that persons were registering to vote more than once, a substantial number of which had registered to vote three times in different precincts. Auditing efforts taken to assure the integrity of the voter rolls are being done.

**SUMMARY:** A balance between promoting the vote and maintaining the integrity of the elections process must be carefully secured. While Florida's move toward "Internet voting" and "voting by mail" represents a laudatory effort to expand the opportunity to vote, it also expands the opportunity to commit voter fraud. Absent the inclusion in voter registration records of significant personal identifier information that is not currently required of Florida voters, the opportunities to defraud the election process will abound through any voting method, be it absentee ballot, electronic voting, or by-mail voting. Indeed, with each step taken that does not include a process that requires sufficient identification verification, the opportunity for fraud increases.

The above-noted observations and concerns are based upon FDLE's experience in investigations and upon national trends. Below, developed in part upon FDLE's experience and drawn from a variety of sources, are several suggestions of ways in which Florida's elections process may be better protected against fraud. It is possible that some of the suggestions may already be in place in one form or another in some areas of the state. The suggestions are intended to promote debate and consideration of what steps are needed in our state and local elections processes to better insure the integrity of our elections.

**Anti-Fraud Steps Florida May Wish To Consider Implementing:**

• Promote a "zero tolerance" approach to voter fraud by making significant efforts to elevate community awareness and opportunity to report fraud.

• Enhancing the state's ability to ferret out potential fraud before it occurs by implementing significant and meaningful proof requirements in voter registrations. No longer simply accept one's "representation" that the form is correct. Instead, require proof of citizenship, and current residency. Is production of a Social Security card or a phone bill or power bill receipt showing one's residence too onerous a burden to place on one who seeks to vote? Surely not.

• Consider a "reverse absentee ballot process" that sends a poll worker to the absentee voter with the ballot. Instead of sending the ballot to "points unknown" and having it returned for after-the-fact verification that is less than acceptable, why not fund absentee ballot vote collection agents who will deliver a ballot upon request to any registered voter. The collection
agent could then wait while the ballot is completed and could serve as a state-bonded witness that the ballot has been filled out correctly by the person to whom the ballot was provided. The process might cost more in personnel time and expense, but after-the-fact ballot verification could be eliminated, thereby offsetting some of the costs, and the much greater value of substantially curtailing absentee ballot fraud could be obtained.

- As an alternative to the "reverse absentee ballot" idea, in the minimum, return to an enhanced absentee ballot witnessing requirement. An absentee ballot verification, including verification of the identity of the person voting, should be required, with the sealing of the ballot being witnessed by two or more witnesses or a notary, as was once the standard in Florida.

- All absentee ballots should have prominently printed warnings regarding the violations of law that could occur in their use, and the penalties attached.

- A voter fraud hotline like California's should be considered. The toll free number could be printed on all absentee ballots.

- Make vote-buying and absentee ballot fraud too expensive for those inclined to do it by offering a reward of a substantial sum of money to any person providing information to law enforcement that results in the conviction of a person for voter fraud. Make the state's payoff for information resulting in a conviction much greater than the profit from accepting a vote buying payoff or participating in absentee ballot fraud.

- Return to a requirement of personal appearance before a government official to register to vote and require the registrant to produce sufficient verification information.

- Require drivers license and/or social security numbers on voter registration cards and as part of the information contained on one's absentee ballot.

- Require foreign-born citizens to provide their naturalization number on their voter registration card.

- Require documented proof of residency in the form of a power bill, phone bill, or other regular mailing to the claimed address, in order to help prevent the "move" made for the sole purpose of voting in a local election.

- With implementation of sufficient specific voter registration verification information, implement the state's centralized voter file to its greatest
extent, including running voter registration records against all available government databases that could identify fraud attempts.

- With sufficient verification information in the data base, place all poll voting places "on line" to the data base for instant verification of registration status and to prevent multiple voting at different locations by the same person.

- Commit to a statewide review of registration records to determine if non-citizens or others have wrongly registered to vote. Consider offering a brief "grace period" in which any person who has illegally registered may, without fear of punishment, appear and voluntarily remove his or her name from the voter records. (Allow the person's name to be retained in the databases so that if he or she attempts to register at a subsequent date, the effort will receive special scrutiny to verify his or her eligibility to vote.)

- Require proof of residency and identity when appearing at a poll to vote AND when requesting an absentee ballot. Issue the absentee ballot in the name of the verified requestor only, and prevent the requestor from voting any other way unless the ballot is returned unvoted. Require, as necessary, additional information to verify identity, such as the person's mother's maiden name, etc.

- Aggressively use existing databases and processes to identify those who claim they are not "residents" or citizens in order to be excused from jury duty or other obligations, then claim they are a resident or citizen for purposes of registering to vote. Citizenship and its responsibilities should not be something one claims or denies when convenient.

- Consider tough alternatives to criminal sanctions for those who are found to have engaged in voter fraud. FDLE's experience demonstrates that often "criminal intent" is often difficult to establish, even though questionable vote conduct occurs. Give the Attorney General or another entity the authority to seek civil sanctions and civil fines when criminal sanctions will not be sought.

- Expand candidate disqualification sanctions. Florida does not provide a blanket disqualification from holding office for those convicted of voter or election misconduct. For example, while a convicted felon may not vote, Florida law disqualifies a person from holding office upon felony conviction of F.S. 104.071 (remuneration by candidate for services, support, etc.) and F.S. 104.271 (making false or malicious charges against, or about an opposing candidate.) Not every election related conviction will disqualify one from office-holding. The list of offenses that, once committed,
disqualifies a person from holding office should be expanded to cover any voter fraud activity.

- **Enhance registration and absentee ballot process audit efforts.** Recognize that such efforts require a level of highly-specialized expertise to ferret out voter fraud around the state before it occurs and rises to a criminal level. Local jurisdictions may not have the resources to support such an effort, so consideration should be given to providing the effort at the state level.

- **Publish and distribute to each registered voter a "Voter Fraud Prevention Handbook"** similar to that used in California, including a voter fraud hotline toll free number to report suspected abuses, and, if implemented, to provide information that could be used to fund one's reward when a fraud perpetrator is convicted.

- **Consider requiring notification of the death of an individual to the Supervisor of Elections as a requisite prior to the settling of one's estate in court either by reason of a will or without.** Proof of notification would be necessary in order to close out the estate's matter in court. Require the Supervisors of election to report any received notices of death to the central database within a short period of time, and to remove the person from all active voting rolls.

This list is not exhaustive, but is offered as the "starting point" for potential legislative consideration and review. None of the suggestions should be deemed "FDLE proposals." They are offered as the basis to promote discussion rather than as finalized proposals.

COMPLAINT
For Alleged Voter Fraud in
Voter Registration or Voting
(Section 106.22(11), Florida Statutes)

Room 316, R.A. Gray Building, 500 South Bronough Street, Tallahassee, Florida 32399-0250
Telephone 1-877-868-3737 (1-877-VOTERFRAUD)

The Division of Elections has authority to conduct preliminary investigations into any irregularities or fraud involving voter registration or voting and report its findings to the State Attorney for the judicial circuit in which the alleged violation occurred for prosecution, where warranted.

PERSON BRINGING COMPLAINT

Name ___________________________ Home Phone ___________________________
Address __________________________ County ___________________________
City ___________________________ State __________________________ Zip Code __________________________

PERSON AGAINST WHOM COMPLAINT IS BROUGHT (limit one person per form)

Name ___________________________ Work Phone ___________________________
Address __________________________ County ___________________________
City ___________________________ State __________________________ Zip Code __________________________
Title of office or position held or sought __________________________

Have you filed this complaint with the:
State Attorney’s Office [ ] Yes [ ] No
Florida Department of Law Enforcement [ ] Yes [ ] No
Florida Elections Commission [ ] Yes [ ] No
Florida Commission on Ethics [ ] Yes [ ] No

VIOLATION
If you believe any irregularities or fraud involving voter registration or voting has been committed, please state the specific acts committed by the person named in this complaint:

__________________________________________________________________________

__________________________________________________________________________

STATEMENT OF FACTS
State in your own words the detailed facts and circumstances that form the basis of your complaint, including the names of any relevant person(s). In your narrative explanation, please include relevant dates and times and the names and addresses of other persons whom you believe have knowledge of the facts. Also, give any reasons that you feel the alleged violation was committed by the person against whom this complaint is brought while knowing his or her actions were wrongful.

Signature of complainant

Print or type name of complainant

This complaint is not confidential and, once on file with the Division of Elections, it will be treated as a public record.

DS-DE 34 (4/03)
FOCUS OF CURRENT RESEARCH

- develop a comprehensive description of what constitutes voting fraud and voter intimidation in the context of Federal elections;

- perform background research (including Federal and State administrative and case law review), identify current activities of key government agencies, civic and advocacy organizations regarding these topics, and deliver a summary of this research and all source documentation;

- establish a project working group, in consultation with EAC, composed of key individuals and representatives of organizations knowledgeable about the topics of voting fraud and voter intimidation;

- provide the description of what constitutes voting fraud and voter intimidation and the results of the preliminary research to the working group, and convene the working group to discuss potential avenues for future EAC research on this topic; and

- produce a report to EAC summarizing the findings of the preliminary research effort and working group deliberations that includes recommendations for future research, if any;
PURPOSE OF WORKING GROUP

Given the preliminary research and EAC authority under HAVA ----

WHERE DOES EAC GO FROM HERE?

NOT to debate what other agencies or organizations should or should not be doing.
Development of:

- nationwide statistics and methods of identifying, deterring, and investigating voting fraud in elections for Federal office [section 241(b)(6)]; and

- ways of identifying, deterring, and investigating coercion of voters in elections [section 241(b)(7)].
The Federal Crime of Election Fraud

-- Prepared by
Craig C. Donsanto¹

The material that follows addresses the role of the United States Department of Justice in criminal matters that arise out of the balloting process, i.e. election fraud.

This paper seeks to answer the most frequently asked questions concerning the federal law enforcement role in election matters. Particularly, what sort of election-related conduct is potentially actionable as a federal crime, what specific statutory theories apply to "frauds" occurring in elections lacking federal candidates on the ballot, what federalism, procedural, and policy considerations impact on the federalization of this type of case, and how Assistant United States Attorneys (AUSAs) should respond to this type of complaint.

An effective federal role in prosecuting crimes against the electoral process is critical to the proper functioning of American democracy. The integrity of the voting process stands at the very heart of our system of representative government. Where elections are corrupted, arbitrary and corrupt government inevitably follow. Rooting out corruption in the election process, and bringing those responsible for it to swift and sure justice, is an important national law enforcement priority.

¹ Director, Election Crimes Branch, Public Integrity Section, Criminal Division, United States Department of Justice.

The views expressed in this paper are solely those of its author, and do not necessarily reflect the policy of the United States Department of Justice on the issues addressed. This paper creates no procedural or substantive rights for private parties, and cannot be relied upon by those whose circumstance may fall within the discussion herein.
What sort of activities are prosecutable as federal "voter fraud" crimes?

The federal concept of "voter fraud" applies only to activity that is appropriately remedied through criminal prosecution, as distinguished from other less severe remedies such as election contest litigation or administrative relief.

In assessing the appropriateness of the criminal remedy to a given set of facts, federal prosecutors should keep in mind that our society tolerates behavior in election campaigns that it does not tolerate in commercial, personal, or government relations. Thus as a general rule, the federal crime of "voter fraud" embraces only organized efforts to corrupt of the election process itself: i.e., the registration of voters, the casting of ballots, and the tabulation and certification of election results.

This definition excludes all activities that occur in connection with the political campaigning process, unless those activities are themselves illegal under some other specific law or prosecutive theory. Examples of the latter would include such things as stealing an opponent's campaign property, breaking into an opponent's headquarters, some transactions that are illegal under campaign financing laws. On the other hand, most things that candidates do or say about one another on the campaign trail, are generally not appropriated remedied through criminal prosecution.

This definition also excludes isolated acts of individual wrongdoing that are not part of an organized effort to corrupt the voting process. If such isolated acts of "fraud" are to be subjected to criminal penalties, that is a task for the states not the federal government to do. Indeed, there is a still-unresolved constitutional issue that dates back to the 19th century concerning whether
the federal courts have authority to hear criminal cases involving isolated incidents of electoral fraud. See e.g., Blitz v. United States, 153 U.S. 308 (1894).

Finally, this definition excludes mistakes and other gaffs which inevitably occur in the administration of the usually hectic election day polling process. Mistakes happen. They can have significant impact on the outcome of close elections. Where mistakes occur on a significant enough level to potentially affect the outcome of an election, the appropriate remedy is an election contest brought by the loser seeking civil judicial redress through the appropriate state election contest process. But mistakes in election administration are not appropriately remedied through criminal prosecution.

In addition to the qualitative limitations on the concept of "criminal" election fraud set out above, the task of prosecuting election fraud offenses in federal court is further complicated by the constitutional limits that are placed on federal power over the election process. The conduct of elections is primarily a state rather than a federal activity. See U.S. Const. Art I, Secs. 2 and 4. Consequently, there are only a limited number of federal statutes and prosecutive theories available to address "voter frauds," and an overall imperative for federal authorities to give way to state and local enforcement in most -- but not all -- situations involving voting. With these considerations in mind, there are essentially four types of federal "election fraud:"

- **First**, there are schemes to purposely and corruptly register voters who either do not exist, or who are known by the putative defendant to be ineligible to vote under applicable state law.

- **Second**, there are schemes to cast, record or fraudulently tabulate votes for voters who do not participate in the voting act at all. This includes such activities as schemes by poll
managers to stuff ballot boxes, schemes to impersonate nonvoting individuals either at the polls or via absent voter ballot, and schemes by vote canvassers to alter vote tallies.

— Third, there are schemes to corrupt the voting act of voters who do participate in the voting act to a limited extent. These include such things as schemes to "assist" voters in such a manner that the voter does not knowingly consent to electoral preferences that are placed on the ballot, schemes to pay voters for voting, schemes to intimidate voters through physical or economic means, schemes to cast multiple ballots, and schemes to induce voters to validate ballot documents (usually absentee ballots) by misrepresenting what the document is.

— Finally, there are schemes to knowingly prevent voters qualified voters from voting. These include such activities as destroying voter registrations or ballots, preventing people known to be qualified to vote from doing so, schemes to tamper with computer equipment that most United States election districts use to tabulate votes, and physically disrupting order within open polling locations.

* When is it appropriate for federal prosecutors to intervene in election "fraud" matters?

The Constitution gives primary responsibility for conducting elections and safeguarding the voting process to the states, not to the federal government. The federal role in matters involving the conduct of elections is a limited one. See e.g., ACORN v. Edgar, 56 F.3d 791 (7th Cir. 1995); Voting Rights Coalition v. Wilson, 60 F.3d 1411 (9th Cir. 1995). Thus, as a general rule the task of policing the integrity of the election process -- including the prosecution of people who violate local or state election laws carrying criminal penalties -- lies with local and state authorities, to which federal power normally should yield.
There are four principal situations where deferral to state or local enforcement authorities may not be appropriate. If any of these factors is present in a pattern of conduct, it may be appropriate to prosecute it federally -- to the extent that this is possible under available federal laws. These four situations are:

1. **Federal affect.** Where the objective of the conduct is to corrupt the outcome of a federal elective contest, or where the consequential effect of the corrupt conduct impacts upon the vote count for federal office (e.g., *Anderson v. United States*, 411 U.S. 211 (1974)).

2. **Civil rights.** Where the object of the scheme is to discriminate against racial, ethnic or language minority groups, the voting rights of which have been specifically protected by federal statutes such as the Voting Rights Act, 42 U.S.C. § 1973 et seq.

3. **Prosecutor of last resort.** Where federalization is required in order to redress longstanding patterns of electoral fraud, either at the request of state or local authorities, or in the face of longstanding inaction by state authorities who appear to be unwilling or unable to respond under local law.

4. **Link to other crimes.** Where there is a factual basis to believe that fraudulent registration or voting activity is sufficiently connected to other forms of criminal activity that perusing the voter fraud angle will yield evidence useful in the prosecution of other categories of federal offense.

*What are the advantages of prosecuting election frauds in federal courts?*

There are four procedural advantages to prosecuting election frauds in federal courts.
These are:

- Voter fraud investigations are labor intensive. Local law enforcement agencies often lack the manpower and the financial resources to take these cases on.

- Voter fraud matters are always politically sensitive and very high profile endeavors at the local level. Local prosecutors (who are usually themselves elected) often shy away from prosecuting them for that reason.

- The successful prosecution of voter fraud cases demands that critical witnesses (including voters whose voting acts have been co-opted) be examined under oath before criminal charges based on their testimony are filed. Many states lack the broad grand jury process which exists in the federal system.

- The defendants in voter fraud cases are apt to be politicians -- or agents of politicians -- and it is often impossible for either the government or the defendant to obtain a fair trial in a case that is about politics and is tried to a locally-drawn jury. The federal court system provides for juries to be drawn from broader geographic base, thus often avoiding this problem.

*What federal statutes are available to federalize frauds that occur in all elections – Federal as well as Non-Federal?*

The fact that the United States Constitution leaves election administration primarily with the states severely diminishes the number and scope of federal laws on this subject where there are no federal candidates on the ballot. Most elections in the United States are nonfederal in the sense that no candidates for federal office are on the ballot. Moreover, as a general rule election fraud is a far more common feature of local elections than it is of federal ones since local politics usually affects people's daily lives more directly than does national politics.
Federal criminal laws dealing directly with elections are generally confined to prohibiting fraudulent activities that occur in "mixed" elections, where federal candidates (i.e., Senate, Congress or President), are on the ballot. National elections such as these occur only two or three times in a two-year election cycle. Thus, a major challenge to the development of an effective federal law enforcement initiative against electoral fraud has been to adapt federal criminal statutes aimed at activities other than voting to the most common varieties of election frauds identified above.

The federal criminal prosecutive theories currently in use to federalize election frauds in all elections include the following:

- Schemes by polling officers "acting under color of law" to violate their duty under state law to safeguard the integrity of the election process through purposefully allowing void ballots to be cast ("stuffed") in the ballot box, or by intentionally rendering fraudulent vote tallies, can be prosecuted as civil rights violations under 18 U.S.C. 241/242 per U.S. v. Olinger, 759 F.2d 1293 (7th Cir. 1985) and its progeny. These two statutes prohibit, among many other things, intentional denigration by public officers acting under color of law of the "one-person-one-vote" principle of Equal Protection that is guaranteed in the 5th and 14th Amendments of the Constitution. Schemes to manipulate voting equipment and to stuff ballot boxes normally require physical access to voting equipment that can only be achieved through authority conferred by state law, thus satisfying the "state action" jurisdictional peg in these two statute in ballot manipulation schemes. Due to a quirk in the law, this theory is not available for use when the object of the scheme is to obtain and record illegal votes obtained through vote buying -- even where an election officer is used to ensure that bought voters vote right. The cases that
require this result are United States v. Bathgate, 246 U.S. 220 (1918); United States v. McLean, 808 F.2d 1044 (4th Cir. 1988).

• Schemes to stimulate or reward voter registration by offering or giving voters things having monetary value violate the "payment for registering" clause of 42 U.S.C. § 1973i(c). Currently all State voter registration laws are make voter registration "unitary" in nature, in the sense that a registrant becomes simultaneously entitled to vote for all candidates – federal and nonfederal alike. In these situations, the "unitary" nature of the registration act provides a sufficient federal nexus to permit federal regulation, and it thus does not matter what particular election the subjects were interested in affecting or when the payments were made. See United States v. Cianciulli, 482 F.Supp. 585 (E.D. Pa. 1979).

• Schemes to register voters fraudulently through providing election officials materially false information about the voter's eligibility for the franchise can be prosecuted in some situations without regard to when the underlying activity took place. As with payments for registering, this is because of the "unitary" nature of the registration act. However, the specific federal statutes that apply to fraudulent registration schemes do impose some limits on the prosecution of this type of case in nonfederal election years:

  – The "false registration information" clause of 42 U.S.C. § 1973i(c) reaches only schemes to provide false information concerning a voter's "name, address or period of residence in the voting district." Schemes to provide other categories of false information (e.g., citizenship) are not reached by this statute, regardless of how material that information may be to determining voter eligibility.
The recently-enacted National Voter Registration Act (NVRA) contains a new criminal provision that reaches schemes to provide any materially significant piece of information concerning entitlement to the federal franchise under state law. 42 U.S.C. § 1973gg-10(2)(B). This new criminal law is broader than Section 1973i(c) in terms of the categories of false information to which it applies. It took effect on January 1, 1995.

Schemes to obtain and cast ballots that are materially defective (and thus "void" under local law) in non-federal elections can prosecuted under the Federal Mail Fraud Statute, 18 U.S.C. § 1341, when the United States Mails (a Federal instrumentality) are used to further the scheme. The "fraud" in this situation lies in generating ballots that the defendants can be shown to have known were materially deficient under state election law, and in causing a false vote count by concealing those material defects from the vote tabulating authority. Federal jurisdiction rests on the fact that the mails are a federal instrumentality.

- The Travel Act, 18 U.S.C. § 1951, is a federal statute that makes it a felony to travel across state lines or to mail items intrastate in aid of activity that constitutes "bribery" under the law of one or more of the states involved in the interstate travel. Schemes to pay voters can be prosecuted under this statute in those states where paying voters is treated as a "bribery" offense. At the current time (1996), 30 of the 50 states treat vote buying as a "bribery" offense, and in those states this activity can thus be prosecuted under Section 1951. Most vote buying schemes do not involve inter-state travel. However, they do often rely on the absentee voting process, and thereby use the United States Mails. Thus the availability of the Travel Act allows for the federalization of vote buying schemes using the absentee balloting process.
What additional statutes are available to federalize election fraud when federal candidates are on the ballot?

In addition to the statutes and prosecutive theories given above, there are several specific criminal laws in the United States Code that address electoral frauds which take place when a federal candidates is on the ballot.

- 42 U.S.C. § 1973i(c) prohibits specific types of voter frauds, when they occur in connection with an election where there are federal candidates on the ballot. The most prominent of these are schemes to provide election officers with false information concerning voters' names, addresses, or one's period of residence in the election district in order to qualify to vote; and schemes to pay voters. The payment for voting portion of this statute requires only that the payment be intended to influence the voter to participate in the election. It does not require that the voter be paid to vote for federal candidates, or for any specific candidate. United States v. Bowman, 636 F.2d 1003 (5th/11 Cirs 1981); Dansereau v. Ulmer, (Ak. S.Ct. 1995). The statute does not, however, criminalize payments that are intended merely to make it easier for a voter to get to the polls, United States v. Lewin, 467 F.2d 1132 (7th Cir. 1972). Nor does it prohibit payments made for actions short of voting -- such as endorsing candidates.

- 18 U.S.C. § 597 prohibits making expenditures for the specific purpose of stimulating voters to cast ballots for candidates seeking the federal offices of Senator, Congressman or President. This is an old statute that dopes require a specific intent to affect a specific election.

- 42 U.S.C. 1973i(e) prohibits "voting more than once" in elections where federal candidates are on the ballot.
• 42 U.S.C. § 1973gg-10(2) prohibits furnishing any significantly false information to an election officer for the purpose of voting in a federal election. Whether a statement is significantly false is determined by whether its importance to voter eligibility under the law of the state in which the vote was tendered. This is a new statute that was added by the National Voter Registration Act of 1993, and it took effect in most states on January 1, 1995.

• 18 U.S.C. 594 prohibits intimidating voters for the specific purpose of inducing them to cast ballots for one or more federal officers (i.e. Senators, Congressman, Presidents).

• 42 U.S.C. § 1973gg-10(1) prohibits voter intimidation in any election where federal candidates are on the ballot regardless of the objective of the defendant to influence specific election contests. This is another facet of the new statute criminal law enacted through the NVRA. With respect to both this statute and Section 594, "intimidation" means actual duress caused by physical or economic threats.

• Finally, 18 U.S.C. § 608 prohibits all the above forms of election fraud when they occur in connection with votes cast by Americans living abroad under the provisions of the Uniformed and Overseas Citizens Absentee Voting Act, which in the principle means by which American citizens living abroad vote by absentee ballot.

* How should federal prosecutors evaluate election fraud complaints?

Information concerning election irregularities comes from a wide variety of sources of varying degrees credibility and in varying degrees of factual specificity. The evaluation of such complaints usually requires prosecutors to address four questions:
• First, does the substance of the complaint -- assuming it can be proven through investigation -- suggest a potential crime? The sort of activity that is usually treated as "criminal" under federal law is summarized above.

• Second, is the complaint sufficiently fact-specific that it provides leads for investigators to pursue? In order to support a criminal investigation, a complaint must be reliable, as well as sufficiently fact-specific to provide logical leads by which a federal preliminary investigation can confirm -- or disprove -- that a federal crime may have occurred along the lines of the offenses discussed above. As most of these offenses deal with frauds that are aimed at defects in individual registration or voting acts, the incoming facts in a complaint should normally specify registration or voting acts that the complainant believes to have been corrupted, or provide leads to the detection of such specific corrupted voting acts. If the facts contained in the complaint fail to meet this standard, the complainant is normally told that (s)he has not sufficient information to allow evaluation and is encouraged to obtain and provide the additional factual detail needed for preliminary evaluation.

• Third, is there a federal statute that can be used to federalize the criminal activity at issue?

• Finally, is a special federal interest in the matter that warrants federalization rather than deferral to state law enforcement? The four most commonly asserted bases for federalization of election "fraud" crimes are also discussed above.

* What investigative procedures should be avoided in election fraud matters?

Investigation of election irregularities by federal authorities always present unique issues of federalism insofar as this principle concerns the constitutionally based primacy of state
responsibility over election administration. Such investigations also have the potential to "chill" lawful voting activity and to interfere with the state vote certification process. All federal election fraud investigations must avoid the following procedural pitfalls:

- **Non-interference in elections.** Overt federal investigation of election fraud matters should be held to a bare minimum necessary to preserve evidence and elicit the evaluative facts until the election in which the alleged "fraud" occurred has been certified. Once a federal criminal investigation is conducted openly in a matter concerning an as-yet unresolved election, the investigation will inevitably become a central feature in the election's outcome. Yet the issue of "who won" is an issue for state -- not a federal prosecutor - to perform. Absent allegations of civil rights abuse actionable under the Voting Rights Act, it is not a proper function of federal criminal justice to interfere with the conduct of elections, the tabulation of votes, the resolution of election contest litigation, or the certification of winners. In most instances, this process is concluded within a few weeks of an election.

  Thus, in election matters lacking Voting Rights Act overtones, and except where as is absolutely necessary to preserve evidence or to round out a seemingly valid complaint to a point where an analysis can be performed on it, no overt federal investigation should be conducted in election fraud matters before the outcome of the election at issue has been certified by appropriate state authorities. The only exception to this rule is where a very limited pre-election inquiry is determined to be absolutely necessary in order to preserve evidence or to round out a seemingly valid complaint to a point where an federalization evaluation can be performed.

- **Interviewing voters during active voting periods.** Most voting fraud investigations require that individual voters at some point be questioned concerning the
circumstances under which they voted (or did not vote). Such interviews should generally not be conducted immediately prior to an election or while voting is taking place. This is because having federal agents interview citizens about the circumstances under which they voted (or did not vote) can easily "chill" lawful voting activity by the interviewees, as well as voters similarly situated. This is not an appropriate result. Thus, the Public Integrity Section should be consulted before any investigative action is taken that anticipates interviews of individual voters during a period of active voting in their respective jurisdiction.

- **Seizing official election documentation.** The investigation and proof of election "fraud" matters customarily rely heavily upon the usually voluminous documentation that the election process produces. Usually, this documentation -- or at least a part of it -- must at some point be obtained by federal authorities perusing criminal election fraud matters. In federal election years, a federal statute enacted in 1960 requires that this important documentation be retained intact for at least 22 months following the election. However, in nonfederal election years, the retention of this documentation is governed solely by state laws which in most states allow its destruction following 30 to 90 days after the election. This means that in nonfederal elections, there is a time-sensitivity to securing federal possession of important election records once a decision has been made to federalize a given inquiry. However, seizing or subpoenaing official election records into federal custody may deprive state authorities of materials they may require to tabulate, canvass and certify the results of elections. No action should be taken that deprives the state of records it needs to perform this state activity, and Public Integrity should be consulted before any attempt to secure such records is made.
• Investigative activity inside open polls. As noted previously in this paper, the task of conducting elections and determining their outcomes is a uniquely state function. Most states closely regulate who may be inside polling places while they are open and during the time when ballots are being tabulated and election results canvassed. In most states, these "poll access" provisions do not anticipate that federal law enforcement personnel be admitted to such places at such times.\(^3\)

In addition, 18 U.S.C. § 592 prohibits the stationing of "armed men" at places where voting activity is taking place. The FBI has determined that this statute applies to Special Agents, who are authorized to carry arms. Anyone who directs an "armed force" to enter a polling location can be subject under this old post Civil War statute to felony penalties.

In view of the above, no federal investigative activity should be done inside open polling places, or in locations where votes are being processed, tabulated or canvassed, without prior consultation with the Public Integrity Section of Justice Department Headquarters.

Along similar lines, there is no authority for federal criminal law enforcement personnel to serve as poll watchers in elections. This is probably the most frequently asked question concerning the federal role in election matters. The only exception lies in Illinois (where state law is uniquely broad), and in matters of racial and language minority voting discrimination falling under the Voting Rights Act.

\(^2\) Illinois is a notable exception.

\(^3\) These state poll access laws are superseded by the federal Voting Rights Act in matters involving discrimination in the franchise based on racial or language minority status. However, absent evidence of an intent to discriminate based on these federal statutory factors, the administration of the election process is a function of local and state law to which we in the federal law enforcement community should defer.
CONCLUSION

Allow me to conclude this paper with an editorial of March 19, 2004, in the Big Sandy News of Eastern Kentucky concerning a recent election fraud prosecution in a rural jurisdiction in the Appalachian Mountains of Eastern Kentucky. The editorial comments on the sentencing of Donnie Newsome, the County Judge-Executive of Knott County, for vote buying. This editorial appears here with the permission of the Big Sandy News, whose late Publisher and Editor, Scott Perry, as an Eastern Kentucky newspaper man, led a strong charge against public corruption and took a proactive role in the fight.

In Kentucky, county judge-executives are the chief operating officers of county government, and, as such, occupy a position of substantial power. Judge Newsome’s conviction culminated a series of vote buying cases the Public Integrity Section and the United States Attorney’s Office for the Eastern District of Kentucky jointly prosecuted during 2003 and early 2004 arising out of a scheme to pay voters for voting in the 1998 primary. This series of cases ultimately resulted in the indictment of 16 defendants. Twelve of these defendants were convicted, three were acquitted, and one had his case dismissed.

The highlight of this series of election fraud cases was the conviction of Knott County Judge-Executive Donnie Newsome for for vote buying in violation of 42 U.S.C. § 1973i(c). Thereafter, the defendant cooperated with the prosecution and received a sentence reduction recommendation under U.S.S.G. §5K1.1. On March 16, 2004, he was sentenced to serve 26 months in prison.4

4 The sentencing judge indicated that had it not been for the downward departure recommended by the prosecution, he was prepared to sentence Newsome to five years’ imprisonment.
The following editorial, reprinted here in its entirety, presents an eloquent and concise statement of why the investigation and prosecution of electoral corruption are important law enforcement priorities of the Justice Department.

Vote fraud sentencing sad, encouraging
- - by Susan Allen

Tuesday's sentencing in federal court of Knott County Judge-Executive Donnie Newsome and campaign worker Willard Smith on vote buying charges was both a sad and encouraging day for Eastern Kentucky.

Sad the people of Knott County were effectively robbed of their voting rights by Newsome and others dooling out cash to buy a public office.

Sad that, as Federal Judge Danny C. Reeves pointed out, some people in Knott and other counties think that elections are supposed to be bought and the only reason to go to the polls is to get their pay off.

Sad those seeking public office in Knott County, and most assuredly in other counties, target poor, handicapped, addicted and uneducated voters to carry out their scheme to secure public office and a hefty paycheck.

Sad that voters in Knott and other counties have been reduced by years and years of political corruption to truly believing that selling their vote is not wrong, it's the norm.

Sad that Eastern Kentuckians have pretty much been left to the mercy of the political machines which serve as dictators of their lives, from their home towns all the way to Frankfort.

Sad that generations sacrificed their lives and their children's lives to the political bosses for mere bones from their local leaders while now their kids are dying from drug overdoses which, we strongly suspect, are directly tied to the years of iniquity and demoralization.

Sad that even today some elected officials continue the abuse and either refuse or can't comprehend the impact of their past and current atrocities against their own people.

Sad that Judge Reeves could see and completely understand during just a one week trial the utter hopelessness and apathy in the area people feel regarding the so-called democratic process.
Sad that our state lawmakers have piddled away their time during this legislative session on petty political issues without even proposing laws that would bar convicted felons, especially vote buyers from retaining their offices while appealing their verdicts.

Sad that Donnie Newsome continues to rule Knott County from a jail cell.

Tuesday's events were encouraging in that prosecutors (AUSA E.D. Ky.) Tom Self and (Public Integrity Section Trial Attorney) Richard Pilger were willing to fight the hard battle for the people of Knott County, which hopefully will lead to at least a grassroots effort for people to take back their towns.

Encouraging that some light has been shed on the workings of the dark political underworld which might shock the good people of Eastern Kentucky into action, at least for their children's future.

Encouraging that what might be perceived as a baby step with Newsome's conviction could finally lead to that giant step Eastern Kentuckians must surely be ready to take to recapture control of their own destinies.

Encouraging that federal authorities have pledged to continue the fight they have started to restore to the people the right to govern themselves without dealing with a stacked deck.

Encouraging that Judge Reeves and prosecutors did see that the Knott Countians who sold their votes, in some cases for food, were victims of Newsome's plot and didn't need to be punished further.

Encouraging that there's some branch of government, in this case on the federal level, not shy about taking on political power houses, knowing the obstacles in their way will be many.

Encouraging that Newsome's lips have loosened regarding others involved in similar schemes to buy public office, even though we suspect it has nothing to do with righting the wrongs, only a self-serving move to spend less days behind bars.

Encouraging that maybe, for once, we are not in this fight alone and have a place to turn to for help when we are willing to stand up to the machine.

The feds have helped us take that first step toward getting back what is rightfully ours which has been traded away by others in the past in back room deals. Not only do they need our help, they need our help.

This time, let's not let ourselves down.

KEY FINDINGS

- **Voter fraud is the “intentional corruption of the electoral process by the voter.”** This definition covers knowingly and willingly giving false information to establish voter eligibility, and knowingly and willingly voting illegally or participating in a conspiracy to encourage illegal voting by others. All other forms of corruption of the electoral process and corruption committed by elected or election officials, candidates, party organizations, advocacy groups or campaign workers fall under the wider definition of election fraud.

- **Voter fraud is extremely rare.** At the federal level, records show that only 24 people were convicted of or pleaded guilty to illegal voting between 2002 and 2005, an average of eight people a year. The available state-level evidence of voter fraud, culled from interviews, reviews of newspaper coverage and court proceedings, while not definitive, is also negligible.

- **The lack of evidence of voter fraud is not because of a failure to codify it.** It is not as if the states have failed to detail the ways voters could corrupt elections. There are hundreds of examples drawn from state election codes and constitutions that illustrate the precision with which the states have criminalized voter and election fraud. If we use the same standards for judging voter fraud crime rates as we do for other crimes, we must conclude that the lack of evidence of arrests, indictments or convictions for any of the practices defined as voter fraud means very little fraud is being committed.

- **Most voter fraud allegations turn out to be something other than fraud.** A review of news stories over a recent two year period found that reports of voter fraud were most often limited to local races and individual acts and fell into three categories: unsubstantiated or false claims by the loser of a close race, mischief and administrative or voter error.

- **The more complex are the rules regulating voter registration and voting, the more likely voter mistakes, clerical errors, and the like will be wrongly identified as “fraud.”** Voters play a limited role in the electoral process. Where they interact with the process they confront an array of rules that can trip them up. In addition, one consequence of expanding voting opportunities, i.e. permissive absentee voting systems, is a corresponding increase in opportunities for casting unintentionally illegal ballots if administrative tracking and auditing systems are flawed.

- **There is a long history in America of elites using voter fraud allegations to restrict and shape the electorate.** In the late nineteenth century when newly freed black Americans were swept into electoral politics, and where blacks were the majority of the electorate, it was the Democrats who were threatened by a loss of power, and it was the Democratic party that erected new rules said to be necessary to respond to alleged fraud by black voters. Today, the success of voter registration drives among minorities and low income people in recent years threatens to expand the base of the Democratic party and tip the balance of power away from the Republicans. Consequently, the use of baseless voter fraud allegations for partisan advantage has become the exclusive domain of Republican party activists.
• The historically disenfranchised are often the target of voter fraud allegations. Fraud allegations today typically point the finger at those belonging to the same categories of voters accused of fraud in the past — the marginalized and formerly disenfranchised, urban dwellers, immigrants, blacks, and lower status voters. These populations are mostly found among those still struggling for full inclusion in American life.

• Better data collection and election administration will improve the public discussion of voter fraud and lead to more appropriate policies. We need better data, better election administration, transparency and more responsible journalism to improve public understanding of the legitimate ways in which electoral outcomes can be distorted and manipulated. This will help ensure that new laws and rules to prevent fraud are narrowly targeted to solve legitimate problems rather than used as a strategy to shape the electorate for partisan advantage.
INTRODUCTION

The claim that voter fraud threatens the integrity of American elections is itself a fraud. It is being used to persuade the public that deceitful and criminal voters are manipulating the electoral system. No available evidence suggests that voters are intentionally corrupting the electoral process, let alone in numbers that dilute and cancel out "the lawful votes of the vast majority of Americans." The lack of evidence is not due to a failure to codify voter fraud as a crime, nor is it due to the inability or unwillingness of local law enforcement agencies to investigate or prosecute potential cases of voter fraud. In fact, when we probe most allegations of voter fraud we find errors, incompetence and partisanship. The exaggerated fear of voter fraud has a long history of scuttling efforts to make voting easier and more inclusive, especially for marginalized groups in American society. With renewed partisan vigor fantasies of fraud are being spun again to undo some of the progress America has made lowering barriers to the vote.

The purpose of this report is to disentangle the myth from the reality and to separate the politics of voter fraud from legitimate administrative concerns about the integrity of the electoral process. To make the argument, we present a usable definition of voter fraud, discuss the problem of evidence, and explain how and why the dynamics of electoral competition drive the use of baseless fraud claims in American politics. We present several contemporary examples to illustrate how poor election administration and voter mistakes are misleadingly labeled "fraud." Recent allegations against voter registration campaigns highlight the need for an analysis sensitive to the partisanship and race and class issues just beneath the surface of most voter fraud claims. The last section of the report makes policy recommendations for improving public understanding and removing the canard of voter fraud from the election reform debate. The appendix discusses what to look for in evaluating voter fraud allegations.
DEFINING VOTER FRAUD

Conceptual clarity is important in evaluating evidence of fraud. We begin with a discussion of what voter fraud is and what it is not. The first problem in defining voter fraud is that as a crime, it defies precise legal meaning. In fact, there is no single accepted legal definition of voter fraud. We have fifty different state electoral systems and fifty state criminal codes governing the administration of elections, plus a federal code that applies in national elections, and no uniform standards. In fact, some states do not actually criminalize ‘voter fraud,’ although they all criminalize acts that are commonly lumped together under the term, such as illegal voting, providing false information to register to vote, and multiple voting. The legal incoherence contributes to popular misunderstandings.

We need a basic definition of voter fraud that cuts through the confusion without violating the way voter fraud is diversely treated in state and federal law. We can start with the U.S. Department of Justice’s definition of election fraud and apply it to election crimes committed by voters. The Justice Department defines election fraud as “conduct that corrupts the process by which ballots are obtained, marked, or tabulated; the process by which election results are canvassed and certified; or the process by which voters are registered.” Voter fraud is a subcategory of election fraud, or the intentional corruption of the electoral process by voters.

This covers knowingly and willingly giving false information to establish voter eligibility, and knowingly and willingly voting illegally or participating in a conspiracy to encourage illegal voting by others. Apparent acts of fraud that result from voter mistakes or isolated individual wrongdoing or mischief making not aimed at corrupting the voting process should not be considered fraud, though sometimes these acts are prosecuted as such. All other forms of corruption of the electoral process and corruption committed by elected or election officials, candidates, party organizations, advocacy groups or campaign workers fall under the wider definition of election fraud.

Voter fraud is the intentional corruption of the electoral process by voters.

1 There are many examples of states that criminalize what we think of as voter fraud without calling it voter fraud. Georgia, for example, has no election code offense for “voter fraud,” but it does provide stiff penalties for “repeat voting” and “voting by unqualified elector.” See, for example O.C.G.A. § 21-2-560 et seq. In New Hampshire, the crime of voting more than once is called “wrongful voting.” See, N.H.R.S. § 63-659.34. In Alaska, voter impersonation, voting more than once, and registering to vote without being entitled to register are all simply called “voter misconduct.” See, Ala. Statutes § 15.56.040 et seq.

3 Fraud is commonly defined as “deception deliberately practiced with a view to gaining an unlawful or unfair advantage” (emphasis added). See Webster’s Revised Unabridged Dictionary, Version published 1913 by the C. & G. Merriam Co. (Springfield, Mass.), under the direction of Noah Porter, D.D., LL.D. Criminal intent is a feature of the election crime codes of most states and the federal system, although a showing of intent is not always required to obtain a conviction for some forms of voter fraud such as “alien voting” (voting by a non-citizen).

4 The proper venue for challenging mistakes that may have affected the outcome of an election is to follow state statutory procedures for an election challenge or contest. See, Barry H. Weinberg, The Resolution of Election Disputes: Legal Principles That Control Election Challenges (Washington, D.C.: IFES, 2006).

5 This definition of voter fraud is simpler and more coherent than others offered. See, for example, U.S. Election Assistance Commission, Election Crimes: An Initial Review and Recommendations for Future Study (December 2006), 13 (herein cited as ‘EAC Report’).
Allegations of "voter fraud" should be analyzed to determine 1) who is alleged to have committed the fraud, and 2) which stage of the electoral process is alleged to have been corrupted. This approach will go a long way toward clarifying whether electoral integrity is being breached and what needs to be done to secure the process (see the appendix for further discussion of how to identify fraud).

Moreover, although it is simple, it preserves the meaning of "fraud" in the electoral context as outlined by the Justice Department. The Department's manual for training U.S. Attorneys in investigating and prosecuting election crimes divides "election frauds" into two categories, one that involves the participation of voters and another that does not. Those election fraud crimes involving the participation of voters include vote buying schemes, absentee ballot frauds, voter intimidation schemes, migratory-voting (or floating-voter) schemes, and voter 'assistance' frauds, in which the wishes of the voters are ignored or not sought. See, Donsanto and Stewart (1995), 22-24. Acts of voter intimidation which are included in the election fraud definitions offered in both the EAC Report and the DOJ Manual are excluded here. While the intimidation of voters certainly corrupts the electoral process, it is a crime that more directly involves the deprivation of rights guaranteed by law and for that reason should be treated separately from acts of deceit.
How prevalent is voter fraud? A 2005 U.S. Senate Republican Policy Committee report claimed that "voter fraud continues to plague our nation's federal elections, diluting and canceling out the lawful votes of the vast majority of Americans" (emphasis added). This would be shocking if it were true. But the Committee made it without providing a single piece of evidence to support or clarify the claim. It cited no surveys, no statistics, no studies, no credible evidence whatsoever to back up its warning that election results are routinely distorted by fraud in the United States.

Evidence of voter fraud like all other crimes comes from law enforcement efforts to combat it

The Committee cited no data because there is very little to cite. Evidence of voter fraud like evidence of other forms of criminal behavior is primarily produced by law enforcement efforts to detect and prosecute it. And the available evidence here suggests that voters rarely commit voter fraud. As in the case of all other kinds of crime, it is simply unacceptable to allege law breaking without providing at least some supporting evidence.

What is that evidence? At the national level, a major new project at the U.S. Department of Justice, the Ballot Access and Voting Integrity Initiative (BAVII) has resulted in only a handful of convictions. According to the Attorney General, since the inception of the program in 2002, "we've made enforcement of election fraud and corruption offenses a top priority." The result? Government records show that only 24 people were convicted of or pleaded guilty to illegal voting between 2002 and 2005, an average of eight people a year. This includes 19 people who were ineligible to vote, five because they were still under state supervision for felony convictions, and four who were not U.S. citizens; and five people who voted twice in the same election, once in Kansas and again in Missouri.

---

8 The idea that voter fraud is first and foremost a crime reaches substantially the federal concept of election fraud which "applies only to activity that is appropriately remedied through criminal prosecution, as distinguished from other less severe remedies such as election contest litigation or administrative relief." See, Craig C. Donsanto, "The Federal Crime of Election Fraud," prepared for the Russian election reform website, Democracy.Ru, n.d.; available online at www.democracy.ru/english/library/international/eng_1999-11.html.

9 On the origins of BAVII, see Jeffrey Toobin, "Annals of Law: Poll Positions," The New Yorker (September 20, 2004). Very little information about the program's overall scope and performance has been released by the Justice Department's Public Integrity Section; annual press releases announce the numbers of investigations and convictions obtained, and the Public Integrity Section's annual reports to Congress briefly discuss some of the cases, but efforts to acquire more information about the program have been stymied by the Criminal Division's failure to respond to a Freedom of Information Act request filed in July 2005. Nevertheless, it is difficult to imagine that the Department would withhold information about closed cases of deceitful voters, and therefore likely that the limited information it has released so far is all there is.

In addition, the BAVII uncovered several vote buying schemes that have resulted in the convictions or guilty pleas of about 30 people, though most of those convicted were party and election officials, candidates for public office and elected officials, and in one case, the commander of a local VFW post. The vote buying cases involved a handful of elections in the Appalachia regions of eastern Kentucky and West Virginia, East St. Louis, Illinois and Caldwell County, North Carolina.

The available state-level evidence of voter fraud, culled from interviews, reviews of newspaper coverage and court proceedings, while not definitive, is also negligible. There are no reliable, officially compiled, national or even statewide statistics on voter fraud. Even though many criminal acts associated with "voter fraud" are classified as felonies, voter fraud fails to appear in the F.B.I.'s uniform crime reports. There are no publicly available criminal justice databases that include voter fraud as a category of crime. No states collect and publish statistics on voter fraud.

The lack of evidence is not due to a failure to codify voter fraud as a crime. If fraud is such a persistent concern of those who run elections, government agencies responsible for election administration should collect statistics on it, as they do in other serious matters, certainly other crimes. It is not as if the states have failed to detail the ways voters could corrupt elections. There are hundreds of examples drawn from state election codes and constitutions that illustrate the precision with which the states have criminalized voter and election fraud.

If we use the same standards for judging voter fraud crime rates as we do for other crimes, which is to calculate the incidence of crime from law enforcement statistics on arrests, indictments and convictions, we must conclude that the lack of evidence of arrests, indictments or convictions for any of the practices defined as voter fraud means very little fraud is being committed relative to the millions of votes cast each year in state, local and federal elections.

---

13 Lori Minnite and David Callahan, Securing the Vote: An Analysis of Election Fraud (New York: Demos: A Network for Ideas and Action, 2003). The author is engaged in a more thorough analysis of state-level voter fraud data and investigations which will be published in her forthcoming book. To-date, the findings only confirm Minnite and Callahan’s earlier conclusions.

14 This is an urgent concern. Law professor Spencer Overton persuasively argues for a more empirical cost-benefit approach to evaluating the value and constitutionality of new restrictive photo identification voting requirements. As Overton notes, this approach is hampered by the lack of systematic data on fraud. See, Spencer Overton, "Voter Identification," Michigan Law Review 105(2007), 631-682.

15 The California Secretary of State’s Office compiled information on electoral fraud cases referred to its office from 1994 to 2003. The data were analyzed in an unpublished conference paper (see, R. Michael Alvarez and Frederick J. Boehnke, "Contemporary Election Fraud: A Quantitative Analysis of Election Fraud Cases in California," paper prepared for Election Fraud Conference, Center for Public Policy and Administration, The University of Utah, and the Caltech/MIT Voting Technology Project, Salt Lake City, Utah, September 29-30, 2006; available online at www.vote.caltech.edu/events/2006/FraudConfAlvBmk-paper.pdf), but they are not publicly available.

Examples Of How States Criminalize "Voter Fraud"

- In Texas, a person can be convicted of a third degree felony if he or she "votes or attempts to vote in an election in which the person knows the person is not eligible to vote; knowingly votes or attempts to vote more than once in an election; or knowingly impersonates another person and votes or attempts to vote as the impersonated person."¹

- California's election code has dozens of provisions that prohibit illegal activity associated with elections. It prohibits fraudulent registration, including registering under a false name, registering under a false address, and registering a non-existent person. It makes it a felony for a person to vote in an election that he or she is not entitled to vote in, to vote more than once, or impersonate another voter. Moreover, it is a felony in California to "give, offer, or promise any office, place, or employment, or promise to procure or endeavor to procure any office, place, or employment to or for any voter, or to or for any other person, in order to induce that voter at any election to vote or not vote for a particular candidate."²

- Pennsylvania law gives the power to monitor elections to county boards of elections, and imposes a substantial number of penalties on people engaging in election fraud. Giving or receiving money in exchange for voting a certain way in an election can bring up to seven years in prison and $15,000 in fines. Any person convicted of perjury "regarding any material matter or thing relating to any subject being investigated, heard, determined or acted upon by any county board of elections, or member thereof, or by any court or judge thereof, judge of election, inspector of election, or overseer" can receive up to five years in prison and a $10,000 fine. Any person voting when they are not registered to vote, or voting more than once can be punished the same."³

- Nineteenth century language in the Alabama Constitution disqualifies from voting "all idiots and insane persons" and those convicted of crimes like murder, arson, and rape, but also wife battering, bigamy, sodomy, miscegenation and vagrancy. It also disqualifies from voting any person convicted of "selling or offering to sell his vote or the vote of another, or of buying or offering to buy the vote of another, or of making or offering to make a false return in any election by the people or in any primary election to procure the nomination or election of any person to any office, or of suborning any witness or registrar to secure the registration of any person as an elector."⁴

- In Minnesota, it is a felony to submit more than one absentee ballot, assist another in submitting more than one absentee ballot, or alter another's absentee ballot in any way."⁵

The lack of evidence of voter fraud is not due to law enforcement agencies ignoring their duties

Even if crime reports underestimate true crime rates because some crimes go unreported or undetected, or because criminal behavior is sometimes addressed by means other than prosecution, crime is still measured as a function of law enforcement efforts to address it. Under the rule of law, enforcement efforts establish the core evidence of crime. It is difficult to conceive of whole categories of criminal behavior that go almost completely undetected or ignored by law enforcement officials at all levels of government across the U.S. today. And yet, those who believe there is a lot of voter fraud despite the lack of evidence frequently fall back on this argument. When confronted they charge the paucity of evidence is due to the government’s failure to undertake the investigations and prosecutions that would produce it.¹⁵ A more plausible explanation is that voters are not committing fraud, leaving little to investigate or prosecute.

The lack of evidence of voter fraud is not due to the inability of law enforcement agencies to pursue voter fraud investigations

Some argue that local officials are ill-equipped to detect voter fraud and poorly motivated to pursue investigations and prosecutions of voter fraud given their lack of expertise and resources and the public’s demand for attention to more serious or violent crimes.¹⁶ If election crime, perhaps like international securities fraud or organized crime, were beyond the ken of local officials to investigate, then we might expect a dearth of prosecutions and little evidence of voter fraud. This is another explanation offered by those who argue that there is a lot of fraud despite the lack of evidence. Local officials, the argument goes, can’t or won’t prosecute fraud for a variety of reasons. The detection and prosecution of voter fraud, however, is not beyond the ken of local officials. In fact, as the Justice Department manual on how to investigate and prosecute election crime argues, “there are several reasons why election crime prosecutions may present an easier means of obtaining convictions than do other forms of public corruption.” They are, 1) “election crimes usually occur largely in public,” 2) “election crimes often involve many players,” and 3) “election crimes tend to leave a paper trail.”¹⁷ Without any evidence to support it, the notion that local law enforcement officials are unable or unwilling to investigate or prosecute voter fraud lacks merit. But, as the saying goes, if you repeat a rumor enough times people will start to believe it.
“FRAUD” THAT IS NOT FRAUD

A review of hundreds of news reports on voter fraud appearing over a recent two year period found that with few exceptions, fraud allegations and cases reported in the press were limited to local electoral contests and individual acts, and fell into three basic categories:

1) unsubstantiated or false allegations of voter fraud made by the losers of close elections;¹⁸
2) mischief; and,
3) claims that later turn out to be based on cases of voter error or administrative mistakes, not fraud.

Here are some examples:

Examples of fraud alleged by election losers
• Pittsburgh City Council President Bob O’Connor lost a close primary race to incumbent Mayor Tom Murphy and charged voter fraud cost him the election. Pittsburgh election officials allowed the two campaigns to review balloting while monitoring each other. Mayor Murphy’s campaign found 81 ineligible voters in a sampling of 71 of the city’s 404 precincts. The Pittsburgh Post-Gazette reviewed Murphy’s data and found only three clearly improper ballots. The O’Connor campaign claimed it found 142 votes cast by people whose voter registration cards were missing but would not share its data with the Post-Gazette for independent verification.¹⁹

• The Pasco County Canvassing Board of Port Richey, Florida, denied a request for a recount filed by Bob Leggiere who lost to the incumbent by nine votes. Leggiere claimed that voter fraud and 11 ballots that did not register a vote for mayor were the cause of his defeat. He charged that owners of a gambling boat operation voted illegally because their boat, which was their legal residence, was outside the city limits, suggesting that “because of their gambling boat interests, they have attempted to take control of the city elections.” The canvassing board informed Leggiere that he needed to file a protest with the board or a complaint in court, which he declined to do.²⁰

Examples of fraud as mischief
• A Ventura County, California woman was arrested and charged with voter fraud when her ex-husband noticed the names of two of their underage children on a list of registered voters in the March 2000 primary and turned her in. The woman was charged with fraudulently registering her 10- and 15-year old daughters, one of her daughter’s friends, her ex-husband who was already registered, and a number of fictitious people.²¹

¹⁹ James O'Toole, “Voting Errors Suggest No Fraud,” Pittsburgh Post-Gazette (June 17, 2001), B17.
²⁰ Chase Squires and Matthew Waite, “Fraud Alleged in Port Richey Vote,” St. Petersburg Times (April 12, 2001), B4.
Prosecutors in West Palm Beach, Florida agreed not to charge a woman who registered her poodle, "Cocoa Fernandez," as a Republican on the condition that the woman stay out of trouble for a year. She averted a third-degree felony charge carrying a maximum 5-year prison term and a $5,000 fine.22

A story appeared in the Marquette University student paper that 174 of 1,000 students surveyed said they voted more than once in the November 2000 presidential election. Another 170 claimed to have voted for write-in candidates, but the official canvass of the voting precincts surrounding the Marquette campus recorded only 12 write-in votes for president. One student told ABC News, the Milwaukee Journal Sentinel and the Marquette student paper that he voted four times. He later recanted when a list of voters from his precinct did not include his name at all. The Milwaukee County District Attorney said he had no evidence of any student voting more than once. The student who told the media he voted four times was later charged with selling other students fake Ohio drivers licenses he printed using his dorm room computer.23

Examples of fraud as voter error

- The Milwaukee Journal Sentinel conducted a two-month review of 203,000 votes cast in Milwaukee and found that 361 felons still under state supervision cast votes in 2000. This was in violation of an “often misunderstood state law” that disqualifies felons on probation or parole from voting. Ninety percent of the 361 illegal votes were cast by African Americans living in central city neighborhoods, most with convictions for welfare fraud, forgery and other property offenses. The newspaper reasoned that the illegal votes probably went to Al Gore, since 92 percent of African Americans in the state voted for Gore. They estimated that if disqualified felons elsewhere in the state voted illegally at the same rate obtained in Milwaukee, as many as 1,100 illegal votes could have been cast statewide, a significant number given Gore’s margin of victory was only 5,708 votes. None of the illegal voters contacted by the paper knew they were prohibited from voting, and a review of parole and probation procedures suggested they were never informed.24 Charges were filed against three people but later dropped when prosecutors couldn’t prove those charged knew they were breaking the law.

- A voter inadvertently filled out five ballots in a local election in Montgomery County, Texas. “It (the five ballots, sic) was just handed to me and I just put them in the box,” said the culprit, 52-year old Ruben Jones, “I wasn’t paying attention.” An election judge allowed one of Jones’ votes to count resulting in a tie at 83 votes each between two candidates who were then forced into a run-off. Fraud was charged. The city attorney acknowledged the judge’s mistake but could not overturn his decision to allow one of the votes to count. There was no provision in Texas election law for overruling an election judge on such matters.25

Examples of cases of administrative incompetence and mistakes leading to misplaced allegations of voter fraud in St. Louis and Milwaukee are discussed in detail below.

22 “In Brief/Florida: No Charges, But Pooch Can’t Punch Ballot,” Los Angeles Times (December 17, 2001), A23.
23 “Marquette Student Admits He Didn’t Vote Four Times,” Chicago Sun-Times (November 16, 2000), 3; “Voter Fraud Inquiries Lead to Charges Against 3 in Milwaukee,” St. Louis Post-Dispatch (December 21, 2000), A8.
THE POLITICS OF VOTER FRAUD CLAIMS

There are many reasons why electoral reform is difficult to achieve, chief among them the benefits the status quo bestows on politicians in charge of making the rules. Voting rights advocates working to expand the electorate and make voting easier for more citizens must also overcome recurring arguments that reform will encourage more voter fraud. Indeed, the specter of voter fraud has been manipulated by elites to restrict and shape the electorate for nearly two centuries.

The Late Nineteenth Century and the “Good Government” Defense

The electoral reforms of the Progressive era dismantled Populist voting majorities and reflected the reformers’ class and anti-immigrant biases. Following the turmoil of the election of 1896 when new immigrants, struggling farmers, and wage workers flooded into the electorate, wealthy elites pressed for tighter regulation of the electoral process. They promoted personal voter registration systems that had the effect of de-mobilizing the poor and working classes.26 The reformers’ rhetoric fastened on fraud and the need to eliminate it in order to protect ‘the Democracy.’ The perception of fraud and widespread electoral corruption gave their efforts moral ballast which obscured the class conflict at the center of the struggle for the vote.

For Progressive era elites, voter registration was good government and universal voting was directly associated with corruption and voter fraud.27 Municipal reformers drawn from the ranks of the new middle and upper class professional strata assumed the lower classes possessed inferior moral capacities that produced unscrupulous behavior in politics. They wrested control of government away from the older political machine organizations by imposing administrative reforms on the electoral process. These reforms deliberately privatized and personalized the social act of voting in order to undercut the machine’s capacity to mobilize majorities through ethno-religious and other group-based appeals.28

28 After the Civil War, the electorate was demobilized in different ways in the North and South. Black disenfranchisement was pursued through the use of violence and terror, and institutionalized through the re-writing of Southern state constitutions between 1890 and 1910. Mississippi pioneered the “Southern system” of burdensome residency requirements, periodic registration, poll taxes, literacy and “understanding” requirements, and exacting disqualification provisions, all designed to strip black men of the vote without reliance on overt racial classifications (Cunningham (1991), 377). There is a large scholarly literature on this subject. See, for example, classic works by V.O. Key, Southern Politics in State and Nation (New York: A.A. Knopf, 1949); and J. Morgan Kousser, The Shaping of Southern Politics: Suffrage Restriction and the Establishment of the One-Party South, 1880-1910 (New Haven: Yale University Press, 1974). On efforts to reshape the electorate outside of the South during this period, see, Walter Dean Burnham, “The Appearance and Disappearance of the American Voter,” in Walter Dean Burnham, The Current Crisis in American Politics (New York: Oxford University Press, 1983); and Paul Kleppner, Who Voted? The Dynamics of Electoral Turnout, 1870-1980 (New York: Praeger, 1982). For a fascinating account of how nineteenth century voters behaved at the polls on Election Day, see Richard Franklin Bensel, The American Ballot Box in the Mid-Nineteenth Century (New York: Cambridge University Press, 2004).
Much has been written about the colorful and varied forms of political corruption in the nineteenth century. The debate over the extent of fraud among scholars, however, has failed to settle the question of whether it accounted for the extraordinarily high levels of turnout that disappeared with the adoption of personal voter registration systems. Nor is it certain that the new voter registration laws were responsible for reducing the election fraud they were aimed at eliminating. But, election fraud documented by the reformers usually involved organized efforts by election officials and politicians, not by the voters who were the intended target of restrictive reforms like voter registration.

Nevertheless, voting rights have been won. Most of the conditions that once gave rise to what we would characterize as fraudulent practices today, such as ballots produced and distributed by the political parties, have changed. In the nineteenth century, election fraud was sometimes perpetrated by partisans acting together to steal elections. Local party organizations competed for voters and controlled votes through patronage, and the stakes were high. In those days, parties, patronage and fraud were intertwined. Today, local party organizations are weak to nonexistent, in part because their access to patronage has all but disappeared. They no longer control lucrative franchises, run police and fire departments, set utility rates or build large-scale public works. The demise of local parties and patronage over the last century has undermined the logic and eroded the means of committing voter fraud.

The Civil Rights Era and Beyond

With each significant effort to protect and extend the right to vote, opponents have argued that the expansion of the franchise, whether through federal protections for voting rights or through reduced structural barriers to the franchise, would lead to more voter fraud. The threat of fraud was taken up by congressional opponents of the Voting Rights Act of 1965; it was raised in the conflict over extending the Act during the first Reagan Administration; and again, in more recent debates over the National Voter Registration Act. It is the very success of these reforms that explains why fraud claims have re-emerged as a principle form of voter intimidation. The victories of the civil rights movement make it no longer easy or acceptable to suppress voting through the use of terrorism or violence, or with a poll tax or a literacy test. Today the intimidation is more subtle.

The dynamics of electoral competition in a two-party plurality system also contribute to the resurrection of the specter of voter fraud. When elections are close, the logic of competition drives opponents to fierce conflict. The winner in a two-party system needs only one vote more than his or her opponent; 51 percent of the votes wins it all, 49 percent wins nothing. Competing parties in

29 See, for example, Glenn C. Altschuler and Stuart M. Blumin, Rude Republic: Americans and Their Politics In the Nineteenth Century (Princeton: Princeton University Press, 2000); and Tracy Campbell, Deliver the Vote: A History of Election Fraud, an American Political Tradition – 1724-2004 (New York: Carroll & Graf, 2005).

For an important account of the movement to reform voter registration laws leading to the passage of the National Voter Registration Act of 1993, see Margaret M. Groarke, Expanding Access to the Vote: An Analysis of Voter Registration Reform in the United States, 1970-1993 (Ph.D. diss., Department of Political Science, City University of New York, 2000).
close elections fight hard to maximize their chances of winning that 51 percent because the closer the election, the fewer the number of voters that are needed to shift victory to one party or the other. Tight elections produce the biggest pay-off for the smallest shifts in vote share.

Theoretically, parties or campaigns can produce a shift by expanding votes for themselves or constraining votes for their opponents, or even pursuing both practices at the same time. But expanding the vote carries higher risks for incumbents. Elected officials try to preserve the majorities that elect them and are wary of the threat new voters pose. Both parties, therefore, are wary of expansion. Since the success of the Voting Rights Act prohibits them from carving out their majorities in ways that directly violate laws protecting voting rights, they shape and manage their electorates by more subtle means, through the rules that govern the electoral process. Both parties seek to control, enforce and bend electoral rules to their advantage. As the political scientist, E.E. Schattschneider once observed,

In politics as in everything else it makes a great difference whose game we play. The rules of the game determine the requirements for success . . . and go to the heart of political strategy.

For example, today, Republican party officials and incumbents support restrictive interpretations of the rules governing voter qualifications when they anticipate that tightening access to the vote will hurt their rivals. They insist that the votes of legitimate, qualified voters are threatened by the votes of ineligible voters, justifying their support for restrictive identification requirements. The Democrats resist these efforts when they think the new rules will threaten their own party base; but if the new rules aren't likely to threaten the base, the Democrats, whose elected officials share the same interest in a stable, predictable electorate as their Republican colleagues, compromise and endorse new restrictions. The Democrats' concession to the inclusion of an identification requirement for first time voters who register to vote by mail in the Help America Vote Act of 2002 (HAVA), in the face of widespread opposition on the part of voting rights advocates, is a case in point. New HAVA voter identification requirements apply to a diffuse category of new voters whose party loyalties were unknown and therefore in adding this rule at the national level, neither party could claim an uncontested advantage or disadvantage. In the partisan wrangling over the bill, the important questions about the extent of voter fraud and the effectiveness of new rules in combating it were lost.

---

33 Or a plurality when the occasional third party candidate is in the race.
35 U.S. Senate, Republican Policy Committee (2005).
In a competitive electoral environment it is easier and safer for the parties to try to stabilize the base and reduce the opposition's support than it is for either to recruit new voters. Given the particular party and competitive dynamics of the current period, the use of baseless voter fraud allegations for partisan advantage has become the exclusive domain of Republican party activists.

Take the American Center for Voting Rights (ACVR). This organization established a presence on the Internet in March 2005, just six days before a Republican-controlled U.S. House Administration Committee hearing on problems in the 2004 Ohio election, and was the only "voting rights" group allowed to testify. Although ACVR claims it is nonpartisan, its founders, leadership, and staff have strong ties to the Republican party. Its report on "Voter Fraud, Intimidation and Suppression in the 2004 Presidential Election," professes to be "the most comprehensive and authoritative review of the facts surrounding allegations of vote fraud, intimidation and suppression made during the 2004 presidential election." It is little more than a compendium of poorly scrutinized newspaper articles sensationalizing election shenanigans allegedly instigated in all but two instances by Democrats. Despite the not so veiled partisanship and absence of credentials, ACVR has achieved remarkable influence advocating for strict, government-issued photo identification requirements and promoting the idea that American elections are riddled with voter fraud. Its leader, attorney and political operative, Mark F. (Thor) Hearne, II, is a serial expert witness before Congress and other government bodies on the need for photo ID. His testimony repeatedly relies for evidence on anecdotes and misleading news reports that grossly overstate the problem of voter fraud.

The systematic use of baseless voter fraud allegations is strategic and in this sense rational, if unethical. In the late nineteenth century when freedmen were swept into electoral politics and where blacks were the majority of the electorate, it was the Democrats who were threatened by a loss of power, and it was the Democratic party that erected new rules they claimed were necessary to respond to the alleged fraud of black voters.

Today, the success of voter registration drives among minorities and low income people in recent years threatens to expand the base of the Democratic party and tip the balance of power away from the Republicans. Therefore, it is not difficult to understand why party operatives might seek to strategically generate enough public support for new restrictions on the vote that will disproportionately hinder opposition voters. These efforts are misleadingly labeled "the electoral integrity" movement because after two hundred years struggling for the vote and winning it from below, ordinary voters are not so easily discredited in the name of democracy. Efforts to do so must appeal to misplaced moral sensibilities like the idea that "integrity" trumps rights. In the end, baseless voter fraud claims are essentially political acts because the contested history of party, race and class in American politics makes them so.

THE USUAL SUSPECTS

The Historically Disenfranchised Are Often the Alleged Perpetrators of Voter Fraud

Fraud allegations typically point the finger at those belonging to the same categories of voters accused of fraud in the past – the marginalized and formerly disenfranchised, urban dwellers, immigrants, blacks, and lower status voters. The targeting is not overt, the language is rarely explicitly racial. Instead, fraud claims tap into older elite associations of political corruption with minorities, big city machine organizations, and the poor: Allegations of voter fraud resonate with the public because they revive a familiar culture of corruption and legends about election fraud that enliven American political history. Today, the alleged culprits are mostly found among those still struggling for full inclusion in American life. This makes them suspect. That they are more likely to identify with one party than the other makes them doubly vulnerable to fraud accusations and to the collateral damage of high stakes competitive partisan politics.

Why Voter Registration Drives Are Vulnerable to Fraud Claims

Since at least the 1960s, the voter registration drive has played a central role in black politics and broader efforts to engage the electoral participation of low-income groups. The intensity of voter registration activities has waxed and waned over the years, with a recent upsurge in third party voter registration drive activity since the disputed 2000 presidential election. By 2004, approximately 12 million registered voters (or 8.5 percent of all registered voters) had registered as a result of a voter registration drive.

In the 1980s, white Christian conservatives and other middle class groups adopted the registration drive with considerable success; but it remains an iconic expression of black political aspiration.

The table reports method of registration for all registered voters, excluding missing cases. The data are estimates with sampling and non-sampling error, and are weighted by age, sex, race, Hispanic ancestry, and state of residence to partially correct for bias due to under-coverage.
Those registering through drives were more likely to be people of color and of lower income than other registered voters.

The number of low income drive registrants is three times the number of low income voters registering at public assistance agencies mandated by the National Voter Registration Act of 1993 (NVRA) to provide registration opportunities. Just four percent of registered voters with total annual family income below $15,000 (approximately 470,000 people) were registered to vote through a public assistance agency. This compares to approximately 1,328,000 low income voters, or 11.6 percent of those with less than $15,000 in annual family income, who said they were registered through a registration drive. It is clear that despite the intent of NVRA to open registration opportunities to low income Americans, thousands of eligible citizens would be left out of the electoral process were it not for the third party groups who register and encourage them to vote.

Competitive or high interest elections like those of the last six years increase incentives to mobilize voters, including the recruitment of new voters – not only to the parties, but to all the other groups who believe they have a stake in the outcome. The use of thousands of volunteers and temporary workers in these drives contributes to the potential for mistakes and duplication in the registration process. This is one of the consequences of essentially “outsourcing” voter registration to the private sector rather than placing the burden of registration on the state as is done in many of the European democracies. If voter registration were mandatory like paying taxes, voter registration drives would not be necessary.

---

4 The table compares only those registered voters who could identify their method of registration. Data on income are limited to people living in families. Family income is the combined income of all family members over the previous year and includes money from jobs, net income from business, farm or rent, pensions, dividends, interest, Social Security payments and any other money received by family members who are 15 years of age or older.

45 U.S. Dept. of Commerce (2005); author’s calculations. For an analysis of the recent drop off in implementation of the agency-based requirements of the NVRA, see Ten Years Later, A Promise Unfulfilled: The National Voter Registration Act in Public Assistance Agencies, 1995-2005, a report compiled by DEMOS, A Network for Ideas and Action; ACORN; and Project Vote (July 2005); available online at http://projectvote.org/fileadmin/ProjectVote/pdfs/Tens_Years_Later_A_Promise_Unfulfilled.pdf.

With the upsurge in voter registration activity has come more media attention to the handful of cases in which organizations have been accused of submitting fraudulent registration applications to local elections officials. No amount of fraud in the registration process is acceptable, but the accusations that voter fraud “is breaking out all over” as a result of “a coordinated effort by members of some organizations to rig the electoral system through voter registration fraud” that put “thousands of fictional voters” on the rolls are unsupported by any credible evidence anyone has been able to bring to bear. In fact, the suspicions about a vast “left-wing” or “Liberal Democrat-sponsored” conspiracy to commit voter registration fraud border on the paranoid.

According to available government data, between October 2002 and September 2005, the federal government prosecuted just 33 people for various misdemeanor and felony crimes related to any form of election fraud that could have involved voter registration. All but two people indicted were prosecuted for falsifying information about their own eligibility to vote, including: 20 people in four states who were prosecuted for registering or voting but who were ineligible under state law because they lacked U.S. citizenship; and ten people who voted in the 2004 presidential election in Milwaukee who were prosecuted for falsely certifying that they were eligible to vote when they were still under state supervision for felony convictions. Ten of the 33 – five of the non-citizen cases and five of the felon cases – were either acquitted of the charges against them or had their indictments dismissed. At least 19 of the 23 people convicted were alleged to have voted illegally because they were ineligible to vote, but notably, these people registered to vote and voted using their real names, hardly acts of conspiracy or of criminals trying to get away with committing fraud. Only two people were prosecuted for crimes related to fabricated voter registration applications for other people. One pleaded guilty to making false statements to a grand jury in connection with 11 fraudulent registration forms. The other, a St. Martinsville, Louisiana city councilwoman running in a hotly contested race for re-election in 2002, pleaded guilty to conspiring to submit false address

49 See, for example, the postings of “Dean,” on democratvotefraud.blogspot.com (accessed in October 2006). This blog collects dozens of news articles from the 2004 election, most of which report allegations of campaign dirty tricks and voter registration fraud, and discuss protests against new “anti-fraud” measures adopted in some states like Ohio, all perpetrated by Democrats or their supporters. Under the title, “Liberal Democrat Vote Fraud,” Dean explains, “We all saw the results of the 2000 American election. This time, I’m personally going to fight back in the only way that I can, with a blog that documents as many news reports about Democrat fraud as I can.”

50 See, for example, the postings of “Dean,” on democratvotefraud.blogspot.com (accessed in October 2006). This blog collects dozens of news articles from the 2004 election, most of which report allegations of campaign dirty tricks and voter registration fraud, and discuss protests against new “anti-fraud” measures adopted in some states like Ohio, all perpetrated by Democrats or their supporters. Under the title, “Liberal Democrat Vote Fraud,” Dean explains, “We all saw the results of the 2000 American election. This time, I’m personally going to fight back in the only way that I can, with a blog that documents as many news reports about Democrat fraud as I can.”

51 One of those convicted, Kimberly Prude, worked as an election inspector in Milwaukee. As of February 2006, Prude was appealing her conviction. See, United States of America v. Kimberly E. Prude, “Criminal Complaint,” United States District Court, Eastern District of Wisconsin, Case No. 2:05-CR-00162-RTR (June 22, 2006).

52 In the ten cases of alleged illegal felon voting in Milwaukee, one defendant was acquitted at trial and four had their charges dismissed. Among the dismissals evidence was presented which suggested defendants did not knowingly commit fraud.
information on two voter registration cards for people who did not live in her district. Those people voted to help the councilwoman win re-election by a slim margin.53

* All but two of those charged with making false claims about their eligibility to register (two non-citizens who were convicted) were also charged with casting a false or fraudulent ballot, as reported above.

Registration drives in recent years have been more effective in registering low income voters than the agency-based requirements of the NVRA. Successful voter drives hold the potential for adding significant new numbers of voters to the rolls and threatening the balance of power between the two parties. Their effectiveness has made them a target for fraud allegations. Their own sporadic failings in the production of duplicate or improperly filled out registration cards, sloppy oversight, poor quality control, and occasional fraud have only fueled the allegations. Such problems are inevitable as along as voter registration is not mandated or universal.

---

CASE STUDIES

The following case studies are illustrative of the politics of voter fraud claims. They do not tell us anything about the incidence of voter fraud in American elections today. That question is central and addressed above. It has always been difficult to measure fraud or even specify it, and it is important to stress that until better evidence comes to light, we will not be able to compile comprehensive statistics on levels of cheating by voters. Researchers are hampered in studying voter fraud because government agencies fail to track it and are often unresponsive to information requests. We can, however, make educated guesses from the available evidence, and what studies there are suggest voters rarely commit fraud. It is only in the public interest that we learn from real cases of voter fraud so that we can better understand where our electoral systems are truly vulnerable. Spurious cases of fraud like those discussed here are equally instructive because they expose the shrewd and partisan manipulation that makes real election reform so difficult.

The case studies presented below demonstrate the ways these partisan interests, database and clerical errors and incompetent electoral administration are sometimes exploited to exaggerate the problem of voter fraud. The intent of the exaggeration is to intimidate the general public and even law makers into believing that American elections face a security threat from a rising tide of deceitful and criminal voters. Unfortunately, in numerous places election administration is in crisis, and in general, faces much larger challenges from changing technology, inadequate resources, poor staffing and training, and especially, partisan manipulation. These are real issues deserving of attention, good ideas, resources and a democratic spirit. They won’t be adequately addressed as long as the voter fraud hoax confuses and distracts us from confronting them.

ACORN and the Mac Stuart Affair

One important example of how the politics of fraud claims are used to manipulate the public about the threat of voter fraud is the political pillorying of ACORN for alleged wide scale registration fraud in the 2004 and 2006 election cycles.

ACORN (Association of Community Organizations for Reform Now) is the largest community-based organization of low and moderate income people in the U.S. It organizes locally and has developed ballot campaigns for a range of issues such as campaign finance reform and raising the minimum wage. Opponents of ACORN’s minimum wage ballot initiative program deployed allegations of voter registration fraud, which then generated official investigations, media coverage and litigation, as a strategy to undermine ACORN’s ability to qualify and pass referenda in several states. One of these cases involved a disgruntled former employee named Mac Stuart who for a while became a cause célèbre of ACORN’s enemies and the pundits who fuel the fraud paranoia. The Mac Stuart affair is instructive because it highlights how politics construct the fraud debate.

In November 2003, Mac Stuart was hired by Florida ACORN and put to work as a petition gatherer collecting signatures supporting the placement of a Florida Minimum Wage Amendment on the

---

When Stuart was fired for suspicion of his involvement in an illegal check cashing scheme a few months later, he filed a Florida whistle blower lawsuit against ACORN claiming the organization engaged in a variety of illegal practices. He was represented by partisan attorneys at Rothstein, Rosenfeldt, Adler, a Fort Lauderdale law firm, and spoke secretly with an official at the Florida Chamber of Commerce which was in the midst of opposing ACORN’s efforts to raise the state’s minimum wage. Stuart provided his attorneys with 179 applications, many of them for Republican registrants, he claimed had been collected and withheld by ACORN.55

In the course of petitioning for signatures, ACORN workers conducted voter registration activities to ascertain whether signatories were registered to vote. Stuart’s lawsuit claimed that petitioners were paid an additional $2.00 for each completed registration card they collected; that ACORN illegally copied the voter registration cards its workers collected and sold its lists for a profit; that ACORN committed fraud by failing to deliver registration cards for people who designated “Republican” as their party affiliation, and otherwise collected cards from ineligible individuals such as convicted felons. Stuart maintained that in July 2004, he refused to participate in these illegal activities and was fired in retaliation under the pretext that he had attempted to cash another person’s check.56

His lawyers filed a second suit against ACORN on behalf of 11 people whose names were among the allegedly withheld voter registration applications Stuart had provided.57 Rothstein, Rosenfeldt, Adler attorneys claimed ACORN had deprived their clients of their constitutional right to vote and committed fraud against them.

After Stuart was fired, he held a news conference and contacted television and print news reporters claiming that “[t]here was a lot of fraud committed” by ACORN, asserting the organization knowingly submitted thousands of invalid registration cards while storing away cards for people designating their party affiliation as Republican. Stuart’s allegations were immediately picked up by news organizations such as the Washington Times, the Florida Times-Union, and other Florida newspapers, and began to spread on rightwing Internet blogs. The Florida Department of Law Enforcement took the unusual step of announcing an investigation into ACORN.58 In fact, for a while, Stuart’s assertions were taken as fact and repeatedly reported as evidence that ACORN routinely engaged in fraud to promote its “radical political agenda.”59 That is, until the real facts about Stuart came to light and his case collapsed in court.

Fraud charges collapse but the damage continues

ACORN denied, and Stuart failed to prove, that canvassers were paid by the card to collect voter registration applications. ACORN’s copying of voter registration applications was an element of their quality control program and well within the bounds of Florida law.60 Finally, ACORN denied, and Stuart failed to produce evidence, that the organization prejudiced Republican voter registration applicants or misleadingly solicited registration cards from ineligible applicants. ACORN countersued Stuart for defamation and libel. On December 6, 2005, the matter of

60 Nothing in Florida’s election code prohibits private, third-party voter registration organizations from photocopying the voter registration applications they collect before submitting them to local elections officials.
Mac Stuart v. ACORN was dismissed with prejudice by a federal judge, exonerating ACORN of any and all wrongdoing. ACORN prevailed in their counterclaims and won a judgment of defamation against Stuart.

ACORN also prevailed in the second Rothstein, Rosenfeldt, Adler suit. Shortly after it was filed, nine of the 11 plaintiffs asked to be dismissed from the case. As ACORN’s lawyers deposed the remaining two plaintiffs it became clear that their lawyers had not asked them if they were qualified to vote, if they had completed the applications Stuart had given the attorneys or whether the plaintiffs were in fact Republicans. One of the two was not qualified to vote, neither remembered completing the application used as the basis for the complaint and both said that, inconsistent with their applications, they were not Republicans and never would have checked off that they were. Stuart was inconsistent in his testimony in how he obtained the applications in the first place. This case, too, was dismissed with prejudice.

The Florida Department of Law Enforcement investigation found no evidence of illegal or fraudulent activity by ACORN. A public records request by Project Vote asking all Florida counties for any documents related to voter fraud elicited just three alleged cases of illegal activity, only one of which involved temporary ACORN workers.

The problem is that the end of this story has received considerably less media attention than the unfounded claims of organized voter fraud on the part of ACORN. Opponents of ACORN continue to spread false rumors that the organization engages in voter fraud. For example, the Employment Policies Institute (EPI) issues dozens of press releases and “reports” attacking ACORN every year. EPI is a non-profit organization that in 2004 paid over $600,000 in “management” fees to its executive director’s publicity firm which lobbies on behalf of the hotel, restaurant, alcoholic beverages and tobacco industries. Those industries are opposed to ACORN’s efforts to raise the minimum wage in Florida and elsewhere. As late as July 2006, months after ACORN was fully vindicated in court, EPI was still claiming they engaged in a “pattern and practice” of voter fraud, citing the Mac Stuart affair as more evidence of ACORN’s “widespread practice of fraud.”

Voter fraud allegations used to restrict voter registration programs

With ACORN under a cloud, Florida passed a law that carried stiff penalties for organizations failing to turn in voter registration applications later than ten days after they were collected. The law’s reporting requirements were so draconian the League of Women Voters ended 77 years of voter registration activity in the state because it feared it could not comply and would be bankrupted if there were problems with just 16 registration forms collected by its volunteers. A federal judge later blocked the implementation of the law as unconstitutional.

64 Joni James, "Voter Fraud Charges Collapse," St. Petersburg Times (December 15, 2005).
65 Telephone interview with Brian Mellor, Senior Counsel, Project Vote (April 13, 2006).
67 A “pattern and practice” of wrongdoing evokes conspiracy and as a legal term refers to the crime of racketeering. See, Employment Policies Institute, Rotten ACORN: America’s Bad Seed (July 2006), 18-19; available online at www.rottencorn.com/downloads/20060728_badSeed.pdf. In fact, ACORN, along with America Coming Together, the NAACP Voter Fund, and the Ohio AFL-CIO were defendants in an Ohio lawsuit that alleged the groups conspired to engage in a series of “predicate” or related acts of forgery, document tampering and drug trafficking in order to produce fraudulent voter registration cards. See, Rubick v. America Coming Together, et al., State of Ohio, County of Wood, Court of Common Pleas, Case No. 04-CV-650 (2004). Plaintiffs’ complaint argued each fraudulent card submitted represented a predicate act. Under the federal Racketeer Influenced and Corrupt Organizations Act or RICO, a person or group can be charged with racketeering by a U.S. Attorney if they commit any two of 35 crimes (27 federal crimes and eight state crimes) within a 10-year period and the prosecutor believes those charged committed the crimes with similar purpose or results.

THE POLITICS OF VOTER FRAUD
The Perils of List Matching

A common source of fraud claims is a list matching exercise gone wrong. The ready availability of high-powered computing capacity and an ever-expanding range of public records databases, have created a cottage industry of software programs and list management consultants ready to match lists for hire.

When databases contain errors or compile data differently, matching them against one another can cause a high degree of what statisticians call “false positive” errors or matches that are not really matches. A prime example is the infamous felon purge list compiled by a private firm for the Florida Secretary of State’s office in 2000. That list joined data on convicted felons with the voter registration rolls using rules that matched only the first four letters of the first name, 90 percent of the last name and an approximate date of birth.67 The result was a highly inaccurate list of people whom the Secretary of State wanted to prevent from voting.68

Voting in Connecticut and beyond

In October 2002, the Republican National Committee (RNC) claimed that in the course of “updating” its voter files, it discovered over 722,000 people nationwide were registered to vote in more than one state, and that at least 600 of these had voted more than once in a single election. In Connecticut, the Secretary of State was alarmed. The RNC released a report that said 7,700 registered voters in Connecticut were also on the rolls in other states and that 54 of them had voted more than once in the 2000 election. Secretary Susan Bysiewicz, a Democrat, asked the RNC for the names of the duplicate registrants and voters. “I am surprised by the numbers,” she said, “it sounds like a lot. We have two million (registered) voters, so I suppose it’s possible; but in four years we haven’t prosecuted one instance of voter fraud.”69

At first the RNC refused to release the names and criticized Bysiewicz for not finding the problem first. When they finally turned over the names of the 54 alleged double voters, Bysiewicz found their claims baseless. Her office conducted a week long investigation of every suspect voter produced by the RNC and found that 29 had never voted in Connecticut, but did vote in another state; 18 voted in Connecticut, but not in the other state named in the report; four names had different birth dates than those on the RNC list, and three were turned over to criminal investigators because out-of-state data could not be obtained for verification.70

---

68 The U.S. Civil Rights Commission conducted an investigation into the 2000 election in Florida and concluded, “Many people appear on the [felon purge] list incorrectly.” One in seven people on the felon purge list supplied to the supervisor of the Miami-Dade election office was erroneously listed and therefore put at risk of disenfranchisement. These people were disproportionately African American. See, U.S. Civil Rights Commission, Voting Irregularities in Florida During the 2000 Presidential Election (2001), chapter 1. See also a disclaimer for the inaccuracy of the felon purge list posted on ChoicePoint’s website (“Choicepoint’s Mythical Role in Elections Past and Present,” posted August 7, 2006, available online at www.choicepoint.com/news/statement_08072006.html). ChoicePoint is the parent company of Database Technologies (DBT), the firm hired for the period 1998 to 2000 by the Florida Division of Elections to create its voter exception list. ChoicePoint claims, “DBT Online was not required to provide a list of exact name matches. Rather, the matching logic only required a 90 percent name match, which produced ‘false positives’ or partial matches of the data. Moreover, the Division of Elections required that DBT Online perform ‘nickname matches’ for first names and to ‘make it go both ways.’ Thus, the name Deborah Ann would also match the name Ann Deborah. At a meeting in early 1999, the supervisors of elections expressed a preference for exact matches on the list as opposed to a ‘fairly broad and encompassing’ collection of names. DBT Online advised the Division of Elections that it could produce a list with exact matches. Despite this, the Division of Elections nevertheless opted to cast a wide net for the exclusion lists.”

69 “Thousands Registered to Vote in Two or More States,” The Associated Press State and Local Wire (October 9, 2002).

Double dipping in New Jersey
A few years later, in time for the next federal election cycle, the New Jersey state Republican party (RSC) claimed it had researched voter registration files in a number of states and found evidence of multiple voting. In September 2005, the state party sent a stern letter to New Jersey Attorney General Peter Harvey threatening a lawsuit for failing to enforce state election laws governing the voter registration rolls.\textsuperscript{71}

The basis for the RSC claims was their own “exhaustive investigation” of voter files from New Jersey’s 21 counties, matched internally county to county on first name, last name and date of birth, as well as against the voter registration files of five other states, New York, Pennsylvania, Florida, North Carolina and South Carolina. In addition, the RSC matched the New Jersey county files against lists of deceased persons from state and federal databases and other commercially available lists. Based on their analysis, the RSC said it found evidence of widespread multiple voting in the November 2004 general election — 4,397 people alleged to have voted more than once in New Jersey, and 6,572 people who “appear to have” voted in New Jersey and another state. Moreover, the RSC claimed that 4,755 dead people had voted and warned the problem could be even worse since the state’s rolls contained tens of thousands of duplicate records and the names of some well known felons in the state.

There is little doubt that New Jersey’s county voter registration lists contained registration records for people who moved away or died. The existence of so-called “deadwood” on voter registration records across the country is well-known. But the presence of deadwood is not in and of itself evidence of voter fraud.

A subsequent more thorough analysis of the data files the RSC supplied to the state suggests major problems with the accuracy of the RSC analysis and therefore the veracity of their claims. The Brennan Center for Justice working with Dr. Michael McDonald, an elections expert at George Mason University, concluded that “these lists simply do not prove what they purport to prove.”\textsuperscript{72} Their report uncovered methodological errors in the RSC’s list matching techniques, such as omitting middle initials and suffixes like “Jr.,” which resulted in the listing of duplicate records for the same person then counted by the RSC as voting twice (from the same address). Mismatches of different people were presumed to be the same person, and again counted as voting twice. Statistical and database experts know that relying solely on non-unique identifiers such as name and date of birth to match records produces a high rate of false positives.\textsuperscript{73} The Brennan Center/McDonald detailed analysis of the alleged 4,397 double votes recorded in the New Jersey county voter files accounted for them all as the likely product of false positives, errors in the data, duplicate records for the same person, and the statistical likelihood that two people will share the same name and birth date.

Voting from the grave in Detroit
Yet one more example of the damage flawed list matching efforts can inflict comes from an oft-cited news item appearing in the Detroit News in February 2006. The article, written by Lisa M. Collins, was headlined, “In Mich. Even Dead Vote,” and continued, “From Holland to Detroit,
votes were cast by 132 dead people; Detroit’s voting records are riddled with inaccuracies, casting
doubt on elections’ integrity.”

The allegations of voting from the grave in Detroit, a poor and
majority black city, are repeatedly cited by conservative bloggers in their litany of purported
evidence that voter fraud is rampant in America.

But a full reading of the article itself indicates that the News did not attribute these irregularities
to voter fraud. Instead, they suggested the irregularities were more likely due to clerical errors.
Influential Republican political operative, Mark F. (Thor) Hearne, paid counsel to the Bush-Cheney
2004 re-election campaign and a member of the U.S. Elections Assistance Committee’s Voter
Fraud – Voter Intimidation Working Group, as well as Missouri’s HAVA Advisory Commission,
nevertheless repeated the misleading allegations of dead people voting in Detroit when he
tested before a U.S. Senate panel in July 2006.

This time the list matching was not performed by an elected official and presidential campaign
doctor, as it was in Florida, or a political party, as it was in the Connecticut and New Jersey
examples. It was done by a newspaper which presented no assurances that it had the kind of
expertise in computer programming, statistics, or records management required to make an
accurate evaluation.

On March 5, 2006, the News printed a letter from Kelly Chesney, the Communications
Director for the Michigan’s Republican Secretary of State, which challenged the implication
that dead people were voting in Michigan. Chesney reported that an analysis of the 132
alleged deceased voters found that this was the number of absentee ballots mailed out
to voters who subsequently died in the weeks before Election Day. Of the 132 absentee
ballots, she said “97 were never returned, and 27 were voted and returned prior to the
voters’ deaths.”

This substantial correction to the implications of voter fraud in Michigan has
been roundly ignored by activists who continue to cite what is now an out-dated news item
reporting erroneous information.

75 “Clerical errors [in the Michigan voter file are] so pervasive that it is difficult to determine in many instances who actually
voted;” and citing Mark Grebner, the list vendor and political consultant upon whose research the News relied, “…Grebner says
he’s never found evidence of organized fraud in Detroit.” See, Collins (2006).
76 Testimony of Mark F. (Thor) Hearne, II, Before the U.S. Senate Committee on the Judiciary, Subcommittee on the Constitution,
Civil Rights and Property Rights, “Regarding the Continuing Need for Federal Examiners and Observers to Ensure Electoral
Integrity,” July 10, 2006.
77 Mark F. (Thor) Hearne, II, “The Missouri Voter’s Protection Act: Real Election Reform for All Missouri Voters,” St. Louis Lawyer;
June, 2006; available online at www.bamsl.org/members/stlawyer/archive/06/june06.html#feature.
79 In fact, the News admitted in the article that they “did not review every vote cast, but instead targeted voter records based
on several factors, such as the voter’s birth year or voting history. Though limited and somewhat random searches were done,
each search found voting records in error or highlighted names of voters who in fact could not have voted.” This is hardly an
adequate methodology.
80 Editorial and Opinions, Special Letter, “Claims That the ‘Dead’ Voted Were Wrong,” Detroit News (March 5, 2006).
St. Louis: More Bad Lists, Even Worse Election Administration

St. Louis, another majority black city with budget problems, presents a case study for how the mishandling of voter registration and elections procedures can be misperceived as fraud.

Whose mess on Election Day 2000?

There is little doubt that in the past St. Louis experienced election fraud and public corruption. St. Louis politics were long organized by political machines and fraud has a storied past which, for some, at least, condemns the politics of the present.81 In 2000, the historical memory of fraudulent elections, bribery, conspiracies, ballot tampering, and voting from the grave colored the rush to judgment when administrative mismanagement and shockingly poor record-keeping combined to produce troubling election irregularities.82 Before the irregularities could be sorted out, they were seized upon by partisans. One of them, Missouri's senior Republican senator, Kit Bond, claimed the problems were evidence of a [Democratic party-driven] "major criminal enterprise designed to defraud voters," instead of what an extensive federal probe later determined to them to be – procedural incompetence and official failure to abide by the law.83

For many voters attempting to cast ballots in the 2000 presidential election, Election Day in St. Louis was a chaotic mess. Many long-time voters were told that they were not registered to vote when they showed up at polling sites where they had cast ballots in the past. To re-establish their legitimacy, many of these rejected voters were told to go down to the St. Louis Election Board's headquarters at 300 North Tucker Boulevard and cast a ballot there since the phone lines to the Board were jammed and election judges staffing the polling sites were unable to establish whether such voters' names had been moved to an "inactive" list of registered voters.84

The illegal "Inactive" list

It was this controversial inactive list and the failure of the St. Louis Elections Board to comply with the NVRA that later formed the basis for a federal lawsuit alleging the Board "denied or significantly impaired the voting rights" of thousands of city voters before the election.85

Missouri law requires bi-partisan control of election administration. Local boards of election have equal representation of Democrats and Republicans as do positions staffed by the boards. The St. Louis Board has had problems maintaining accurate voter registration rolls, and leading up to the 2000 election, there were still no clear rules for specifying when a voter should be dropped from the rolls.86

81 Secretary of State Matt Blunt, Mandate For Reform: Election Turmoil in St. Louis, November 7, 2000 (July 24, 2001); available online at (herein cited as 'Blunt Report'), 39-46.
82 For an excellent example of the rush to judgement, see chapter four, 'Politically Active after Death,' in John Fund's Stealing Elections: How Voter Fraud Threatens Our Democracy (San Francisco: Encounter Books, 2004). See also, Bruce Rushton, "Dead Man Voting," Riverfront Times (April 24, 2002). For Sen. Bond's remarks, see Carolyn Tuft, "Bond Wants Federal Investigation of Problems at City Polls; He Accuses Democrats of 'Criminal Enterprise' in Keeping Polls Open Late; Democrats Criticize Election Board," St. Louis Post-Dispatch (November 10, 2000), Al. According to the Riverfront Times, "In his letters to...two federal agencies, Bond wrote...of a 'deliberate scheme' planned in advance so unregistered voters could vote illegally: 'There is reason to believe that collusion existed to commit voter fraud and voter fraud occurred on a wide scale throughout the city of St. Louis.'" See, Safir Ahmed, "Slimin' the City: When It Comes to Election Day Problems in St. Louis, the Politicians' Rhetoric Doesn't Match the Reality," Riverfront Times (November 15, 2000).
83 U.S. v. Board of Election Commissioners for the City of St. Louis, U.S. District Court, Eastern District of Missouri, "Stipulation of Facts and Consent Order," Civil Action No. 4:026v001235 CEJ (August 14, 2002), 5; (herein cited as 'St. Louis Election Board Consent Order').
84 Karen Branch-Brioso and Doug Moore, "Board Denied Voters' Rights, U.S. Says: Election Officials Here Say They've Already Taken Steps to Correct Deficiencies From 2000," St. Louis Post-Dispatch (May 23, 2002), CI.
85 Office of the State Auditor of Missouri, Board of Election Commissioners, City of St. Louis, Missouri, Report No. 2004-40 (May
Between 1994 and 2000, the Board conducted a series of mail canvasses of its voter registration rolls, none of which complied with the requirements of the NVRA. Based on these improper canvasses, the Board removed more than 50,000 names of voters who had been on the rolls in 1996, and "made no effort to notify inactive voters that their registration status had changed, that their names would not appear on the voter registration lists provided to election judges in each voting precinct, or that they would face additional administrative steps on election day before they would be permitted to vote." This number represented roughly 40 percent of the total number of votes cast in St. Louis in the 1996 election, and was about twice the national and state averages for the proportion of inactive voters on the rolls. Moreover, for all elections it conducted after 1994, the Board failed to provide precinct election judges a list of any of the voters it had designated as "inactive." This failure created mass confusion at polling sites when many legitimate voters showed up to vote and were told they were no longer registered.

In the days leading to the November 7, 2000, election, the unprecedented administrative reclassification of thousands of active voter registration records in the overwhelmingly Democratic city was seen by Democrats, including national party officials with the Gore-Lieberman campaign, as an illegitimate Republican party-sponsored effort to restrict Democratic voting. When he spoke at a Gore-Lieberman campaign event, Democratic Congressional hopeful William Lacy Clay, Jr., told supporters not to "let anyone turn you away from the polls," and warned, "If it requires leaving the polls open a little longer, we're going to get a court order to do it.

The showdown

In fact, this is exactly what happened. Voters stood in line for hours. First, they had to check in with precinct workers, then, for those whose names were no longer on the precinct voter registration lists, they stood in another line to plead their case before their precinct's election judge. When many of these officials were unable to confirm their registration status with headquarters because they couldn't get through to elections officials at the Board, they sent voters down to the Board's office to try to resolve the problems on their own. According to news reports, "It made for a wild hour at Board's downtown office,

where hundreds of voters turned away from the polls because they were not registered or had problems voting filled the lobby throughout the day. By early evening, the lobby was shoulder to shoulder with people who wanted to vote."

In the afternoon, the Democrats and the Gore-Lieberman campaign filed suit in a state circuit court requesting the polls remain open for an additional three hours to accommodate voters victimized by the inaccessible and inaccurate inactive list.

---

26, 2004), 10 (herein cited as 'Mo. State Auditor's Report').
87 Section 8(d)(2) of 42 U.S.C. 1973gg-6(d). See, St. Louis Election Board Consent Order, 3.
88 St. Louis Election Board Consent Order, 4.
89 In 1996, 122,003 votes were cast in the general election in the City of St. Louis. In 2002, according to records from the Federal Election Commission, both nationwide and for the state of Missouri, 12 percent of all voters on the rolls were classified as "inactive," compared to 22 percent in the City of St. Louis. See, Mo. State Auditor's Report, 15.
90 St. Louis Election Board Consent Order, 4.
92 The State Auditor found that the St. Louis Election Board frequently failed to secure the minimum number of precinct-level election judges as required by state law. Section 115.081, RSMo 2000, mandates four election judges, two from each major political party, for each polling place at each primary and general election, or about 1,600 election judges per major election. The Auditor found that the Board has not been able to attract more than 1,200 such judges in recent elections. See, Mo. State Auditor's Report, 24.
93 Scott (2000); see also, Ahmed (2000).
St. Louis Circuit Judge Evelyn Baker complied, but her order was overturned within 45 minutes of the regular poll closing time (7 PM) by a three-judge appeals panel. The St. Louis City Board of Elections successfully argued she lacked jurisdiction to change state law. Elections officials estimated that only about 100 extra people had been permitted to vote by Judge Baker's order. Republican officials charged there may have been a "preconceived plan" to misuse the judicial process to keep the polls open longer than their statutorily mandated closing time, as well as an "organized campaign" (by the Democrats) to abuse the procedure by which voters obtain court orders to vote, resulting in voter fraud and the casting of hundreds of illegal votes.94

In a 51-page report, Republican Secretary of State Matt Blunt outlined the possible violations of law committed in the City of St. Louis by alleged illegal voters. He referred to an unspecified conspiracy "to create bedlam so that election fraud could be perpetrated;" and to corrupt election judges put in place to manipulate the results of the election. The report claimed that, 1) 342 persons obtained court orders to vote even though the information provided by them on affidavits suggested they were properly disqualified from voting; 2) 62 convicted federal felons and 52 Missouri felons voted in either the City of St. Louis or St. Louis County; 3) 14 votes were cast in the names of dead people; 4) that there was a high probability of multiple voting by dozens of people; 5) 79 votes were cast by people registering to vote from vacant lots; and 6) 45 election judges were not registered to vote and therefore disqualified to serve.

Many of Blunt's allegations have been disproved or significantly weakened by the discovery of major records management problems at the Elections Board that resulted in grossly inaccurate voter rolls. The St. Louis Post-Dispatch conducted a canvass of over 2,000 alleged vacant lot addresses from which thousands of St. Louis voters were supposedly registered and found buildings on virtually all of them. The lots had been misclassified by the city assessor or misread by elections officials. They concluded that "most of the 79 people on the state's suspect voter list from last fall probably shouldn't be on it," including the city's budget director whose ten-year old condominium was mislabeled as a vacant lot.96

The claim that more than 100 felons may have illegally voted is also unreliable since the data upon which it was based was inconclusive, as the report itself admits.97 Later investigations by the State Auditor did find that three years after the 2000 election fiasco, St. Louis's voter rolls still included the names of over 2,000 felons prohibited by state law from voting or registering to vote. But the Auditor found no conspiracy to commit voter fraud on the part of voters and questioned instead why the Elections Board had failed to remove the names from their lists when they had been provided with monthly and quarterly felony conviction reports from state and federal authorities.

Like the Blunt Commission, the State Auditor also found thousands of duplicate records of voters registered to vote in St. Louis and elsewhere in the state, but only 28 instances across three recent election cycles in which a voter may have voted more than once. Without further investigation it is impossible to know whether these 28 cases represent actual illegal behavior or are more likely the product of clerical errors in the Board's voter registration files.

Throughout the months following the election, Republicans and Democrats alike called for a federal investigation, each side charging the other with fraud or with suppressing the vote. Both sides expected to be vindicated. The federal investigation provided a decisive end to the Blunt Commission's allegation that corrupt election judges allowed hundreds of patently unqualified voters to vote.

St. Louis Board of Elections forced into federal consent decree

After an F.B.I. investigation that involved subpoenaing all of the registration and voting records from the St. Louis Elections Board for the months before the election, the Justice Department made a surprise announcement. They told the Board they were planning to sue them for violating the NVRA and threatening the voting rights of thousands of eligible voters in St. Louis by erroneously purging their records from the active voter file. The Board was forced into a consent decree that stipulated how they would change their procedures for maintaining accurate registration records, complying with federal requirements for notifying voters of their status on the list, and with handling voters whose names are not on the active voter list on election day.

Four years after the St. Louis Elections Board signed the consent decree acknowledging these failures, Mark (Thor) Hearne, the St. Louis lawyer and influential Republican activist, submitted Senate testimony that included citations to materials he produced after 2002 that ignored the Board's culpability and repeated misleading allegations of voter fraud in St. Louis.98

Milwaukee: The Coup de Grâce

In 2000, Vice President Al Gore won Wisconsin by just under 6,000 votes out of more than 2.5 million cast. Heading into the last months of the 2004 presidential campaign candidates George W. Bush and John Kerry were neck-and-neck in the polls in Wisconsin and the race was once again projected to be razor close. As a battleground state Wisconsin attracted attention from the national campaigns and a host of non-profit and political consulting organizations that poured money, staff and volunteers into the state to increase voter registration before Election Day.

By September, the voter registration drives and heightened national interest in Wisconsin as a battleground state led elections director Kevin Kennedy to report that elections officials across the state had been swamped by an unprecedented increase of over 200,000 new applications submitted by mail. The intensified focus on Wisconsin by outside voter registration groups pouring their volunteers into the state was unparalleled in recent elections, an anomaly associated with Wisconsin's swing state status and the closeness of the presidential contest – in Wisconsin and the nation – just four years before.

Pre-election news coverage in Wisconsin focused on three controversies: problems associated with some of the voter registration drives; a dispute between county and city officials over the number of ballots to be printed and provided to the city of Milwaukee; and a flap over thousands of alleged "bad addresses" on Milwaukee's voter registration list.

Procedural breakdowns and discrepancies in the voter registration records were associated with what Kennedy called "volume" problems, but they helped create a climate of suspicion about the quality of record keeping at the Milwaukee elections commission and the commission's ability to run a "clean" election. The pre-election disputes repeatedly invoked the language of "voter fraud," though no evidence was produced that voters were intentionally committing it. The climate of distrust made it difficult to see clerical mistakes, illegible handwriting, and workload problems leading to backlogged voter registration applications as human error or problems related to resource issues. Instead, foul-ups and mistakes were assumed to be evidence of fraud perpetrated by partisans trying to "steal elections."

Imperfect voter registration drives and simple human error, however, are not the same as voter fraud, nor do they inevitably lead to fraudulent voting.

Voter registration problems

Intensified political competition and the influx of outside organizations, campaign workers and volunteers into Wisconsin in the months and weeks before the election contributed to an inevitably flawed voter registration process. Duplicate registration cards, improperly filled out cards, cards from people who are not eligible to vote or who don't live in the district in which the card was submitted are not uncommon in the chaotic pre-election atmosphere of an intense political campaign. Imperfect voter registration drives and simple human error, however, are not the same as voter fraud, nor do they inevitably lead to fraudulent voting. As the Milwaukee case demonstrates, however, these deficiencies are easily exploited by partisans.

---

Since voters can register to vote on Election Day, pre-election voter registration drives have been less common in Wisconsin than elsewhere.

How many ballots for Milwaukee?

As stories of potential voter registration fraud circulated in the press, a political fight erupted in Milwaukee. In October the chief elections official in Milwaukee asked the county elections board for 260,000 extra ballots in anticipation of record turnout. Under Wisconsin law counties print and pay for all ballots for their localities. Milwaukee county elections officials rejected the request, with County Executive Scott Walker writing in support of the county board’s decision to give Milwaukee roughly the same number of ballots it had received in the previous presidential election. In 2000, the number of ballots on hand exceeded the eligible voting population in Milwaukee by at least 200,000. But in planning for the number of ballots needed, local officials must compensate for the fact that in order to scan and count the ballots after they are cast, a bar code is assigned that prevents ballots from being counted outside the ward in which they are issued. In other words, unused ballots can’t be moved around from ward to ward to cover shortfalls. Estimating probable turnout involves estimating turnout in each ward rather than citywide. This could have the effect of inflating the overall estimated number of ballots needed citywide. In 2004 Milwaukee requested 938,000 ballots for a voting population of about 424,000. The county board agreed to give the city 679,000 ballots, and a firestorm of protest erupted when County Executive Walker defended the decision by suggesting that he was concerned about potential voter fraud and didn’t want people to be able to “grab” extra ballots at the polling site.102

Milwaukee Mayor Tom Barrett accused Walker of trying to foment chaos at the polls and suppress the central city vote. Barrett is a Democrat and served as a state co-chair of John Kerry’s campaign, while Walker is a Republican and served as state co-chair of George W. Bush’s campaign. In press reports, the dispute was repeatedly referred to as “ugly,” generating partisan recrimination on both sides. On the morning of October 14, about a hundred protesters, including students, elected officials and union activists, stormed Walker’s office while he was meeting with municipal election clerks, chanting, “Let the people have their voice!” and demanding that Walker issue the extra ballots to Milwaukee. Wisconsin Governor Jim Doyle intervened by asking the state elections board to help resolve the dispute and offered state aid to pay for the extra ballots. The next day Walker and Barrett held a joint press conference on the steps of Milwaukee city hall to announce a compromise between the city and county: the county would supply the extra ballots, giving the city the 938,000 ballots it originally requested, the city would split the cost, estimated at about $40,000, and promise to return all unused ballots to the county election commission to ensure that all ballots were accounted for.103 Approximately 665,000 unused ballots were later returned to the county board of elections.104

Inaccurate lists of “potentially fraudulent voters”

At 4:57 p.m. on Wednesday, October 27, 2004, three minutes before the legal deadline for filing a complaint with the city elections commission, the state Republican Party challenged the validity of 5,619 names on the city voter rolls. State GOP chairman Rick Graber said, “This is a black eye on the city of Milwaukee and the state of Wisconsin. These 5,600 addresses could be used to allow fraudulent voting. Whether it’s deliberate or not, something’s wrong when you have people

---

103 Associated Press, “Governor Sends Election Board Into Milwaukee Ballot Fray,” Capital Times (October 15, 2004), 4A; Dave Umhoefer and Steve Schulze, “Doyle joins rift over ballot supply; Governor seeks state inquiry; After protest, Walker agrees to review city’s request,” Milwaukee Journal-Sentinel (October 15, 2004), A1.

from addresses that don’t exist.” First the local elections board voted 3-0 when the board’s lone Republican appointee joined the two Democrats in finding the challenge lacked sufficient evidence. The Milwaukee City Attorney, Grant Langley, conducted a review that he said in a letter to the city elections commission executive director casts “doubt on the overall accuracy” of the list supplied by the state GOP.

Then, just four days before Election Day the state GOP demanded that Milwaukee city officials require identification from 37,180 people it said its review of the city’s voter rolls turned up as living at questionable addresses. The list was produced in the same manner as the first list of 5,619 names using a computer program to match data from the city’s voter database with a U.S. Postal Service list of known addresses. It included 13,300 cases of incorrect apartment numbers and 18,200 cases of missing apartment numbers. City Attorney Langley, a non-partisan officeholder, called the GOP’s request, “outrageous,” adding, “We have already uncovered hundreds and hundreds and hundreds of addresses on their (original list) that do exist. Why should I take their word for the fact this new list is good? I’m out of the politics on this, but this is purely political.”

Langley’s review did find some addresses that do not appear to exist, and the Milwaukee Journal-Sentinel did its own limited investigation, finding 68 questionable addresses. “Others, though,” it said, “were likely to be clerical errors.”

By Monday, officials from the state GOP and the City of Milwaukee worked out an agreement on how the registrations of voters with addresses challenged by the GOP would be dealt with at the polls. The list of 37,000 was pared back down to 5,512 and the city agreed to provide poll workers with the names of people in their wards from the list whose addresses appeared to be incomplete or inaccurate. Those people would be flagged if they showed up to vote and asked to show identification and/or re-register to update their records.

At the time Wisconsin law did not require pre-registered voters to show identification to vote at the polls, they only needed to state their name and address to receive a ballot. The compromise deal with the Republican party imposed an identification requirement not mandated by law on people who made their way onto the GOP’s list.

Who bears responsibility for sloppy records and procedural meltdown?
The Journal-Sentinel reviewed Milwaukee’s voting records and found a number of unexplained discrepancies. The most troubling finding from the newspaper’s detailed computer analysis was that as many as 1,242 votes, three-quarters of them cast by people registering on site on election day, appeared to have come from invalid addresses. Another 1,305 registration cards with discernible flaws such as missing addresses or missing names were accepted from voters on election day who were then allowed to vote.

---

108 Borowski (October 31, 2004).
109 “Milwaukee Vote Deal Reached on Dubious Addresses,” The Capital Times (November 1, 2004), 5A.
110 Wisconsin allows for election day registration. Same-day registration rules require new registrants to show some form of proof of residency, or, for those lacking proof, another registered voter may vouch for them.
The newspaper opined on its own investigation and reporting:

Republicans are quick to jump on the discrepancies, real or imagined, in voting data in Milwaukee as proof of widespread fraud in the big city. In their minds, the Journal Sentinel’s findings fit that pattern. A more plausible explanation, however, is that the findings reflect the unfortunate tendency of voting systems throughout America to err.\(^{12}\)

By the end of January, the Mayor had appointed an internal task force to review the city’s electoral procedures, and federal and county law enforcement agencies began a joint investigation into whether breakdowns in procedure, poor record-keeping, human error or fraud explained the discrepancies. On February 10, the bipartisan Joint Legislative Audit Committee of the state legislature voted unanimously to direct auditors to review voter registration and address verification procedures. All of these investigations produced clear evidence that Milwaukee’s Board of Elections was overwhelmed by its own incompetence and under-staffing on election day, resulting in massive record-keeping problems. Poll workers failed to follow procedures; the number of votes cast in Milwaukee failed to match the number of people recorded as voting; same day registration cards were not filled out properly and follow up was not performed when post-registration address verification efforts identified address discrepancies; some voters were allowed to register to vote in the wrong ward.

The dénouement
The scrutiny from federal, state and local law enforcement and elections officials produced several reports, an intensive review of voter registration practices in a number of Wisconsin cities, many recommendations for improving election administration and voter registration procedures, several later-vetoed photo ID bills in the state legislature, a variety of other legislative proposals, and very little conclusive evidence of voter fraud.

Widespread ignorance among the public and elections officials alike of Wisconsin’s seldom enforced felony disenfranchisement laws account for the hundreds of ineligible felons post-election audits have found voted since 2000. Alleged illegal felon voting constitutes nearly all of the “voter fraud” reported on by the media in Wisconsin over the last six years, and represents most of the handful of cases prosecuted by the federal government. Wisconsin election crime laws require the establishment of a willful effort to defraud. Most of those identified as ineligible have not been prosecuted because they were never informed that they lost their voting rights until they completed their entire sentence. Until recently, Wisconsin’s voter registration application form did not clearly indicate that felons on probation or parole were ineligible to vote. One of the federal cases against the dozen or so people charged with illegal (felon) voting in the 2004 election was dropped when it was revealed that the defendant had registered to vote on election day in Milwaukee using his state offender ID card.\(^{13}\)

POLICY RECOMMENDATIONS

This report has illustrated how the public is being manipulated about the problem of voter fraud.

Voting is a right, it's not a gift and it's not a privilege. Moreover, we can't have a democracy without the voters, and that means all voters, contributing to self-government. Therefore, layers upon layers of rules and bureaucracy to administer elections do not serve us well if they hinder electoral participation, which they do especially when the electorate expands. It is simply naïve to argue that the rules have nothing to do with turnout. On the other hand, it's true, the rules don't on their own increase turnout — issues, passion, competition, good candidates, effective communication and a diverse media — these are some of the factors that contribute to higher levels of electoral participation. But high interest campaigns and elections present precisely those conditions under which a complex regime of rules will have a depressing effect. When voter interest is high, partisans exploit the rules to determine the size and shape of the electorate they want.

Today partisans use the threat of voter fraud as an intimidation tactic. As our history shows, it is an old and reliable instrument for shaping the electorate by influencing the rules and procedures governing access to the vote. It is difficult to openly suppress voting in a democratic culture. The threat of fraud, however, if it's real, is enough to scare most people into accepting new rules that undermine the electoral participation of other voters - the unfortunate price, we are told, we must pay to keep our elections clean. The unraveling logic of this argument should be obvious. Unfortunately, reason flies out the window when we're scared.

We need better data, better election administration, transparency and more responsible journalism to improve public understanding of the legitimate ways in which electoral outcomes can be distorted and manipulated. Specifically:

1. States' chief elections officers should collect and maintain data on fraud allegations and enforcement activities and routinely report this information to the public. The data and methods used to collect it should be transparent and in the public domain.

2. To protect the right to vote and improve public confidence in the electoral process improvements to statewide, centralized voter registration databases must continue. Accurate registration records and methods for instantaneously certifying voter eligibility are the best defense against voter fraud.

3. To minimize mistakes, clerical errors, and duplication, state and local elections officials need to develop good, cooperative working partnerships with third party voter registration organizations that do a service to democracy by encouraging more people to register and vote.

4. States can go further and reduce the need for registration drives by fully implementing the agency-based voter registration requirements of NVRA and instituting same-day voter registration procedures. Ultimately, the states and federal government should provide a means to automatic universal voter registration.

5. To improve public understanding of voter fraud and more balanced reporting, state elections and law enforcement officials should educate journalists to ask for and recognize evidence of fraud when reporting on fraud allegations.
Elections are instruments of democracy. They are the mechanisms for choosing representatives of the people's will, and they are widely regulated by law. Many different actors participate in the electoral process. Legislators and administrators make and implement the rules, candidates organize campaigns to run for office, voters cast their ballots, administrators count the ballots and elected officials certify the results.

The voters' role is simple — to make choices about candidates by casting legal ballots. Voters don't set deadlines for registering to vote, nor do they make the rules about how ballots are designed, displayed, or marked. They don't decide where the polls are located, when they are open, or what voting technology will be used. Voters have nothing to do with receiving completed ballots, determining valid ballots, counting or recounting ballots, tallying election results, or ensuring that the vote totals are accurate.

Voters, like all other actors or groups in the electoral process, can only corrupt that part to which they have access. They can do this directly, for example, by providing false information about their identity and/or eligibility in order to vote illegally, or indirectly through participation in a conspiracy, usually with others who have more authority and access to the marking and counting of ballots than the voters themselves possess.

The first step in confronting any allegation of voter fraud is to identify who is alleged to have committed the fraud and to figure out if any voters are involved. If the alleged fraud does not involve voters it should not be considered voter fraud.

The second step is to identify which part of the electoral process was corrupted by fraud. Given their limited access, voters can only corrupt the registration and voting phases. They can't corrupt the vote tallying and counting phases where most election fraud has occurred in the past because they lack access to votes after they've cast them. A fraudulent ballot
is one that was not cast legally. But the definition of a legal ballot varies according to the rules that qualify eligible voters to vote and govern the procedures for casting a ballot in the different states.

**Fraud in Voter Registration**

To its earliest proponents, voter registration was intended as an anti-fraud safeguard. Registration fraud is typically punished less severely than fraud in voting and this is as it should be. What matters most to the integrity of electoral outcomes is the casting and counting of an illegal ballot. A person who provides false information on a voter registration application but never casts a ballot is less of a threat to electoral integrity than one who negates or dilutes the will of the voters by casting an illegal ballot. This is not to say that voter registration fraud is a negligible crime or should be tolerated. The available evidence suggests voter registration fraud is rare, but when it does occur, if it goes undetected it can compromise the accuracy of the voter rolls. When it's caught it burdens the elections and law enforcement officials who find it and must address it.

Since voters can perpetrate it, even if they rarely do, for purposes of this report we will consider voter registration fraud a form of voter fraud, along with all forms of illegal voting. However, when voter registration fraud is committed by a campaign volunteer or a paid canvasser, we should not consider the crime "voter fraud." Doing so only adds to public confusion about what should be done to eliminate opportunities for fraud.

**Fraud in Voting**

Under most state and federal laws a vote is considered illegal when it is cast improperly by an unqualified or ineligible voter. The voter must be qualified and the vote cast according to the rules governing the act of voting under state and federal law. Both elements — the voter and the act of voting — must be legal or the vote is illegal.

**The difference between an eligible and a qualified voter**

To be legal, an eligible voter must be qualified by the state to vote. This raises questions about the difference between an 'eligible' voter and a 'qualified' voter. The centuries long struggle for the franchise in the U.S. established a common law right to vote and constitutional bans on voter discrimination by race, color, gender, or age (over the age of 18), but no constitutional right to vote. The lack of an affirmative right to vote in the Constitution and the delegation of authority to the states to determine voter qualifications and oversee election administration are peculiar features of American democracy. The Constitution explicitly grants the states the power to set voter qualifications, reserving authority to Congress to regulate only "the times, places and manner of holding elections for Senators and Representatives."116 "Eligible" voters are those whose age and citizenship status, and in some cases absence of a felony conviction allows them to be credentialed or “qualified” by the states as legitimate or legal voters. "Qualified" voters, therefore, are those eligible voters who complete a state's procedures for casting a legal ballot.

Because the Constitution vests power to 'qualify' voters in the states, as long as they do not unconstitutionally discriminate against people by race, color, gender or age, they may make different rules for qualifying voters, and they do. This is why the definition of a legal vote varies across the states, especially with regard to residency and felony disqualification rules. Consider,

---

116 But, "the Congress may at any time by law make or alter such regulations, except as to the places of choosing Senators." See, U.S. Constitution, Article I, section 4.
for example, the ballot of an otherwise eligible and qualified voter with a felony conviction who is no longer under state supervision. If that citizen lived in Maine and registered to vote by or on Election Day, his or her vote would count as a legal ballot. If that citizen lived and voted in Florida where a felony conviction eliminates the right to vote until clemency is granted, he or she could be prosecuted for casting an illegal ballot.

In fact, states make lots of rules for qualifying voters. The most important is the requirement that all eligible voters register. All states except North Dakota require eligible voters to register before casting a ballot. Thus, all states except North Dakota qualify eligible voters by requiring them to meet certain conditions in order to register their names on the rolls of legitimate or valid voters. Voter registration, therefore, is a means of voter qualification, and in nearly all states, otherwise eligible voters must be registered properly or the vote they cast is illegal. In addition, ineligible voters, such as those disqualified by state law for a felony conviction or because they do not possess U.S. citizenship, could register to vote either mistakenly or by deceit, thus appearing on the voter rolls as 'qualified' voters despite their ineligibility. Their votes would be treated as legal votes when in fact they would be illegal.

There are a few known cases of ineligible persons such as non-citizens making it on to the voter registration rolls due to a misunderstanding about who has the right to vote in American elections, or to mistakes made by elections officials who misinformed such applicants or failed to note their lack of citizenship. One involves the case of Mohsin Ali, a long-time legal permanent resident living in Florida at the time of his arrest for “alien voting.” He pleaded guilty but claimed a clerk in the Department of Motor Vehicles issued a voter registration application to him when he renewed his license. In a letter begging the judge to intercede with immigration authorities considering Ali’s deportation back to Pakistan, Ali claimed he told the clerk he was a Florida resident but not a U.S. citizen. He states that the clerk told him as the husband of an American citizen he was eligible to vote. When Ali received a voter registration card in the mail he assumed he was qualified to vote and voted in the 2000 presidential election.

Voters have limited access to the electoral process, but where they do interact with it they confront an array of rules that can trip them up and change depending on where they live. The more rules and restrictions, the more stumbling blocks voters face when trying to cast legal ballots. For example, in Pennsylvania where a voter must qualify with an excuse when applying for an absentee ballot, it is illegal to vote that ballot if the voter’s plans change and he or she remains physically present at home (barring a disability that prohibits the voter from visiting the polling place). A voter must apply for an absentee ballot a full week before Election Day. What happens if plans change or the business trip gets canceled and the voter is present on Election Day, after all? If that voter then mails in the ballot instead of striking out for the line at the polling place, that voter is breaking the law in Pennsylvania. Who knew? Who wouldn’t make...

---

North Dakota repealed its voter registration law in 1951. To vote in North Dakota eligible voters must have proper identification showing their name and current address. If they lack identification, they may still vote by filing a voter’s affidavit attesting to their identity and address, or if a poll worker knows them and can vouch for them. Poll workers use lists of previous voters to track voting on Election Day.

The courts have dealt with the question of whether voter registration is an unconstitutional burden on the vote by using a balancing test, weighing the alleged burden on rights against a state’s legitimate interest in ensuring electoral integrity. State laws mandating voter registration have been upheld repeatedly by the Supreme Court as reasonable administrative burdens on the right to vote (“a person does not have a federal constitutional right to walk up to a voting place on election day and demand a ballot,” Morston v. Lewis, 410 U.S. 679, 680, (1973)).

Federal law does not require persons be U.S. citizens to vote, but all states do, as it is their constitutional prerogative to set citizenship as a condition for voter eligibility and qualification.

U.S. v. Mohsin Ali, U.S. District Court, Northern District of Florida, Tallahassee Division, Case No. 4:05cr47-WCS.
things easier and drop the ballot in the mailbox? The more complex are the rules regulating voter registration and voting, the more likely voter mistakes, clerical errors, and the like will be wrongly identified as "fraud."

Eligible voters may nevertheless fail to qualify as legal voters because they fail to register properly — usually their ballots would be considered illegal. Illegal ballots, however, may also result from qualified — or properly registered — voters failing to follow the rules for casting a ballot under state law. As the following table suggests, expanding rules create more ways to cast an illegal ballot than a legal one.

**Voter Eligibility, Voter Registration and Legal Balloting**

As states and localities continue to loosen restrictions on the time and place for casting a legal ballot, qualified voters will face more options for casting their ballots. The lack of uniformity increases complexity of the rules and unintended consequences proliferate. For example, the growth of early and mail voting is generally considered positive because these reforms make voting more convenient by opening up more avenues for casting legal ballots. Voters in many states may now cast their ballots at a town clerk’s office two weeks before the election, by mail, or in person at the polling booth on Election Day. But one consequence of expanding voting opportunities is a corresponding increase in opportunities for casting unintentionally illegal ballots if administrative tracking and auditing systems are flawed.

In fact, several recent cases of alleged voter fraud involved legal voters who mailed in their ballots and then showed up at the polls on Election Day because they either forgot mailing in their ballots or, distrusting the absentee balloting process, wanted to be sure that their votes were counted by voting again. They used their real names to try to vote twice because they were confused. Poor record management on the part of elections officials was the problem, but voters got the blame. As the options and rules expand they increase the possibility that voter misunderstandings will be labeled ‘voter fraud.’

Dear Mr. Hurst:

Hope all is well. Thanks for your request for the May Standards Board materials. Attached are the DRAFT documents that we provided to the Standards Board members for the May meeting. Note that these are not final papers, but works in progress. I'm also providing the information for Sheila Banks, who is Special Assistant to Commissioner Hillman, sbanks@eac.gov, and she can be reached at 202-566-3100. Ms. Banks can assist you with further Standards Board questions.

Thanks very much.

REPORT AND RECOMMENDATIONS TO THE EAC
VOTER IDENTIFICATION ISSUES

1. Introduction and Report Background

This report to the United States Election Assistance Commission (EAC) presents recommendations for best practices to improve implementation of the requirements for voters to show identification pursuant to [statute or regulation citation]. It is based on research conducted by the Eagleton Institute of Politics at Rutgers, the State University of New Jersey, and the Moritz College of Law at Ohio State University under contract to the EAC, dated May 24, 2005. The research included a review and legal analysis of state statutes, regulations and litigation concerning voter identification and provisional voting, a sample survey of local election officials, and a statistical analysis of the effects of various requirements for voter identification on turnout in the 2004 election. This report is a companion to a report on Provisional Voting submitted to the EAC on November 28, 2005 under the same contract.

The Help America Vote Act of 2002 (HAVA) (Public Law 107-252) authorizes the EAC (SEC. 241, 42 USC 15381) to conduct periodic studies of election administration issues. The purpose of these studies is to promote methods for voting and administering elections, including provisional voting, that are convenient, accessible and easy to use; that yield accurate, secure and expeditious voting systems; that afford each registered and eligible voter an equal opportunity to vote and to have that vote counted; and that are efficient.

2. Voter Identification –Background and Approach of the Study

Voters may have to identify themselves twice in the electoral process: when registering to vote and then when casting a ballot. The burden of providing required ID documents on the voter may be greater at the polls on Election Day than at the time of registration. The burden of checking ID, even as simple as a signature match, can be much greater on election workers at the polls than on those registering voters. Poll workers may be faced with long lines and limited time. This analysis focuses on ID requirements on Election Day, but with an appreciation that the ID requirements at time of registration and on Election Day are inter-related. The emphasis here is on Voter ID on Election Day and afterwards as election judges evaluate provisional

1 As the Carter-Baker Commission noted, photographic ID requirements for in-person voting do little to address the problem of fraudulent registration by mail, especially in states that do not require third-party organizations that register voters to verify identification. Commission on Federal Election Reform, pp 46-47.
ballots. This is the critical period for the electoral system, the time when ballot access and ballot security are in the most sensitive balance.

This analysis takes a view of voter ID issues broader than the rather narrow identification requirements in HAVA. Much of the national ferment over voter ID goes beyond HAVA to require more rigorous documentation of identity for all would-be voters, not just those casting a ballot for the first time who had not registered in person. The controversy in the states over voter ID stems from the HAVA requirements, goes beyond those requirements, and sets the context for the analysis here.\(^2\)

Identification is often described as the critical step in protecting the integrity of the ballot, the process that ensures that the potential voter is eligible and permitted to cast a ballot and one ballot only. In fact, ensuring ballot integrity requires a perspective that takes in the entire voting process. Protecting the integrity of the ballot requires more than preventing the ineligible from voting. It also should ensure that all those who are eligible and want to vote can cast a ballot that counts, and that they can effectively cast a ballot for the candidate of their choice. The protection effort must take into account all forms of voting, including absentee ballots, and embrace each step in the process. A voting system that establishes onerous requirements for voters to identify themselves may prevent the ineligible from voting, but it may also prevent the eligible from casting a ballot. If the ID requirements of a ballot protection system block ineligible voters from the polls at the cost of preventing eligible voters who cannot obtain or forget to bring to the polls the required forms of identification, the integrity of the ballot may not have been improved; the harm may be as great as the benefit.

Assessing the effectiveness of voter ID as a way to protect the integrity of the ballot should logically include an estimate of the nature and frequency of vote fraud. This analysis does not include consideration of the incidence of vote fraud, the forms that it takes, nor the possible effectiveness of various voter ID regimes to counter attempts at vote fraud. The EAC has commissioned a separate study of vote fraud and instructed us not to address that issue in this research.

\(^2\) Harvard Law Review 119:1127. "Legislators hoping to stiffen their state antifraud laws have taken their cue from identification provisions buried in HAVA. . . . HAVA makes explicit that it shall not 'be construed to prevent a State from establishing election technology and administration requirements that are more strict than' HAVA itself provides. The states have accepted the invitation."

2
Nonetheless, a broad view of ballot integrity is needed to appreciate the background and context of this narrower study. We explore the inter-relationships between Voter ID requirements and Provisional Voting and estimate the effects of various voter id requirements on turnout and on the casting of provisional ballots.

Voters lacking required ID, or who have ID that does not reflect their current address, may be able to vote only by casting a provisional ballot. To the extent that stricter voter ID requirements divert more voters to the provisional ballot, voter ID requirements can put stress on the already pressured management of the polling place. Administering provisional ballots is more expensive than the normal ballot. Scrutiny of ID can create lines at the polling places, lines made longer as voters are diverted to the provisional voting line. Each of these potential consequences of more elaborate voter identification processes can increase the chance of litigation. Long lines will, at best, discourage voters and at worst make voting seem a hassle that will keep more citizens from the polls. A review of voter identification practices should keep in mind that America's problem may well be that too many people do not vote rather than that a few people may vote more than once.

An evaluation of the effect of different Voter ID regimes will be more effective if based on clear standards --legal, equitable, practical. The standards suggested here can best be described as the set of questions to be asked about Voter ID requirements. We suggest 7 questions that try to measure the most important dimensions of the problem.

- Is the Voter ID system designed on the basis of valid and reliable, empirical studies of the incidence of the sorts of vote fraud it is designed to prevent?
- How effective is the ID requirement in increasing the security of the ballot? How well can it be coordinated with a statewide voter database?
- How practical is the requirement? Can it be administered smoothly by the staff and budget likely to be made available? How much additional training of polling place workers might be required? Is it simple enough or can it be defined with sufficient clarity

---

3 For example, the Florida voter ID law adopted after the 2004 election and pre-cleared by the Department of Justice, permits voters who cannot meet the ID requirements to sign an affidavit on the envelope of a provisional ballot, which will be counted if the signature matches that on the voter's registration form.

4 See the final section of this report for a brief overview of possible effects of a statewide voter database on voter identification issues.
that poll workers throughout the state can administer it uniformly and with a minimum of local interpretation made on the fly under the pressure of Election Day?\(^5\)

- How cost-effective is the system? Does it increase the security of the ballot at an affordable cost, measured in both monetary and other costs? To improve understanding of the non-monetary component of the costs, conducting a voter impact study might be appropriate. The voter impact study would examine, before the adoption of the regulation, the cost of compliance by the voter (such as the cost in time and money of acquiring a photo ID card), any offsetting benefits to voters, and the possible disparate effects of the regulation on various groups of voters.

- If a side effect of the Voter ID regulation is likely to reduce turnout, generally or among particular groups, is it possible to take other steps to ameliorate the adverse consequences?\(^6\)

- Does it comply with the letter and spirit of Voting Rights Act?

- The seventh question is more difficult to measure than those described in the 6 questions outlined above. The Voter ID requirements should have a neutral result on the composition of the qualified electorate. That is, those requirements should not be designed to reduce the turnout of particular groups of voters who may have a propensity to support one party over another. Whatever the requirement may be, all citizens should be able to comply with it easily and at no or minimal cost.

**Summary of findings and conclusions**

Voter turnout at the state level in 2004 declined where voter identification requirements were more demanding. While the trend is not perfectly linear, the data show a general movement toward lower turnout as requirements tend toward requiring greater levels of proof. An average of 63.1 percent of the voting age population turned out in states that required voters to state their names, compared to 57.3 percent in states that required photo identification. Including other factors beyond voter id requirements diminishes the influence of voter ID on turnout. But the analysis still offers some support for the hypothesis that as the burden of voter identification

---

\(^5\) In New York, in 2004, disparities in training and voting information were made all too apparent in a study finding elections officials had wildly varying interpretations of what the state’s voter identification requirement was. Tova Wang, "Warning Bell in Ohio," December 5, 2005. Website, the Foundation for National Progress.

\(^6\) For example, the Carter-Baker Commission accompanied its recommendation for a national voter ID card with a recommendations for an affirmative effort by the states to reach out and register the unregistered, to use the new Voter ID regime as a means to enroll more voters.
requirements increases, turnout declines. The effect is particularly noticeable in counties with concentrations of Hispanic residents or of people living below the poverty line.

Evidence on the incidence of vote fraud, especially on the kind of vote fraud that could be reduced by requiring more rigorous voter identification is not sufficient to evaluate the tradeoffs between ensuring ballot access and ensuring ballot integrity. The lack of full understanding of the dynamics of voter ID requirements on political participation can be remedied by requiring the collection and reporting of data on the reasons potential voters are required to cast a provisional ballot and the reasons for rejecting provisional ballots. Also useful would be the results of exit polling of voters on their experiences in meeting voter ID requirements and on what type of ballot they cast. And, of course, more information is needed on the incidence and varieties of vote fraud, but that inquiry is outside the scope of this report.

Recommendations for consideration and action by the EAC

The EAC should consider the following actions to improve understanding of the relationship between voter ID requirements, broadly defined, and the two important goals of ensuring ballot access and ensuring ballot integrity.

- Encourage or sponsor further research to clarify the connection between Voter ID requirements and the number of potential voters actually able to cast a ballot.
- Recommend as a best practice that before states adopt a change described as increasing ballot security, states should publish an analysis of the number of eligible, potential voters that the new requirement may keep away from the polls or be permitted to cast only a provisional ballot as well as an estimate of the number of ineligible voters who will be prevented from voting.
- Encourage or require the states in the 2006 election and beyond, to collect and report reliable, credible information on the relationship between ballot access and ballot security. The data should be analyzed to provide a sound estimate of the incidence of the kinds of vote fraud that more stringent ID requirements may prevent and should describe the dynamics of voter ID in preserving the security of the ballot?

---

7 Arizona held its first election with new, stricter ID requirements on March 14, 2006. In at least one county (Maricopa) election officials handed a survey to voters that asked if they knew about the voter identification law and if they did, how they found out about it. Edythe Jensen, "New Voter ID Law Goes Smoothly in Chandler," Arizona Republic, March 15, 2006. More surveys of this kind can illuminate the dynamics of voter ID and voting in ways not possible with the current lack of information on this subject.
Useful information could be supplied by exit polling. It would identify those who had cast a provisional ballot and ask why they were unable to cast a regular ballot. Answers would illuminate the frequency with which ID issues divert voters into the provisional ballot line.

Polling to ask voters what they know about the voter ID requirements would also provide useful context for evaluating the effect of various voter ID requirements on electoral participation.

- Encourage states to examine the time period allowed for voters who cast a provisional ballot because they lacked required ID to return with their identification. In eleven states, voters who had to cast a provisional ballot because they lacked the ID required for a regular ballot were permitted to return later with their ID. Their provision of this ID is the critical step in evaluating the ballots. The length of the period in which the voter may return with ID is important. In setting the time period for return, which now varies among the states from the same day to about two weeks, states should consider three criteria: the convenience of the voter, the total time allowed to evaluate ballots\(^\text{8}\), and the safe harbor provision in presidential elections.

\(^{8}\) Our research on provisional voting reveals that states that provide more than week to evaluate provisional ballots end up counting substantially more of those ballots than states that provide less than a week.
3. Voter ID and Turnout

As of the 2004 election, the states and the District of Columbia could be divided into 5 different Voter ID regimes. These are shown in Table 1, Voter ID Requirements. Nine states required that voters give their names; 14 that they sign their names; 8 match the signature to a sample in the registration book; 15 require some form of ID (ranging from a utility bill to a government-issued photo ID), and 5 states in 2004 required a photo ID, although in all those states voters without that credential could cast a regular ballot after signing an affidavit concerning their identity and eligibility.

*In Florida and Louisiana, states that required a photo ID in 2004, voters without that credential could sign an affidavit concerning their identity and eligibility and cast a regular ballot.

**In these states in 2004, voters lacking a photo ID could vote by providing other ID.

*Arizona voters who lack a photo ID may present 2 forms of ID with no photograph, such as 2 utility bills.

**State only requires ID for first-time voters who register by mail without providing ID. They accept all forms of ID listed in the statute.

***Georgia is currently enjoined from implementing this law, returning them for the time being to their 2004 requirement of provide ID.

****Pennsylvania requires ID of all first-time voters, whether they registered by mail or in-person.

*****Tennessee voters must provide signature and address. In counties without computerized lists, the signature is compared to the registration card. In counties with computerized lists, the signature is compared to a signature on ID presented with registration.

******Texas voters must present a current registration certificate. Those without a certificate can vote provisionally after completing an affidavit.

In 9 states, voters were required merely to state their names so that poll workers could locate them in the registration book. In 14 states, voters signed their names. In 8 states, voters' signatures were matched with a specimen signature. In 15 states voters had to show some form of ID, not necessarily an official picture ID. And in 5 states, voters were required to show an official photo ID, although in 2004 voters who lacked a picture ID could execute an affidavit and vote a regular ballot.
This neat assignment of each state to one of a few categories may fail to reflect actual practice at a polling place. Like any system run by fallible people it is subject to wide variation in practice. Voters may be confronted with demands for identification at variance with state statutes or legislation. Other voters may be waved through the process without a look at any document, no matter what the regulations may say. Under the press of long lines and unfamiliar requirements, there is, in short, no sure way to report the wide variety of conditions voters may encounter.

It is not practical to attempt to capture the wide variety of how voter ID requirements may be actually implemented across the nation’s tens of thousands of polling places. Recognizing that means that the analysis of the effect of state requirements on county-level turnout must be viewed with some caution.

Effect of Voter ID requirements on Turnout

Summary of Findings and Conclusions
We categorized each state according to its voter ID requirements in 2004, as shown in Table 1 and analyzed turnout data for each county according to the voter identification requirements of its state. We also assessed self-reported turnout by the sample interviewed in the November 2004 Current Population Survey of the Census Bureau.  

Voter turnout at the state level in 2004 varied based on voter identification requirements. An average of 63.1 percent of the voting age population turned out in states that required voters to state their names, compared to 57.3 percent in states that required photo identification. Other factors, of course, also influence turnout. Taking those other factors into account in the county-level analysis makes the effect of the voter ID requirement less dramatic. But the analysis still offers some support for the hypothesis that as the burden of voter identification requirements increases, turnout declines. The effect is particularly noticeable in counties with concentrations of Hispanic residents or of people living below the poverty line.

The individual-level analysis, based on the CPS, produced a similar result. Voter identification requirements exert a statistically significant, negative effect on whether survey respondents said they had voted in 2004. The probability that a respondent to the survey voted dropped with each

---

9 See Appendix ___ for the full report on voter ID and turnout.
level of voter identification requirement, with a total drop of 2.5 percent across the five types of identification.

Future policy decisions should consider the tradeoffs between the incidence of vote fraud that can be prevented by stricter voter ID requirements and the number of eligible voters who will be kept from the polls by those stricter ID requirements. Continuing research is needed to provide the information to inform this calculation of benefits and costs.

Methods and Findings

We classified each state as having one of five types of identification requirements in place on Election Day 2004. Upon arrival at polling places, voters had to either: state their names (9 states); sign their names (13 states and the District of Columbia); match their signature to a signature on file with the local election board (8 states); provide a form of identification that did not necessarily include a photo (15 states); or provide a photo identification (5 states). We then tested the assumption that voter identification requirements would prove to be increasingly demanding on the voter, with providing photo ID the most rigorous, a form of identification, and providing a form of photo identification.

The analysis recognized that election laws in numerous states offer exceptions to these requirements if a prospective voter lacked the ID. Laws in those states set a minimum standard that a voter must meet in order to vote using a regular ballot. We therefore also categorized states based on the minimum requirement for voting with a regular ballot. None of the states required photo identification as a minimum standard for voting with a regular ballot. Four states, however, required voters to swear an affidavit as to their identity (Florida, Indiana, Louisiana, and North Dakota). The five categories for minimum requirements were: state name (12 states), sign name (14 states and the District of Columbia), match one's signature to a signature on file (six states), provide a non-photo identification (14 states), or swear an affidavit (four states). This analysis treats the array of minimum identification requirements also in terms of increasing demand on the voter: state name, sign name, match signature, provide non-photo identification, and, given the potential legal consequences for providing false information, swearing an affidavit.
Voter turnout at the state level in 2004 declined as voter identification requirements became more demanding, as shown in Table 2. While the trend is not perfectly linear, there is a general movement toward lower turnout as requirements tend toward requiring greater levels of proof. Using the maximum requirements as the independent variable, an average of 63.1 percent of the voting age population turned out in states that required voters to state their names, compared to 57.3 percent in states that required photo identification. A similar trend emerged when using the minimum requirements as the independent variable. Sixty-one percent of the voting age population turned out in states requiring voters to state their names, compared to 58.7 percent in states that required an affidavit from voters.

Voter identification requirements alone do not determine voter turnout. Other influences -- demographic or political-- also affect voter participation. Multivariate models that take into account other predictors an place the effects of voter identification in a more accurate context. To consider that broader context, our multivariate analysis included whether the county was in a presidential battleground state or a state with a competitive race for governor or the U.S. Senate. Demographic variables included the percentage of the voting-age population in each county that was Hispanic or African-American, the percentage of county residents age 65 and older, and the percentage of the county population living below the poverty line. The dependent variable in each model was voter turnout at the county level, with turnout calculated as the percentage of the voting-age population that voted in the 2004 election.

The aggregate analysis for the maximum identification requirements revealed a small and negative effect on turnout in 2004 controlling for electoral context and demographic factors. If the state was a battleground for president, governor or senate voter turnout increased. As the percentage of senior citizens in the county increased, so did turnout. The percentage of African-
Americans in the county had no effect, but the percentage of Hispanic adults reduced voter turnout, as did the percentage of individuals living below the poverty line. In general, analysis of the aggregate data at the county level provides some support for the hypothesis that as the burden of voter identification requirements increases, turnout declines, at least in the case of the maximum requirements. This is particularly so for counties with concentrations of Hispanic residents or individuals who live below the poverty line.

Information collected for the Census Bureau Current Population Survey in November 2004 makes it possible to examine the influence of voter ID requirements at the individual level. Self-identified registered voters reported their experience at the polls in the survey. (Note that the voter turnout rate for the CPS sample, an average of 89%, is much higher than the turnout rates presented in the aggregate data analysis, which average 58%. The difference is a result of several factors, including different denominators in calculating the turnout rate — self-reported registered voters in the CPS versus the much larger voting-age population for the aggregate data. Also some survey respondents overstate their incidence of voting.) Nevertheless, the CPS serves as a widely accepted source of data on voting behavior.

The dependent variable in the individual analyses is whether respondents said they voted in the 2004 election. As in the aggregate analysis the contextual variables consist of whether the state was a battleground state or had competitive state-level races. The analysis also controlled for gender, age in years, education, household income, race or ethnicity, and employment status, marital status, and residential mobility.

The analysis revealed that voter identification requirements exerted a statistically significant, negative effect on whether survey respondents said they had voted in 2004. Of the other state factors, only the competitiveness of the presidential race had a significant effect on turnout. In terms of demographic influences, consistent with previous research, age, education, income, and marital status all were positive predictors of voting. Women also were more likely to say they voted than men. Those who had moved within six months before the interview were less likely to say they had voted.

Allowing the voter identification requirement to vary while holding constant all other variables in the model showed that the predicted probability of turnout ranged from 91.2 percent if all voters had to state their names to 88.7 percent if all voters had to provide photo identification. (Note
that these turnout figures are higher than actual because of the factors involved in the CPS's self-reported survey, but that the difference in effect is reasonably related to the results obtained in the aggregate analysis.) In other words, the probability of voting dropped with each level of the maximum voter identification requirement, with a total drop of 2.5 percent across the five types of identification. When taking into account the minimum requirement for identification, the probability showed a similar decline, with a slightly larger total drop of 3.3 percent.

Both the maximum and minimum identification requirements had negative and statistically significant effects for white voters. Allowing the requirements to vary from stating one's name to providing photo identification or an affidavit showed drops of 2.5 percent and 3.3 percent respectively in the predicted probability of voting. The identification requirements had no effect on the probability of African-Americans voting, but the minimum identification requirements had a comparatively sizable effect on voter turnout among Hispanics. The predicted probability of Hispanics voting ranged from 87 percent if stating one's name would be the required form of identification to 77.3 percent if a voter would have to provide an affidavit in order to vote, a difference of 9.7 percent. Variation also emerged along the lines of income, with the effects of voter identification requirements varying to a greater extent for voters in households below the poverty line compared to those living above the poverty line.

Registered voters who had less than a high school education had a 77.5 percent probability of voting if the maximum requirement would be stating one's name, and a 70.8 percent probability if they would have to provide photo identification under the maximum requirement, a difference of 6.7 percent. The range of effects of voter identification requirements was smaller among those with higher levels of education (and non-existent for one category – voters with some college education).

Discussion and Conclusions of the Analysis

The results presented here give evidence that tougher voter identification requirements are associated with a decline in voter participation. The overall effect for all registered voters was fairly small, but even a slight decline in turnout has the potential to alter the outcome of a close election. The decline is apparent in both the aggregate data and the individual-level data, although not always for both the maximum and minimum sets of requirements.
• Hispanic voters and the poor appear to be less likely to vote if the level of required identification becomes more demanding, according to both the aggregate and the individual-level data. In the individual-level data, for Hispanic voters, the probability of voting dropped by 9.7 percent across the various levels of minimum identification requirements. Survey respondents living in poor households would be 5.3 percent less likely to vote as the requirements vary from stating one’s name to attesting to one’s identity in an affidavit.

• Self-reported registered voters who had not graduated from high school would be 6.7 percent less likely to vote if the maximum requirement is photo identification as opposed to stating one’s name. When considering the minimum requirements, those with less than a high school education would be 7.4 percent less likely to say they voted if the requirement was an affidavit as opposed to stating one’s name.

• Age was also a key factor, with voters ages 18 to 24 being 7.7 percent to 8.9 percent less likely to vote as the requirements ranged from stating one’s name to providing a photo identification or affidavit.

• Two concerns aired by critics of voter identification requirements were not borne out by the results. African-American voters did not appear to be affected by voter identification requirements, according to both the aggregate data and individual-level data analyses. Also, the elderly, while they would be slightly less likely to vote as requirements range from least to most demanding, would not necessarily be affected in the dramatic manner predicted by some opposed to photo identification requirements in particular.

The data examined in this analysis could not capture the dynamics of how identification requirements might lower turnout. Do these requirements dampen turnout because individuals are aware of the requirements and stay away from the polls because they cannot or do not want to meet the requirements? Or, do the requirements result in some voters being turned away when they cannot meet the requirements on Election Day? The CPS data do not include measures that can answer these questions, pointing up the need for collection of additional data. Knowing more about the “on the ground” experiences of voters concerning identification requirements could guide policy-makers at the state and local level in determining whether and at what point in the electoral cycle a concerted public information campaign might be most
effective in helping voters to meet identification requirements. Such knowledge also could help in designing training for poll workers to handle questions about, and potential disputes over, voter identification requirements.
There have been a handful of cases challenging identification requirements in court in recent years. In general, requirements that voters provide some identifying documentation have been upheld, where photo ID is not the only acceptable form. Whether or not laws requiring photo ID will be upheld is more doubtful. To date, only one court has considered a law requiring voters to show photo ID (Common Cause v. Billups), and that court concluded that this requirement is likely unconstitutional. Cases challenging the mandatory disclosure of voters' Social Security numbers on privacy grounds have yielded mixed results.

Non-photo identification. For the most part, courts have looked favorably on cases challenging requirements that voters present some form of identifying documents if the photo identification is the only form accepted. In Colorado Common Cause v. Davidson, No. 04CV7709, 2004 WL 2360485, at *1 (Colo. Dist. Ct. Oct. 18, 2004), plaintiffs challenged a law requiring all in-person voters to show identification (not just first-time registrants). The court upheld this requirement against a constitutional challenge. Similarly, in League of Women Voters v. Blackwell, 340 F. Supp. 2d 823 (N.D. Ohio 2004), the court rejected a challenge to an Ohio directive requiring first-time voters who registered by mail to provide one of the HAVA-permitted forms of identification, in order to have their provisional ballots counted. Specifically, the directive provided that their provisional ballots would be counted if the voter (a) orally recited his driver's license number or the last four digits of his social security number or (b) returned to the polling place before it closed with some acceptable identification (including reciting those identification numbers). Id. This was found to be consistent with HAVA.

Photo ID. Since the 2004 election, two states have adopted laws requiring photo identification in order to have one's vote counted, without an affidavit exception: Georgia and Indiana. Both these requirements were enacted in 2005 and both have been challenged in court. The Georgia law required voters attempting to cast a ballot in person present a valid form of photographic identification. O.C.G.A. § 21-2-417. On October 18, 2005, the District Court granted the Plaintiff's motion for a preliminary injunction, enjoining the application of the new identification requirements on constitutional grounds. In granting the injunction, the court held that plaintiffs' claims under both the Fourteenth Amendment (equal protection) and Twenty-Fourth Amendment (poll tax) had a substantial likelihood of succeeding on the merits at trial (Common Cause v. Billups,
In January 2006, Georgia enacted a modified version of its photo ID law, which the court has not yet ruled on. In the other state that has enacted a photo ID requirement without an affidavit exception (Indiana), legal challenges have also been filed. (Indiana Democratic Party v. Rokita and Crawford v. Marion County Election Board). Cross-motions for summary judgment are currently pending. Another case of significance, for purposes of photo ID requirements, is American Civil Liberties Union of Minnesota v. Kiffmeyer, No. 04-CV-4653, 2004 WL 2428690, at *1 (D. Minn. Oct. 28, 2004). In that case, the court enjoined a Minnesota law that allowed the use of tribal photo ID cards, only for an Indian who lived on the reservation. 2004 WL 2428690, at *1. The Court found no rational basis for distinguishing based on whether or not the cardholder lives on the reservation. Id. at *1, 3. The court’s decision in this case indicates that courts are likely to look strictly on photo ID requirements.

Privacy. In Greidinger v. Davis, 988 F.2d 1344 (4th Cir. 1993), the court struck down on due process grounds a Virginia law requiring disclosure of voters’ social security numbers for voter registration. The social security numbers recorded in voter registration lists had been disclosed to the public and political parties that had requested the lists. The court found that the requirement to give the social security number effectively conditioned rights on the consent to an invasion of privacy. It concluded that this public disclosure of the social security numbers was not necessary to achieve the government’s interest in preventing fraud. On the other hand, in McKay v. Thompson, 226 F.3d 752 (6th Cir. 2000), the court rejected privacy challenges based on both the Constitution and federal statutes, to a Tennessee law requiring social security numbers for voter registration since 1972. 226 F.3d at 755. Second, the NVRA only permits requiring the minimum amount of information necessary to prevent duplicate voter registration and to determine eligibility. The distinction appears to be between the use of Social Security numbers for internal purposes only, which was deemed permissible, and the disclosure of those numbers to the public which was not.

These decisions suggest that the courts will look strictly at requirements that voters produce a photo ID in order to cast a regular ballot. The courts have used a balancing test to weigh the legitimate interest in preventing election fraud against the citizen’s right to privacy (protecting social security numbers from public disclosure, for example) and the reasonableness of requirements for identity documents. To provide both the clarity and certainty in administration of elections needed to forestall destabilizing challenges to outcomes, these early decisions...
suggest that best practice may be to conform to the NVRA's limitation on requirements for voter identification to the minimum needed to prevent duplicate registration and ensure eligibility.
5. Developments since 2004

Since the passage of HAVA, with its limited requirements for voter identification, and following the 2004 election, debate over voter ID has taken place in state legislatures across the country. That debate has not been characterized by solid information on the consequences of tightening requirements for voters to identify themselves before being permitted to cast a regular, rather than a provisional, ballot.

Better information might improve the quality of the debate. Answers to the following key questions are not available in a form that might satisfy those on both sides of the argument.

- What is the overall incidence of vote fraud?
- How does fraud take place in the various stages of the process: registration, voting at the polls, absentee voting, or ballot counting?
- What contribution can tighter requirements for voter ID make to reducing vote fraud?
- What would be the other consequences of increasingly demanding requirements for voters to identify themselves? This is the question addressed, within the limits of the available data, in the analysis in this report.

This information would allow a more informed judgment to be brought to bear in the states as they consider the tradeoffs among the competing goals of ballot integrity, ballot access, and administrative efficiency. The Carter-Baker Commission recognized the tradeoffs when it tied recommendation for national ID to an affirmative effort by government to identify unregistered voters and make it easy for them to register.

State Voter Databases and Voter ID

With the implementation of the HAVA Computerized Statewide Voter Registration List, an application for voter registration for an election for Federal office may not be accepted or processed unless the application includes a driver's license number or last four digits of the Social Security number on the voter registration form. This information can be used to verify the identity of the registrant through interfacing with lists maintained by the Motor Vehicle office and Social Security office. If registrants do not have either a driver's license or Social Security number, the State will assign a unique identifier number to that person.
HAVA does not require that the states notify registrants to remedy any failure to provide either of these numbers or to confirm that they have provided a verifiable number. Verification at the time of registration could forestall difficulties at the polling place. HAVA is silent on how the ID might be required at the polling place for new voters whose driving license or Social Security number could not be verified. Errors in recording those numbers are sure to occur.

Some states are wrestling now with these unresolved issues. In New Jersey, for example, pending legislation require that voters must be able to confirm their registration through a secure access to the SVRL. It also requires voters to present ID at the polls in order to cast a regular ballot if the numbers recorded on the registration have not been verified (or if no verifiable number appears on the registration). It recognizes the HAVA requirement that if the number provided by the voter has not been verified and if the voter does not present ID at the polls, that voter may cast a provisional ballot. The bill does not specify they have to provide ID within 48 hours in order for their vote to count, as is the case with first-time mail-in registrants.

As some states gain experience in this area, the EAC would perform a useful service by making timely recommendations of best practices for all states to consider.

6. Conclusions
The form of Voter ID required of voters affects turnout. Lack of ID can keep voters from the polls. Or, when they go to the polls, it is reasonable to conclude that stricter Voter ID requirements will divert more voters into the line for provisional ballots. (This conclusion is a conjecture because we lack good data on why voters must cast their ballots provisionally.) The result can be longer lines at the polls and confusion, without a clear demonstration that the security of the ballot is correspondingly increased. The dynamics of Voter ID requirements — how the more rigorous Voter ID requirements—affect the decision by potential voters to go or stay away from the polls are not well understood. This lack of understanding should be recognized in the policy process. The debate over voter ID in the states would be improved by additional research sponsored by the EAC. That research might address that, so far as may be

10 In this connection, the Brennan Center's response to the Carter-Baker Commission report observes that, "while it might be true that in a close election "a small amount of fraud could make the margin of difference," it is equally true that the rejection of a much larger number of eligible voters could make a much bigger difference in the outcome." The exclusion of voters through restrictive ID requirements could affect election outcomes as much as fraud by voters at the polls. Response to the Report of the 2005 Commission on Federal Election Reform, The Brennan Center for Justice at NYU School of Law and Spencer Overton, On Behalf Of The National Network on State Election Reform, September 18, 2005.
necessary to reduce vote fraud, could identify methods to eliminate the need for voters to bring specific identity documents with them to the polls while assuring that each voter who casts a ballot is eligible and votes only once. One way to break the connection between the benefits of photo ID and the need for the voter to bring identification to the polling place, as recommended by our colleague Edward Foley: keep the information to verify a voter’s identity in the records at the polling place. Other approaches could be developed.  

11 *A potential solution to this problem is to break the connection with the photo requirement and the obligation to produce identification at the polls. Eligible citizens could be required to provide a photograph at the time they register to vote, and poll workers would match this photograph with the image of the person standing in front of them. Given the availability of digital photography, the photos of registered voters could be stored in electronic poll books and easily “pulled up” with a click of a computer mouse when voters sign in to vote. These electronic photos should satisfy the anti-fraud concerns of conservatives as much as printed photos that citizens would be required to bring to the polls... Of course, to satisfy the concerns of liberals, a requirement to provide a digital photograph at time of registration would have to address the cost and accessibility issues identified earlier.*
APPENDICES

a. Summary of case law on Voter ID issues (included with this draft)

b. Analysis of Effects of Voter ID Requirements on Turnout (attached as a separate document)

c. Indexed database of major articles on Voter ID Requirements and related topics (included with this draft)

d. Compendium of states' legislation, procedures, and litigation
Summary of Relevant Cases:

Challenges Prevailed:

American Civil Liberties Union of Minnesota v. Kiffmeyer, 2004
- Action for temporary restraining order – granted
- Statute: allowed use of tribal identification cards w/ name, address & photo as a valid identification to register to vote only if the voter lives on the reservation to “complete” a mail-in application (which only affected about 600 voters w/ incomplete applications)
- Claim -14th Amendment EPC: likely to prevail, no rational basis for a distinction between Indians residing on reservations and those not
- Statute: may use certain forms of photo identification lacking address together with a utility bill but not tribal identification cards
- Claim -14th Amendment EPC: likely to prevail

Greidinger v. Davis, 1993
- Statute: mandated disclosure of SS # as a precondition to voter registration (rationale was voter identification, but the numbers were rarely used to verify identity & were disclosed in voter lists to both political parties and the public upon request)
- Claims:
  - 14th Amendment EPC: no classification (applied strict scrutiny)
  - Substantive due process: law invalid; found that the statute conditioned the fundamental right to vote on the consent to an invasion of privacy; this was found to be a substantial burden (applied strict scrutiny)
    - Compelling interests: preventing voter fraud (deemed compelling)
    - Necessary: fails, preventing voter fraud when allowing names for inspection could be achieved by supplying addresses and DOBs or use of voter registration numbers
    - HOWEVER: Court also made it clear that if the registration scheme kept the SS# for internal use only – it would be valid

Challenges Rejected:

- Sec. of State Directive: provisional ballots issued if first-time voter, who registered by mail and did not provide ID, cannot produce proper ID at the polls AND that the provisional ballot will only be counted if the voter returns to the poll before it closes w/ ID or can recite SS# or DL#
- Claims – Supremacy Clause & HAVA: ruled that HAVA did not specify how the first-time voters’ identifications should be verified and this method was not unreasonable or too burdensome

Colorado Common Clause v. Davidson, 2004
- Statute: required all voters to show ID (most types permitted) before voting
- Claims:
  - HAVA: ruled that HAVA did not preempt more strict state laws & allowed States to be more strict as long as consistent with the purpose of HAVA (both HAVA & CO provisions’ purposes were to prevent voter fraud)
  - Substantive due process and equal protection
    - No improper discrimination
Preventing voter fraud is a compelling interest since it is irreversible once vote is cast.
Only marginally more intrusive than HAVA, many types of identification permitted – thus, valid.

McKay v. Thompson, 2000
- Statute: mandated disclosure of SS # as a precondition to voter registration
- Claims:
  - Privacy Act, Section 7: ruled that Tennessee voter system exempt from Privacy Act because it is pre-75
  - NVRA, permitting only min. amt. of info. necessary to prevent duplicate registration and determine eligibility: ruled that NVRA does not specifically forbid the use of SS#s & the Privacy Act specifically permits them pre-75
  - Substantive due process: ruled that internal use of SS# not a burden
  - Free Exercise, based on Bible's supposed prohibition on use of universal identifiers: ruled that law is generally applicable and thus valid
  - P&I, Article IV: does not protect in-state citizens
  - P&I, 14th Amend.: no protection for privilege where Congress authorized its infringement

Kemp v. Tucker, 1975
- Statute: required name, occupation, address, sex, race, height, hair color, eye color, and date of birth be listed on voter registration card for identification purposes
- Claims:
  - VRA: ruled that race was not made a "qualification" for voting
  - 15th Amendment: ruled that it did not abridge right to vote on account of race because rejection of application was due to failure to provide information, not race; race only one factor in identification
  - 14th Amendment EPC: ruled there was no distinction among voters

Perez v. Rhiddlehoover, 1966
- Statute: date of birth, place of birth, mother’s first or maiden name, color of eyes, sex, race, occupation, and whether owner, tenant or boarder must appear on the registration for identification
- Claims:
  - VRA: ruled that it was not a "test or device" because it applied equally
  - 15th Amendment: same reasons

Cases in Which the Plaintiffs Have Prevailed in Challenging the Statute Requiring Voter Identification:

This was an action just before the November 2004 election for a temporary restraining order, which was granted. The ACLU challenged a Minnesota law allowing the use of tribal identification cards with the name, address, and photograph as a valid identification (equal to a driver’s license) for use in “completing” an incomplete mail-in voter registration only if the Indian lives on the reservation. 2004 WL 2428690, at *1. The Court ruled that this distinction would likely violate the Equal Protection Clause because there was no rational basis for differentiating...
between the validity of the identification based on whether or not the cardholder lives on the reservation. *Id.* at *1, 3.

Secondly, the ACLU challenged a second statute which allowed the use of certain photo identification lacking the voter’s address to be used together with a utility bill or bank statement as valid identification for registration. *Id.* at *3. The statute did not, however, permit using a tribal identification for this same purpose. *Id.* The Court ruled that this likely violated the equal protection clause as well. *Id.*

*Greidinger v. Davis, 988 F.2d 1344 (4th Cir. 1993).*

This case challenged a Virginia law requiring the social security number for voter registration, which the State subsequently disclosed to the public and political parties upon request in voter registration lists, which included the social security numbers. Failure to provide the social security number resulted in the denial of the registration application. The law was challenged under the Equal Protection Clause and under substantive due process. The Court quickly rejected the equal protection challenge because the law made no classification. 988 F.2d at 1350.

The law was invalidated under substantive due process. *Id.* at 1355. The Court found that the statutory scheme conditioned the fundamental right to vote on the consent to an invasion of privacy, based on concerns of identity theft. *Id.* at 1353-54. The Court found this to be a substantial burden on the right to vote. *Id.* at 1354. The Court recognized that the government’s interest in preventing voter fraud was compelling. *Id.* However, the Court found that disclosure of the information to the public and political parties was not necessary to achieve that interest. *Id.* Disclosure of addresses or dates of birth would be sufficient to aid the public in distinguishing between two voters with the same name. *Id.* at 1355. The Court did state that required disclosure of the social security number for internal use only would be valid. *Id.* at 1354 n.10.

**Cases in Which the Statute or Practice of Voter Identification Has Been Upheld:**

The League of Women Voters challenged the Secretary of State’s directive that provisional ballots should be issued to all first-time voters who registered by mail without providing identification who cannot show proper identification at the polls. 340 F. Supp. 2d at 828. The Directive also stated that the provisional ballots would only be counted if the voter orally recited his driver’s license number or the last four digits of his social security number or returned to the polling place before it closed with some acceptable identification, including reciting those identification numbers. *Id.* The Court stated that HAVA only requires verification of eligibility of first time voters registering by mail; it does not say how that should be done. *Id.* at 831. The Court found the burden on the right to vote to be slight. *Id.* The Directive was found valid under HAVA and the Supremacy Clause because the number of uncounted votes would be small, the requirement was reasonable, and there was adequate notice of the requirement on the registration forms. *Id.* at 829-30.

In this case, the validity of three Colorado statutory provisions was challenged. The laws (1) required all in-person voters to show identification (not just first-time registrants); (2) provided that votes cast in the wrong precinct would not be counted; and (3) provided that
provisional ballots would not be counted if the voter applied for an absentee ballot. 2004 WL 2360485, at *1. The plaintiffs also challenged the provisions under HAVA. The identification provision allowed nearly all forms of acceptable identification under HAVA. Id. at *6.

The challenge to the identification requirement failed under both challenges. The Court interpreted HAVA as not intended to preempt state laws and as permitting states to be more strict than, but not inconsistent with, HAVA. Id. at *10. The Court felt that the purpose of both laws was the same, to reduce voter fraud, and thus, both laws could coexist. As to the Constitutional claim, both equal protection and substantive due process, the Court felt that preventing voter fraud, which is impossible to remedy once a vote is cast, is a compelling interest, and the Court also felt that a voter identification requirement for all voters, with many types of acceptable identification, was only marginally more intrusive than HAVA. Id. at 12. The Court also found no improper discrimination between voters. Id. Thus, the provision was upheld.

**McKay v. Thompson, 226 F.3d 752 (6th Cir. 2000).**

The Sixth Circuit ruled that the Privacy Act, the National Voter Registration Act, Substantive Due Process, the Privileges and Immunities Clauses (Fourteenth Amendment & Article IV), and the First Amendment right to free exercise do not prohibit requiring disclosure of social security numbers as a precondition to voter registration.

The Privacy Act, Section 7, mandates that it is unlawful for a government to deny a right or privilege because of a citizen's refusal to disclose his social security number, unless the disclosure was required for a system established prior to 1975. 226 F.3d at 755 (citing Privacy Act of 1974, Pub. L. No. 93-579 (1974)). Since Tennessee required social security numbers for voter registration since 1972, his challenge was rejected. 226 F.3d at 755. Second, the NVRA only permits requiring the minimum amount of information necessary to prevent duplicate voter registration and to determine eligibility. Id. at 755-56 (citing 42 U.S.C. §1973gg-3(c)(2)(B)). The Court rejected this challenge because the NVRA does not specifically forbid the use of social security numbers, and the Privacy Act, a more specific statute, grandfathered their use if prior to 1975. 226 F.3d at 756.

Finally, the plaintiff's constitutional claims were all rejected. His substantive due process claim was rejected because internal receipt and use of social security numbers does not burden the fundamental right to vote. Id. The free exercise challenge, based on the Bible's supposed prohibition of universal identifiers, was rejected because the law was generally applicable and not directed at particular religious practices. Id. The Privileges and Immunities Clause claim was rejected because the Clause does not apply to citizens of the state. Id. The Fourteenth Amendment Privileges and Immunities claim, based on the right to vote as unique to U.S. citizenship, was rejected because the Clause provides no protection where Congress has authorized the infringement. Id.

A statute was upheld, which required name, occupation, address, sex, race, height, hair color, eye color, and date of birth to be recorded on the voter registration card and allowed registration officials to reject an incomplete application. 396 F. Supp. at 738. Claims were alleged under the Fourteenth Amendment's Equal Protection Clause, the Fifteenth Amendment, and the Voting Rights Act.

As to the Fourteenth and Fifteenth Amendment claims, the Court reasoned that preventing voter fraud is a compelling goal, and identification provisions are "an essential means of achieving the goal." Id. at 739. The Court also rejected the equal protection claim because the statutes did not create a distinction at all. Id. at 740 n.3. Since race is just one of
several characteristics required, the Court found that it was intended for preventing voter fraud, not some other motive. Id. at 740. As to the VRA, the Court rejected the claim that it added race as a qualification for voting as frivolous. Id. As to a Fifteenth Amendment claim that it abridged the right to vote on account of race, the Court also made a distinction between rejecting a voter application because of race and rejecting an application because of failure to answer all relevant questions to assist in preventing voter fraud. Id. The statute was upheld.

_Perez v. Rhiddlehoover, 186 So. 2d 686 (La. Ct. App. 1966)._ 

A voter registration requirement was challenged and upheld. The statute stated that date of birth, place of birth, mother's first or maiden name, color of eyes, sex, race, occupation, and whether owner, tenant or boarder must appear on the registration. 186 So.2d at 690. This information was required for identification of voters, especially when voters had the same name, to prevent duplicate voting. It was challenged under the Voting Rights Act of 1965 Section 4(a) which prohibits denying the right to vote for failure to comply with a "test or device." The Court felt that this requirement was not a test or device for discrimination because it applied equally. Id. at 691. The Court also determined that it was not in conflict with the Fifteenth Amendment either. Id.

_Friendly House, et al. v. Janet Napolitano et al., CV 04-649 TUC DCB_

On November 30, 2004, the Mexican American Legal Defense and Educational Fund (MALDEF) filed suit seeking to halt the implementation of Proposition 200. Proposition 200 created a number of legal requirements to ensure that public benefits are not available to illegal immigrants. In particular, Proposition 200 requires that a person attempting to register to vote provide one of six specific forms of proof of United States citizenship. Compl. 12-13. Also, any person attempting to vote must present either one form of photo identification or two forms of non-photo identification. Id. at 13.

The lawsuit alleges two violations that directly relate to the voting identification restrictions. First, the lawsuit alleges a violation of the Twenty-Fourth and Fourteenth amendments in that a voter must pay a poll tax by spending money to purchase the required identification. Id. at 20. Second, the lawsuit alleges violation of the Voting Rights Act. Id. at 21. The lawsuit was recently dismissed by the 9th Circuit Court of Appeals for a lack of standing. The Circuit Court found that there was no injury-in-fact, meaning that once an injury occurs the suit will likely be refiled. Additionally, it should be noted that the voter identification issue is only a part of the lawsuit, and much of the focus has been on other aspects of Proposition 200.

Current Litigation Concerning Voter ID Issues\(^\text{12}\)

Litigation is filled with uncertainty. Litigation stemming from newly passed voter identification requirements will continue into the foreseeable future. Lawsuits are currently pending over voter identification requirements in Georgia and Indiana. Other states, such as Ohio, are considering new identification requirements that could lead to further litigation. The Georgia lawsuit has already succeeded in getting a preliminary injunction against the law in question, which will likely galvanize interested parties in other states to pursue similar litigation. Of course, if the injunction is eventually overturned at the appellate level it could have a similar chilling affect on future litigation.

This summary major litigation pending in Georgia and Indiana includes a brief assessment of the likelihood of success:

\(^\text{12}\) As of January 2, 2006
Georgia (Common Cause/Georgia v. Billups):

On September 19, 2005, Common Cause of Georgia, in conjunction with several other non-profit organizations, filed suit in Federal District Court against the Georgia Secretary of State and other election officials, challenging the constitutionality of Georgia's new voter identification requirements. The new law requires all voters attempting to cast a ballot in person to present a valid form of photographic identification. O.C.G.A. § 21-2-417. A voter that is unable to provide proper identification is given a provisional ballot. However, that provisional ballot will be counted only if the voter is able to subsequently present valid identification within two days of the election. Id.

The lawsuit alleges five separate violations of state and federal law. First, the complaint alleges that the identification requirements infringe on the right to vote guaranteed in the Georgia constitution (Compl. 32). In addition, the Plaintiffs claim violations of the Federal Civil Rights Act and Voting Rights Act. (Compl. 36,38). Finally, the lawsuit alleges violations of the Fourteenth and Twenty-Fourth amendments to the U.S. Constitution. The complaint claims that the ID requirements constitute an "undue burden" on the right to vote, in violation of the Equal Protection Clause of the Fourteenth Amendment (Compl. 34). The ID requirement does not apply to most absentee voters, and thus the requirement is also over-broad and not narrowly tailored to address the stated purpose of preventing voter fraud (Compl. 34). The complaint further alleges that the cost of obtaining a photo ID constitutes a poll tax, in violation of the Twenty-Fourth Amendment, and that the cost is also a violation of the Fourteenth Amendment because it applies to voters who choose to vote in person, and not to those who vote absentee (Compl. 34,35).

On October 18, 2005, the District Court granted the Plaintiff's motion for a preliminary injunction, enjoining the application of the new identification requirements. In granting the injunction, the court held that both federal constitutional claims had a substantial likelihood of succeeding on the merits at trial (Prelim. Inj. 96, 104). The court also held that, while the two federal statutory claims were plausible, they both lacked sufficient evidence at the time to have a substantial likelihood of success. (Prelim. Inj. 109,111,116). Finally, the court held that the Georgia constitutional claim would be barred by the Eleventh Amendment to the U.S. Constitution. (Prelim. Inj. 77).

The Defendants appealed the motion for preliminary injunction to the Eleventh Circuit, and oral argument is scheduled for March 1, 2006. In addition, some news reports have claimed that the Georgia legislature is considering re-visiting the ID requirements in light of the on-going litigation. As for the merits, in granting the preliminary injunction the District Court has already signaled its belief that the federal constitutional claims are likely meritorious. The Eleventh Circuit may have a different view, but for now the case looks to have a reasonable chance of success.

Indiana (Indiana Democratic Party v. Rokita and Crawford v. Marion County Election Board):

The Indiana lawsuit is similar to its Georgia counterpart in content, though not in status. In Indiana separate lawsuits, now joined, were filed by the state Democratic Party and the

---

13 Litigation documents are available at the Election Law @ Moritz website. http://moritzlaw.osu.edu/electionlaw/litigation/index.php
Indiana Civil Liberties Union (ICLU). The Democratic Party's lawsuit is directed against the Indiana Secretary of State, while the ICLU's lawsuit involves the Marion County Board of Elections and the State of Indiana. Like Georgia, Indiana law also requires citizens voting in person to present some form of official photo identification. IC § 3-11-8-25.1. Voters unable to present identification are given a provisional ballot, which is counted if they are able to provide the required identification by Noon on the second Monday following the election. IC § 3-11.7-5-1. Unlike Georgia, Indiana provides state issued identification at no charge. However, there are costs involved in the process, including transportation to the Bureau of Motor Vehicles, and payment for documents such as birth certificates, which are needed to obtain the ID. (Second Am. Compl. 6).

The Democratic Party's complaint raises Fourteenth Amendment claims similar to those in the Georgia lawsuit, including concerns about substantially burdening the right to vote, the enactment of a de-facto poll tax from the costs indirectly associated with obtaining ID, and the lack of applicability to voters who cast an absentee ballot. (Second Am. Compl. 6-9). In addition, the complaint alleges that the substantial burden placed on the right to vote violates the First Amendment protection of expressive or symbolic speech, as well as the freedom of association as applied to Democratic primary elections. (Second Am. Compl. 9-10). Finally, the complaint alleges violations of the Voting Rights Act, National Voter Registration Act, and the Help America Vote Act (Second Am. Compl. 10-11). The ICLU’s complaint alleges many of the same violations, but also includes claims of a violation of Indiana’s constitutional guarantee of a free and equal election system. (Compl. 15)

The case is currently in the pre-trial phase, with both sides awaiting decisions on their respective motions for summary judgment. The likelihood of success is bolstered by the fact that the Fourteenth amendment constitutional claims have already been found persuasive by at least one other Federal District Court. However, the Indiana law is notably different than its Georgia counterpart in that it provides free identification. While the plaintiffs make a solid argument that related costs still amount to a poll-tax, it is possible that the court could distinguish on this matter.

Unlike the Georgia case, the Indiana lawsuit also claims a violation of the Help America Vote Act. Although the claim is not completely clear, it seems as though the Plaintiffs are arguing that the Indiana statute requires more stringent identification than what is required by HAVA. 42 U.S.C. § 15483(b)(1)-(2). While this is true, it is unclear how this violates the statute. HAVA merely states that certain voters unable to produce HAVA required identification be given a provisional ballot. Id. Indiana law meets this requirement. IC § 3-11-8-25.1. Although Indiana law requires more stringent identification for counting the provisional ballot, HAVA leaves those decisions to state law. 42 U.S.C. § 15482(a).

---

15 According to an AP article, the Plaintiffs filed some type of brief on December 21—however it is not yet up on the Moritz website and I am unsure how to access it otherwise.

Appendix
All-

About a week ago you received a copy of the Eagleton draft report on Voter Identification. As you know, Eagleton will be coming to EAC on April 3 to do a project close-out meeting with the agency.

Should you have comments or edits that you would like me to pass along to Eagleton, regarding their draft report on Voter ID, please get them to me by COB Friday, March 24, so that I may pass them along to Eagleton for inclusion in their final document.

Thank you

Karen Lynn-Dyson
Research Manager
U.S. Election Assistance Commission
1225 New York Avenue, NW Suite 1100
Washington, DC 20005
tel:202-566-3123
Thank you for the information. I shall include in my list of discussion topics for the small group sessions with the election officials.

Subject Revised Voter ID Paper

Karen,

Attached is a new draft of the Voter ID paper, revised to take into account the comments you gave us on Tuesday as well as some points raised recently by other reviewers. We'll be bringing hard copies of this draft with us to Monday's briefing. If you could distribute the new "Executive Summary" (pages 1 – 5) in advance to those who will take part in the meeting on Monday, I think the discussion would be improved.

Our train is scheduled to get into Union Station at 10:30 on Monday. Barring Amtrak delays, we should arrive at your offices shortly before 11.

Tom O'Neill
FINAL DRAFT REPORT AND RECOMMENDATIONS TO THE EAC VOTER IDENTIFICATION ISSUES

Report Background
This report to the United States Election Assistance Commission (EAC) presents an analysis of voter identification requirements across the country and makes recommendations for best practices to improve implementation of voter ID requirements at the polls. It is based on research conducted by the Eagleton Institute of Politics at Rutgers, the State University of New Jersey, and the Moritz College of Law at Ohio State University under a contract to the EAC, dated May 24, 2005. The research included a review and legal analysis of state statutes, regulations and litigation concerning voter identification and provisional voting, a sample survey of local election officials, and a statistical analysis of the effects of various requirements for voter identification on turnout in the 2004 election. This report is a companion to a report on Provisional Voting submitted to the EAC on November 28, 2005 under the same contract.

The Help America Vote Act of 2002 (HAVA) (Public Law 107-252) authorizes the EAC (Sec. 241, 42 USC 15381) to conduct periodic studies of election administration issues. The purpose of these studies is to promote methods for voting and administering elections, including provisional voting, that are convenient, accessible and easy to use; that yield accurate, secure and expeditious voting systems; that afford each registered and eligible voter an equal opportunity to vote and to have that vote counted; and that are efficient.

Executive Summary
Methods
To explore the effects of voter ID requirements on electoral participation in 2004, as measured by turnout, we gathered information on the requirements in effect in the 50 states and the District of Columbia in that year. We assigned each state to one of five categories based on its ID requirements. The five categories are progressively more rigorous based on the demands they make on both voters\(^1\) (and, to some extent) on election workers. The categories range from "Stating Name" which we judge to be somewhat less demanding than "Signing Name." "Signature Match" requires poll workers to examine the signature and compare it to a sample, even the most relaxed provisions for identification at the polls — anything stricter than the honor system used in North Dakota — will impose some burden on particular voters. *Harvard Law Review* 119:1146

\(^1\) Even the most relaxed provisions for identification at the polls — anything stricter than the honor system used in North Dakota — will impose some burden on particular voters. *Harvard Law Review* 119:1146
which is slightly more demanding that the voter simply signing. "Present ID" requires voters to offer some documentary evidence of their identity, ranging from a utility bill to a passport. It is more demanding than the previous three categories because it requires that the voter remember to bring this documentation to the polls. (Even a simple ID, such as a utility bill, may not be available to some renters or, say, those in group housing.) We regard a government "Photo ID" as the most rigorous requirement. Such identity documents are not uniformly and conveniently available to all voters.

We collected data on turnout in all counties to permit an estimate of the relationship between the rigor of the ID requirements and the level of turnout. This aggregate analysis is useful, but does not provide valid estimates on the effects of different kinds of ID requirements on particular demographic groups (e.g., the old, the young, African-Americans, the poor, or high school graduates.) To allow that analysis, we used the Census Bureau's Current Population Survey from November 2004, which asked a large sample of Americans about their experience in the election. It has the disadvantage of relying on self reports by respondents about their registration status, citizenship, and experience in the polling place, but it provides the demographic data needed to supplement the aggregate analysis.

To understand the legal issues raised by voter ID requirements, we collected and analyzed the few major cases that have been decided on this issue. The decisions so far suggest the constitutional and other constraints to policies on voter ID requirements.

Findings
The form of Voter ID required of voters affects turnout. Lack of ID can keep voters from the polls. Or, when they go to the polls, it is reasonable to conclude that stricter Voter ID requirements will divert more voters into the line for provisional ballots. (This conclusion is a conjecture because we lack precise information on why voters must cast their ballots provisionally.) The result can be longer lines at the polls and confusion, without a clear demonstration that the security of the ballot is correspondingly increased.

Voter turnout at the state level in 2004 was lower in states where voter identification requirements were more demanding. While the trend is not perfectly linear, the data show a general movement toward lower turnout as requirements tend toward requiring greater levels of proof. An average of 63.1 percent of the voting age population turned out in states that required
voters to state their names, compared to 57.3 percent in states that required photo identification. Those figures, however, probably overstate the effect since the inclusion of other factors beyond voter ID requirements in the analysis diminishes the extent of influence of voter ID on turnout. After taking account of the other factors, the analysis still offers some support for the hypothesis that as the burden of voter identification requirements increases, turnout declines. The effect is particularly noticeable in counties with concentrations of Hispanic residents or people living below the poverty line.

Our analysis of litigation suggests that the courts will look strictly at requirements that voters produce a photo ID in order to cast a regular ballot. The courts have used a balancing test to weigh the legitimate interest in preventing election fraud against the citizen’s right to privacy (protecting social security numbers from public disclosure, for example) and the reasonableness of requirements for identity documents. To provide both the clarity and certainty in administration of elections needed to forestall destabilizing challenges to outcomes, best practice for the states may be to limit requirements for voter identification to the minimum needed to prevent duplicate registration and ensure eligibility.

Evidence on the incidence of vote fraud, especially on the kind of vote fraud that could be reduced by requiring more rigorous voter identification is not now sufficient to evaluate the tradeoffs between ensuring ballot access and ensuring ballot integrity. The lack of full understanding of the dynamics of voter ID requirements on political participation can be remedied by requiring the collection and reporting of data on the reasons potential voters are required to cast a provisional ballot and the reasons for rejecting provisional ballots during the 2006 and subsequent elections. Also useful would be the results of exit polling of voters on their experiences in meeting voter ID requirements and on what type of ballot they cast. And, of course, more information is needed on the incidence and varieties of vote fraud, but that inquiry is outside the scope of this report.

A voting system that requires voters to produce an identify document or documents may indeed prevent the ineligible from voting. It may also prevent eligible voters from casting a ballot. If the

---

2 Arizona held its first election with new, stricter ID requirements on March 14, 2006. In at least one county (Maricopa) election officials handed a survey to voters that asked if they knew about the voter identification law and if they did, how they found out about it. Edythe Jensen, "New Voter ID Law Goes Smoothly in Chandler," Arizona Republic, March 15, 2006. More surveys of this kind can illuminate the dynamics of voter ID and voting in ways not possible with the current lack of information on this subject.
ID requirement of a ballot protection system blocks ineligible voters from the polls at the cost of preventing eligible voters who lack the required forms of identification, the integrity of the ballot may not have been improved; the harm may be as great as the benefit.

Recommendations for consideration and action by the EAC

The dynamics of Voter ID requirements—how more rigorous Voter ID requirements affect the decision by potential voters to go or stay away from the polls—are not well understood. This lack of understanding should be recognized in the policy process in the states. The debate over voter ID in the states would be improved by additional research sponsored by the EAC.

The EAC should consider the following actions to improve understanding of the relationship between voter ID requirements, broadly defined, and the two important goals of ensuring ballot access and ensuring ballot integrity.

- Encourage or sponsor further research to clarify the connection between Voter ID requirements and the number of potential voters actually able to cast a ballot.
- Recommend as a best practice the publication of a “Voting Impact Statement” by states considering changing their voter ID requirements to protect the integrity of the ballot. The analysis will help ensure that efforts to increase ballot security have a neutral effect on electoral participation by eligible voters. The Voter Impact Statement would estimate the number and demographics of 1) eligible, potential voters that a proposed stricter ID requirement may keep away from the polls or be permitted to cast only a provisional ballot; and 2) and assess the number of ineligible voters who will be prevented from voting by the stricter ID requirements.
- Encourage or require the states in the 2006 election and beyond, to collect and report reliable, credible information on the relationship between ballot access and ballot security. EAC should analyze this publish an analysis of this information to provide a sound estimate of the incidence of the kinds of vote fraud that more stringent ID requirements may prevent. The analysis should describe the dynamics of the voter ID process in preserving the security of the ballot. The states should also be encouraged to use this information to increase the effectiveness of programs to ensure that all eligible voters have required ID and are permitted to vote in future elections.
  - Useful information could be supplied by exit polling or surveys of voters by local election officials. It would make clear why those who cast a provisional ballot
were found ineligible to cast a regular ballot. The answers would illuminate the frequency with which ID issues divert voters into the provisional ballot line.

- Polling to ask voters what they know about the voter ID requirements would also provide useful context for evaluating the effect of various voter ID requirements on electoral participation.

- Encourage states to examine the time period allowed for voters who cast a provisional ballot because they lacked required ID to return with their identification. In eleven states, voters who had to cast a provisional ballot because they lacked the ID required for a regular ballot were permitted to return later with their ID. Their provision of this ID is the critical step in evaluating the ballots. The length of the period in which the voter may return with ID is important. In setting the time period for return, which now varies among the states from the same day to about two weeks, states should consider three factors: the convenience of the voter, the total time allowed to evaluate ballots\(^3\), and the safe harbor provision in presidential elections.

- Recommendations to the states from EAC should reflect current judicial trends. Requirements that voters provide some identifying documentation have been upheld, where photo ID is not the only acceptable form. Whether laws requiring photo ID will be upheld is more doubtful. To date, only one court has considered a law requiring voters to show photo ID (Common Cause v. Billups), and that court concluded that this requirement is likely unconstitutional.

Background and Approach of the Study
Establishing the eligibility of a person to vote has long been part of the electoral process. Voters may have to identify themselves twice in the electoral process: when registering to vote and then when casting a ballot. The stress on voters to provide required ID documents may be greater at the polls on Election Day than when registering. The pressures arising from the need to check ID, even so simple a check as a signature match, can be greater at the polls on Election Day than at the time of registration. Poll workers may be faced with long lines and limited time.

\(^3\) Our research on provisional voting reveals that states that provide more than a week to evaluate provisional ballots end up counting substantially more of those ballots than states that provide less than a week.
This analysis focuses on ID requirements on Election Day, but with an appreciation that the ID requirements at time of registration and on Election Day are inter-related. The emphasis in this report is on Voter ID requirements on Election Day and afterwards as election judges evaluate provisional ballots. This is the critical period for the electoral system, the time when ballot access and ballot security are in the most sensitive balance.

The report looks broadly at voter ID issues and goes beyond the rather narrow identification requirements in HAVA. Much of the current debate in state legislatures on voter ID goes ranges beyond HAVA to require more rigorous documentation of identity for all would-be voters, not just those who had not registered in person and are casting a ballot for the first time. The controversy in the states over voter ID seems to have been sparked in part by the HAVA requirements, but goes beyond those requirements, and sets the context for the analysis here.

We recognize that the previously technical, rather dull subject of voter ID requirements has become fiercely partisan and divisive in many states. The polarization of the debate has raised the stakes over this issue, making dispassionate analysis both more valuable and more rare. Voter ID is often described as the critical step in protecting the integrity of the ballot, the process to ensure that the potential voter is eligible and, if eligible, is permitted to cast one ballot and one ballot only. Truly protecting the integrity of the ballot, however, requires a perspective that takes in the entire voting process. It demands more than preventing the ineligible from voting, and should also ensure that all those who are eligible and want to vote can cast a ballot that counts. The protection effort must embrace all forms of voting, including absentee ballots, and consider each step in the process from registration through vote counting.

---

4 As the Carter-Baker Commission noted, photo ID requirements for in-person voting do little to address the problem of fraudulent registration by mail, especially in states that do not require third-party organizations that register voters to verify ID. Commission on Federal Election Reform, pp 46-47.
5 Harvard Law Review 119:1127: "Legislators hoping to stiffen their state antifraud laws have taken their cue from identification provisions buried in HAVA."
6 "Of the various electoral procedure laws passed in the fifty states since the 2000 and 2004 presidential elections and those still being debated in state legislatures and local media, few arouse more potent partisan feelings than voter identification laws." Harvard Law Review 119:1144. John Fund's 2004 book, Stealing Elections: How Voter Fraud Threaten Our Democracy, cites (pages 16 – 17) a Rasmussen Research poll that asked respondents if they were more concerned with voting by ineligible participants or with disenfranchisement of eligible voters. Sixty-two percent of Kerry supporters, but only 16 percent of Bush supporters, worried more about disenfranchisement; 58 percent of Bush supporters, but only 19 percent of Kerry supporters were more concerned with voter fraud.
A voting system that requires voters to produce an identity document or documents may prevent the ineligible from voting. It may also prevent the eligible from casting a ballot. If the ID requirements block ineligible voters from the polls at the cost of preventing eligible voters who cannot obtain or have left at home the required forms of identification, the integrity of the ballot may not have been improved; the harm may be as great as the benefit.

Assessing the effectiveness of voter ID as a way to protect the integrity of the ballot should logically include an estimate of the nature and frequency of vote fraud. The EAC has informed us that it has commissioned a separate analysis of the incidence of vote fraud. Consequently, this research does not include consideration of vote fraud nor the possible effectiveness of various voter ID regimes to counter attempts at vote fraud. As a result, our analysis of the effects of voter ID requirements on turnout cannot take into account how many potential voters who did not turn out under comparatively stricter voter ID requirements might have been ineligible or eligible to vote.

In some states, voters lacking required ID, or who have ID that does not reflect their current address, are able to vote only by casting a provisional ballot. Voter ID requirements that require voters to bring a document to the polls --rather than simply sign their names-- can divert more voters to the provisional ballot. Requiring poll workers to request and check ID, can put stress on the already demanding environment of the polling place. Scrutiny of ID can create lines at the polling places. Further delays can result when voters cast a provisional ballot and fill out the ballot envelope. Voters who cast a provisional ballot because they lack their ID on Election Day, and who then fail to return with the needed document or documents, will have their ballot rejected. And, of course, the cost of processing provisional ballots is greater than the cost of regular ballots.

Each of these potential consequences of more elaborate voter identification processes can increase the chance of litigation. Long lines will, at best, discourage voters and at worst make voting seem a hassle, an impression that could keep more citizens (even those with ID) from the

---

7 For example, the Florida voter ID law adopted after the 2004 election and pre-cleared by the Department of Justice, permits voters who cannot meet the ID requirements to sign an affidavit on the envelope of a provisional ballot, which will be counted if the signature matches that on the voter’s registration form.

8 The EAC’s Election Day Study found “improper ID,” to be the third most common reason for a provisional ballot to be rejected. “Improper ID” was cited by 7 states responding to the survey, compared to 14 mentions for voting in the wrong precinct. Election Day Study, Chapter 6, p. 5.
polls. In conducting this analysis, we were sensitive to the observation that the problem with
American elections may well be that too many people do not vote rather than that a few people
may vote more than once.

An evaluation of the effect of different Voter ID regimes can be more effective if based on clear
standards—legal, equitable, practical. The standards suggested here can best be described as
the set of questions to be asked about Voter ID requirements. We suggest 7 questions that try
to measure the most important dimensions of the problem.

1. Is the Voter ID system designed on the basis of valid and reliable, empirical studies of
the incidence of the sorts of vote fraud it is designed to prevent?9

2. How effective is the ID requirement in increasing the security of the ballot? How well can
it be coordinated with a statewide voter database?10

3. How practical is the requirement? Can it be administered smoothly by the staff and
budget likely to be made available? How much additional training of polling place
workers might be required? Is it simple enough or can it be defined with sufficient clarity
that poll workers throughout the state can administer it uniformly and with a minimum of
local interpretation made on the fly under the pressure of Election Day?11

4. How cost-effective is the system? Does it demonstrably increase the security of the
ballot affordably, measured in both monetary and other costs? To improve
understanding of the non-monetary component of the costs, conducting a voter impact
study might be appropriate. The voter impact study would examine, before the adoption
of the regulation, the cost of compliance by the voter (such as the cost in time and
money of acquiring a photo ID card), any offsetting benefits to voters, and the possible
disparate effects of the regulation on various groups of voters.12 A thorough, objective

---

9 "Often where the battle over voter identification is most heated, real evidence of voter fraud proves
scarce: in Georgia, for example, the Secretary of State averred that she had never encountered a
single instance of voter impersonation at the polls. State laws might sometimes impose tighter restrictions
on in-person voting than on absentee ballots, which yield the greatest incidence of, and provide the

10 See the final section of this report for a brief overview of possible effects of a statewide voter database
on voter identification issues.

11 In New York, in 2004, disparities in training and voting information were made apparent in a study
finding elections officials had wildly varying interpretations of what the state’s voter identification
requirement actually was. Tova Wang, "Warning Bell in Ohio," December 5, 2005. Website, the
Foundation for National Progress.

12 "Absent clear empirical evidence demonstrating widespread individual voter fraud, legislatures
need to fashion narrowly tailored voter identification provisions with an eye toward the inevitable and well-
grounded constitutional challenges that will arise in the courts. Only as states grow more adept at
impact statement that demonstrated the nexus between the identification regime and the integrity of the ballot could provide protection against inevitable legal challenges.

5. If a side effect of the Voter ID regulation is likely to reduce turnout, generally or among particular groups, is it possible to take other steps to ameliorate the adverse consequences? 

6. Does it comply with the letter and spirit of Voting Rights Act?

7. The seventh question is the most difficult to answer. Does the Voter ID requirement have a neutral result on the composition of the qualified and eligible electorate? ID requirements should not be designed to, or unintentionally, reduce the turnout of particular groups of voters or supporters of one party or another. Whatever the requirement may be, can all citizens comply with it easily and at no or minimal cost?

**Voter ID and Turnout**

As of the 2004 election, the states and the District of Columbia could be divided into 5 different Voter ID regimes. These are shown in Table 1, *Voter ID Requirements*. Nine states required that voters give their names; 14 that they sign their names; 8 match the signature to a sample in the registration book; 15 require some form of ID (ranging from a utility bill to a government-issued photo ID), and 5 states in 2004 required a photo ID, although in all those states voters without that credential could cast a regular ballot after signing an affidavit concerning their identity and eligibility or provide other forms of ID.

This neat assignment in the following table and map of each state to one category no doubt fails to reflect actual practice at many polling places. Like any system run by fallible people, the voter ID process is subject to wide variation in practice. Voters may be confronted with demands for identification different from the directives in state statutes or regulation. Some voters may be waved through the process without a look at any document, no matter what the regulations say. Under the press of long lines and unfamiliar requirements, there is, in short, no sure way to report the wide variety of conditions voters actually encounter.

13 For example, the Carter-Baker Commission coupled its recommendation for a national voter ID card to a call for an affirmative effort by the states to reach out and register the unregistered, that is, to use the new Voter ID regime as a means to enroll more voters. Similarly, Richard Hasen Hasen's has suggested combining a national voter ID with universal registration. See his "Beyond the Margin of Litigation: Reforming U.S. Election Administration to Avoid Electoral Meltdown," 62 Washington and Lee Law Review 937 (2005).

^In Florida and Louisiana, states that required a photo id in 2004, voters without that credential could sign an affidavit concerning their identity and eligibility and cast a regular ballot.

^^In these states in 2004, voters lacking a photo ID could vote by providing other ID.

*Arizona voters who lack a photo ID may present 2 forms of ID with no photograph, such as 2 utility bills.

**State only requires ID for first-time voters who register by mail without providing ID. They accept all forms of ID listed in the statute.

***Georgia is currently enjoined from implementing this law, returning them for the time being to their 2004 requirement of provide ID.

****Pennsylvania requires ID of all first-time voters, whether they registered by mail or in-person.

*****Tennessee voters must provide signature and address. In counties without computerized lists, the signature is compared to the registration card. In counties with computerized lists, the signature is compared to a signature on ID presented with registration.

******Texas voters must present a current registration certificate. Those without a certificate can vote provisionally after completing an affidavit.

Figure 1

![Voter ID Requirements 2004](image)
Since it is not practical to attempt to capture the wide variety of how voter ID requirements are actually implemented across the nation's tens of thousands of polling places, the analysis of the effect of state requirements on county-level turnout must be viewed with some caution.

**Effect of Voter ID requirements on Turnout**

We categorized each state according to its voter ID requirements in 2004, as shown in Table 1 and analyzed turnout data for each county according to the voter identification requirements of its state. We also assessed self-reported turnout by the sample interviewed in the November 2004 Current Population Survey of the Census Bureau.  

Voter turnout at the state level in 2004 varied based on voter identification requirements. An average of 63.1 percent of the voting age population turned out in states that required voters to state their names, compared to 57.3 percent in states that required photo identification. Other factors, of course, also influence turnout. Taking those other factors into account in the county-level analysis makes the effect of the voter ID requirement less dramatic. But the analysis still offers some support for the hypothesis that as the burden of voter identification requirements increases, turnout declines. The effect is particularly noticeable in counties with concentrations of Hispanic residents or of people living below the poverty line.

The individual-level analysis, based on the CPS, produced a similar result. Voter identification requirements exert a statistically significant, negative effect on whether survey respondents said they had voted in 2004. The probability that a respondent to the survey voted dropped with each level of voter identification requirement, with a total drop of 2.5 percent across the five types of identification.

Future policy decisions should consider the tradeoffs between the incidence of vote fraud that can be prevented by stricter voter ID requirements and the number of eligible voters who will be kept from the polls by those stricter ID requirements. Continuing research is needed to provide the information to inform this calculation of benefits and costs.

---

14 See Appendix __ for the full report on voter ID and turnout.
Methods and Findings

We classified each state as having one of five types of identification requirements in place on Election Day 2004. Upon arrival at polling places, voters had to either: state their names (9 states); sign their names (13 states and the District of Columbia); match their signature to a signature on file with the local election board (8 states); provide a form of identification that did not necessarily include a photo (15 states); or provide a photo identification (5 states). We then tested the assumption that voter identification requirements would prove to be increasingly demanding on the voter, with providing photo ID the most rigorous.

The analysis recognized that election laws in numerous states offer exceptions to these requirements if a prospective voter lacked the ID. Laws in those states set a minimum standard that a voter must meet in order to vote using a regular ballot. We therefore also categorized states based on the minimum requirement for voting with a regular ballot. None of the states required photo identification as a minimum standard for voting with a regular ballot. Four states, however, required voters to swear an affidavit as to their identity (Florida, Indiana, Louisiana, and North Dakota). The five categories for minimum requirements were: state name (12 states), sign name (14 states and the District of Columbia), match one's signature to a signature on file (six states), provide a non-photo identification (14 states), or swear an affidavit (four states). This analysis treats the array of minimum identification requirements also in terms of increasing demand on the voter: state name, sign name, match signature, provide non-photo identification, and, given the potential legal consequences for providing false information, swearing an affidavit is regarded as the most rigorous.

Voter turnout at the state level in 2004 declined as voter identification requirements became more demanding, as shown in Table 2. While the trend is not perfectly linear, there is a general movement toward lower turnout as requirements tend toward requiring greater levels of proof. Using the maximum requirements as the independent variable, an average of 63.1 percent of the voting age population turned out in states that required voters to state their names, compared to 57.3 percent in states that required photo identification. A similar trend emerged when using the minimum requirements as the independent variable. Sixty-one percent of the voting age population turned out in states requiring voters to state their names, compared to 58.7 percent in states that required an affidavit from voters.

Voter identification requirements alone do not determine voter turnout. Other influences – demographic or political-- also affect voter participation. Multivariate models that take into account other predictors can place the effects of voter identification in a more accurate context. The multivariate analysis included whether the county was in a presidential battleground state or a state with a competitive race for governor or the U.S. Senate. Demographic variables included the percentage of the voting-age population in each county that was Hispanic or African-American, the percentage of county residents age 65 and older, and the percentage of the county population living below the poverty line. The dependent variable in each model was voter turnout at the county level, with turnout calculated as the percentage of the voting-age population that voted in the 2004 election.

The aggregate analysis for the maximum identification requirements revealed a small and negative effect on turnout in 2004 controlling for electoral context and demographic factors. If the state was a battleground voter turnout increased. As the percentage of senior citizens in the county increased, so did turnout. The percentage of African-Americans in the county had no effect, but the percentage of Hispanic adults reduced voter turnout, as did the percentage of individuals living below the poverty line. In general, analysis of the aggregate data at the county level provides some support for the hypothesis that as the burden of voter identification requirements increases, turnout declines, at least in the case of the maximum requirements. The decline in turnout is particularly noticeable in counties with concentrations of Hispanic residents or individuals who live below the poverty line. Determining if the reduction in turnout is, in fact, among the Hispanic or poor residents of those counties requires further research at the individual level.
Information collected for the Census Bureau Current Population Survey in November 2004 makes it possible to examine the influence of voter ID requirements at the individual level. Self-identified registered voters reported their experience at the polls in the survey. Note that the voter turnout rate for the CPS sample, an average of 89%, is much higher than the turnout rates presented in the aggregate data analysis, which average 58%. The difference is a result of several factors, including different denominators in calculating the turnout rate – self-reported registered voters in the CPS versus the much larger voting-age population for the aggregate data. Also some survey respondents overstate their incidence of voting. Nevertheless, the CPS serves as a widely accepted source of data on voting behavior.

The dependent variable in the individual analyses is whether respondents said they voted in the 2004 election. As in the aggregate analysis the contextual variables consist of whether the state was a battleground state or had competitive state-level races. The analysis also controlled for gender, age, education, household income, race or ethnicity, and employment status, marital status, and residential mobility.

The analysis revealed that voter identification requirements exerted a statistically significant, negative effect on whether survey respondents said they had voted in 2004. Of the other state factors, only the competitiveness of the presidential race had a significant effect on turnout. In terms of demographic influences, consistent with previous research, age, education, income, and marital status all were positive predictors of voting. Women also were more likely to say they voted than men. Those who had moved within six months before the interview were less likely to say they had voted.

Allowing the voter identification requirement to vary while holding constant all other variables in the model showed that the predicted probability of turnout ranged from 91.2 percent if all voters had to state their names to 88.7 percent if all voters had to provide photo identification. (Note that these turnout figures are higher than actual because of the factors involved in the CPS's self-reported survey, but that the difference in effect is reasonably related to the results obtained in the aggregate analysis.) In other words, the probability of voting dropped with each level of the maximum voter identification requirement, with a total drop of 2.5 percent across the five types of identification. When taking into account the minimum requirement for identification, the probability showed a similar decline, with a slightly larger total drop of 3.3 percent.
Both the maximum and minimum identification requirements had negative and statistically significant effects for white voters. Allowing the requirements to vary from stating one’s name to providing photo identification or an affidavit showed drops of 2.5 percent and 3.3 percent respectively in the predicted probability of voting. The identification requirements had no effect on the probability of African-Americans voting, but the minimum identification requirements had a comparatively sizable effect on voter turnout among Hispanics. The predicted probability of Hispanics voting ranged from 87 percent if stating one’s name would be the required form of identification to 77.3 percent if a voter would have to provide an affidavit in order to vote, a difference of 9.7 percent. Variation also emerged along the lines of income, with the effects of voter identification requirements varying to a greater extent for voters in households below the poverty line compared to those living above the poverty line.

Registered voters who had less than a high school education had a 77.5 percent probability of voting if the maximum requirement would be stating one’s name, and a 70.8 percent probability if they would have to provide photo identification under the maximum requirement, a difference of 6.7 percent. The range of effects of voter identification requirements was smaller among those with higher levels of education (and non-existent for one category – voters with some college education).

Discussion and Conclusions of the Analysis
The results give evidence that tougher voter identification requirements are associated with a decline in voter participation. The overall effect for all registered voters was fairly small, but even a slight decline in turnout has the potential to alter the outcome of a close election. The decline is apparent in both the aggregate data and the individual-level data, although not always for both the maximum and minimum sets of requirements.

- Hispanic voters and the poor appear to be less likely to vote if the level of required identification becomes more demanding, according to both the aggregate and the individual-level data. In the individual-level data, for Hispanic voters, the probability of voting dropped by 9.7 percent across the various levels of minimum identification requirements. Survey respondents living in poor households would be 5.3 percent less likely to vote as the requirements vary from stating one’s name to attesting to one’s identity in an affidavit.
• Self-reported registered voters who had not graduated from high school would be 6.7 percent less likely to vote if the maximum requirement is photo identification as opposed to stating one’s name. When considering the minimum requirements, those with less than a high school education would be 7.4 percent less likely to say they voted if the requirement was an affidavit as opposed to stating one’s name.

• Age was also a key factor, with voters ages 18 to 24 being 7.7 percent to 8.9 percent less likely to vote as the requirements ranged from stating one’s name to providing a photo identification or affidavit.

• Two concerns aired by critics of voter identification requirements were not borne out by the results. African-American voters did not appear to be affected by voter identification requirements, according to both the aggregate data and individual-level data analyses. Also, the self-reports of elderly voters, while indicating that they would be slightly less likely to vote as ID requirements become stricter, do not show a dramatic effect.

The data examined in this analysis could not capture the dynamics of how identification requirements lower turnout. Do know the voter ID and stay away from the polls because they cannot or do not want to meet them? Or, do the requirements result in some voters being turned away when they cannot meet the requirements on Election Day? The CPS data do not include measures that can answer these questions, pointing up the need for collection of additional data. Knowing more about the “on the ground” experiences of voters concerning identification requirements could guide policy-makers at the state and local level in determining whether and at what point in the electoral cycle a concerted public information campaign might be most effective in helping voters to meet identification requirements. Such knowledge also could help in designing training for poll workers to handle questions about, and potential disputes over, voter identification requirements.

It is important to note that the 2004 data do not allow us to draw conclusions about the effect of laws such as those recently passed in Georgia and Indiana, which require government-issued photo ID. No such laws were in place in 2004, and the five states that then required photo ID at the time allowed voters who signed an affidavit or provided another form of identification to cast a regular ballot.
Litigation Over Voter ID Requirements

A handful of cases have challenged identification requirements in court in recent years. In general, requirements that voters provide some identifying documentation have been upheld, where photo ID is not the only acceptable form. Whether laws requiring photo ID will be upheld is more doubtful. To date, only one court has considered a law requiring voters to show photo ID (Common Cause v. Billups), and that court concluded that this requirement is likely unconstitutional. Cases challenging the mandatory disclosure of voters' Social Security numbers on privacy grounds have yielded mixed results.

Non-photo identification. For the most part, courts have looked favorably on requirements that voters present some form of identifying documents if the photo identification is not the only form accepted. In Colorado Common Cause v. Davidson, No. 04CV7709, 2004 WL 2360485, at *1 (Colo. Dist. Ct. Oct. 18, 2004), plaintiffs challenged a law requiring all in-person voters to show identification (not just first-time registrants). The court upheld this requirement against a constitutional challenge. Similarly, in League of Women Voters v. Blackwell, 340 F. Supp. 2d 823 (N.D. Ohio 2004), the court rejected a challenge to an Ohio directive requiring first-time voters who registered by mail to provide one of the HAVA-permitted forms of identification, in order to have their provisional ballots counted. Specifically, the directive provided that their provisional ballots would be counted if the voter (a) orally recited his driver's license number or the last four digits of his social security number or (b) returned to the polling place before it closed with some acceptable identification (including reciting those identification numbers). Id. This was found to be consistent with HAVA.

Photo ID. Since the 2004 election, two states have adopted laws requiring photo identification in order to have one's vote counted, without an affidavit exception: Georgia and Indiana. Both these requirements were enacted in 2005 and both have been challenged in court. The Georgia law required voters attempting to cast a ballot in person present a valid form of photographic identification. O.C.G.A. § 21-2-417. On October 18, 2005, the District Court granted the Plaintiff's motion for a preliminary injunction, enjoining the application of the new identification requirements on constitutional grounds. In granting the injunction, the court held that plaintiffs' claims under both the Fourteenth Amendment (equal protection) and Twenty-Fourth Amendment (poll tax) had a substantial likelihood of succeeding on the merits at trial (Common Cause v. Billups,
In January 2006, Georgia enacted a modified version of its photo ID law, which the court has not yet ruled on. In the other state that has enacted a photo ID requirement without an affidavit exception (Indiana), legal challenges have also been filed. (Indiana Democratic Party v. Rokita and Crawford v. Marion County Election Board). Cross-motions for summary judgment are currently pending. Another case of significance, for purposes of photo ID requirements, is American Civil Liberties Union of Minnesota v. Kiffmeyer, No. 04-CV-4653, 2004 WL 2428690, at *1 (D. Minn. Oct. 28, 2004). In that case, the court enjoined a Minnesota law that allowed the use of tribal photo ID cards, only for an Indian who lived on the reservation. 2004 WL 2428690, at *1. The Court found no rational basis for distinguishing based on whether or not the cardholder lives on the reservation. Id. at *1, 3. The court’s decision in this case indicates that courts are likely to look strictly on photo ID requirements.

Privacy. In Greidinger v. Davis, 988 F.2d 1344 (4th Cir. 1993), the court struck down on due process grounds a Virginia law requiring disclosure of voters’ social security numbers for voter registration. The social security numbers recorded in voter registration lists had been disclosed to the public and political parties that had requested the lists. The court found that the requirement to give the social security number effectively conditioned rights on the consent to an invasion of privacy. It concluded that this public disclosure of the social security numbers was not necessary to achieve the government’s interest in preventing fraud. On the other hand, in McKay v. Thompson, 226 F.3d 752 (6th Cir. 2000), the court rejected privacy challenges based on both the Constitution and federal statutes, to a Tennessee law requiring social security numbers for voter registration since 1972. 226 F.3d at 755. Second, the NVRA only permits requiring the minimum amount of information necessary to prevent duplicate voter registration and to determine eligibility. The distinction appears to be between the use of Social Security numbers for internal purposes only, which was deemed permissible, and the disclosure of those numbers to the public which was not.

These decisions suggest that the courts will look strictly at requirements that voters produce a photo ID in order to cast a regular ballot. The courts have used a balancing test to weigh the legitimate interest in preventing election fraud against the citizen’s right to privacy (protecting social security numbers from public disclosure, for example) and the reasonableness of requirements for identity documents. To provide both the clarity and certainty in administration of elections needed to forestall destabilizing challenges to outcomes, these early decisions
suggest that best practice may be to limit requirements for voter identification to the minimum needed to prevent duplicate registration and ensure eligibility.

Developments since 2004
Since the passage of HAVA, with its limited requirements for voter identification, and following the 2004 election, debate over voter ID has taken place in state legislatures across the country. That debate has not been characterized by solid information on the consequences of tightening requirements for voters to identify themselves before being permitted to cast a regular, rather than a provisional, ballot.

Better information might improve the quality of the debate. Answers to the following key questions are not available in a form that might satisfy those on both sides of the argument.

- What is the overall incidence of vote fraud?
- How does fraud take place in the various stage of the process: registration, voting at the polls, absentee voting, or ballot counting?
- What contribution can tighter requirements for voter ID make to reducing vote fraud?
- What would be the other consequences of increasingly demanding requirements for voters to identify themselves? This is the question addressed, within the limits of the available data, in the analysis in this report.

Answering these questions would provide the information needed for more informed judgment in the states as they consider the tradeoffs among the competing goals of ballot integrity, ballot access, and administrative efficiency. The Carter-Baker Commission recognized the tradeoffs when it tied recommendation for national ID to an affirmative effort by government to identify unregistered voters and make it easy for them to register.

State Voter Databases and Voter ID
With the implementation of the HAVA Computerized Statewide Voter Registration List, an application for voter registration for an election for Federal office may not be accepted or processed unless the application includes a driver’s license number or last four digits of the Social Security number on the voter registration form. This information can be used to verify the identity of the registrant through interfacing with lists maintained by the Motor Vehicle office and Social Security office. If registrants do not have either a driver’s license or Social Security number, the State will assign a unique identifier number to that person.
HAVA does not require that the states notify registrants to remedy any failure to provide either of these numbers or to confirm that they have provided a verifiable number. Verification at the time of registration could forestall difficulties at the polling place. HAVA is silent on how the ID might be required at the polling place for new voters whose driving license or Social Security number could not be verified. Errors in recording those numbers are sure to occur.

Some states are wrestling now with these unresolved issues. In New Jersey, for example, pending legislation would require that voters must be able to confirm their registration through a secure access to the SVRL. It also requires voters to present ID at the polls in order to cast a regular ballot if the numbers recorded on the registration have not been verified (or if no verifiable number appears on the registration). It recognizes the HAVA requirement that if the number provided by the voter has not been verified and if the voter does not present ID at the polls, that voter may cast a provisional ballot. The bill does not specify they have to provide ID within 48 hours in order for their vote to count, as is the case with first-time mail-in registrants.

As some states gain experience in this area, the EAC would perform a useful service by making timely recommendations of best practices for all states to consider.

6. Conclusions

The form of Voter ID required of voters affects turnout. Lack of ID can keep voters from the polls. Or, when they go to the polls, it is reasonable to conclude that stricter Voter ID requirements will divert more voters into the line for provisional ballots. (This conclusion is a conjecture because we lack good data on why voters must cast their ballots provisionally.) The result can be longer lines at the polls and confusion, without a clear demonstration that the security of the ballot is correspondingly increased.\footnote{In this connection, the Brennan Center's response to the Carter-Baker Commission report observes that, "while it might be true that in a close election "a small amount of fraud could make the margin of difference," it is equally true that the rejection of a much larger number of eligible voters could make a much bigger difference in the outcome." \textit{Response to the Report of the 2005 Commission on Federal Election Reform}, The Brennan Center for Justice at NYU School of Law and Spencer Overton, On Behalf Of The National Network on State Election Reform, September 19, 2005}
the states would be improved by additional research sponsored by the EAC. So far as it may be necessary to reduce vote fraud made possible by inadequate voter ID, the research could identify methods to eliminate the need for voters to bring specific identity documents with them to the polls while assuring that each voter who casts a ballot is eligible and votes only once. One way to break the connection between the benefits of photo ID and the need for the voter to bring identification to the polling place, as recommended elsewhere by one of the authors of this report, Edward Foley: keep the information to verify a voter’s identity in the records at the polling place. Other approaches could be developed. \(^{16}\)

\(^{16}\) "A potential solution to this problem is to break the connection with the photo requirement and the obligation to produce identification at the polls. Eligible citizens could be required to provide a photograph at the time they register to vote, and poll workers would match this photograph with the image of the person standing in front of them. Given the availability of digital photography, the photos of registered voters could be stored in electronic poll books and easily "pulled up" with a click of a computer mouse when voters sign in to vote. . . Of course, to satisfy the concerns of liberals, a requirement to provide a digital photograph at time of registration would have to address the cost and accessibility issues identified earlier."

APPENDIX – Court Decisions and Literature on Voter Identification and Related Issues

Court Decisions

Summary of Relevant Cases:

Challenges Prevailed:

American Civil Liberties Union of Minnesota v. Kiffmeyer, 2004
- Action for temporary restraining order – granted
- Statute: allowed use of tribal identification cards w/ name, address & photo as a valid identification to register to vote only if the voter lives on the reservation to "complete" a mail-in application (which only affected about 600 voters w/ incomplete applications)
- Claim -14th Amendment EPC: likely to prevail, no rational basis for a distinction between Indians residing on reservations and those not
- Statute: may use certain forms of photo identification lacking address together with a utility bill but not tribal identification cards
- Claim -14th Amendment EPC: likely to prevail

Greidinger v. Davis, 1993
- Statute: mandated disclosure of SS # as a precondition to voter registration (rationale was voter identification, but the numbers were rarely used to verify identity & were disclosed in voter lists to both political parties and the public upon request)
- Claims:
  - 14th Amendment EPC: no classification (applied strict scrutiny)
  - Substantive due process: law invalid; found that the statute conditioned the fundamental right to vote on the consent to an invasion of privacy; this was found to be a substantial burden (applied strict scrutiny)
    - Compelling interests: preventing voter fraud (deemed compelling)
    - Necessary: fails, preventing voter fraud when allowing names for inspection could be achieved by supplying addresses and DOBs or use of voter registration numbers
    - HOWEVER: Court also made it clear that if the registration scheme kept the SS# for internal use only – it would be valid

Challenges Rejected:

- Sec. of State Directive: provisional ballots issued if first-time voter, who registered by mail and did not provide ID, cannot produce proper ID at the polls AND that the provisional ballot will only be counted if the voter returns to the poll before it closes w/ ID or can recite SS# or DL#
- Claims – Supremacy Clause & HAVA: ruled that HAVA did not specify how the first-time voters' identifications should be verified and this method was not unreasonable or too burdensome

Colorado Common Clause v. Davidson, 2004
- Statute: required all voters to show ID (most types permitted) before voting
- Claims:
  - HAVA: ruled that HAVA did not preempt more strict state laws & allowed States to be more strict as long as consistent with the purpose of HAVA (both HAVA & CO provisions' purposes were to prevent voter fraud)
  - Substantive due process and equal protection
    - No improper discrimination
- Preventing voter fraud is a compelling interest since it is irreversible once vote is cast
- Only marginally more intrusive than HAVA, many types of identification permitted – thus, valid

McKay v. Thompson, 2000
- Statute: mandated disclosure of SS # as a precondition to voter registration
- Claims:
  - Privacy Act, Section 7: ruled that Tennessee voter system exempt from Privacy Act because it is pre-75
  - NVRA, permitting only min. amt. of info. necessary to prevent duplicate registration and determine eligibility: ruled that NVRA does not specifically forbid the use of SS#s & the Privacy Act specifically permits them pre-75
  - Substantive due process: ruled that internal use of SS# not a burden
  - Free Exercise, based on Bible’s supposed prohibition on use of universal identifiers: ruled that law is generally applicable and thus valid
  - P&I, Article IV: does not protect in-state citizens
  - P&I, 14th Amend.: no protection for privilege where Congress authorized its infringement

Kemp v. Tucker, 1975
- Statute: required name, occupation, address, sex, race, height, hair color, eye color, and date of birth be listed on voter registration card for identification purposes
- Claims:
  - VRA: ruled that race was not made a “qualification” for voting
  - 15th Amendment: ruled that it did not abridge right to vote on account of race because rejection of application was due to failure to provide information, not race; race only one factor in identification
  - 14th Amendment EPC: ruled there was no distinction among voters

Perez v. Rhiddlehoover, 1966
- Statute: date of birth, place of birth, mother’s first or maiden name, color of eyes, sex, race, occupation, and whether owner, tenant or boarder must appear on the registration for identification
- Claims:
  - VRA: ruled that it was not a “test or device” because it applied equally
  - 15th Amendment: same reasons

Cases in Which the Plaintiffs Have Prevailed in Challenging the Statute Requiring Voter Identification:

This was an action just before the November 2004 election for a temporary restraining order, which was granted. The ACLU challenged a Minnesota law allowing the use of tribal identification cards with the name, address, and photograph as a valid identification (equal to a driver's license) for use in “completing” an incomplete mail-in voter registration only if the Indian lives on the reservation. 2004 WL 2428690, at *1. The Court ruled that this distinction would likely violate the Equal Protection Clause because there was no rational basis for differentiating
between the validity of the identification based on whether or not the cardholder lives on the reservation. Id. at *1, 3.

Secondly, the ACLU challenged a second statute which allowed the use of certain photo identification lacking the voter’s address to be used together with a utility bill or bank statement as valid identification for registration. Id. at *3. The statute did not, however, permit using a tribal identification for this same purpose. Id. The Court ruled that this likely violated the equal protection clause as well. Id.

**Greidinger v. Davis, 988 F.2d 1344 (4th Cir. 1993).**

This case challenged a Virginia law requiring the social security number for voter registration, which the State subsequently disclosed to the public and political parties upon request in voter registration lists, which included the social security numbers. Failure to provide the social security number resulted in the denial of the registration application. The law was challenged under the Equal Protection Clause and under substantive due process. The Court quickly rejected the equal protection challenge because the law made no classification. 988 F.2d at 1350.

The law was invalidated under substantive due process. Id. at 1355. The Court found that the statutory scheme conditioned the fundamental right to vote on the consent to an invasion of privacy, based on concerns of identity theft. Id. at 1353-54. The Court found this to be a substantial burden on the right to vote. Id. at 1354. The Court recognized that the government’s interest in preventing voter fraud was compelling. Id. However, the Court found that disclosure of the information to the public and political parties was not necessary to achieve that interest. Id. Disclosure of addresses or dates of birth would be sufficient to aid the public in distinguishing between two voters with the same name. Id. at 1355. The Court did state that required disclosure of the social security number for internal use only would be valid. Id. at 1354 n.10.

**Cases in Which the Statute or Practice of Voter Identification Has Been Upheld:**

The League of Women Voters challenged the Secretary of State’s directive that provisional ballots should be issued to all first-time voters who registered by mail without providing identification who cannot show proper identification at the polls. 340 F. Supp. 2d at 828. The Directive also stated that the provisional ballots would only be counted if the voter orally recited his driver's license number or the last four digits of his social security number or returned to the polling place before it closed with some acceptable identification, including reciting those identification numbers. Id. The Court stated that HAVA only requires verification of eligibility of first time voters registering by mail; it does not say how that should be done. Id. at 831. The Court found the burden on the right to vote to be slight. Id. The Directive was found valid under HAVA and the Supremacy Clause because the number of uncounted votes would be small, the requirement was reasonable, and there was adequate notice of the requirement on the registration forms. Id. at 829-30.

In this case, the validity of three Colorado statutory provisions was challenged. The laws (1) required all in-person voters to show identification (not just first-time registrants); (2) provided that votes cast in the wrong precinct would not be counted; and (3) provided that
provisional ballots would not be counted if the voter applied for an absentee ballot. 2004 WL 2360485, at *1. The plaintiffs also challenged the provisions under HAVA. The identification provision allowed nearly all forms of acceptable identification under HAVA. *Id.* at *6.

The challenge to the identification requirement failed under both challenges. The Court interpreted HAVA as not intended to preempt state laws and as permitting states to be more strict than, but not inconsistent with, HAVA. *Id.* at *10. The Court felt that the purpose of both laws was the same, to reduce voter fraud, and thus, both laws could coexist. As to the Constitutional claim, both equal protection and substantive due process, the Court felt that preventing voter fraud, which is impossible to remedy once a vote is cast, is a compelling interest, and the Court also felt that a voter identification requirement for all voters, with many types of acceptable identification, was only marginally more intrusive than HAVA. *Id.* at 12. The Court also found no improper discrimination between voters. *Id.* Thus, the provision was upheld.

**McKay v. Thompson, 226 F.3d 752 (6th Cir. 2000).**

The Sixth Circuit ruled that the Privacy Act, the National Voter Registration Act, Substantive Due Process, the Privileges and Immunities Clauses (Fourteenth Amendment & Article IV), and the First Amendment right to free exercise do not prohibit requiring disclosure of social security numbers as a precondition to voter registration.

The Privacy Act, Section 7, mandates that it is unlawful for a government to deny a right or privilege because of a citizen's refusal to disclose his social security number, unless the disclosure was required for a system established prior to 1975. 226 F.3d at 755 (citing Privacy Act of 1974, Pub. L. No. 93-579 (1974)). Since Tennessee required social security numbers for voter registration since 1972, his challenge was rejected. 226 F.3d at 755. Second, the NVRA only permits requiring the minimum amount of information necessary to prevent duplicate voter registration and to determine eligibility. *Id.* at 755-56 (citing 42 U.S.C. §1973gg-3(c)(2)(B)). The Court rejected this challenge because the NVRA does not specifically forbid the use of social security numbers, and the Privacy Act, a more specific statute, grandfathered their use if prior to 1975. 226 F.3d at 756.

Finally, the plaintiff's constitutional claims were all rejected. His substantive due process claim was rejected because internal receipt and use of social security numbers does not burden the fundamental right to vote. *Id.* The free exercise challenge, based on the Bible's supposed prohibition of universal identifiers, was rejected because the law was generally applicable and not directed at particular religious practices. *Id.* The Privileges and Immunities Clause claim was rejected because the Clause does not apply to citizens of the state. *Id.* The Fourteenth Amendment Privileges and Immunities claim, based on the right to vote as unique to U.S. citizenship, was rejected because the Clause provides no protection where Congress has authorized the infringement. *Id.*

A statute was upheld, which required name, occupation, address, sex, race, height, hair color, eye color, and date of birth to be recorded on the voter registration card and allowed registration officials to reject an incomplete application. 396 F. Supp. at 738. Claims were alleged under the Fourteenth Amendment's Equal Protection Clause, the Fifteenth Amendment, and the Voting Rights Act.

As to the Fourteenth and Fifteenth Amendment claims, the Court reasoned that preventing voter fraud is a compelling goal, and identification provisions are "an essential means of achieving the goal." *Id.* at 739. The Court also rejected the equal protection claim because the statutes did not create a distinction at all. *Id.* at 740 n.3. Since race is just one of
several characteristics required, the Court found that it was intended for preventing voter fraud, not some other motive.  Id. at 740.  As to the VRA, the Court rejected the claim that it added race as a qualification for voting as frivolous.  Id. As to a Fifteenth Amendment claim that it abridged the right to vote on account of race, the Court also made a distinction between rejecting a voter application because of race and rejecting an application because of failure to answer all relevant questions to assist in preventing voter fraud.  Id. The statute was upheld.

A voter registration requirement was challenged and upheld. The statute stated that date of birth, place of birth, mother’s first or maiden name, color of eyes, sex, race, occupation, and whether owner, tenant or boarder must appear on the registration. 186 So.2d at 690. This information was required for identification of voters, especially when voters had the same name, to prevent duplicate voting. It was challenged under the Voting Rights Act of 1965 Section 4(a) which prohibits denying the right to vote for failure to comply with a “test or device.”  The Court felt that this requirement was not a test or device for discrimination because it applied equally. Id. at 691. The Court also determined that it was not in conflict with the Fifteenth Amendment either. Id.

Friendly House, et al. v. Janet Napolitano et al., CV 04-649 TUC DCB

On November 30, 2004, the Mexican American Legal Defense and Educational Fund (MALDEF) filed suit seeking to halt the implementation of Proposition 200. Proposition 200 created a number of legal requirements to ensure that public benefits are not available to illegal immigrants. In particular, Proposition 200 requires that a person attempting to register to vote provide one of six specific forms of proof of United States citizenship. Compl. 12-13. Also, any person attempting to vote must present either one form of photo identification or two forms of non-photo identification. Id. at 13.

The lawsuit alleges two violations that directly relate to the voting identification restrictions. First, the lawsuit alleges a violation of the Twenty-Fourth and Fourteenth amendments in that a voter must pay a poll tax by spending money to purchase the required identification. Id. at 20. Second, the lawsuit alleges violation of the Voting Rights Act. Id. at 21. The lawsuit was recently dismissed by the 9th Circuit Court of Appeals for a lack of standing. The Circuit Court found that there was no injury-in-fact, meaning that once an injury occurs the suit will likely be refiled. Additionally, it should be noted that the voter identification issue is only a part of the lawsuit, and much of the focus has been on other aspects of Proposition 200.

Current Litigation Concerning Voter ID Issues

Litigation is filled with uncertainty. Litigation stemming from newly passed voter identification requirements will continue into the foreseeable future. Lawsuits are currently pending over voter identification requirements in Georgia and Indiana. Other states, such as Ohio, are considering new identification requirements that could lead to further litigation. The Georgia lawsuit has already succeeded in getting a preliminary injunction against the law in question, which will likely galvanize interested parties in other states to pursue similar litigation. Of course, if the injunction is eventually overturned at the appellate level it could have a similar chilling affect on future litigation.

This summary major litigation pending in Georgia and Indiana includes a brief assessment of the likelihood of success:

---

17 As of January 2, 2006
Georgia (Common Cause/Georgia v. Billups):

On September 19, 2005, Common Cause of Georgia, in conjunction with several other non-profit organizations, filed suit in Federal District Court against the Georgia Secretary of State and other election officials, challenging the constitutionality of Georgia’s new voter identification requirements. The new law requires all voters attempting to cast a ballot in person to present a valid form of photographic identification. O.C.G.A. § 21-2-417. A voter that is unable to provide proper identification is given a provisional ballot. However, that provisional ballot will be counted only if the voter is able to subsequently present valid identification within two days of the election. Id.

The lawsuit alleges five separate violations of state and federal law. First, the complaint alleges that the identification requirements infringe on the right to vote guaranteed in the Georgia constitution (Compl. 32). In addition, the Plaintiffs claim violations of the Federal Civil Rights Act and Voting Rights Act. (Compl. 36,38). Finally, the lawsuit alleges violations of the Fourteenth and Twenty-Fourth amendments to the U.S. Constitution. The complaint claims that the ID requirements constitute an “undue burden” on the right to vote, in violation of the Equal Protection Clause of the Fourteenth Amendment (Compl. 34). The ID requirement does not apply to most absentee voters, and thus the requirement is also over-broad and not narrowly tailored to address the stated purpose of preventing voter fraud (Compl. 34). The complaint further alleges that the cost of obtaining a photo ID constitutes a poll tax, in violation of the Twenty-Fourth Amendment, and that the cost is also a violation of the Fourteenth Amendment because it applies to voters who choose to vote in person, and not to those who vote absentee (Compl. 34,35).

On October 18, 2005, the District Court granted the Plaintiff’s motion for a preliminary injunction, enjoining the application of the new identification requirements. In granting the injunction, the court held that both federal constitutional claims had a substantial likelihood of succeeding on the merits at trial (Prelim. Inj. 96, 104). The court also held that, while the two federal statutory claims were plausible, they both lacked sufficient evidence at the time to have a substantial likelihood of success. (Prelim. Inj. 109,111,116). Finally, the court held that the Georgia constitutional claim would be barred by the Eleventh Amendment to the U.S. Constitution. (Prelim. Inj. 77).

The Defendants appealed the motion for preliminary injunction to the Eleventh Circuit, and oral argument is scheduled for March 1, 2006. In addition, some news reports have claimed that the Georgia legislature is considering re-visiting the ID requirements in light of the on-going litigation. As for the merits, in granting the preliminary injunction the District Court has already signaled its belief that the federal constitutional claims are likely merituous. The Eleventh Circuit may have a different view, but for now the case looks to have a reasonable chance of success.

Indiana (Indiana Democratic Party v. Rokita and Crawford v. Marion County Election Board):

The Indiana lawsuit is similar to its Georgia counterpart in content, though not in status. In Indiana separate lawsuits, now joined, were filed by the state Democratic Party and the

---

18 Litigation documents are available at the Election Law @ Moritz website. http://moritzlaw.osu.edu/electionlaw/litigation/index.php
Indiana Civil Liberties Union (ICLU). The Democratic Party’s lawsuit is directed against the Indiana Secretary of State, while the ICLU’s lawsuit involves the Marion County Board of Elections and the State of Indiana. Like Georgia, Indiana law also requires citizens voting in person to present some form of official photo identification. IC § 3-11-8-25.1. Voters unable to present identification are given a provisional ballot, which is counted if they are able to provide the required identification by Noon on the second Monday following the election. IC § 3-11.7-5-1. Unlike Georgia, Indiana provides state issued identification at no charge. However, there are costs involved in the process, including transportation to the Bureau of Motor Vehicles, and payment for documents such as birth certificates, which are needed to obtain the ID. (Second Am. Compl. 6).

The Democratic Party’s complaint raises Fourteenth Amendment claims similar to those in the Georgia lawsuit, including concerns about substantially burdening the right to vote, the enactment of a de-facto poll tax from the costs indirectly associated with obtaining ID, and the lack of applicability to voters who cast an absentee ballot. (Second Am. Compl. 6-9). In addition, the complaint alleges that the substantial burden placed on the right to vote violates the First Amendment protection of expressive or symbolic speech, as well as the freedom of association as applied to Democratic primary elections. (Second Am. Compl. 9-10). Finally, the complaint alleges violations of the Voting Rights Act, National Voter Registration Act, and the Help America Vote Act (Second Am. Compl. 10-11). The ICLU’s complaint alleges many of the same violations, but also includes claims of a violation of Indiana’s constitutional guarantee of a free and equal election system. (Compl. 15)

The case is currently in the pre-trial phase, with both sides awaiting decisions on their respective motions for summary judgment.20 The likelihood of success is bolstered by the fact that the Fourteenth amendment constitutional claims have already been found persuasive by at least one other Federal District Court. However, the Indiana law is notably different than its Georgia counterpart in that it provides free identification. While the plaintiffs make a solid argument that related costs still amount to a poll-tax, it is possible that the court could distinguish on this matter.

Unlike the Georgia case, the Indiana lawsuit also claims a violation of the Help America Vote Act. Although the claim is not completely clear, it seems as though the Plaintiffs are arguing that the Indiana statute requires more stringent identification than what is required by HAVA. 42 U.S.C. § 15483(b)(1)-(2). While this is true, it is unclear how this violates the statute. HAVA merely states that certain voters unable to produce HAVA required identification be given a provisional ballot. Id. Indiana law meets this requirement. IC § 3-11-8-25.1. Although Indiana law requires more stringent identification for counting the provisional ballot, HAVA leaves these decisions to state law. 42 U.S.C. § 15482(a).

---

20 According to an AP article, the Plaintiffs filed some type of brief on December 21—however it is not yet up on the Moritz website and I am unsure how to access it otherwise.
APPENDIX

Annotated Bibliography on Voter Identification Issues

Law Journals

  - Discusses HAVA a lot
  - Benefits of US adopting Mexican system of identifying voters and voter registration
  - Discusses HAVA, problems of 2000 election, discusses registration & identification
  - Discussion of HAVA requirements and voter ID, problems in 2000
  - Discusses changes in AL to their election law in 2003, including adding voter ID
  - HAVA discussed
  - Discusses challenging elections based on voter fraud & illegal votes
  - Discusses a GA law in 2001 removing hunting & fishing licenses from list of acceptable ID and a failed amendment to limit acceptable ID to photo ID only
  - General discussion of ways voters are verified, what happens when voters are challenged as illegal voters
  - Discusses a photo ID law passed in Michigan in 1997 (later declared violated EPC of 14th amendment)
  - Arguments against photo ID
  - Discusses voter registration as a way to combat fraud & several different ways to do it

Historical articles:

  - Lot of analysis on HAVA and voter ID
  - Little bit of historical
  - Arguments for and against certain types of voter ID laws
- History of voting & requirements & laws throughout time
- Future: I-voting & e-registration – improvements in voter ID which would result

**Marginally relevant/limited discussion of Voter ID issues**
  - Discusses HAVA & implementation
  - Discusses an Ala. law expanding exemptions to ID requirement if 2 poll workers identify them
  - Internet voting

Appendix
Status Report on the
Voting Fraud-Voter Intimidation Research Project

May 17, 2006
INTRODUCTION

Section 241 of the Help America Vote Act of 2002 (HAVA) requires EAC to conduct research on election administration issues. Among the tasks listed in the statute is the development of:

- nationwide statistics and methods of identifying, deterring, and investigating voting fraud in elections for Federal office [section 241(b)(6)]; and
- ways of identifying, deterring, and investigating methods of voter intimidation [section 241(b)(7)].

EAC's Board of Advisors recommended that the agency make research on these matters a high priority.

FOCUS OF CURRENT RESEARCH

In September 2005, the Commission hired two consultants with expertise in this subject matter, Job Serebrov and Tova Wang, to:

- develop a comprehensive description of what constitutes voting fraud and voter intimidation in the context of Federal elections;
- perform background research (including Federal and State administrative and case law review), identify current activities of key government agencies, civic and advocacy organizations regarding these topics, and deliver a summary of this research and all source documentation;
- establish a project working group, in consultation with EAC, composed of key individuals and representatives of organizations knowledgeable about the topics of voting fraud and voter intimidation;
- provide the description of what constitutes voting fraud and voter intimidation and the results of the preliminary research to the working group, and convene the working group to discuss potential avenues for future EAC research on this topic; and
- produce a report to EAC summarizing the findings of the preliminary research effort and working group deliberations that includes recommendations for future research, if any;

As of the date of this report, the consultants have drafted a definition of election fraud, reviewed relevant literature and reports, interviewed persons from government and private sectors with subject matter expertise, analyzed news reports of alleged election fraud, reviewed case law, and established a project working group.
DEGINITION OF ELECTION FRAUD

The consultants drafted a definition of election fraud that includes numerous aspects of voting fraud (including voter intimidation, which is considered a subset of voting fraud) and voter registration fraud, but excludes campaign finance violations and election administration mistakes. This draft will be discussed and probably refined by the project working group, which is scheduled to convene on May 18, 2006.

LITERATURE REVIEW

The consultants found many reports and books that describe anecdotes and draw broad conclusions from a large array of incidents. They found little research that is truly systematic or scientific. The most systematic look at fraud appears to be the report written by Lori Minnite, entitled “Securing the Vote: An Analysis of Election Fraud”. The most systematic look at voter intimidation appears to be the report by Laughlin McDonald, entitled “The New Poll Tax”. The consultants found that books written about this subject all seem to have a political bias and a pre-existing agenda that makes them somewhat less valuable.

Moreover, the consultants found that reports and books make allegations but, perhaps by their nature, have little follow up. As a result, it is difficult to know when something has remained in the stage of being an allegation and gone no further, or progressed to the point of being investigated or prosecuted or in any other way proven to be valid by an independent, neutral entity. This is true, for example, with respect to allegations of voter intimidation by civil rights organizations, and, with respect to fraud, John Fund’s frequently cited book, “Stealing Elections”.

Consultants found that researchers agree that measuring something like the incidence of fraud and intimidation in a scientifically legitimate way is extremely difficult from a methodological perspective and would require resources beyond the means of most social and political scientists. As a result, there is much more written on this topic by advocacy groups than social scientists.

Other items of note:

- There is as much evidence, and as much concern, about structural forms of disenfranchisement as about intentional abuse of the system. These include felon disenfranchisement, poor maintenance of databases and identification requirements.

- There is tremendous disagreement about the extent to which polling place fraud, e.g. double voting, intentional felon voting, noncitizen voting, is a serious problem. On balance, more researchers find it to be less of a problem than is commonly described in the political debate; but some reports say it is a major problem, albeit hard to identify.
• There is substantial concern across the board about absentee balloting and the opportunity it presents for fraud.

• Federal law governing election fraud and intimidation is varied and complex and yet may nonetheless be insufficient or subject to too many limitations to be as effective as it might be.

• Deceptive practices, e.g. targeted flyers and phone calls providing misinformation, were a major problem in 2004.

• Voter intimidation continues to be focused on minority communities, although the American Center for Voting Rights uniquely alleges it is focused on Republicans.

Recommendations
The consultants recommend that subsequent EAC research include a follow up study of allegations made in reports, books and newspaper articles. They also suggest that the research should focus on filling the gap between the lack of reports based on methodical studies by social or political scientists and the numerous, but less scientific, reports published by advocacy groups.

INTERVIEWS
The consultants jointly selected experts from the public and private sector for interviews. The consultants’ analysis of their discussions with these members of the legal, election official, advocacy, and academic communities follows.

Common Themes
• There is virtually universal agreement that absentee ballot fraud is the biggest problem, with vote buying and registration fraud coming in after that. The vote buying often comes in the form of payment for absentee ballots, although not always. Some absentee ballot fraud is part of an organized effort; some is by individuals, who sometimes are not even aware that what they are doing is illegal. Voter registration fraud seems to take the form of people signing up with false names. Registration fraud seems to be most common where people doing the registration were paid by the signature.

• There is widespread but not unanimous agreement that there is little polling place fraud, or at least much less than is claimed, including voter impersonation, “dead” voters, noncitizen voting and felon voters. Those few who believe it occurs often enough to be a concern say that it is impossible to show the extent to which it happens, but do point to instances in the press of such incidents. Most people believe that false registration forms have not resulted in polling place fraud,
although it may create the perception that vote fraud is possible. Those who believe there is more polling place fraud than reported/investigated/prosecuted believe that registration fraud does lead to fraudulent votes. Jason Torchinsky from the American Center for Voting Rights is the only interviewee who believes that polling place fraud is widespread and among the most significant problems in the system.

- Abuse of challenger laws and abusive challengers seem to be the biggest intimidation/suppression concerns, and many of those interviewed assert that the new identification requirements are the modern version of voter intimidation and suppression. However there is evidence of some continued outright intimidation and suppression, especially in some Native American communities. A number of people also raise the problem of poll workers engaging in harassment of minority voters. Other activities commonly raised were the issue of polling places being moved at the last moment, unequal distribution of voting machines, videotaping of voters at the polls, and targeted misinformation campaigns.

- Several people indicate that, for various reasons, DOJ is bringing fewer voter intimidation and suppression cases now, and has increased its focus on matters such as noncitizen voting, double voting, and felon voting. Interviews with DOJ personnel indicate that the Voting Section, Civil Rights Division, focuses on systemic patterns of malfeasance in this area. While the Election Crimes Branch, Public Integrity Section, continues to maintain an aggressive pursuit of systematic schemes to corrupt the electoral process (including voter suppression), it also has increased prosecutions of individual instances of felon, alien, and double voting.

- The problem of badly kept voter registration lists, with both ineligible voters remaining on the rolls and eligible voters being taken off, remains a common concern. A few people are also troubled by voters being on registration lists in two states. They said that there was no evidence that this had led to double voting, but it opens the door to the possibility. There is great hope that full implementation of the new requirements of HAVA – done well, a major caveat – will reduce this problem dramatically.

**Common Recommendations:**

- Many of those interviewed recommend better poll worker training as the best way to improve the process; a few also recommended longer voting times or voting on days other than election day (such as weekends) but fewer polling places so only the best poll workers would be employed.

- Many interviewed support stronger criminal laws and increased enforcement of existing laws with respect to both fraud and intimidation. Advocates from across the spectrum expressed frustration with the failure of the Department of Justice to pursue complaints.
o With respect to DOJ’s Voting Section, Civil Rights Division, John Tanner indicated that fewer cases are being brought because fewer are warranted – it has become increasingly difficult to know when allegations of intimidation and suppression are credible since it depends on one's definition of intimidation, and because both parties are doing it. Moreover prior enforcement of the laws has now changed the entire landscape – race based problems are rare now. Although challenges based on race and unequal implementation of identification rules would be actionable, Mr. Tanner was unaware of such situations actually occurring and his office has not pursued any such cases.

o Craig Donsanto of DOJ’s Election Crimes Branch, Public Integrity Section, says that while the number of election fraud related complaints have not gone up since 2002, nor has the proportion of legitimate to illegitimate claims of fraud, the number of cases DOJ is investigating and the number of indictments his office is pursuing are both up dramatically. Since 2002, in addition to pursuing systematic election corruption schemes, DOJ has brought more cases against alien voters, felon voters and double voters than ever before. Mr. Donsanto would like more resources so that his agency can do more and would like to have laws that make it easier for the federal government to assume jurisdiction over voter fraud cases.

• A couple of interviewees recommend a new law that would make it easier to criminally prosecute people for intimidation even when there is not racial animus.

• Several advocate expanded monitoring of the polls, including some associated with the Department of Justice.

• Almost everyone hopes that administrators will maximize the potential of statewide voter registration databases to prevent fraud.

• Challenge laws, both with respect to pre-election day challenges and challengers at the polls, need to be revised by all states to ensure they are not used for purposes of wrongful disenfranchisement and harassment.

• Several people advocate passage of Senator Barak Obama’s “deceptive practices” bill.

• There is a split on whether it would be helpful to have nonpartisan election officials – some indicated they thought even if elections officials are elected as non partisan officials, they will carry out their duties in biased ways nonetheless. However, most agree that elections officials pursuing partisan agendas are a problem that must be addressed in some fashion. Suggestions included moving election responsibilities out of the secretary of states’ office; increasing transparency in the process; and enacting conflict of interest rules.
- A few recommend returning to allowing use of absentee ballots “for cause” only if it were politically feasible.

- A few recommend enacting a national identification card, including Pat Rogers, an attorney in New Mexico, and Jason Torchinsky from ACVR, who advocates the proposal in the Carter-Baker Commission Report.

- A couple of interviewees indicated the need for clear standards for the distribution of voting machines

NEWS ARTICLES

Consultants conducted a Nexis search of related news articles published between January 1, 2001 and January 1, 2006. A systematic, numerical analysis of the data collected during this review is currently being prepared. What follows is an overview of these articles provided by the consultants.

Absentee Ballots

According to press reports, absentee ballots are abused in a variety of ways:

- Campaign workers, candidates and others coerce the voting choices of vulnerable populations, usually elderly voters.

- Workers for groups and individuals have attempted to vote absentee in the names of the deceased.

- Workers for groups, campaign workers and individuals have attempted to forge the names of other voters on absentee ballot requests and absentee ballots and thus vote multiple times.

It is unclear how often actual convictions result from these activities (a handful of articles indicate convictions and guilty pleas), but this is an area in which there have been a substantial number of official investigations and actual charges filed, according to news reports where such information is available. A few of the allegations became part of civil court proceedings contesting the outcome of the election.

While absentee fraud allegations turn up throughout the country, a few states have had several such cases. Especially of note are Indiana, New Jersey, South Dakota, and most particularly, Texas. Interestingly, there were no articles regarding Oregon, where the entire system is vote by mail.
Voter Registration Fraud

According to press reports, the following types of allegations of voter registration fraud are most common:

- Registering in the name of dead people;
- Fake names and other information on voter registration forms;
- Illegitimate addresses used on voter registration forms;
- Voters being tricked into registering for a particular party under false pretenses; and
- Destruction of voter registration forms depending on the party the voter registered with.

There was only one self evident instance of a noncitizen registering to vote. Many of the instances reported included official investigations and charges filed, but few actual convictions, at least from the news reporting. There have been multiple reports of registration fraud in California, Colorado, Florida, Missouri, New York, North Carolina, Ohio, South Dakota, and Wisconsin.

Voter Intimidation and Suppression

This is the area which had the most articles, in part because there were so many allegations of intimidation and suppression during the 2004 election. Most of these remained allegations and no criminal investigation or prosecution ensued. Some of the cases did end up in civil litigation.

This is not to say that these alleged activities were confined to 2004 – there were several allegations made during every year studied. Most notable were the high number of allegations of voter intimidation and harassment reported during the 2003 Philadelphia mayoral race.

A very high number of the articles were about the issue of challenges to voters’ registration status and challengers at the polling places. There were many allegations that planned challenge activities were targeted at minority communities. Some of the challenges were concentrated in immigrant communities.

However, the tactics alleged varied greatly. The types of activities discussed also include the following:

- Photographing or videotaping voters coming out of polling places;
- Improper demands for identification;
• Poll watchers harassing voters;
• Poll workers being hostile to or aggressively challenging voters;
• Disproportionate police presence;
• Poll watchers wearing clothes with messages that seemed intended to intimidate; and
• Insufficient voting machines and unmanageably long lines.

Although the incidents reported on occurred everywhere, not surprisingly, many came from “battleground” states. There were several such reports out of Florida, Ohio, and Pennsylvania.

“Dead Voters and Multiple Voting”

There were a high number of articles about people voting in the names of the dead and voting more than once. Many of these articles were marked by allegations of big numbers of people committing these frauds, and relatively few of these allegations turning out to be accurate according to investigations by the newspapers themselves, elections officials, and criminal investigators. Often the problem turned out to be a result of administrative error, poll workers mis-marking voter lists, a flawed registration list and/or errors made in the attempt to match names of voters on the list with the names of the people who voted. In a good number of cases, there were allegations that charges of double voting by political leaders were an effort to scare people away from the voting process.

Nonetheless there were a few cases of people actually being charged and/or convicted for these kinds of activities. Most of the cases involved a person voting both by absentee ballot and in person. A few instances involved people voting both during early voting and on Election Day, which calls into question the proper marking and maintenance of the voting lists. In many instances, the person charged claimed not to have voted twice on purpose. A very small handful of cases involved a voter voting in more than one county and there was one substantiated case involving a person voting in more than one state. Other instances in which such efforts were alleged were disproved by officials.

In the case of voting in the name of a dead person, the problem lay in the voter registration list not being properly maintained, i.e. the person was still on the registration list as eligible to vote, and a person took criminal advantage of that. In total, the San Francisco Chronicle found five such cases in March 2004; the AP cited a newspaper analysis of five such persons in an Indiana primary in May 2004; and a senate committee found two people to have voted in the names of the dead in 2005.
As usual, there were a disproportionate number of such articles coming out of Florida. Notably, there were three articles out of Oregon, which has one hundred percent vote-by-mail.

**Vote Buying**

There were a surprising number of articles about vote buying cases. A few of these instances involved long-time investigations concentrated in three states (Illinois, Kentucky, and West Virginia). There were more official investigations, indictments and convictions/pleas in this area.

**Deceptive Practices**

In 2004 there were numerous reports of intentional disinformation about voting eligibility and the voting process meant to confuse voters about their rights and when and where to vote. Misinformation came in the form of flyers, phone calls, letters, and even people going door to door. Many of the efforts were reportedly targeted at minority communities. A disproportionate number of them came from key battleground states, particularly Florida, Ohio, and Pennsylvania. From the news reports found, only one of these instances was officially investigated, the case in Oregon involving the destruction of completed voter registration applications. There were no reports of prosecutions or any other legal proceeding.

**Non-citizen Voting**

There were surprisingly few articles regarding noncitizen registration and voting – just seven all together, in seven different states across the country. They were also evenly split between allegations of noncitizens registering and noncitizens voting. In one case, charges were filed against ten individuals. In another case, a judge in a civil suit found there was illegal noncitizen voting. Three instances prompted official investigations. Two cases, from this Nexis search, remained just allegations of noncitizen voting.

**Felon Voting**

Although there were only thirteen cases of felon voting, some of them involved large numbers of voters. Most notably, of course, are the cases that came to light in the Washington gubernatorial election contest (see Washington summary) and in Wisconsin (see Wisconsin summary). In several states, the main problem was the large number of ineligible felons that remained on the voting list.

**Election Official Fraud**

In most of the cases in which fraud by elections officials is suspected or alleged, it is difficult to determine whether it is incompetence or a crime. There are several cases of ballots gone missing, ballots unaccounted for and ballots ending up in a worker’s possession. In two cases workers were said to have changed peoples’ votes. The one
instance in which widespread ballot box stuffing by elections workers was alleged was in Washington State. The judge in the civil trial of that election contest did not find that elections workers had committed fraud. Four of the cases are from Texas.

Recommendation

The consultants recommend that subsequent EAC research should include a Nexis search that specifically attempts to follow up on the cases for which no resolution is evident from this particular initial search.

CASE LAW RESEARCH

After reviewing over 40,000 cases from 2000 to the present, the majority of which came from appeals courts, the consultants found comparatively few applicable to this study. Of those that were applicable, the consultants found that no apparent thematic pattern emerges. However, it appears to them that the greatest areas of fraud and intimidation have shifted from past patterns of stealing votes to present problems with voter registration, voter identification, the proper delivery and counting of absentee and overseas ballots, provisional voting, vote buying, and challenges to felon eligibility.

Recommendation

Because so few cases provided a picture of these current problems, consultants suggest that subsequent EAC research include a review of state trial-level decisions.

PROJECT WORKING GROUP

Consultants and EAC worked together to select members for the Voting Fraud-Voter Intimidation Working Group that included election officials and representatives of advocacy groups and the legal community who have an interest and expertise in the subject matter. (See Attachment A for a list of members.) The working group is scheduled to convene at EAC offices on May 18, 2006 to consider the results of the preliminary research and to offer ideas for future EAC activities concerning this subject.

FINAL REPORT

After convening the project working group, the consultants will draft a final report summarizing the results of their research and the working group deliberations. This report will include recommendations for future EAC research related to this subject matter. The draft report will be reviewed by EAC and, after obtaining any clarifications or corrections deemed necessary, will be made available to the EAC Standards Board and EAC Board of Advisors for review and comment. Following this, a final report will be prepared.
Attachment A

Voting Fraud-Voter Intimidation Project Working Group

The Honorable Todd Rokita
Indiana Secretary of State
Member, EAC Standards Board and the Executive Board of the Standards Board

Kathy Rogers
Georgia Director of Elections, Office of the Secretary of State
Member, EAC Standards Board

J.R. Perez
Guadalupe County Elections Administrator, TX

Barbara Arnwine
Executive Director, Lawyers Committee for Civil Rights Under Law
Leader of Election Protection Coalition
(To be represented at May 18, 2006 meeting by Jon M. Greenbaum, Director of the Voting Rights Project for the Lawyers Committee for Civil Rights Under Law)

Robert Bauer
Chair of the Political Law Practice at the law firm of Perkins Coie, DC
National Counsel for Voter Protection, Democratic National Committee

Benjamin L. Ginsberg
Partner, Patton Boggs LLP
Counsel to national Republican campaign committees and Republican candidates

Mark (Thor) Hearne II
Partner-Member, Lathrop & Gage, St Louis, MO
National Counsel to the American Center for Voting Rights

Barry Weinberg
Former Deputy Chief and Acting Chief, Voting Section, Civil Rights Division, U.S. Department of Justice

EAC Invited Technical Advisor:

Craig Donsanto
Director, Election Crimes Branch, U.S. Department of Justice
U.S. ELECTION ASSISTANCE COMMISSION
STANDARDS BOARD MEETING

Taken at the Hamilton Crown Plaza Hotel
1001 14th Street, Northwest
Washington, D.C.

Taken on the date of:
Tuesday, May 23, 2006

Start time: 10:00 o'clock, a.m.

Taken before: Pauline Jansen, court reporter

AGENDA:
1 Brief Welcoming Remarks
   Commissioner Ray Martinez
2 EAC Staff Presentations:
3 Legal on-line Information
   Julie Hodgkins
4 Clearinghouse
   Karen Lynn-Dyson
5 Design for Democracy

Page 1
Public Access Portals
Spanish and Asian Language Working Groups
Standards Board Plenary Session:
1) Adoption of Parliamentarian
2) Adoption of Agenda
3) Review of Meeting
4) Review of Present Standards Board Bylaws
5) Briefing on Re-adoption of Standards Board Charter
6) Election of Executive Board Vacancy
DISCUSSION DRAFT REPORT ON PROVISIONAL VOTING
Presenters: Thomas O'Neill and Edward Foley
DISCUSSION: RESEARCH ON POLL WORKER RECRUITMENT, TRAINING AND RETENTION
Presenters: Jennifer Collins-Foley and Abby Horn

MR. MARTINEZ: Good afternoon, everybody.
Please continue with your lunch. We are going to get started with the program. And what I am going to do for a quick two or three minutes is just to lay the groundwork if you will and try to let you all know what we are going to attempt to accomplish over the next couple of days. And give you an idea as to what issues we hope to put in front of you et. Cetera.
Again I am Ray Martinez. I am a Commissioner with the U.S. Elections Assistance Commission. I do want you to recognize my esteemed colleague the former Secretary of State of the great State of Colorado and now Commissioner with EAC, Betty Davidson. Madame
Commissioner if you will stand up (Applause).

What we hope to accomplish—well, we are here to discuss and get advice, the EAC, to get advice from our Statutory Advisory Boards. We have two main Statutory Advisory Boards created by (inaudible) which is our government statute. One is the Board of Advisors which is meeting up on the second floor and is conducting concurrent meetings doing and hearing exactly the same issues that you all will be hearing about as well.

We have a presenter upstairs and as soon as they are done we switch places and we will run concurrent agenda with the Board of Advisors upstairs.

And of course our second important Advisory Board committee is this great body right here and that is the 110 Member Standards Board.

What we have done in preparing your agenda for this particular meeting is different from what we did in Denver last September, In Denver last September we had a very important issue that we had to put before our two Statutory Advisory Boards and the Board of Advisors met separately for that meeting in a different location.

What we did is focus on the voluntary voting system guidelines lines back in Denver back in September of last year. We broke up into break out sessions on the various aspects of the BBSG, security,
accessibility human factors et cetera. We had a very productive meeting about the voluntary voting system guidelines.

For this particular meeting what you have is an agenda full of Commissions and working EAC research projects. Just about our full research agenda will be presented to you throughout the next two days. And the reason for us to do that is because the EAC--a very important function of the EAC in addition to working as your full partner in implementing the various requirements in HAVA will also be a national clearing house for best practices on election administration. And to be able to fully play and fulfill that role as an agency it is incumbent upon us to commission objective and professional and sound research so we can fully inform our partners in the election community and in the advocacy community, all our stakeholders as to what we find our best practices in election administration.

So you will hear a series of presentations that begin almost immediately as soon as I get off the podium here. They will start to tell you here are the things that we are working. And the goal that we want to try to accomplish in the next day and a half is to get your candid advice of what we are working on.
strongly encourage as much feed back questions whether they are positive or challenging. We want to get a sense of direction on the projects we are going to be presenting to you over the next day and a half. So we want to encourage your candid interaction as you hear these presentations and we need to get fully informed as to the direction that we are headed.

So the goal of this meeting is to give you a full briefing of all of our research projects we are working on. If you look at the agenda you will see at the end of the next day and a half, meaning tomorrow afternoon, you will have a two block. And that block can be extended even further if necessary for a plenary session time were you will be able to talk among yourselves as members of the Standards Board and to discuss what you heard from the EAC and if necessary if it is so desired pass resolutions and speak formally as a Standards Board, as an Advisory Board as to your collective opinion about the work that we are doing here.

We truly value the feed back we get from all of you. We don't just meet in a vacuum. I see so many
faces out in this room that we at the EAC call on just about every day for advice and for input. 

So it is a very unique situation for us to have so many of you that we call upon almost daily to have you all collectively in the same room and to be able to draw from your vast experience and expertise for the next day and a half. We feel very fortunate to have you here. We are very thankful that you have traveled a great distance for many of you to spend the next day and a half with us. Thank you in advance.

So with that let me say I do need to announce anybody that needs to have an interpreter or signage can come and sit in the front row or we will make better accommodations for you to have a better view of the interpreter. This meeting is open to the public as have all of our Standards Board meetings have been. So there is a section in the back where non Standards Board Members are present. However Q and A and actual interaction is limited to the Standards Board members who are present. The members of the public who are here may observe but they may not ask questions or engage in any of the discussions or
presentations. It is strictly for the members of the Standards Board.

After we do some quick presentations here for the remainder of our lunch hour this meeting will be turned over the members of your executive board, meaning your acting chair, Peggy Nighswonger and her colleagues on the Executive Board, will then come up to the head table and begin to work you through the agenda and solicit your feedback.

So with that I will go ahead and ask our first presenter, our current General Counsel, Julie Thompson Hodgkins to come up and give us a brief presentation on our Legal Resources web page. After that we will have three more presentations. And then we will take a break and go into your first Plenary Session. Julie, if you will come up, please.

MS. THOMPSON-HODGKINS: Thank you Mr. Martinez and welcome everyone to Washington D.C. I am so pleased to be the first presenter. To be able to talk about, well, what is a small project for EAC, but one that I hope will bring a lot of value to the election.

Just to briefly give you a little insight
into this project I remember the days back when I was a
State Election Administrator being general counsel for
the Department of Elections in Louisiana thinking it
really would be nice to have one source to be able to
go to take a look at all of the laws, all of the
regulations, all of the cases country wide that dealt
with elections.

I remember those days when you got frantic
calls from the Legislature wanting to know how another
state dealt with provisional voting or casting ballots
or absentee voting or what have you and wishing I had a
resource.

Actually at the Denver meeting I took a
little poll of a few of you asking what you would think
about EAC putting together this kind of resource. And
it got some support. I brought it to the Commissioners
and said, you know, hey what do you think about this?
And they thought it was a good idea to.

So what we are doing is putting together a
website to provide access for all of you, all the
members of the public, to legal materials related to
elections. It will provide you with up to date
information, current statues, current cases, and in a
format that is user friendly.

We decided to start this project with a
rather simple focus and that is State and Federal elections. Anything from State Constitutions, Federal Constitutions, Federal law, such as Help America Vote Act, and NVRA, The Voting Rights Act. Certainly the Voting Accessibility for the Elderly and Handicapped, ADA and the rehab act. Anything that we could think of either in the Federal or State arena in terms of Legislation that would impact the elections process.

We are also going to have State Statutes. Constitutions, Administrative Rules and Regs. They will be categorized by state and by topical area. So if you're interested in knowing how California deals with provisional voting you can go to California and take a look at Provisional Voting Statutes or cases. The same thing with voting equipment and various other categories.

However if you are looking for a broader search you will also be able to key in the terms that you're interested in finding and take a look across all of the States to see a sort of panorama of how that particular topic is dealt with.

As far as the cases are concerned we asked our contractor to summarize the cases for you at the beginning so that you didn't have to read the whole
case in order to determine whether or not it was
something that really applied to your particular
situation. You will also have a link to the full text
of that decision. We started with a narrow focus and
that is State and Federal elections particularly Help
America Vote Act and the NVRA, and those issues which
would be the most important to you guys as you are
implementing HAVA.

As far as the time line is concerned on this
project our contractor is just about finished
identifying all of the resources that we need to be
contained in the data base. They are in the process of
summarizing those cases. And we will be populating that
data base.

I am thrilled actually today to be able to
give you a little bit of a preview of the data base. I
hope you guys can see this. The text is a little small.

But these are some screen shots that we have. And this
a look into the actual key word search where you would
be able to enter in for instance: "Cast Ballot". And
pull up cases, statutes, regulations that deal with how
various different states are casting ballots. You can
also of course, as I told you before, search by
category or by state. So there will be a browsing
function there that you can go to those into a drop
down menu and choose from various different sources. And this is sort of an example of what the results page would look like. The information that you will be needing. We are very excited about this. I hope that you guys share the excitement and hope this will be a great resource for you. This is another little screen shot here of browsing a particular record for a single state.

If you have any questions, comments anything that I can answer right now I would be happy to take questions.

MS. LYNN BAILEY: (Georgia) when do you anticipate that project will be available for the public.

MS. THOMPSON-HODGKINS: I believe the tract that the contractor is on right now we should have this up by mid July. They are well into identifying all of the resources. There are quite a number of cases that they have summarized. But we try to ask them to do that on a priority bases, the newest cases first so that we can get that information out to you in that time frame.

BRAD CLARK: (California) Will this be available to a regular EAC website? Will there be a be
a link to that legal resources.

MS. THOMPSON-HODGKINS: That is correct. There will be a link to Legal Resources Clearing House or Legal resources. You will be able to just go get that right off the EAC page.

The court Reporter has asked me to tell those who are speaking to identify yourselves so we will know who is speaking. Thank you so much for this opportunity to come and talk to you about this. I will be around for the next day and a half. So if any other questions come up with regard to Legal Resource Clearing House or in regard to anything else please do not hesitate to come and find me.

MR. MARTINEZ: I think Julie actually makes a good point at the end. And that is our staff will be around for the next couple of days. The presentations that you're hearing today at lunch are going to be kind of rushed because we are trying to get you as much information as we can. And we are starting with this lunch hour. But after the lunch hour the presentations that you will have will be issue specific. You will not not have four in a one hour block of time. There will be a time when you will get a ten or fifteen minute presentation with about thirty to forty minutes to ask questions on a particular issue.
So these are the ones we thought we could do rather quickly. But still even so we encourage you to ask to ask questions even if it means we need to readjust our agenda this afternoon.

Okay. Our next presenter-- I am going to ask Karen Lynn-Dyson who is our research manager. Karen manages all of our research agenda. And Karen, why don't you come on up to the microphone if you don't mind. And Karen will introduce our next presenter who will give a very a quick, brief, presentation. This project is on the work that we are doing to redesign or to offer more user friendly designs for various products that our presenter will explain to you. Karen come on up.

MS. KAREN LYNN-DYSON: I just want to reiterate what Commission Martinez said in terms of my availability to everyone here over the next couple of days. Am the individual responsible for oversight for all of the agencies research works and projects. I look forward very much to hearing from you all, your concerns, you issues, things you would like to see us addressing or addressing in more detail.

We have with us today Rick Grafe who is the CEO of the American Institute of Graphic Art. This
project which the Elections Assistance Commission is contracted for is one that Commissioner Martinez indicated where we are trying to provide to you all a series of best practices on ballot design and on signage. And with these best practices and these exhibits, if you will, of possibilities for approaches to ballot design and polling place signage we will take into consideration literacy, readability, usability, alternate languages, braille, audio accessibility and ADA compliance.

The American Institute of Graphic Art is the professional association of design. It has some 17,000 designers working in a variety of communication media. And they through their Design for Democracy which is their non profit affiliate can assist you all, government agencies, in finding national or local professional designers and researchers who can help you on a for hire basis to implement some of these designs. So with that very brief introduction I am going to Mr. Grafe Korfe go ahead and describe to you all the work they have been doing for the EAC on this contract.

DESIGN FOR DEMOCRACY

MR. RICK KORFE:
All right. Thank you Karen. Again I am Rick Grafe (sic) I want to thank you, Karen and also Commissioner Martinez. And I think some of the comments that he made are so very critical to what we want to share with you. That is he talked about the importance of best practices; he talked about the importance of research; and he talked about how critical input is. And I think all of those are reflected in what we are trying to share with you today.

This is going to be very brief. And one of the reasons it is going to be brief is that this isn't really about you listening to me it is really about our me listening to you.

Our project is effective design in election administration (sic) and as Karen pointed out Sign for Democracy is an initiative for AIGA which has been around since 1999.

It eventually focused on clear communication and more thoughtful experiences in public sphere so we can trust in government and increase citizen participation.

The specific project we are working on is aimed at building expertise, or building from our expertise, experience and new research to create models
for optical scan electronic ballots and also for polling place signage.

Now the exhibits we actually created are under Tab five in your binders. And I mention that because I am going to do something that is a little unusual in talking about design. And that is I am not going to show you the designs because what we really want to do is gain your input. And there is an opportunity for you to look at the work under tab five and get a sense of it. And also in a room right across the hall we have two staff people, user specialists and researchers who are there to gain your input on various of the exhibits that are over there.

So during the next day, well actually two days, we will have the room, again, right across the hall. There is Elizabeth Hare, our Project Director and Mary Kwan who is our experienced strategist and usability specialist strategist. And they both will be over there looking for your input on some the exhibits. The exhibits are things like this. And while they are all drafts the intention is to get your reaction so we can refine them.

I want to mention now a couple of things quickly about designers and try to disavow you of
certain preconceptions about design. What we are
talking about here is not people in flip flops and long
pony tails who are trying to design this stuff. And we
are not talking about arrogant artists wearing all
black. What we are talking about are professionals who
can take an experience and define and break it down
into the small pieces that make an experience, like the
voting experience, like the election experience and
break it up into segments. And research how people
react to information and then craft a solution.

So what we are really talking about is a
process, a designing process, a way of thinking about a
problem and the election process itself.

We broke it down into identification,
orientation, instruction, action, is the voting part,
completion. And what you do is you look at the election
process and say what are all the pieces and how do
people relate to that.

And out of that what we are going to do is we
are going to propose to you guidelines that respect a
number of issues, that respects a number of issues. It
respects HAVA compliance; it will respect need to adapt
materials for local applications; it will always to
seek to find clarity and simplicity in what we are
doing. And it will also reflect the need to respond to
the technical requirements of voting equipment.

So right now our approach, and what happened
to our project, right now our approach will deal with
guidelines on the content, on what information is
really needed by people at various stages.

You will deal with the voting system
implication of course responding to the technical
issues. It will deal with layout systems, the way
people work through information. We know patterns that
are most effective. And we will share those with you as
well as issues of layout that reflect the needs of
different technical systems. And also principles of
design so that materials being adapted for the local
level there are certain principles that you will know
to follow.

What you see here are twelve stages in the
design process. And I need to mention this again to
point out that when you are dealing with a designer you
shouldn't just expect them to design a ballot.
You should deal with designers who are actually asking you more about the process of design. And the issues that are highlighted, five and six, gather information and develop prototype ideas is a stage that we are at. With that, that is an important stage.

We need to understand how people need, use information. What information is needed and then you develop prototypes which are like the draft examples you will see across the hall and then you gain greater information.

This is one case where when we talk about testing we are not testing to figure out how well we have done. We are testing to inform what we do. So the idea here is that we have materials for you to react to and it is your reaction that is as critical as it is to what we bring to the project.

I know that for many dealing with this issue isn't traumatic but it is a tough one because ballots have been developed over the years and they have accommodated a huge amount of information, a huge amount of requirements that are very local. And most

people in this room, and most people in most of the
elections systems, feel very strongly, they feel the issues we are confronting are unique. And they are concerned that all of the challenges they have already faced be accommodated in the outcome.

Let me assure you that that is exactly why we want to hear from you. Understanding what you bring about, what is important, is actually critical for us to be able to adapt to something that you can use effectively at the local level.

One of the advantages of the work we have done. One of the advantages of the work that we have done our election design project team has already worked with election officials in Cook County, Illinois and the state of Oregon. And so in terms of the testing process we have actually have not only the kinds of test that we do in order to perform research, to understand how people can best understand the issues and answer the ballot. But also we have had field testing and post election use. And we bring to the project here not only that experience but also certain things that are true of virtually any information design issue.

And our objective here is useful usable design. And our core team and what we bring to it, among other things, in addition to that experience, we
bring what we know from other research in terms of how people use information. And we know that there are certain principles that we will share with you that regardless of how your design evolves that you need to keep in mind and that is the design is not because it makes things look pretty but because it makes things useful. It makes things usable. They are effective. They are clear, they are simple. These are things like using clear capital letters; not center lining type; keep the number of type variations down; understand information hierarchy; and using graphics to help illustrate points. We will share those things. And that's where we start.

Then we have our own panel of experts and project advisors that advise us and become part of that process of testing. Are we making the right conclusion when we are coming us with certain solutions? And the next critical aspect is all of you.

That's why we will be here for two days because we need to hear from you the issues that are most important to you and make sure we can accommodate them. And then of course there are the voters as well. We look to them and their response in two ways. One is through putting together some test situations
with prototypical or typical voters in advance and also the outcomes of actual use.

The concept we are taking here is we want to create a design that is simple enough to address exceptional means. And by dealing with the needs at the extremes, the exceptional needs, and making something simple and clear for them we believe we will meet everyone's requirements.

So in this next round of testing that we do we are going to include people from 18 to 21 years of age, 65 to 80 and address the kind of issues that Karen pointed are the object of the issues and that is dealing with literacy issues, readability, usability, alternate languages, braille and audio accessibility and ADA compliance. And then in addition we will try to see what the requirements are for localization, for low experience levels and also for cultural obstacles.

Ultimately again the outcome will be models that are other compliant, capable for local variability, easy to implement and sensitive to technical requirements.

The next stage will be some tests that we will do in the field, task based usability testing. We plane to do it on the east coast, midwest and west coast. And certainly if any of you want to be involved in this be sure to let Elizabeth or Mary know because

Page 22
we have not selected sights yet. And the testing will be putting together, presumably, test labs and bring in volunteers to actually use the information.

I mention we will be in the room across the hall in the McPhearson Square Room, oh, I guess tomorrow is in the Board Room, it is not across the hall. So in the McPhearson Square Room, all day today until 6 o'clock. And tomorrow it will be in the Board Room which is also on this level Board Room one I believe from 10 a.m., to 6 p.m. And you can also respond and even if it is not responding to what you see sharing with us your concerns.

Now what is this? We also want to get your feed back on line. But this is one of those slides from hell. You know you try to come up with a simple solution, especially for designers who talk about simplicity. You try to come up with a simple solution and you get a URL that no one can remember. So we will skip that. We are looking for a survey monkey to do another job.

Nest, you can use this link on the Home page of Design for Democracy.org/participate URL there is a link of that on line survey which is going to be available through the end of the month for any of your
comments on any materials in Tab 5. And again: Design for Democracy.org/participate. And that will be up for ten more days, until the end of the month to gather your comments.

There are the names of Mary and Elizabeth who we be here the next two says seeking your input. And we certainly welcome it in any way or form you choose to get it to us. But it is critical for us to hear from all of you on this in order to accommodate your needs.

Thank you.

MR. MARTINEZ: Any questions on this particular presentation? Okay. Great thank you.

It occurs to me as I was listening to that presentation that perhaps this room could have been designed a little better for our meeting. Howard is that you behind the pillar? I think so. So our apologies for columns that are blocking the view, not that you want to see us up here anyway. But hopefully you can hear us back there, Howard.

What we want to do next, the final presentation both of this presentations on Public Access Portals and Spanish and Asian Language Working Groups that we have assembled will be presented by Edgardo Cortes who is one of our research specialists at the EAC. He will talk to you very quickly about
these issues and give you a chance to ask questions.
I also want to say about the previous presentation we reached our to Design for Democracy and to pull together best practices on ballot design and polling place signage et cetera. Based upon the input and urging from many of you out there we actually got a lot of feedback from, in particular, our Board of Advisors, upstairs, that this was a useful project for us to do with a lot of positive feedback from election officials who had worked with Design for Democracy. And we felt they were an important group to bring in. Have them do some templates and some best practice documents that we could put out for your consumption to see if you want to follow up with any of their work. And that is why you heard that presentation.
Okay. The following two presentations very quickly, Edgardo Cortes with the EAC staff:
PUBLIC ACCESS PORTALS & SPANISH & ASIAN LANGUAGE WORKING GROUPS.
MR. CORTES:
Thank you Mr. Vice Chairman. Give me just a
052306

minute to set this up.

Good afternoon, everyone, my name is Edgardo Cortes. I have been with EAC since late July of last year. Prior to that I used to run a National Voter Registration campaign that was funded by the government of Puerto Rico as well as did some political consulting work for a couple of campaigns around the country. Probably working with Peggy Sims dealing with all the requirement payments issues, the HAVA funding questions that come in, the College Board Approval Programs, any NVRA issues that come up and so anything I am Peggy's backup for that. So a lot of stuff you send in to us she and I work on getting your responses to.

First thing I am going to talk about is the Public Access Portal Project that we have been working on since last fall. We awarded a contract to Publius.org to conduct a study which will examine and create a best practices document about Public Access Portals.

Publius is a non partisan, non profit 501C3 based out of Detroit Michigan. They have been in existence for about ten years now. And actually got their start setting up an information web site like this for the state of Michigan.
The methods up here is essentially from the research that is ongoing, it is kind of a color coded map as to what sorts of web sites by available by state. You can see some of them have state wide sites available. Some just have independent jurisdictions, half sites. Some are county based. And you can also see there are quite a few states that don't have anything set up so far. So those are kind of-- in terms of the research that is a visual representation of what they have looked at so far.

They have from September through December what they did was they went out and started doing an initial search of what web sites were out there and who is running them. And to this point they have identified and reviewed approximately 425 state, county and local web sites that provide information to voters.

Of those 425 what they did was, starting in January, they started a more comprehensive look at a much smaller section of those, approximately fifty. What they have done is they are going in an ah, number one, going through the process of looking up information on the site, capturing what information is provided, how it is being provided all those sorts of things.
And then they have also conducted about 100 interviews so far, finance reviews with the administrator that run these sites, with the IG folks. And what they have done in terms of those 50 sites they really went out and got a variety of state, county and local web sites to look at. They focused on urban and rural web sites, you know various that were urban and rural. They looked at as much geographic diversity as possible so that the Best Practices Document that comes out in the end will address some of the regional differences that might exist in terms of how information is presented. And will look at the differences throughout the states.

A couple facts about the web site. The actual first source of these informational web sites actually date back to around 1996, when the Internet, the use was not very widespread yet. And so they really advanced a lot between then and now.

In terms of their initial research one of the things that they have found to be the most popular function-- when we went into this we really thought that the big questions were people wanting the check their registrations status, their voter registration...
status. And to know where their polling place was located.

That was one of the reasons we received this project, the kind of internal, initial research that we did to prepare to let this out a contractor indicated that those were the two big questions.

What we actually found is that aside from those, those are very important actually, but one of the things that draws people most to these sites are the sites that have candidate information and sample ballot information on the sites. Which is something they are taking a look at in terms of what ways that can be readily presented to folks. And what they found is that sites that have the usage increases dramatically once that information goes up closer to election time. Once those sites put that information up the usage goes up.

Another interesting thing that we were able to take a look at this year, and it is going into the final report actually, is Louisiana set up a web site to provide voter information to displaced voters. Folks that were displaced after Hurricane Katrina. And they
set up this web site so that those folks, prior to the special election in New Orleans, would be able to, from anywhere in the country, go in and access not only the information of, you know, the dates and everything, but were able to get information on the absentee ballot process, were able to down load applications for absentee ballots and really provided a lot of information and was kept up to date. So Publius was actually able to, because of the timing of our project was actually able to look at from beginning to end this process and has spoken with folks in Louisiana about it. And that is one of the things we will be dealing with in the final report which we might be able to use in the future for other studies as well.

One of the things that may or may not surprise you is that number one there is a lot of interest at all levels for providing these sites. It is has really been an issue of resources up until now as to whether or not jurisdictions provide these sites and how advanced they are.

One of the things through the phone calls and interviews that they have done with existing sites is a
lot of the smaller jurisdictions and the counties have been kind of stalling further development of these sites because there is a lot of concern out there about how the switch to a statewide voter registration list is going to impact states providing this information whether or not it is going to be done at a state level. And kind of remove the need for them to have it at the local level. So that is one of the concerns that has come up during the research as well.

One thing that shouldn't surprise anybody is there is no one promotion strategy for these sites that works. Every location that has them is different as to how they get the word out about them and how they draw people to those sites.

In terms of timing, just go give everybody an idea, they have been doing this research for a while now. They are hoping to-- we are hoping to have the draft document ready by mid to late summer. So July or August we are hoping to have a draft document available which we will-- I will work with the Commissioner to make sure that we are able to distribute that to both the Standards Board and the Board of Advisors for people to be able to look at it, give their feedback before it goes into the final version which we hope if
we can get the draft in mid summer and we are hoping that sometime in the early Fall we will be able to have a final document out there.

In terms of the time line we realize it is an election year. We realize this information is going out in the Fall. One of the things that we realized early on was that even last Fall it was to the point were it was pretty much too late for states and jurisdictions to implement the suggestions that were going to come out of this in time to impact this years elections. So what we are really hoping to get out of this document is that it will be available toward the end of this cycle so that once we get into next year and people start looking toward the '08 Presidential elections. And we have gotten past the HAVA deadlines and everybody's attention starts to shift this information will be out there so that states, and counties and local jurisdictions can take the information in here and be able to implement these sites with enough time to make them functional and work out all the bugs and

everything before we move into the election year. So that's what we are looking at in terms of time lines for this project.

I will take questions about both of these
SPANISH AND ASIAN LANGUAGES WORKING GROUPS.

Many of you know there have been a lot demographic changes in the country and a lot of-- particularly in the past decade there is a lot of jurisdictions that have sizeable populations that fall under Section 203 of Voting Rights Act, or who will soon be, and a lot jurisdictions. And lot of jurisdictions that didn't before now have to provide information in alternative languages.

We have seen it and we realize the issues that come up in terms of jurisdictions that have never dealt with alternative languages or to some of the issues that come up and how can they implement this properly.

Prior to my getting here the work had already started on these projects. It was decided by the Commission that we should-- really what we should do is to bring together some working groups that consist of election administrators, advocacy organizations, different people that deal with the issues that come up and deal with them first hand and let us know what sort of research we can conduct that will help you in that
HAVA Section 241, which is the section that talks about the studies of election administrations one of the things that it charges the EAC to do is conduct research on making information most convenient, accessible and easy to use for voters including voters with limited proficiency in the English language. So that is actually in HAVA. And one of our mandates is to go out there and find information to make it easier to provide or to administer elections using alternative languages.

The way we started out was last August we had the first meeting of the Spanish language working group. We had that at the EAC offices. And the reason we chose to deal with the Spanish language first is number one it is largest alternative language that folks are dealing with. Most of the-- the majority of jurisdictions out there that deal with alternative languages have been dealing with Spanish. And that really has been because of the growing population size it has been an issue that a lot of knew jurisdictions have had to deal with. So we wanted to bring that group together and see what sort of things we could do. That was in early August.

The next group we decided to bring together
was a group to discuss access to different Asian languages. Under Section 203 of the Voting Rights Act there are actually five Asian languages, Asian and Pacific Islander languages that are covered and that certain jurisdictions have to provide information in those languages. That is Chinese, Japanese, Korean, Vietnamese and Tadolwin (sic). So that working group we actually had at the end of April, so just about a month ago we brought that group together.

We are looking toward the future, hopefully sometime next year to be able to bring together a working group dealing with native American languages.

And that one is going to be really interesting because with a lot of languages we are talking about languages that have no written form, they are all spoken languages. And so that presents a whole additional set of issues when you're talking about administering elections and providing information in an alternative language that you can't write.

So basically what all three of these groups are meant to do is provide the EAC with, or help us in accessing what sort of language specific projects we can conduct as an agency.

Some of the things that have already come up...
and that we are actually are working towards is number one creating translation dictionaries of election terminology to have a document that would provide a whole list of election terms and provide a translation from English to whatever the alternative language is. The first one we are working on is actually English to Spanish. And so we are also looking towards doing the five Asian languages.

And one of the biggest complaints we have gotten in terms of, and I am sure you have all heard, in terms of trying to provide this information is that the translation services that are out there aren't always the best. And when election information gets translated a lot of time it is a literal translation and the meaning is really lost when you translate it to the other language.

So we are hoping by providing this tool for election administrators it can help you all meet the needs of the communities that you are serving, and the electorate that you serve.

The other project that we actually are working and we hope to have ready by mid summer is providing a translation of the National Voter Registration form. We have the Spanish language version, the updated one already up on our website.
Both the English and the Spanish were recently updated. But the form hasn't been translated into the five Asian languages since the FEC first created the initial voter registration form. So it has been quite a while. And we are hoping to get that done fairly quickly so that those jurisdiction can have voter registration forms available in those languages later this year.

And then finally we are-- one of the roles of these groups is to provide us not only with the feed back but to help us prioritize. I mean there is all these questions all the time for different research projects that you all think would be useful. And by bringing these groups together we are hoping to establish some sort of priority for what we can do short term to get some immediate assistance out there and then look at what we can do long term in terms of these issues.

So that is pretty much what the language groups are doing. So I can take some questions.

MR. MARTINEZ: We can move very quickly for some questions or comments from anybody out there? Any questions or comments about Public Access Portals or the working groups we have assembled, Secretary Kidmeyer.
SECRETARY KIDMEYER: A question in regards to dialects how do you handle dialects even though it is the same language?

MR. CORTES: That is actually one of the things we spent a lot of time on actually during both working groups. The Spanish language translations are the first ones we are working on so I can tell you a little bit about how we are going to handle that.

One of the suggestions we had was to bring together a group of language experts, academics to review the work we are doing in terms of translation. But the other thing that we are doing is we are going to look at what the regional differences are and provide alternative terms to reference the same thing.

For instance the word ballot is translated into Spanish is different if you go to Florida if you go to New York, if you go to California. They all use different terms for that. In the instances were we can provide some sort of standard translation term that everybody understands or alternatively for those were that doesn't exist to provide, you know, multiples translations so that depending on where you're at you can look and see what sort of populations you are coming from.

A lot has to do with country of origin. So
providing that information you will be able to go to the list and say well my jurisdiction has a very large Puerto Rican population this is probably the translation form I should use.

MR. MARTINEZ: Other questions please? Yes, John.

JOHN LINDBACK: It is a really basic question. I don't understand the difference between a Public Access Portal and conventional website. Because we have had a ton of information out there on a conventional website. When you talk Public Access Portals what do you mean exactly?

MR. CORTES: It is essentially a voter information website. And what they are looking at is a website were you can go in and get information as far as registration status. It is a polling state locations, candidate information, all those very specific election information.

We do realize that most states do have basic sites, whether it is the Chief Election Officer or the local jurisdictions that have polling place hours and those things. We are really looking at sites that open further and are more interactive in terms of the information that people can pull from them.
MR. MARTINEZ: And some states, I think, have
more experience in putting forth what is regarded as
Public Access Portals. I am looking at Sarah Ball
Johnson who is right next to you because I think
Kentucky is one of the states that has been something
like this for a while. She is whispering to you right
now.

I broke my own rule. When you raise your
hand to speak if you can introduce yourself, state your
name for the court reporter. And I apologize, Secretary
Mary Kiffmeyer and John Lindback from Oregon. Mary
Kiffmeyer from Minnesota.

Any other questions or comments on anything
that was presented, please.

Okay. Edgardo, thank you very much. I
appreciate your work.

Again as a quick background what we are
presenting to you over the next day and a half, and
what we just started with the first four presentations
are research projects that are grounded in some place
in our government statute, within HAVA.

We are either wearing a hat of producing a
national clearing house of best practices; or we are wearing a hat of having to produce voluntary guidance to help clarify title free requirements. So there are different hats that the EAC will wear statutorily that when we wear the hat we want to wear it in the manner that is consistent with the advice that we get from our statutory boards, and that is you.

Again what we do proactively is to try to reach out to all of you, as many as we can individually, throughout the course of our fiscal year, asking you to participate in working groups, many of you have done so, seeking your advice through our fiscal year. We have a chance to get you all in one room once or twice a year to put it all in front of you and solicit your candid feedback.

So again I encourage your questions. And it doesn't have to happen in this hour. We can continue this conversation throughout the duration of the next day and a half I am going to turn the mic over, after the break, to your Executive Board and they will commence the official gavel of your Standards Board Meeting. So thank you very much for being here once.
Thank you for what I know will be a productive day and a half. The four Commissioners will be in and out because we have the Board of Advisors going on simultaneously two floors above you we will be alternating in and out. But all four Commissioners will be around for the next couple of days. We look forward, I certainly look forward to engaging in conversation both with the body collectively and all of you individually.

So with that Madam Chair, I have 1:25 if you want to allow for a ten break we can just go five minutes off your schedule. I have 1:25 if we can reassemble at 1:35. Thank you very much.

(Recess from 1:25 to 1:45 P.M.)

MS. NIGHTSWONGER: Okay. Commission Martinez has already welcomes you and I would also like to welcome you to our meeting here of the National Standards Board. And I am only here because Mike left us. He had the nerve to go out on us. And you all probably got that email about him getting a new fantastic job. So he kind of left me hanging out here. So all of you are going to have to be very patient with me today and tomorrow and please don't throw tomatoes
at me from the crowd. I will try to get someone up here in a few minutes to help keep me in line.

Before we begin to day I guess I should call this meeting to order first of all. I don't have a gavel. I don't know if Adam took it or what happened. I would like to just talk about a couple of ground rules that I'd like to put in place here and that is for our Court Reporter here is going to be taking the minutes, the official minutes of this meeting so we really do need to speak in a microphone when we go to the floor. And we are going to have some roving mics so that you don't always have to get out of your seat. So if you will raise your hand I will call on you and the people carrying the mic will get a microphone to you. And I would like you to address the group with your name and where you are from please. And then you can give your question or whatever. So if you can just try to do that. That way we will know who is talking and what they are saying and we can hear very well.

The first thing we need to do is call the role. So I would like to have Bill Campbell if you

1 would go ahead and do that. If you would respond when he call your name so we can make sure we have a quorum at this meeting.
MR. CAMPBELL: I will read the state name and then the members.

Alabama, Nancy Worley.

MS. WORLEY: Here.

Alaska, Whitney Brewster.

MS. BREWSTER: Here.

MR. CAMPBELL: Shelly Crowden?

MS. CROWDEN: Here.

MR. CAMPBELL: American Samoa? Soliai T. Fuimaono?

MR. FUIMAONO: Here.

MR. CAMPBELL: FILIVAA MAGEO? (No response).

MR. TYNE: Here.

MR. CAMPBELL: Mitch Etter?

MR. ETTER: Here.

MR. CAMPBELL: Arkansas, Charlie Daniels? (No response).

Mary Lou Slinkard?

MS SLINKARD: Here.

MR. CAMPBELL: California, Brad Clark?

MR. CLARK: Here.

MR. CAMPBELL: Coney McCormack? (no response).

MR. CAMPBELL: Colorado, Gigi Dennis (no
MR. CAMPBELL: Russ Ragsdale? (No response).

Sandra Hutton? (No response).

Delaware, Frank Calio? (no response).

Howard Sholl?

MR. SHOLL: Present.

MR. CAMPBELL: District of Columbia, Alice Miller?

MS. MILLER: Here.

MR. CAMPBELL: Jonda McFarlane? (no response)

Florida; Dawn Kimmel Roberts?

MS. ROBERTS: Here.

MR. CAMPBELL: Bill Cowles?

MR. COWLES: Here.

MR. CAMPBELL: Georgia, Kathy Rogers (No response)

Lynn Bailey?

MS. BAILEY: Here.

MR. CAMPBELL: Guam, Gerald Taitano?

MR. TAITANO: Here.

MR. CAMPBELL: Hawaii, Scott Nago?

MR. NAGO: Here.

MR. CAMPBELL: Glenn Takahashi?

MR. TAKAHASKI: Here.
Illinois, Daniel W, White?
MR. WHITE: Here.
MR. CAMPBELL: Richard Cowen? (No response)
Indiana, Todd Rolita?
MR. ROKITA: Here.
MR. CAMPBELL: The Honorable Shannon Weisheit?
MS SHANNON WEISHEIT: Here.
Kansas Ron Thornburgh? (No response).
Donald Merriman? (no response).

Kentucky, Sarah Ball Johnson?
MS. JOHNSON: Here.
MR. CAMPBELL: Don Blevins?
MR. BLEVINS: Here.
Louie Bernard?
MR. BERNARD: Here.
MR. CAMPBELL: Maine, Julie Flynn?
MS. FLYNN: Here.
MR. CAMPBELL: Clairma Matherne?
MR. CAMPBELL: Maryland, Linda H. Lamone? (No response).

Kim A. Atkins? (No response).

Massachusetts, William Francis Calvin? (No response) William.

MR. CAMPBELL: I am here.

Michigan, Thomas Luitje?

MR. LUITJE: Here.

MR. CAMPBELL: Tony Bartholomew?

MR. BARTHOLOMEW: Here.

MR. CAMPBELL: Minnesota, Mary Kiffmeyer?

MS. KIFFMEYER: Present.

MR. CAMPBELL: Sharon Anderson?

MS. ANDERSON: Here.

Missouri, Leslye Winslow?

MS. WINSLOW: Here.

MR. CAMPBELL: Richard T. Struckhoff?

MR. STRUCKHOFF: Here.

MR. CAMPBELL: Montana, Elaine Gravely? (No response) Vickie Zeier?

MS. ZEIER: Here.
MR. CAMPBELL: Nebraska, John Gale? (no response)  
Roberta Zoucha? (No response).  
Nevada, Dean Heller? (No response).  
Harvard L. Lomax?

MR. LOMAX: Here.

MR. CAMPBELL: New Hampshire, Anthony Stevens?

MR. STEVENS: Here.

MR. CAMPBELL: Carol Johnson?

MS. JOHNSON: Here.

MR. CAMPBELL: New Jersey, Maria Delcoch?

MS. DELCOCH: Here.

MR. CAMPBELL: Joanne Ambruster?

MS. AMBRUSTER: Here.

MR. CAMPBELL: New Mexico, Rebecca Vigil-Geron?

MS. VIGIL-GERON: Here.

MR. CAMPBELL: David Kunko? (no response)

New York, John Haggerty?

MR. HAGGERTY: Here.

MR. CAMPBELL: Edward Szczesniak?

MR. SZCZESNIAK: Here.

MR. CAMPBELL: North Carolina, Johnnie McLean?

MS. McLEAN: Here.

MR. CAMPBELL: Kathie Cooper? (No response)
17 North Dakota, James Silrum?
18 MR. SILRUM: Here.
19 MR. CAMPBELL: Michael M. Montplairer?
20 MR. MONTPLAISER: Here.
21 MR. CAMPBELL: Ohio, J.Kenneth Blackwell?
22 (no response).

Steve Harsman?

18 MR. HARSMAN: Here.
19 MR. CAMPBELL: Oklahoma, Clint Parr? (No response).
20 Oregon, Jack Lindback?
21 MR. LINDBACK: Here.
22 MR. CAMPBELL: John Kauffman?
23 MR. KAUFFMAN: Here.
24 MR. CAMPBELL: Pennsylvania, Pedro Cortes?
25 (No response) Regis Young?
26 MR. YOUNG: Present.
28 Juan M. Toledo-Diaz?
29 MR. TOLEDO-DIAZ: Here.
30 MR. CAMPBELL: Rhode Island, Jan Ruggerio?
31 (no response).
32 Marian Clarke? (no response).
South Carolina, Marci Andino? (No response)

Marilyn Bowers?

MS. BOWERS: Here.

MR. CAMPBELL: South Dakota, Kea Warne.

MS. WARNE: Here.

MR. CAMPBELL: Sue Roust?

MS. ROUST: Here.

Texas, Trey Trainor?

MR. TRAINER: Here.

MR. CAMPBELL: Dana DeBeauvoir?

MS. DeBEAUVOIR: Here.

MR. CAMPBELL: Utah, Michael Cragun?

MR. CRAGUN: Here.

MR. CAMPBELL: Robert Pero?

MR. PERO: Here.

MR. CAMPBELL: Vermont, Deborah Markowitz?

MS. MARKOWITZ: Here.

MR. CAMPBELL: Arnette Cappy? (No response).

MR. CAMPBELL: Virginia, Jean Jansen?

MS. Jansen: Here.

MR. CAMPBELL: Allan Harrison, Jr.?

MR. ALLAN HARRISON, JR.: Here.

MR. CAMPBELL: Virgin Islands, Corinna
MS. PLASKETT: Here.
MR. CAMPBELL: Natalie Thomas?
MS. THOMAS: Here.
MR. CAMPBELL: Washington, Paul Miller?
MR. MILLER: Here.
MR. CAMPBELL: Bob Terwilliger?
MR. TERWILLIGER: Here.
MR. CAMPBELL: West Virginia, Benjamin Beakes? (No response).
Gary Williams? (No response).
Wisconsin, Kevin Kennedy?
MR. KENNEDY: Here.
MR. CAMPBELL: Sandra L. Wesolowski?
MS. WESOLOWSKI: Here.
MR. CAMPBELL: Wyoming, Peggy Nightswonger?
MS. NIGHTSWONGER: Present.
MR. CAMPBELL: Julie Freese?
MS. FRESE: Here
MS. NIGHTSWONGER: I believe we need 56 members for a quorum, so we will figure this out.
MR. CAMPBELL: Is there anyone that did not
respond to the roll call?

MS. NIGHTSWONGER: Okay. We have a sufficient number of members to conduct business. We will move ahead.

Before we get started here with some other things on the agenda I would like to introduce the Executive Board if I could. Probably most of you know who they are but I'd like them to stand so you can make sure you know what their face looks like in case you want to bombard them with a problem or an issue that you're having.

Actually is the room okay? I want to ask that. Is anyone too hot or too cold or do we care that they are uncomfortable?

So if I could just have you stand when I call your name. First of all Indiana Secretary of State Todd Rokita. And Vermont's Secretary of State Deborah Markowitz. Oregon Director of Elections John Lindback. Kentucky Executive Director Sarah Ball Johnson. City Clerk of Woburn, Massachusetts Bill Campbell who is up here with me. And Clark County Registrar of Voters, Harvard Lomax. And last but not least, even though he
came last Natchitoches Clerk of the Court, Louie Bernard. And Louie do you want to come up. You have something to say. I am almost afraid to call him to the table. So that's your Executive Board. And I really appreciate all of them and the help they haven given me. Now you know what they look like in case you have forgotten since Denver.

MR. BERNARD: I was asked to be the chaperon for the Executive Board when we were first elected. I was not here last night. I have nothing to do with last night. I don't know what they did and I don't want to know what they did.

It is very good to see all of you. I couldn't come in until this morning. Beverly Kauffman and I flew up together from Houston. We just happened to meet up, it is good to be here and see all these familiar faces again.

As most of you know Ray Martinez has announced that he will be leaving the EAC in June. I am personally very pleased about that because anyone who has worked with Ray, you know how pushy he can be (laughter). For almost two years we all have had the
honor and privilege to work with this tireless and
tireless man. And we all better people for and a better
selfless man. And we all better people for and a better
EAC for him having come our way.

I don't know about you, I sense in this
country a partisanship that almost strangles everything
we try to do. Our Commissioner since the day I came in
here at the meeting in Houston. I've always been amazed
how they seem to get along and work together with one
another. I have no doubt that behind closed doors when
we go home they may holler and scream but there is an
outward appearance that lets try to respect each other
and accomplish accomplish something for the entire
group. And I think that is a good thing to do.

Ray Martinez has been at the heart of all
that is positive, that has happened with EAC in this
relatively short period of time.

He is one of the four, what I call one of the
four T-Rex's at the EAC but the endearing quality
about Ray is that he doesn't know he is one of those.
He is a man of great humility. He is a man of great
sincerity and he is someone more than anything else
respects someone's point of view.

Where I come from the nicest thing that can
be said about a man is that he is truly a gentleman.
And I think without question, despite if you agree with everything that Ray has said or done, that Ray Martinez is truly a gentleman.

Ray, the Executive Board and the Standards Board would like to wish the very best in all that comes down your way in the future we want to give to you our heartfelt appreciation for all you have done for us.

I think it would be a shame for anybody to be a part of any organization and leave without being able to say they made a difference. I don't think Ray Martinez has anything to worry about when it comes to having made a difference at the EAC.

So I will close it by allowing Peggy to present this plaque. And Ray I just want to tell you that on behalf of all of us it is not an original blessing but it is something that I feel is very appropriate as you leave, the old Irish blessing, we would all say to you:

"May the Road rise to meet you.

May the wind be always at your back.
May the sun shine warm upon your face.
May the rain fall softly upon your fields.
And until we all meet again may the Lord.
Hold you in the palm of His hand."

Ray, would you come forward you. (Applause).

Presented to Ray Martinez III for selfless and exemplary service to the Elections Assistance Standards Board, our heartfelt thanks for going the extra mile for America's voters this 23rd day of May 2006, by a very appreciative Executive Board.

MR. MARTINEZ: Thank you very much. I am going to get out of your way quickly. I can not thank you, Louie, for the wonderful words and my thanks to all of the members of the Executive Board. I have had the distinct privilege of working very closely now for the past year that I feel like I am a close friend with each and every one of them for a very long time now. I am so appreciative.

And you know I am still the Commissioner for at least a few more weeks and I am going to savor every moment of it because has been truly for me the most fulfilling professional experience in my life.

In my household growing up in south Texas public service meant something. And I am proud to say to my family and all my friends that I have tried to fulfill that. So I thank you very much. It is with genuine sincerity it has been a privilege for me, a
real privilege and honor, to work with all of you. So thank you very much now get to work.

(Applause).

MS. NIGHSWONGER: Thank you Commissioner.

The first order of business is we need to appoint a Parliamentarian. And Julie has been so kind to do that for us in the past. She too has left us. I don't know what is going on here. Everyone is leaving us.

So I would like to open this up. I am sure many of you are Parliamentarians and would love the opportunity to sit up here beside me and keep me in line. So is there anyone who would like to do that today? Don't be shy. We know who you are. Some on. Nobody? Lou, what do you think.

MR. BERNARD: I think they are being shy.

I know there is someone out there who can do it. You don't want me.

MS. NIGHSWONGER: Anybody? I really do need help, honest. Secretary Kiffmeyer, oops she is still deciding here. Thank you so much for volunteering, if you will come up and take the seat on my left. Are you right handed.

MS. KIFFMEYER: Either hand will do.
MS. NIGHSWONGER: Thank you so much.

The next thing on our agenda here, and I think all of you got an agenda I hope. They were in your books. If you need an agenda please raise your hand we can get you one for today's meeting. As we look down over the agenda we are going to do a little bit of Board business here. And then following that we will move into some presentations from the EAC.

If we can move ahead with the agenda the chair will entertain a motion to adopt the agenda if we could first.

MS. BARTHOLOMEW: I so move.

MS. NIGHSWONGER: All in favor?

(Aye).

MS. NIGHSWONGER: Opposed? I hear no opposed, Okay. The Aye's have it and we have an agenda.

As for the minutes in your book, behind Tab 4 I believe it is we have a synthesis of the Denver meeting. I don't know about you but I probably would like to look over those a little bit. And I was wondering if we can postpone talking about the minutes until tomorrow sometime. That would give you tonight to look over the minutes of the synthesis of what was done in the Denver meeting.

I think that would be better. There is quite
a lot for you to read after just picking up your books. So we will postpone that on the agenda until tomorrow that would work better.

Okay. You all have your books. And I think the books are pretty self explanatory. Everything is tabbed and put together very nicely. So we will be working from the agenda. As you notice all of the presenters have information in our books. And you will find them behind the tabs as indicated in your book.

Right now we do have some discussion about our bylaws when we were in Denver last year as many of you probably remember. And we actually adopted our bylaws when we were in Denver. But I am going to ask Kevin Kennedy if he would come up. Kevin worked on the original bylaws committee, or whatever that committee was called, when we were trying to establish bylaws. And I would like him to give us a brief presentation on sort of what is going on and the history.

I know many of you are new to our Board because someone has left and you have been appointed to this position and you may not even know some of the things that have gone on in the past. So Kevin if you would just give us a brief presentation about that I would appreciate it.
MR. KENNEDY: Thank you. First I would like to welcome Peggy to this new position. And challenge her during the course of this meeting to pronounce the name of the New Mexico Secretary of State and the Travis County clerk (laughter).

MS. NIGHSWONGER: I have been working at it.

MR. KENNEDY: The minutes-- I'm sorry. The bylaws are set up behind Tab 2. And as Peggy said were adopted at the last meeting. The minutes provide a very good summary of the fact that we had three motions to change those bylaws. All three of those bylaws failed. So what you see in front of you are the bylaws.

I would like to draw your attention to a few sections of that so that your familiar with it because as a new organization. I think this tells you how we are going to operate. It is a point of reference.

One of the motions that failed dealt with Section 23 on authority, page one on how to treat non partisan members of the Commission of the Standards Board.

I'd also want to make sure you are familiar with the Procedures of Nominating of new members of the Board, members of the Executive Board that are set out on page 2 of the materials under Section 4.
Chair, on page 3 certain duties of a client, we have two standing committees according to the bylaws. One is a nominating committee. So there will be some action on that towards the end of the year. And our President will appoint a Chair for that committee and the Board will find members.

The same is true of the bylaws committee. A Chair will be appointed in the interim. And committee members will volunteer for that. That is in Section 4F, on page 3.

The final thing we had some questions that failed at the last meeting dealing on how we establish quorum. And whether or not we use proxy votes. And if you look at Section 5-- I'm sorry, Section 6 on page 8 it describes the voting procedures.

Section 7 proposes how we handle the actual bylaws for the committee. And with Section 7 I will point out the committee wants us to is establish and be charged with developing a forum. My experience of working with this group in the last year in putting a these bylaws together is that there is no shortness of ideas on how to come up with rules and regulations. One of the proposals is there will be a sample form so that we can have a very orderly process in doing this.

Page 61
I think it is very important for all of the members to take the time to review the materials that are on pages one through ten before the next meeting, if you have ideas on changes to the bylaws. In terms of that my guess is that the Bylaws Committee will have a form in place.

And what I would like to do for my final comment before is there any questions is to point out these initial set of bylaws would not have happened if it were not for Joanne Armbruster, Bill Campbell, Tonni Bartholomew, Howard Sholl all made dedicated attempts to review these bylaws, make suggestions and edit the initial document that was put together by Julie Horowits (sic) so with that unless there are any questions that is my summary.

MS. NIGHSWONGER: I think I might before take questions from the floor. I think a little apology to the Executive Board I believe we asked for people who had an interest in working on the bylaws committee to indicate that somehow while we were at the Denver meeting. And we never really formally asked for that. So I would just indicate that right now that if you want to look at our bylaws and propose any changes we do need a committee to work on that. So I would really like you to let me know if you have any interest in
doing that because I think it is out job to appoint a
Bylaws Committee. Seven members?
MR. KENNEDY: Seven members.
MS. NIGHSWONGER:
So if you have an interest on working on bylaws I
would really challenge you to let me know that. You can
email me. My email address is in the book. And I would
be happy to hear you about that. Any questions for
Kevin?
MS. Nighswonger: One thing that I failed to
mention. It was just a little housekeeping thing. In
the book where the members are listed. Behind Tab 3. I
want you all to really take a good look at that list
and also the bios for all of the members of the
Standards Board because I think there are some people
who think that maybe they were left out, or maybe their
bio isn't correct, or it is an old one. Anyway please
look at that while you're here at this meeting and make
sure that everything on your information is correct.
Read your bio. And if there are any changes to anything
on that page or in that section I would suggest you get
hold of Adam. You can email Adam at the EAC and he will
get those changes made before we send out anymore mailings or meet again. So it you will take a look at that that will be great.

Okay. I think I would like to call Commissioner Martinez to the front again. He is going to review and present the Standards Board charter. And we can talk about that little bit.

MR. MARTINEZ: Thank you, Madam Chair.

One person, and actually I believe you have heard his name over and over again, but needs to be properly introduced is Adam Ambrosi(sic) who is my special assistant and who had helped to pull together all of the logistics and all of the preparations for this meeting. He has done a terrific job. He did it in Denver. Adam is your point of contact for anything that you need. He will be floating around here for the next couple of days and will be available to help in any way. So that is who Adam Ambrosi is.

The Charter that we took up, the Federal Advisory Act, governs advisory committees to Federal agencies. It requires that we adopt a charter in the next couple of days.
MS. NIGHSWONGER: If you don't have a copy of the charter it is outside on the table.

MR. MARTINEZ: Adam can you get a stack of copies and make them available.

MS. NIGHSWONGER: Maybe we can them pass out.

MR. MARTINEZ: Right.

MS. NIGHSWONGER: I am sorry. I meant to do that.

MR. MARTINEZ: Yes i should have done that. But we have them up front and Adam will get a stack and walk down the center isle here and pass them out.

The Charter, Madam Chair, is required under the Federal Advisory Committee Act and it essentially, I have a copy of one in front of me this is the Charter that governed the authority of this Advisory Committee for the past two years. And it simply has to be readopted. It is required to be readopted. And we readopt it every two years. And you have reached the two year mark.

Essentially the Charter reiterates it just takes the authority and responsibilities that come straight out of our governing statute which is the Help
America Vote Act puts it into a Charter type of format and says, here are your responsibilities, here is how we are going to carry out those responsibilities. It is a pretty straight forward document. And we will ask that you all will allow for the Charter to be adopted once again.

And, Madam Chair, of course, if there is any questions or if there is a desire to wait until your plenary session tomorrow in case anybody has any questions or concerns obviously I don't think that is a problem from our perspective. It is just before you leave here at the close of business tomorrow we obviously need to readopt your Charter. As it is now about to expire. Thank you. Back to you Madam Chair.

MS. NIGHSWONGER: Thank you, Commissioner. I need a motion.

MS. VIGIL-GORON: Rebecca Vigil-Gorom from the State of New Mexico. I make a motion for adoption if there is no objection from the other members.

MR. KENNEDY; I will second that motion. I am Kevin Kennedy.

MS. NIGHSWONGER: All in favor?

(Ayes from the audience).

MS. NIGHSWONGER: Opposed? Motion carries.

MR. MARTINEZ: Thank you very much.
MS. NIGHSWONGER: I'm sorry. I am out of order. We did not have discussion. Too late the motion carried.

Would like to introduce my secretary, Joe Meyer. I am so nervous about this you all conduct these meetings a lot on a local level. This is not like we do in Wyoming. We take a sot gun and when someone is out of order we just shoot it. (laughter) I guess that would go over big here.

Okay. Next item on our agenda is the election of our Executive Board vacancy. With Mike leaving that left a vacancy on the Standards Board and on the Executive Board. Now when we went to figure out how to figure out how to fill this vacancy nothing was very clear about that in our Bylaws. So there is something for you to do.

So what the Board talked about-- many of you, or all of you, should have received emails from Adam with the names of the people who are interested in filling that vacancy. What the Executive Board talked and decided to do because we didn't have a nominating committee either, which is something that we need to appoint and get a nominating committee before our next meeting. We decided to go ahead and throw that out for
people to put their names in for that position. We did have four people that showed interest for that position. And I believe Adam set their bios out, that are over there on the table. That is another thing that is on the table. So if you don't have them with you maybe raise your hand and we can get you a copy of that also. What we decided to do is take these names-- I would like the four people who did submit their names and their bio to give us a two or three minute introduction to themselves so that we will know their face and know who they really are. And I am going to give them that opportunity. And then we would like to pass out a paper ballot. And we are going to let all the voting members vote for one person that he would like to fill this vacancy on the Executive Board. And we have a very responsible Counting Board that is going to handle those ballots for us. Did everyone get a copy of the bios?

MR. CAMPBELL: Can I say something?

MS. NIGHSWONGER: Yes, Bill, you can say anything that you want.

MR. CAMPBELL: The bylaws do provide a method by which a method is filled. And that is the Executive Board Interim appointment. But we, as an Executive
Board, have discussed this. We took the message and hold closely the message that we received when we were first appointed or elected as an Executive Board and that is we never want the full Board to feel that we are trying to usurp any authority. And although you have delegated it to us we decided the best practice although it was only a four or five month period was actually wait to hold the position vacant and have the full election take place today.

So the by laws do have a provision that it didn't have to have sufficient information to allow us to set up that election today. We have a Nominating Committee and deadlines to next February. So I hope you understand how we got here and how we tried to limit

the selection process without limiting the selection process and that the Bylaws Committee will know that one of their first tasks is to try to work out how this interim election will be can be made.

MS. NIGHSWONGER: Secretary Markowitz?

MS. MARKOWITZ: I am sorry for not thinking about this morning at our Executive Board meeting preparing for this today. But under Roberts Rules in order to have a paper ballot for elections we need to have a vote to do so. So I will actually so move.
MS. NIGHSWONGER: It is in the regular bylaws already.

MS. MARKOWITZ; Oh, good so it's in the regular bylaw. But thank you. Anyone else on our board want to make any comments about how we came to this process?

Okay. If not I'd like to introduce the four people. And if you would just step to the microphone. First I am going to call Carol Johnson who is the Deputy City Clerk from Manchester, New Hampshire. Anything you want to say, you can tell us about yourself.

MS. JOHNSON: Good afternoon, my name is Carol Johnson. I am from Manchester, New Hampshire and I am the local election official. I have been in this municipal business for 29 years, hopefully I don't look it. So I have been around for a while. I am a certified municipal clerk. I have been involved in the City Clerk's Office since 1988. It was not my first introduction to elections but that is where I started helping run them for the city.

I guess somebody said to me very nicely in the hallway a little while ago that with every great act there are some unattended consequences which is why I responded to the email.
My bio is not contained in the book which is why I am mentioning that although I have been around for a couple of years. I am a certified municipal clerk. I have worked as the mediator, if you will, with the State and a lot of local election officials in the process of delving out the processes that Howard has brought us.

And the reason for responding to all of that was I think local election officials are the ones that frequently advise State because we are in the nitty gritty and we are in with the details of it. And we frequently work with other municipal and local election officials and help get through the process in a positive manner which is not always easy talk but usually we can get there.

The Standards Board is very much that. It is in an advisory capacity but the devil is in the detail. And I think this is the Board that needs to focus on those details for the EAC. So with that I will part company because we have a lot on our agenda today.

Thank you.

MS. NIGHSWONGER: Thank you, Carol. Okay, Sandi Wasolowski. I hope I said that correctly Sandi is the Franklin City Clerk. She is from Franklin,
MS. WASOLOWSKI: Thank you. I am Sandi Wasolowski. You pronounced it pretty close.

I am the Director of Clerk Services, City Clerk for the city of Franklin, Wisconsin. As a local election official I represent 1850 local election officials in the state of Wisconsin. I have been involved in the administration of election since 1976. So for some 30 years that has been my desire my strong field.

I have been on the Standards Board since its inception. I briefly was the State of Wisconsin elections director and HAVA coordinator. I was-- I returned to the city of Franklin after a new months of doing that for the state. The weather in Washington has taken my throat and voice.

You can see on the bio that I have been involved with the state of Wisconsin HAVA State Plan Committee. I was a former member of the SVRS, the State Regulation Administration Steering Committee. I was-- I am still on the Standards Board for the state of Wisconsin. I am a member of the International Institute of Municipal Clerks. I am also a member of the Wisconsin Municipal Clerks Association. I am the past president of the Metro Milwaukee Municipal Clerks.
I would be honored to fill the unexpired term of Mike. And I will be brief and that is it.

MS. NIGHTSWONGER: Thank you. You all have weird names, Ed Szczesniak, they are worse than my name Ed is from New York. He is Onondaga County Commissioner of Elections for Syracuse.

MR. SZCZESNIAK: Thank you. Good afternoon. The reason I responded positively I was selected and I was honored by back in 2003, January, to be selected to be as a local official on this standards Board.

What I have attempted to do over the years is attend every meeting and be as active as I can in this particular group. I think it is a meaningful role for a very meaningful organization, the Election Assistance Commission in terms of the revolutionary impact it is having on elections administrations across this country.

Being from New York as you see I feel a little overwhelmed by three women and myself on this floor of candidates here. But what I want to say is rather than read through all my notes I have been involved in all levels from the local town level as a
candidate, as a party official right through county
level, state level and national level in terms of
involvement in the party as well with elections.

I think I have a fair understanding what it
looks like at the County level. And I happen to be from
New York State. But we have had the distinction of
being the only state that has had DOG lawsuit against
it to enforce HAVA. And I won't take responsibility for
the lawsuit. But I know the difficulty that you all
are going through in terms of trying to make this work.
And the timelines that Congress has set for us to try
to make this work.

I think that participating in things like the
Standards Board goes a long way toward making sure
everyone understands how things are happening at the
local level to make this thing happen. I think our
mission, if there is one, is to have a can do attitude
to make this system work whether it is through Best
Practices or whatever. We can share that knowledge and
do it right at the county level as well as the State
level and of course it all becomes the Federal level.

So with that I would honored if you would
consider me to be the replacement for the unexpired
term. Thank you very much.
MS. NIGHSWONGER: There are other people trying to get rid of me.

Last but not least Tonni Bartholomew, is the City Clerk of Troy, Michigan.

MS. BARTHOLOMEW: Thank you very much for letting me have this opportunity to speak to you. I too am very interested in this Directors position on the Executive Board. I am a local clerk for a Municipality of about 90,000 people. I do everything from recruit people to code the devices. I have been involved at various levels in the State. I do instructions for the MNL as well as the Michigan Tactical Association and I have been involved on various advisory boards for the state of Michigan. I am currently Voter File Advisory Board. I was on the JEC for the State Devices for the State of Michigan.

If you talk to people from Michigan they will say I am a very detailed person. I am all about all about code standards and laws and if it says do it they we do it. I think I can lend that kind of expertise from my experience which I am much older than I look, I have been involved with elections since 1986,'87. And
I would really like the opportunity to serve you and serve the people of the United States.

MS. NIGHSWONGER: Thank you, Tonni. How many of us can say we are older than we look?

Okay. If there is no objections we will proceed with the lucky new candidate to join us on this Executive Board. Oh yes, did we get the ballots past out? Would you pass the ballots out please and while you are doing that I want to remind you to vote for one, please do not over vote or under vote, vote for one. And if you can you can fold your ballot in half once. I am going to have Sarah and John collect the ballots. Sarah I am going to ask you to take this side of the room, on my right. John if you will collect the ballots on the left side of the room please. Todd would you like to get the map? So if you will mark your ballot and fold it in half they will pick up your ballot. And then we will have a group of people who will be counting the votes and we will announce to you on one of our breaks who the lucky person is.

Oh, yes, is there anyone in the room that did not respond to the first roll call? That is one thing
I want to ask you. Julie as been running around trying to
track down her luggage. That is always a hard thing.
Sara John and Todd are going to be picking up
the ballots and I would like to remind you that voting
members only will be marking the ballots. Polls are
officially closed.
Again I would like to remind you before we
close this session of our meeting I would just like to
remind you if you are interested in serving on a
nominating committee before the next meeting we will
have to utilize a nominating committee in order to
get-- Phil I believe there are two more positions on
our Board that will be vacant by people-- Oh, three?
One State and two local. If you're interested in
serving on a nominating committee I would appreciate
getting information about that so we can do this
process appropriately at our next meeting.
Thank you so much. And we will move on into
the next portion of our meetings. If I can get
Commissioner Martinez' attention. He is in the hallway
there. We will move on to our next report on Getting a
report on Provisional Voting. So will the panel who
going to be talking on Provisional Voting if you can
come on up here we will give you our seats.

MR. MARTINEZ: We will move into our next presentation. We are, by my watch, about 11 minutes off schedule right now. So we will make up the time during break, or at some point we will figure out how to do that. I know some of you had plans after the meeting is over to get out of the hotel and so forth. So we will try to honor our agenda as closely as possible.

Our next pane will give us an important presentation on Provisional Voting. The Help America Vote Act requires as all of you know that the EAC at a minimum consider the development of voluntary guidance on any of the Title 3 requirements the Title 3 requirements of course for those of us with voting systems that require section 301, State Wide Voter Registration Voter Data Basis and Voter ID for certain voters that are in Section 303 and Section 302 which is Provisional Voting and Poling Place Signage. So in looking at that mandate that the EAC developed Voluntary Guidance on Provisional Voting, we felt we needed to commission some sound research and analysis on the issue of provisional voting.

We turned for that task to the Eagleton--

Tom, forgive me is it Eagleton Institute, yes, I almost
lost it there, at Rutgers University. And in turn
Eagleton Institute also brought in Moritz School of Law
at the Ohio State University and thus we have Professor
Edward Foley.

Tom O'Neil is the Project Manager, the lead
consultant, if you will, to the EAC for the study that
has been conducted on provisional voting. They will
give you the details. We have been working with Tom now
for perhaps the last eight or ten months perhaps longer
than that. Lots of discussions about the issue. Tom
will present, as well as professor Ed Foley who is the
director of Election Law at Moritz program, an expert,
well known national expert on election law issues
covering the whole gamut of election law from
redistricting to election administration.

We are very pleased to have their
participation in this project. And particularly please
to have them here today to present the draft product of

what they have been working on and to answer your
questions. What we have asked our presenters to do is
give you an audio visual presentation that will be
short and to the point we hope. After which our counsel
Julie Thompson-Hodgkins is here. She is listed as the
resource person and she will lead the discussion upon
Page 79
052306

the end of the presentation. And we hope that you will
be-- that you will not be shy in asking questions and
give us your opinions and advice on the work product
you are about to hear about.

With that, Tom, I will give you the podium

DISCUSSION: DRAFT REPORT ON PROVISIONAL VOTING

Presenters: Thomas O'Neill, Provisional Voting/ Voter
Identification
Tim Vercellotti, Eagleton Institute.
Edward Foley, Election Law @ Moritz School
of Law.

MR. O'NEIL: Thank you Commissioner Martinez,
I am happy to be here. We regard the presentation we
are making at this meeting as phase of our research. We
are going to be presenting our final draft, report and

recommendations. And we hope that it will elicit from
you comments and questions that will become part and
parcel of our research efforts to understand the
dynamics of provisional voting in 2004 and going
forward. And we hope that the states have much to learn
from one another in the provisional voting process and
that we can do something to act as a catalyst in that
mutual learning exercise that all of you are engaged in
here as members of this Board.

Page 80
As Commissioner Martinez said we are looking at provisional voting. We have been working on this project just shy of a year. And today you're to going to see some of what we have concluded and our recommendations to the EAC. In term what we are recommending to the EAC is that they make recommendations for Best Practices to States and localities to improve the functioning of the provisional voting system.

Commissioner Martinez described the parties that are doing this, the Eagleton Institute of Politics at Rutgers State University in New Jersey, the Moritz College of Law at the Ohio State University which is well known for the website it maintains on election law all around the county.

Ed Foley and I are happy to be up here on the podium but we represent a larger group. This is the project management team. The principal investigators Dr. Ruth Mandel, the Director of the Eagleton Institute of Politics. With us here today, from the Project Management Team, are Ingrid Reed, Ansa Cadgig from the Moritz College of Law and one of our lead researchers Tim Bersoltti, Assistant Director from the Center of Public Interest Polling that undertook the survey of
local election officials on which some of our findings are based.

We proceeded by looking at six questions that the EAC raised with us. And those questions are displayed on this slide they are basic, they are important and some of them I have to tell you are very hard indeed to answer.

How do states prepare for HAVA's Provisional Voting Requirements?. How did preparation and performance vary between states that previously had some form of provisional ballot and those that did not?

We will be coming back to that issue several times via this report. And so we have developed a short hand for it. We call them Old states and New States. And I hope you will bear with me. If you come from one of those Old States we don't mean it personally.

How did litigation effect the implementation of provisional Voting?  How effective was provisional voting in enfranchising qualified?  Did state and local processes provide for consistent counting of provisional ballots?  Did local election officials have a clear understanding on how to implement provisional voting?

To answer those questions we undertook several steps. Our aim being throughout this to provide
the EAC with a strategy to engage the states in a continuing effort to strengthen the provisional voting process and increase the consistency, this is important, increase the consistency by which provisional voting was administered. Particularly consistency within the State as opposed to consistency on the States.

We surveyed 400 local election officials. We reviewed the EAC election day survey. We analyzed the states experience with provisional voting mostly on a statistical basis. We collected the provisional voting statutes and regulations for each State in the country. And in fact part of our deliverables to the EAC was a continuum of those statutes and regulations. And they will all be on one CD rom for easy access. And we analyzed the litigation that took place concerning provisional voting issues in 2004.

Summary of findings, again looking at this consistency issue which is so important. There was considerable variation among the States. HAVA allows the States considerable latitude in how to implement provisional voting including deciding who beyond the required categories of voters should receive provisional ballots. And how to determine which
provisional ballots should be counted. We had just shy of two million ballots cast in 2004 and 63 percent of them were counted. Now the variation of among the States is enormous. The percentage of provisional ballot in the total vote varied by a factor of a thousand. From as high as seven percent in Alaska to Vermont's six one thousands of one percent. Now that's like the lobster production between Maine and Utah. You don't find that large a difference among States on measures like this. So there is an enormous variation. And the portion of the provisional ballots counted varied significantly from 96 percent in Alaska to 6 percent in Delaware. We don't need to tell you is that the percentage of total votes cast rises in terms of provisional votes being a greater that becomes more and more significant in closer elections. If the election margin of victory is two percent but seven percent in provisional ballots that is a very different scenario than if one percent was of ballots are provisional but the victory was ten percent. There are some sources of the variation among the States. Number one that jumped out at us was experience. The share of provisional ballots in the total vote was six times greater in states that had
used provisional ballots before than in States where
the provisional ballot was new before.

MR. VERCELLOTTI: It is good to be an old

State.

MR. O'NEILL: In the 25 states, 25 States
that had experience with provisional balloting 18 were
new.

Administrative arrangements. Simple
administrative differences also I think go a long way
in explaining the variation in the use of provisional
ballots.

The time to evaluate ballots. How much time
after the election do you give officials to determine
whether a provisional ballot should be counted? States
that provided less than a week, counted a little bit
more of a third of the provisional ballots counted.
States that permitted more than two weeks counted 61
percent. That time factor is important.

And voter registration data basis. States
with voter registration data basis, and there were only
a few of them in 2004, counted an average of only 20
percent of the provisional ballots cast. States without
those data basis counted twice that number.

MR. FOLEY: If I can just underscore these two

Page 85
points that you're going to hear throughout this presentation the importance of both of them. In other words the time to evaluate the ballots increasing the accuracy is a very important finding. And it leads to an issue on how to trade off the value of accuracy verses speed or completeness of finality of the election. And we will be talking more about that.

Likewise another theme that will run throughout this presentation is the important relationship between the provisional voting system as one component of an overall election system with the registration data basis. Those two subsystems if you will are very much integrated as you know.

And they will be increasingly integrated under HAVA and under centralized voter data basis.

MR. O'NEILL: Now turning from looking at variation across States to variation within States.

We gathered county election-- provisional ballot data for 20 States. Had we been able to get data from all of the States at a county level the ranges and variation I am reporting to you might be wider than what we found. So bear that in mind. The rate of counting provisional ballots within the same State
varied by as much as 90 to 100 percent among counties in the State. The resources available to administer provisional voting varied significantly within the same State.

The election day study found that staffing problems appeared to be particularly acute in jurisdictions in the lower income and education category. Small rural jurisdictions, large poor urban jurisdictions have higher rates of inadequate training for poll workers. The jurisdictions in poorer areas reported more inactive voter registrations and more provisional ballots cast. Richer areas had more poll workers per polling place and reported lower rates of staffing problems per precinct.

There are other effects that go beyond what is going on at the State other than scio-economic. Some reports from the States suggest possible sources of lack of consistency. You know Iowa cast some provisional not signed in the assigned precincts. Even thought the States policy was to count only those ballots cast in the correct precinct. So you could see how that would enlarge the variation among counties in
the percentage of provisional votes that were cast.

Similar kinds of free lancing were going on in Washington state.

MR. FOLEY:: Another theme that we found. There is a difference between the rules on the books and the rules as they were enforced in practice. And that obviously is of concern potentially in respect to litigation when we get to that point.

MR. O'NEILL: Turning to from this sort of summary in terms of what the variation was all about to some of the details of the answers we developed in each of the questions that were put to us by the EAC.

First how did States prepare for the provisional voting requirement? Most election officials we talked to in our survey received provisional voting instructions from state government. But the type and amount of that instructions varied very widely across the states. Almost all of them provided training or written instruction to precinct public poll workers. Only in about one in ten made available to poll workers the voter registration data base. Equally rare was training or written procedures
for poll workers to understand how provisional ballots would be evaluated.

Second question, how did preparation and performance vary between States, the old States and the new States? The local election officials in the old States felt more confident about exercising their responsibilities for provisional voting. As we earlier 18 States were new to provisional voting, 25 others had experience.

The New State officials I thought they did not receive enough information more frequently and felt and felt more funding was necessary to educate voters about, their rights to cast a provisional ballot.

Ballot .

Local Officials in the old states counted more ballots, were better prepared to direct voters to their correct precincts with maps and other types of information. And regarded provisional voting as easy to implement.

Officials from new states were more likely to believe that voters needed more information where to vote and to feel that provisional voting created unnecessary problems. There was much less if a response than from officials in the old states.
MR. FOLEY: One could abstract from that provisional voting is a dynamic process. It is not static, it's not that HAVA created provisional voting and now we have it and we are done. There is a learning curve here. It is not an all or nothing situation. There are shades of gray involved. Sometimes it is sold as a safety mechanism, or fail safe. But the ability for it to perform as a fail safe is dependant on various factors. It's not automatic.

MR. O'NEILL: Question three: How did litigation effect the implementation of provisional voting?

Litigation before the election clarified voters rights. To sue in federal Court to remedy violations of HAVA; to receive provisional ballots even though they wouldn't be counted; have the voters be directed to the right precinct. And most of the litigations occurred to late to influence how states implemented provisional voting in the year 2004. Even with that finding I think it is a fair assessment to say that pre election litigation was more successful in changing the dynamic of at least the rules. And to clarify what the rules were going into election day. And therefore could be perceived as having some utility in the process. Post election litigation only invited
How effective was provisional voting in enfranchising qualified voters? And I suggested at the outset some of these questions were very hard to answer. And this was among the hardest. To know the answer to how effective was provisional voting in providing that fail safe that Ed just mentioned and you show up and your not on the registration rolls how effective is getting that provisional to you? Ideally to know that we have to know the decisions that were made in 200,000 precincts around the country. And we would have to know the criteria that the evaluators of provisional ballot used when the process came to them to decide which ones counted and which ones didn't. And there is a considerable element of individual eccentricity in making these decisions. It is hard to predict and therefore we had to look for a more abstract way to have some kind of number to attach effectiveness. If that batter hits the ball one third of the time as it comes across the plate it is .333. So we are aiming for

Page 91
something not quite as precise as Ted Williams 405 but
something that would at least put us in the order of
magnitude.

We know that 1.2 million voters, or about
one percent of the turnout, got to vote by provisional
ballot who otherwise would have been turned away. But
what is the denominator of that? What do you divide
into? Well in 2000 the CalTech MIT voting technology
estimated that two and a half million to four million
votes were lost in the 2000 Presidential election
because of registration mix ups or confusion at the
polling place.

Now registration mix up and confusion at the
polling place are pretty good description of what is
going to put someone in the line for provisional ballot
instead of to get on the regular machine. So 1.2
million voters casting a provisional ballot and maybe
two and a half to three million figure in the number of
them who were there but didn't get one, we figure that
provisional balloting might just have been 50 percent
effective in 2004. It's an approximation but it
indicates something I think we all will agree about
which is there is room for improvement.

Indeed legislative activity in the states
following the 2004 election leads us to believe that
the states themselves recognized that they were not satisfied with the effectiveness of their provisional voting systems and made efforts to improve that through legislation.

Question five: Did state and local processes provide for consistent counting of provisional ballots?

Again this is a topic of considerable interest. As we have already talked about there was little consistency among states and within states. That the use of provisional ballots was not distributed evenly across the country. In fact six states accounted for two thirds of all the provisional ballots cast. The share of provisional ballots in the total vote was six times greater in experiences states than in new states. The more rigorous the state's voter ID requirements the smaller percentage of provisional ballots that were counted. And new states with registration data bases counted 20 percent of the ballots past. Those without data bases counted more than double that rate, 44 percent.

MR. FOLEY: And I can add to that. The most common reason why a provisional ballot was not counted in most states it was reported that the provisional
voter was not a registered voter. That was the reason given. What is poorly understood unfortunately at this point is what underlies the reason why that voter was not registered according to the system, yet that voter attested that to believing he or she was registered by HAVA. And what our research has shown, as Tom just suggested, is that there is a considerable variation both among states and within states as the method for checking whether or not the provisional voter is registered.

The methods and the processes that the system uses to try to verify whether this ballot should count varied considerably. And there is very little rule guidance as to what that methodology should be. So an important part of our presentation today is the need to better understand that and to develop more guidelines. The theme here is there is just a lot of difference just about the mechanics on how to go about determining whether this voter is even an eligible.

MR. O'NEILL: Continuing on with the consistency question.

States that allowed out of precinct ballots counted 65 percent of the provisional ballots cast. States that recognized only ballots cast in the proper
052306

16 precinct counted 42 percent. In old states the
difference was greater than that 52 percent were
counted in states requiring new district ballots and 70
percent were counted in those allowing other precinct
ballots.

21 This aspect of the consistency issue takes us
back to the time question. Fourteen states permitted

1 less than a week to evaluate provisional ballots, they
counted 35 percent of the ballots. Fifteen states
between one and two weeks, they counted 47 percent of
the ballot. And 14 states that permitted more than two
weeks they counted 61 percent of the ballots. Just the
administrative handling of the ballots makes a
difference in the performance of the state.

Conclusions with this? The states have
latitude on how they meet under the HAVA requirements.
A considerable degree of variation among the states are
to be expected. And here is the interesting observation
about that. If the variation among the states reflects
differences in their political cultures it is likely to
persist. If it reflects a learning curve for the new
states figuring out how to do this provisional ballot
thing then consistency among the states is likely to be
achieved much more quickly than if some states have a

Page 95
fundamental philosophic objection to the concept of the provisional ballot.

Questions six: Did local election officials have a clear understanding on how to implement provisional voting?

What we did was ask the local officials themselves to characterize understanding. From a sample of about 400 of them around the country eight out of ten reported receiving instructions from state government; four out of ten, only four out of ten I should say, felt poll workers needed more training to understand their responsibilities.

Moving back now from asking the local officials themselves for some kind of objective evaluation on how the process was managed. The lack of consistency among and within states indicates the differences in how our election officials understand their responsibilities and managed the 2004 election.

In thinking through this body of information we have to recognize the existence of inconsistency of understanding between the states and within the states. Particularly of concern are the inconsistencies within a state. And that we need to forge away to approach this as a learning experience, a way to understand and explain the rules by which each state governs...
21 provisional voting.

22 And we will phrase this as a set of

1 questions. Does the provisional ballot system
distribute, collect, record and tally provisional
ballots with sufficient accuracy as to be seen as
procedurally legitimate by both supporters and
opponents of the winning candidate. That is the acid
test here.

Second: Does the provisional balloting
system place administrative demands on local
jurisdictions that are realistically related to the
staff and other resources available to fulfill those
demand?

Third: Is the variation within state great
enough to cause concern that the system might not be
administered uniformly from county to county.

MR. FOLEY: I just want to act on Tom’s point
about the acid test of legitimacy. The reason why
clarity is so important to that is again because the
provisional votes matter as you know when there is a
close race and when there is a dispute about what to do
with these ballots. Should they be verified or not?
And if the rules for that process are unclear and
disputable that casts everything in doubt. It casts the
process in doubt; it casts the results of the election in doubt. So clarity is the first and most important value for bringing legitimacy to the process. Because it will be a process that unfolds after election day in the heat of the moment. And to avoid litigation, and particularly destabilizing litigation, clarity has to be the first priority.

MR. O'NEILL: In looking for clarity a place the states often turn to is the history of litigation. Litigation coming out of the 2004 election clarified the right of voters to receive provisional ballots even though the election officials were certain they would not be counted. And lawsuits prompted election officials to take better care in instructing precinct officials on how to notify voters about the needs and go to the correct precinct in order to cast a countable ballot. Those are the issues of clarity like we have just been discussing.

We recommending to the EAC that it recommend as Best Practices to states the promulgation of clear standards for evaluating provisions ballots. And provide training for the officials who will apply those
bonds. We believe they should provide materials to
local jurisdictions. To train polling workers on such
procedures as how to locate polling places for
potential voters who show up at the wrong place. And
to think that the only permissible requirement to
obtain a provisional ballot is an affirmation by that
voter standing in front of a local election official
that that voter is registered in the jurisdiction and
eligible to vote in an election for federal office. And
poll workers need the training to understand their duty
to give those voters a provisional ballot.

MR. FOLEY: And on that point, on the voters
affirmation, it's their sincere belief that they think
that they are registered. The polling place is not the
time or place to verify eligibility in determining
whether the voter is correct or not.

And in that sense as a working rule, as a
practical matter given long lines in a high turn out
election, you know if a voter asks for provisional
ballot they really ought to get one. Then you can
figure out what to do with it later the one question
that can be asked is: Do you really think you are
registered? If they think they are registered they should get that provisional ballot. It should not be a complicated process to administer provisional voting at the precinct.

There may be complexities that are unavoidable after election day. And again it might be best to minimize those complexities as we get into. But it is very, very important to streamline the process at the polling place itself. And so it should be virtually automatic that if a voter says: I think I am entitled to vote; that they get the provisional ballot.

MR. O'NEILL: We believe the general way the states can most effectively pursue improvements in the provisional voting process is to take a quality improvement approach.

Defining quality begins in asking how well the system works now. But figuring it out to how open it is to error, recognition and correction. And by asking how well our provisional voting process is connected to the other parts of the machine that they need to be well characterized to the registration and voter identification names. So to do all that requires a systematic quality improvement program that starts by
collecting data that is not now generally available.

The data collected should insure a list of
the specific reasons why provisional ballots were not
counted; measures of variance among jurisdictions,
counties or even precincts; a hard look at the time
actually required to evaluate the ballots by
jurisdiction and then comparing that to what the
statute or regulation allows in that state. If it is
simply unrealistic what kind of changes are needed? And
an accurate and timely report on provisional votes cast
and counted by jurisdiction down to the precinct level
so you can spot anomalies and take a look at where more
poll worker training may necessary to get them up to
the standard you would like the entire state operate
at.

MR. FOLEY: Just to give an example of this.
Most of you know about Washington State's experience
with its gubernatorial election in 2004. That
illustrated several things about this process. One of
which was this issue is the provisional voter
registered? And in some localities the answer came
back yes, and this was not true by the way of only
Washington State, this occurred in other states in
lower profile races. So the answer comes down back "no,
we have looked at our data base, our files and we don't have this voter as a registered voter." Then the question arises well they are not in the system but did you go back to the original voter registration card and see for whatever reason that card for a new registrant was not entered in the system in the run up to this particular election? Sure enough it turned out there were a substantial number of voters in Washington state, and elsewhere, that had submitted timely registration forms; that had submitted timely registration forms; had submitted procedurally proper registration forms and they should have been in the system but were not through no fault of their own.

That's the very thing that a provisional voting fail safe is supposed to protect against. But it couldn't protect against it if the only checking mechanism is to go back to the data base as opposed to going back to the original voter registration card. The reason why the poll book, the precinct official has,
The courts ordered those forms to be entered into the system and ordered those provisional ballots to count several weeks after the election had already be certified.

So here is an example of where the methodology used and the process used determined what does it mean to be a registered voter really matters which is why there has to specific standards on that. And that gets into the finality point, or the timing point that we have already talked about. If it takes, five, six, eight weeks to add those hundreds of voters to the certified total you run up against serious deadlines. You have past certification deadlines. In some cases you have past inauguration deadline. You have past the Federal so called safe harbor deadline for Presidential races.

So there was an ability to increase accuracy that had outcome determinative effects in terms of who was the winner of the governor's race in Washington. That final certification occurred two days before New Year's Eve. So again accuracy verses timing is a these that needs to be evaluated as you specify what are best practices for implementing the evaluation process.
approach for improving the provisional voting process is to access each stage of the provisional voting process. Before the election the better the voters understand their rights and obligations the easier the system will be to manage and the more legitimate the appearance of the process.

At the polling place? Avoiding error at the polling place will allow more voters to cast a regular ballot and all others who requested cast a provisional ballot. In the evaluation process the clarity of the criteria for evaluating voter eligibility is critical to a sound process for deciding which of the cast provisional ballots should be counted.

And post election we belief the best practice is for states to consider how to complete, as Ed was just saying, all the steps in the evaluation of ballots and challenges to that determinations within the five weeks available in Presidential elections it is important top provide timely information to voters about the disposition of their provisional ballot. For instance having cast a provisional ballot this time are they now registered for future elections. They should know that. If not what do they need to do to be covered?

As I said at the opening we look at this
briefing as an opportunity to continue our research by hearing from you. The detailed examination of each stage in the provisional voting process we hope can lay the foundation that each state needs to improve its system.

Efforts to improve provisional voting may be most effective as a part of a broader effort to strengthen voting systems. Collecting and analyzing data about those systems will enable states to identify which aspects of the registration and electoral process are most important into the provisions voting process. Responsible officials can then look to their registration system, their identification requirements, poll worker training, as ways to reduce the need for voters to cast their ballot provisionally and evaluate them consistently. Thank you and we are looking forward to our discussion.

MR. FOLEY: Likewise. Thank you.

And just one more general remark to share with you before turning it over for questions and so forth. If 2004 was a learning experience in terms of the provisional voting process. And we saw stresses imposed on that system and we were asking could the provisional voting process handle the stresses of a
close election and the demands put on it. I think right now, two years later in 2006 we are in an interesting situation because there has been reaction to 2004, as Tomb said. There has been new legislation. Some of that new legislation has alleviated some of the stresses that were imposed onto the provisional voting system, having increased its ability to be the fail safe that HAVA and Congress spoke of. But some of the legislation and some of the developments candidly put more stresses on the provisional voting system. It is possible that as we go forward in elections this Fall and in the future we will see higher rates of provisional ballots past, not lower rates more demands in terms of how to evaluate them. Some of this again is maybe good and important for understandable reasons, but as the data bases get rolled out and as there are complexities in terms of rolling out the data bases that may cause more questions to be asked about the eligibility of a registered voter. And that may cause that voter to cast a provisional ballot whereas in the past the question would not have been raised and would have cast a regular ballot.

Likewise in the states without the voter ID requirements those new requirements may raise questions...
about eligibility causing more votes to be cast as
provisional votes in stead of regular votes.
So that has created a rather interesting
phenomenon and that HAVA said from a voting rights
perspective, if you will, said we saw the situation in
which a voter went to vote, turned up at the voting
place on election day believing that they were entitled
and then finding that they were purged, sometimes
erroneously purged, and they were turned away. So what
provisional voting was designed to do is to make sure
no one was ever turned away like that. They could at
least cast a provisional ballot and then we could ask
questions.
Some of the new legislation and some of the
new demands being put on the system have instead of
saying this is really for the voter. They are saying
this a reason to check eligible voters and therefore
instead of using a provisional ballot to give the voter
an opportunity so that they are not cast away we are
going to use this provisional ballot so that the voter
doesn't case a regular ballot. We are going to put
them in the question mark category rather than the yes
category which is different than putting them in the
question mark category rather than the no category. But
as that happens more questions marks get raised so more stress gets put on the system. Thank you.

MS. HODGKINS: Thank you Mr. O'Neill and Professor Foley. Members of the Standards Board we have about 35 minutes until the end of this session for your discussion, comments. I know many of you have questions about perhaps the methodology, their conclusions maybe experiences you would like to share. I am going to be here to make sure this is an orderly process. And as you had in your previous session there are several hand held mics that are around the room. If you will indicate to me that you're interested in making a statement will recognize you and then we bring a mic to you and let you speak. Please do remember to identify yourself before you start speaking Mr. Szczesniak?

MR. SZCZESNIAK: Yes. I guess through from the presentation I got the sense that many states as part of your survey have coworkers make the determination as to whether or not the provisional ballot was a good deal or not; is that correct, or was I misunderstanding something.

MR. O'NEILL: We did not mean to imply that.

MR. SZCZESNIAK: That's good because it didn't make any sense to me.
MR. FOLEY: It is after determination. And

MR. O'NEILL: Another comment is many people that do put that out are the old states. But it is truly a fail safe provision and we focus that in the training of the inspectors, poll workers so they understand that nobody leaves the polling place without having had the opportunity to vote either on the machine, by court order or by provisional ballot.

MR. SZCZESNIAK: But many people cast a ballot thinking they are registered voters and they aren't. There is a requirement that we do not put in our poll box any inactive voters whether active or not. Many people who show up at the right place but they just can't. We give them the affidavit and we check them out and give them a chance.

Some reason they are not counted is that people have moved within our jurisdiction. They are in the right church and the wrong pew. They are still eligible to vote but now with the new requirement and
because of federal lawsuits says right church wrong pew
that's okay. But if they are in the wrong church they
just can't be counted. So we tell them to go to the
right polling place if they want to get counted.

MS. HODGKINS: Mr. Kennedy?

MR. KENNEDY: Kevin Kennedy from Wisconsin. I
have a question about the methodology in the sense that
you have 43 states that do not include the six states
with election day registration?

MR. O'NEILL: That is correct, yes.

MS. HODGKINS: Yes, ma'am behind Al.

MS. ROUST: Sue Roust from South Dakota. On
page eight of your handout at the top that says: "EAC
should recommend to the states that they" and one of
the bullet points is: "Make clear the only permissible
requirement to obtain a provisional ballot is an
affirmation that the voter is registered in the
jurisdiction and eligible to vote in a federal
election."

Are you saying that you feel that the EAC
should recommend that on that question of do you have
to be at the right precinct or you just have to be
Are you saying that the EAC should come down on the side that if you go to the wrong precinct that your registered somewhere in that jurisdiction that you should be allowed to vote or that your provisional ballot should count?

MR. FOLEY: Well first of all it is our understanding in examining the case law that has developed on this that HAVA itself does not require the states to adopt the so called wrong precinct you count the ballot rule. So it couldn't be mandated as a matter of what HAVA requires. In terms of-- if EAC considers itself in a position to provide best practice type recommendations that aren't necessarily HAVA requirements then it could be considered whether or not as a policy matter is there something advisable. And actually in reference to the New York litigation it seemed that a middle step position is that if a state is going to allow for multiple precincts to exist within the same location and the voter shows up at the correct location but ends up in the wrong line at that
location could that be considered attributable to administrative error as opposed to voter error? That was the holding of the New York case. So that the voter should get the benefit of the doubt if they go to the right place even if they ended up in the wrong line. And we thought as a policy matter that was appropriate to recommend as best practices. Beyond that probably it makes sense to say that as a matter of Federalism in federal law it's really up to the state whether to go beyond that.

MS. HODGKINS: Mr. Clark.

MR. CLARK: Bradley Clark from California. I was just curious. How you on methodology how you selected your 400 jurisdictions to survey?

MR. O'NEILL: It was a stratified random sample we looked for size, a mix of size, a mix of urban and suburban and then selected randomly from within that. We have our poll director here if you would like more details.

MS. HODGKINS: Mr. Sholl.

MR. SHOLL: Howard Sholl from Delaware. I have a few comments. First of all in your analysis you seemed to
forget there are different types of provisional ballots. By that I mean in Delaware we had 300 and some odd provisional ballots that were cast between 400,000 people and you were saying we were doing a very good job. Well, actually if you would count our fail safe if someone changes an address instead of sending them to a different polling or giving them a provisional ballot we made every effort to qualify them and let them vote normal. So instead of having 6 percent rate that we counted you count the 6 or 7 thousand change of addresses that we did at the polling place we ended up counting 95 percent of our so-called provisional ballots.

So there is a difference of what a state calls a provisional ballot. You will find that it varies across the country and that could effect your analysis to some degree.

Second of all. You are very correct information needs to be distributed to the election officials and their friends. It also needs to go to the media who consistently misrepresented what provisional voting was. The media in the Philadelphia market said you can vote anywhere you want to. Well that wrong in Pennsylvania, that was wrong in Delaware and I don't
know about New Jersey. But people picked up information from elsewhere in the country and misrepresented it to their populations. So the media needs a heck of a lot of education about what provisional voting is so they don't misrepresent it to the voter, because we can't counter what the media blitz misrepresents.

MR. FOLEY: Well that underscores what we were saying were A this is a dynamic evolving process and not static. We couldn't agree more with that point. Secondly we agreed very much as Tom said that there were challenges, methodological challenges in terms of finding the right data, evaluating the right data, and one theme in our recommendation, and you know-- besides we are a snapshot or synopsis of the larger report. But one theme is that a very helpful role that the EAC can play is that of data collection, data consistency in terms of terminology or data classification of data. So we hope that through this cycle of empirical studies is just the first in a series of cycles of empirical studies that increase knowledge and increase understanding of the mechanics of the process.

MR. O'NEILL: Can I respond also.

MS. HODGKINS: Sure.

MR. O'NEILL: Mr. Sholl you said that there are different kinds of provisional ballots in Delaware.
Is there more than one category of provisional ballot that you report? Or are there some sorts of things that provisional ballots aren't really provisional ballots as we have been referring to? When you talk about qualifying voters for instance to make sure that they can vote a regular ballot?

MR. SHOLL: Howard Sholl from Delaware.

No, we call a provisional ballot exactly what it is it is a provisional ballot. It's the last chance to vote. So that's what we report, we don't report fail safe, what we call fail safe voting call. We update your address at the polling place, we verify the registration and we let them vote it. That's not in our lingo a provisional ballot. But it is in the lingo of other states what a provisional ballot is.

So when you're looking at Delaware verses Ohio verses California you're looking at apples and oranges.

MR. O'NEILL: Thank you.

MR. HODGKINS: The lady in the back and then we will come over here for Mr. Lomax.

MS. ANDERSON: Sharon Anderson from Minnesota.

My question is about limiting the study to 43 states that do not now have election day registration,
and I guess North Dakota doesn't have registration at. I am curious about studying those EDR states in the future. And the reason that I ask that is I have spent my entire 27 years in the county office is riveted with election day registration. And certainly on election day in those EDR states is moving that whole decision making process to election day. And one of the slides that you were showing is training between the poll workers makes a big difference, I can assure you that makes a huge difference when you are a EDR state. So my question is based in the thought that perhaps perhaps things to be learned from EDR states that could improve the provisional ballot process.

MS. HODGKINS: Mr. Lomax?

MR. LOMAX: Harvey Lomax, Clark county, Nevada.

I guess your sources of variation you listed is the experience of the state and how long a time the state has given to resolve the provisional ballot. Yet I would suggest kind of piggy backing on what Howard said that the laws of the state-- if you take the laws of California and Nevada and look at the laws of who past the provisional ballot. They drive (sic) more the number of provisional ballots cast, how long it takes to resolve those issues and how many are going to be...
excepted. And most of that has to do with how people changes in address and if you allow changes in address up to the last minute.

In Nevada for instance no changes in address are allowed. So all we are dealing with are they registered or are they not registered. That's pretty much it. So it doesn't take us as long. And you're going to have a much higher rejection rate.

Just on the side a different issue. I can also speak loud and clear not all voters who show up and attest that they are registered voters even begin to qualify. In Nevada a high tourism state down there in Las Vegas in the 2004 elections we had people from all over the country insisting they had a right to vote in Nevada. And we let them vote provisionally and we didn't count them.

MR. FOLEY: And we are by no means suggesting that provisional votes should be counted if in fact the provisional voter was not properly registered voter. And in fact one of the problems that occurred in the state of Washington was the erroneous inclusion of provisional voters, of some provisional ballots in the final certified total that should not have been included. They were included prior to the evaluation.
process. So there are two possible errors. There is the
exclusion of one that should have been validated. And
the other kind of error is the inclusion of those that
should not have been validated. In a well designed
system we try to minimize both types of error.

MR. O'NEILL: Let me supplement that a little
bit.

I think what is driving our recommendation is

anybody that comes in and affirms that he or she is
registered and eligible to get a provisional ballot is
driven by the pressures on the poll workers on election
day. And we gladly not see those poll workers time
taken up by sort of a quasi traditional process in
deciding whether any particular voter really deserves a
provisional ballot. Everybody should get it and sort
out later when you have a matter of weeks rather than
matter of hours. That is the burden of our argument.

MS. HODGKINS: The gentleman in the blue
shirt?

MR. TERWILLIGER: Bob Terwilliger from the
state of Washington.

I hear categorizations of states by the way
the they verify (inaudible) the ballot. You talk about
a voters affidavit and current ID as if they exclusive.
In the state of Washington we actually use three. To
To determine whether or not they get a mechanical ballot, the only thing we don't have is to return with your ID. If we have an affidavit on the envelope we check the signature. We also verify that he or she is an actual registered voter which to is three of the four that you list there.

Mr. O'Neill: We will clarify that.

Mr. Miller: Paul Miller also from the state of Washington.

And I was interested in your comments about going back and checking against the actual original registration card for a couple of reasons.

One the practical administration implications of that. And two because you cited Washington state specifically in regards to that. And I think that there may be possibly some misunderstanding as to what came out of the 2004 gubernatorial election in that regards.

First of all as a practical matter what I understand you to say is we ought to be going back and checking all of our voter registration cards to make sure we didn't inadvertently miss one or more. Obviously in King County where they have 1.2 million registered voters, as an administrative matter that is an impossibility.
Two, what I am understanding you to refer to actually is a little more complex; but, raises some additional questions I think you might want to investigate in your survey which is what can be remedied in voters registration when either the provisional affidavit is incomplete or when the original voter registration form is incomplete. If the person, for example, didn't sign the voter registration form they can't be made inactive registered voter. Can that be remedied with a provisional ballot and a signature verification if the address was an invalid address and couldn't be precincted can we give them a provisional ballot? Those are some of the kinds of issues that did come out and we were forced, in Washington, to clarify those kinds of questions.

MR. FOLEY: Those are really important questions. And absolutely that's where clarify is the primary value. It's much more important to have an answer to that question ahead of time that it matters what the answer is. So if the issue is a missing address we should ahead of time what the consequences of that missing address is. It either counts or it won't count. But at least you know the rule ahead of time so I absolutely agree with that.

MR. O'NEILL: And I believe the court case
you are referring to is the judge ordered King County
to seek signatures for provisional when they hadn't
signed the provisional ballot. That's my understanding
of the decision in that case. My guess is that was the
court case you were referring to.

MR. FOLEY: Well there were multiple cases as
you know. And one piece of good news on this I do
think the HAVA requirement of statewide centralized
voter registration data bases will help because I think
a well designed data base will always archive any
retained historical records with respect to registered
voter. In the event of a purge or in the event of some
action on that registered voter you can go back and
archive the history. And that will minimize to a
considerable degree issues about the validity of the
status should they arise in the context of a
provisional ballot.

But there is still a question of the point of
intake question. In other words until you get that
registrant within the system, in the centralized data
base there is a gap and we have seen it. It is not just
in Washington. There are gaps in terms of forms
1 delivered to DMV that are not transferred timely to the
2 Board of Elections, who bears the burden of that risk?
3 Of course there is a different burden of risk if the
4 form is delivered to one of the third party groups. And
5 they make a mistake. I am not saying that all risks
6 should be borne by the state. Some risk should be borne
7 by the voters. Some risks maybe should be borne by the
8 system. But the most important issue is to clarify
9 ahead of time is who bears the risk of a missed form,
10 and under what circumstances?

MS. HODGKINS: The gentleman in the back and
then we will go to Mr. McCormack.

REGIS YOUNG: Regis Young from Pennsylvania.

You made several points about educating the
polls workers throughout your presentation. But nowhere
did you mention educating the news media. I am
following up on what Howard mentioned before especially
in Pennsylvania in 2004 the news media kind of took
over our election by advertising and saying it doesn't
matter if you're registered or not just go vote. It
doesn't matter where you live just go vote to your
nearest polling place. And I was wondering did you
1 gather any statistics on your survey in Pennsylvania?
2 We had a low percentage of counting the provisional
3 ballots because of that. It was too late for us to get
4 to the the news media to change.
5 I think it should be noted that on the
6 national level the news media should be trained right
7 down to the local newspapers.
8 MR. O'NEILL: They usually resist training.
9 MS. HODGKINS: Okay. Mr. Lindback and then
10 Secretary Markowitz.
11 MR. LINDBACK: John Lindback, I am Director
12 of Elections in Oregon.
13 You know we are one of those odd ball states
14 where we do things very differently and it effects your
15 study I am sure. One of those states that make you rip
16 your hair out.
17 One of the things we found with
18 implementation of state wide voter registration program
19 is in a primary election last week is it appears that
20 the number of provisional ballots went dramatically
21 down because of our statewide voter registration
22 system. It sort of strikes me that your research team
lists us as a moving target in regards to the dynamics of elections changing in this country. And I sympathize with. And I am wondering if you could go back for a second to your slide on your quality improvement program because I have a question about that.

MR. O'NEILL: Tell me when.

MR. LINDBACK: That one. As election officials we get told we ought to do a lot of things. And in fact I have gotten kind of used to it. Ever since 2000 we have to do this and we have to do that we have to do a lot of things that are very good ideas. Rarely do we get a suggestion are we told how to do it. And a cost effective in an efficient way. And I am looking specifically for example at time required to evaluate ballots by jurisdiction.

When we get into that level of detain and data collection I need to hire a full time person to collect that data at election time. I don't have the budget to do that or the resources to do it and that kind of thing.

I think we are appreciated as election officials when folks from the academic world do studies and make recommendations. We don't only need recommendations on what we ought to do as to how we ought to do it and how we can do it in a cost effective
and efficient way. I think if you folks would look at that specifically with request to these four suggestions because to me they look expensive and overwhelming is some respects when we are trying to collect the data.

MR. FOLEY: I hope we were sensitive to that. We tried to be, maybe not sufficiently, but we wrestled with the notion of trying get specific. And there are downsides to getting too specific on some of these issues, particularly as to what date should this be done by. It also relates to a larger theme which I theme which I as an academic. I think requires a dialogue between people who are implementing election law in practice as administrators and then people who are studying it. And a real genuine back and forth ongoing dynamic dialogue because what would it take to build an optimal provisional voting system is not an easy task just in terms of identifying the values. And there are trade off values, there is a trade off between accuracy and finality not to mention not to mention budgets and expenses. And I think it is unfair to election officials that the media in particular and public rhetoric demands more than is achievable. It is sort of
an expectation that the system is going to be perfect
that provisional voting is going to be that automatic
fail safe.

I think one of the education functions that
hopefully the EAC can play given its public profile is
that there needs to be more sophisticated
understanding that a well designed system can't promise
too much. And it can work without the-- cars, you know
well designed cars sometimes break down but we don't
think the car was poorly designed because you have to
take it to the shop every few years. And it may be that
a well designed election system, you know, is still
well designed it still functions appropriately given
the budget and so forth even though it has glitches
here and there.

I don't thing the public is not quite at that
point in the conversation, and hopefully our process

and the EAC can help with that understanding.

MR. O'NEILL: We agree with the thrust of
your comments I believe somewhere in here we have a
bullet point that calls for an assessment of cost
effectiveness of the kinds of regulations you set up to
improve and evaluate provisional ballots.

You will find also here a specific reference
to the check list that has been using, Colorado to
record the reasons provisional ballots were not excepted with a simple three letter code and will allow you to go back at the end of the election and process and evaluate why persons are getting into the provisional ballot line and why they are failing to have their ballots evaluated and counted. It will give you a check on the functioning of many parts of the system.

And many of these pieces of information are collected for other purposes. You know how many provisional ballots are cast. You know how many are counted. But they are not necessarily compiled in a way that allows you to analyze the data at leisure once the election is over. So in general what we are calling for is using the data for two purposes; to call the election and after it is all over to analyze why the system worked the way it did in that particular election. Your right it is a moving target and each year will be a little different.

MS. HODGKINS; Secretary Markowitz? And Adam if you wouldn't mind the gentleman on the front row will be next and secretary Ruggiero will have the last word.

MS. MARKOWITZ: Secretary of State, Deborah
Markowitz from Vermont.

I like to go back to the comments from Delaware. As you continue to study this issue you look at what the goal of provisional balloting is and then evaluate how it is working state by state. Vermont is your lowest participant in provisional voting and that's because our-- we actually do something better than that like Delaware where we have affidavit voting. So somebody comes in-- and we have a terrible problem with motor voter, and I don't know about the rest of the other states, but routinely there are thousands of people who never make it on the voter rolls because those registration forms aren't filled out correctly and don't get to us or don't get to the right place and really, in most cases, through no fault of the voter.

So for many years and we are called an old state with provisional balloting and we have resolved by allowing somebody to swear or affirm that they were registered and we simply add them to the check list on election day and allow them to vote.

In Vermont provisional voting is reflected in two things: One was town clerks or election officials who misunderstood provisional voting and used it instead of the activating list and we should have a lower number than that. Or there were people from Page 128
Connecticut who come to Vermont and think they have a right to vote in any polling place because they are Americans. So we should say that we have something better that allows them to have an actual ballot.

MR. FOLEY: Oh, absolutely. Like Tom said and I will definitely repeat. A large number of provisional ballots cast in a jurisdiction is by no means necessarily a good thing. And a large number of provisional ballots counted is not necessarily a good thing because maybe those folks should have gotten an actual ballot in the first place, if it was determined that they were registered voters why weren't they voting a regular ballot.

Now, again, a fire extinguisher is good. It is good to have safety measures. It is good to have fire extinguisher if there is a fire that you have to put out. It would be nice to avoid the first in the first place. And some of the academic research that we drew upon was efforts to have improvements in registration systems that would avoid the need for provisional voting and put less stress on the on provisional voting precisely because provisional voting is after election day when the litigants want to gain the system. In other words in a post election...
environment there is inevitably going to be extra stress if the election is close. So it would be much, much better if you could reduce the number of provisional ballots cast and have those be actual ballots if that is a feasible thing. So that's why we talk about the relationship between the provisional voting system as a subsystem, with the data bases

another subsystem. It is an important component and it is provided by HAVA and it is good to have fire extinguishes. But one needs and overall assessment of the totality of the states election system really to be able to evaluate its component that is provisional voting.

MR. BLEVINS: Don Blevins, Lexington, Kentucky. I have got a couple of things.

Number one you say that everybody should get a provisional ballot. And the application, if we decide to put it in place, is not a good thing. We only allow a provisional ballot for federal elections only. And given that there is no such thing really as a federal election. There is an election day in America where we elect officers of a all levels of government including six cities where half a dozen people get together and decide they want to have a little city. So for those of us who administer elections on the local level we have
to absorb the entire scheme of officers and issues that are on the ballot. So in our state the way we put it in place in a perfect situation we would never count a provisional ballot. We have it orchestrated so that that truly is a last resort. On the other hand we want the voters to be able to vote in all election issues and races that they are eligible to vote in. And when they choose the provisional ballot route they have opted out of that. So that is not necessarily the best route to go.

We have a statewide data base. We have had it for a long time. We have a leg up on the states that don't have that. And we have a telecommunications system that allows us check the registration. The size of the population of the state plays a roll we have four million people, two million registered voters. They top that in Los Angeles county in California. So I can tell you from my administration we would have to look at this in a different context by virtue of sheer volume.

The second thing I want to point out to you is that I think the biggest over simplification that was in HAVA was this idea that we are not training poll workers well enough. Or we are not training the public
I don't think the federal government has got enough money to train the electorate out there on how to do this voting. So the burden of the election on the county. When people talk about.

Educating poll workers I hear what I think must be a two, three or four day training session. And you're lucky if you get them in for 30, 40 minutes. They have the attention span of a kindergartner. So this is over glorified and under appreciated that these poll workers are volunteers and get paid poorly. And until there is some heat built up on the state to put up more money poll workers were are we going to get that?

Another thing that HAVA wants is we are supposed to teach them a sensitivity about disabled. We are supposed to teach them about provisional ballots. We have to teach them about state law and all this. You know, I don't know about anybody else but we get a them for two hours we have performed a miracle. So this idea of training being the answer to everything I think you are going to find between academics and practice there is a big over simplification difference.

MR. FOLEY: I think we are very much in the arena because it is because of that complexity and
difficulty that out point about the practical rule of thumb is to give them a provisional ballot. And I stress that is when the poll workers are in a position to say I am in a position were I can not give this voter standing in front of me, or a would be voter, a regular ballot. Something has caused me to make the determination that they can't vote a regular ballot. They are not on my list; they don't have the right ID whatever. If at that point the voter says I don't want to go home empty handed I would like to vote a provisional ballot because I believe I am eligible it is at that point that our recommendation is don't take time to worry about that. You have too much on your mind poll worker. At that point you know you're not going to let them in the regular booth or regular ballot give them a provisional ballot. So it is not giving them a provisional ballot instead of letting them vote regularly. That is not an issue.

MR. O'NEILL: I did not follow one part of your comment, maybe you can straighten it out for me. You said you don't like the issue of the provisional ballot in Kentucky. And if you do the person who get it
doesn't get to vote in a local election. That's the part I didn't understand.

MR. BLEVINS: We chose to make the provisional ballot only for federal elections. We went with HAVA in that regard that it only applied to federal elections.

MR. O'NEILL: I understand. Thank you.

MR. BLEVINS: And we did that for several reasons that may not make a lot sense here. Voter fraud, and vote ban and those sort of things.

MR. O'NEILL: You're talking to someone from New Jersey.

MS. HODGKINS: Thank you Mr. Blevins.

Secretary Rokita.

MR. ROKITA; I have a couple comments and a couple of questions if you can bear with me.

First of all for the record I also agree that there is much more relationship between this subject and ERA than to your research currently. And I would suggest doing a little more research in that regard.

For example when EAC requires that full service agencies to continue to accept voter registrations it's
a great thing. But you're also at the same time right after the election and if you would the election coming up after registering it might be driving more people to the polling place like NVRA requires only to have them cast a provisional ballot because the registrant won't let us pass. So issues like that I think might be right for some of your discussions.

What data point did you specifically come up to conclude that if someone is in the right polling site, all be it not the right precinct, that their ballot should count?

MR. FOLEY: It was a core decision, correct.

MR. ROKITA: I understand. Just for example a photo ID, I will use that as an example, are you saying that there is a coral effect between the time allowed to count a provisional ballot and the rate-- are you saying there is a causal effect and the rate of counting that provisional ballot and voter ID are you saying it causal?

MR. FOLEY: No. We found correlation if you will, I don't have the time but I could go into this more. But I don't think we are making a finding on causation.
MR. ROKITA: Well, if it is not causal I
guess my point would be, so you can respond, what value
is it to be in this report?

MR. O'NEILL: The existence of the correlation
between having less time to evaluate ballots and with
fewer ballots being excepted it is an indication to us
that something is going on. We don't know exactly
whether it is causative or merely highly correlated.
But whatever it is it makes it worth while looking at
the time period allowed to evaluate ballots and try to
figure out if it is causing it. And you can do that
for instance by finding out are there a bunch of
ballots that you never got to at the end of the
process, the process was only three days long. It is
worthy of further investigation.

My own suspicion is that the arrow of
causality does flow that way but it is only a
suspicion.

MR. FOLEY: And there would be reasons to
look at the timing issue even if that data didn't
exist. I mean it maybe anecdotal but I mean I keep

referring to Washington but half of the Washington
governor's race the process for evaluating the ballots
shut down on the same date in 2004 as a matter of state
law that the federal Supreme Court in Bush vs. Gore
shut down the counting process in 2000, the current governor would be a different incumbent. So the fact that the process took longer than the five weeks that federal law allows for Presidential elections shows that timing can be outcome determinative.

And I simply wanted to share that knowledge with all of you as you determine for your own races what is the appropriate time table to utilize before bringing the process to conclusion.

MR. O'NEILL: And my recommendation for the EAC is that they be very careful with this research were things are not causal or currently suspicions that we say that.

I think at the outset with some of these subjects, and I am usually the first on up to bat, but some of the other subjects that we are going to deal with maybe the same way, maybe not. But these issue these themes are not conducive to very easy data gathering. I must have said that ten times here. And maybe it has to stop right there or slow down right there. Maybe there is value in just saying that, rather than try to fit a square peg in a round hole where these potential conclusions or these correlations that you're saying could be taken by the public as
conclusion or causality when there really is none.

MS. HODGKINS: Thank you. Mr. Martinez, we do apologize for running this session over time but--

MR. MARTINEZ: That was great. we were looking for the kind of discussion we had today. It's very valuable to us. We are on the record and we can come back and really consider the comments. We really do appreciate them all and are looking for this kind of discussion.

I am speaking for myself and not the EAC in saying this I think there is strong sentiment at the EAC, at least from my perspective, to evaluate in very sound and deliberative manner, Mr. Secretary, the kinds of reports of reports that were presented to you.

Keep in mind these reports are from our consultants to the EAC and we are sharing them with you. These were not EAC reports that we have adopted and are presenting to you for final analysis.

There is a complete difference in those areas and that's why we took these extremely important steps to show you what the consultants have brought to us and sharing it with you at this stage in the development so we can then honor that importance to deliberate and contemplate very thoroughly before we embrace whether it is voluntary guidance or best practices. So we are
very much in that period. I encourage it for the rest of the discussions we are going to discuss.

All right. We are going to take a quick break our next topic will be Research on Poll Worker Recruitment.

Madam Chair, it is 4:20 and I am calling for a 15 minutes break or so. Reassemble in 15 minutes, please.

(Recess taken at 4:20 p.m., and reconvened at 4:40).

MR. MARTINEZ: We are starting again. We have one more session left. I know it has been a long afternoon full of a lot of information. We have one session left for today and tomorrow we will hit you again with a long session.

What we are going to do today is give you a presentation regarding another one of our contracted research projects and that is pertaining to poll worker recruitment, training and retention for poll workers who are generally used at the polls but targeted specifically as well to college poll workers, to the population of college poll workers.

We have a couple of consultants that we have hired that have done some tremendous work and want to
share the results of that work.

What I am going to do is ask Karen Lynn Dyson who we all heard before. She is our project research manager at the EAC and has been with us for quite some time now to stand up and give us a quick introduction of our project consultants and anything else she might want to say.

However I forgot I am supposed to recognize your chair, Peggy Nighswonger who wants to give you a quick piece of information, Madam Chair.

MS. NIGHSWONGER: Okay. I am just going to

tell you that 66 ballots were counted successfully. So please welcome Tonni as our new Executive Director.

We are leaving right after this session.

MR. MARTINEZ: Congratulations. Karen Lynn-Dyson will make the introductions and we will get to the last presentation of the afternoon.

MS. LYNN-DYSON: Commissioner Martinez just mentioned that I have been with the EAC for some time and I could swear either he said or Chairman Boyer said I have been here for years. He said a lifetime.

I am pleased to introduce two of our contractors Abby Horn who is to my immediate right. And Abbey is the Assistant Director for the Center for Election Integrity at Cleveland State University. Abby
leads the Center as Acting Assistant Director and she came to the Center as a democracy for the United States for International Development and did a lot of work all over the world, primarily in Central America related to democracy and citizenship.

The Center for Election Integrity at Cleveland State University is a partnership of the Cleveland Marshall College of Law and the Massey, Goodman, Levine College of Urban Affairs. She draws upon the long standing expertise from those colleges in electoral and regulatory law, public education and civic education. The Center for Election Integrity provides research, training, consultation to assist Ohio in becoming a national leader in transparent, legal, efficient and accurate elections. It is three organizations dedicated to three interconnected missions: To assist Ohio in becoming the national leader in elections; to help assure the citizens trust that their elections are fair, lawful and accurate and to undertake scholarly studies and offer recommendations on election administration and legal reform at the state, local and international level.

Again Abby is overseeing the Cleveland State's efforts related to college poll worker.
recruitment and training and retention.

Jennifer Collins-Foley to Abby's right is an attorney who has provided democracy development around the world since 1989 working with election administrators, civic organizations and political parties in the former Soviet Union, Central Asia and the Middle East.

Jennifer has served in the Elections Administration Community since 1996, spending seven years as Assistant Registrar of Voters of LA County. She now serves as an Election Administration Consultant. And has worked in recent years with us and on this project with IFES. And IFES for those of you who don't know was established in 1987 as a non governmental, non partisan, non profit organization. IFES has provided assistance to current elections, the rule of law, civil society and good government in more than a hundred countries including the US.

IFES is headquartered in Washington with offices in nearly 30 countries and it specializes in technical assessments, poll worker training programs, technical observations, election commission management reviews and election equipment and commodities procurement systems. IFES is the contractor for the Elections
Assistance Commission is doing work on the general poll worker recruitment and training and retention project. So with that I am going to turn it over to Jennifer who is going to make her presentation that will last for about 15 minutes. And then Abby will go for about 15 minutes. And then I will open it up for questions. Thank you.

RESEARCH ON POLL WORKER RECRUITMENT AND RETENTION (INCLUDING COLLEGE POLL WORKERS)

Presenters: Jennifer Collins-Foley, IFES.
Abby Horn, Cleveland State University
Karen Lynn-Dyson, EAC.

MS. COLLINS-FOLEY: First off I want to say it is an honor it is to work on this project because I am a self proclaimed poll geek. And to be part of a team that gets to look at these issues for 15 months and actually get paid for it. And talk to hundreds of election places across the country it's really neat. And I have been having a lot of fun with it. Went over a little bit of where the project came from, of course it stems from a Help America Vote Act that is such an important program and is the heart
We were awarded this project in September 2005 and it goes until the end of this year 2006, a fifteen month applied research project. We are working under IFES, International Foundation Election Systems, and it has been terrific working with them. It is a fantastic international program offering technical systems to jurisdictions in the US, and visa versa offering models from the US to international partners.

I am President of an organization called the Poll Worker Institute which is a relatively new non profit focusing on poll worker issues in the US, and we have a Board that is quite active. Conny McCormack is on the Board; Beverly Kauffman from Harris County Texas and Lynn Shadman from Washington D.C. And we are also very fortunate to have the League of Women Voters working on this project as well. I don't have to introduce the League I guess.

What we have been working on these past 13 months is we have been partners with Cleveland State University to compile 50 state laws as they apply to Poll workers to compile field tested practices in poll...
worker recruiting, training and retention. We pulled together a working group to give us guidance over the course of this program.

We conducted some focus groups with the League of Women Voters project earlier this year. We are developing a how to practical guide book which we will talk about in a few minutes. And I hope you have the job table of contents that was supposed to have been distributed to you earlier today. We will be conducting some pilot projects to test the guidebook.

I won't go too much into the compilation of state laws because Abby is going to talks about that more in a bit.

The three things we found really impacted the ability to have innovative poll worker programs were age requirement, obviously if you want to bring high school or college students in that can sometimes can be an impediment. Residency requirement become an issue if the poll worker can only serve in that precinct. They can start more innovative programs like corporate or college. And being required to be nominated by your political party can also achieve programs that are a
little more out of the box.

We were very fortunate to partner with the National Association of Counties. They were going to do an intensive survey of counties on poll worker practices. So we worked with them to have their survey be as helpful to us as it could be in terms of collecting practices. We also went to some fabulous programs or collection of practices that had been put together by NEMS, by NASED, by IACREAT, the Election Center and the EAC. So we began pulling together practices that we thought were bordering on successful. Some of them were not so successful, bordering on best practices but certainly in the successful realm. Early on we started pulling together our guidebook and then of course together with NECO Survey we were thrilled that we got three hundred responses out of three thousand counties.

Before I was in this project I used to think a ten percent response rate that is terrible. But that is really good when you are doing research. And our research people was thrilled with that. And of course it has given us fabulous stuff to work from. So we are
going to be putting out some results soon. And it is going to be great on who is doing what kinds of practices; who doing what kind recruiting. We also pulled together a great working group to guide us through the projects. I should have mentioned earlier IFES and the poll workers we pulled together were a terrific group for consultants to work on this project. All retired or current election officials who really had some field tested practices to share.

And on our working group we had State Election Directors, two local election directors from large and small jurisdictions from from large and small jurisdictions, Academic advisor a research advisor, an adult learning advisor and a training expert form the private sector. So we really were able to pull together some good folks to help us look at whether these programs we were compiling really are successful. We also were fortunate to have advocates from the multi lingual and Voters with Disabilities community.

We have tried to call in as many (inaudible) as we can in addition to the NECO survey we are really trying to find out what is going on out there and pulling in some practices, and our working group pulling some information from them. We also pulled
together a round table with volunteers. Not all of us consider poll workers volunteers, in some places they do.

They gave us some pretty good thoughts on when you are working with volunteers apparently there is a growing trend in what we call episodic volunteers which means you get all your volunteering done in one big chunk. So really you would think that poll workers would follow that trend.

All you need to do is ask. And they said if you don't mind us telling you, your election officials don't ask the right questions if you're really going coworkers as volunteers. Uncle Sam needs you they tell us is a bomb. They advised us to think more about your community needs you on election day to serve in this place and this is what you are going to be doing. They said the more specific the request the better. So you're going to hear feedback from people who, like the Points of Light Foundation, people who are really in the field of volunteerism.

We talked to and interviewed training experts. A lot of you know Ray Hawkins and Robert Lovejoy (sic) absolute opinion leaders in the field. They gave us some terrific feedback. We had voters with Disability round table talk about some practices.
on recruiting poll workers with disabilities. And also some pieces that are going to go in our guidebook that are really good for sensitivity training. Getting your poll workers to go out there and, you know, really make polls set up the best way to accommodate these folks.

The League of Women Voters in an amazing two or three month period did 19 focus groups in 17 jurisdictions. Obviously they were trying to compile strategies and also to underscore some potential puts. They came back with some shocking survey analysis which is that election officials do work on shoe string budgets. I was amazed to know that. They also said that election officials had limited staff, and also that the election environment system historically had little need for change. Those of you or started transitioning from punch card voting back in the 60's will welcome the change. I am not supposed to

side with the focus group results.

Now some current reasons for change include a course of Help America Vote Act, bringing in new technology that will have big impacts on poll workers. The increase of public scrutiny of election administrators obviously we all under the microscope now. And that means our poll workers are under the
microscope. Razor thin margins of electoral victories in recent elections. Obviously the candidates know who their voters are, and if they loose it must be our fault, or the poll workers fault. And finally the anticipated demographic changes that have served as agents for change. And this is everything from increasing needs to have more bilingual poll workers that kind of thing. So lots of change going on there.

The most common recruiting practices include word of mouth, personal networks, referrals, more people are paying more money. Lead poll workers in some places are selecting their own team. And some other very common recruiting practices, flyers, posters, adds. Check boxes on voter registration forms. This is traditionally you put something out there as an election official and the voter, the potential poll worker contacts you.

Some of the more innovative recruiting methods are were you find the partner and the partner gets you your poll workers and gets you-- instead of one poll worker they get you multiple poll workers. These program include what we call county poll worker programs, also called governmental private sector, also called corporate poll worker programs, high school college student programs, civic organization programs.
One thing that came out of the focus groups is that it is generally more difficult to recruit poll workers from lower income areas and very wealthy areas. And for those of you who have read or will read our guidebook you will see that the chapter that says: "Tips for Recruiting Poll Workers in Low Income Areas" is blank. And that's because we actually haven't found very many good tips. We have spoken to literally dozens of election officials in low income areas, that have to recruit for low income areas including me in Los Angeles, and we are drawing a blank. There really are not too many successful tips. We are getting there. We are talking to churches. If anybody has any ideas I am listening so please do let me know. Another thing that the focus group found is it is especially difficult to get technological savvy poll workers in economically disadvantaged areas.

When we put this in our guidebook we are going to say: "Well, you have two choices you can kill yourself trying to find tech savvy people in those precincts or you shut them down". So our guidebook we are really trying to be very practical.
included recruiting a partnership of political parties. Obviously there are practices out there of how many have this in their state law that you have to work with political parties. And the reality is that election officials have told us that this is mostly a bomb. Very few election officials have said: "Oh this is a fabulous recruiting technique." Most people have said this is the biggest pain in the neck ever. The people we get we can't place them, they are dead by the time--- I mean no disrespect. I mean very mixed results on this particular type of recruiting. Offering split shifts is another thing we found. First thing a voter on the street, a potential poll worker will say: "Well if I was offered split shifts I would be glad to do it." Then they find out that you-- that they have to find their partner because Hello we are not going to find their partner for them on the split shift and they quit. Or they say: "Do I have to share my stipend? There is no way I am doing that." So you know the perception is okay if we just this practice everything will be great. The reality is a little different. And our guidebook goes into some of these nuances.

And one things that has become a kind of undertone of our whole project is that there is, you know, strategies that give you the balmies (sic). Like
you know we always talk laughingly about the breathing test. If they are breathing we will hire them. And those strategies really go by the wayside in the time when we are using new technologies and we are under the microscope and there are all these tight elections. We really need to be working on strategies that provide the best poll poll workers not just enough poll

Some successful messages that the League came back with from their focus groups are based on the person you ask you need to ask is it a family; is it a neighbor is it somebody calling person to person asking some kind of connection. The more specific you can be the better. And stress the benefit to the community. Key findings on poll worker training. We found that in the focus groups and also in the NECO (sic) Survey and also in talking to literally hundreds of election workers across the country there is a trend from moving away from talking head training more to hands on roll playing, setting up a full poll worker station, a full mock polling place and the training and allowing as much hands on as possible. And one interesting thing that we found in both the survey and the focus groups is that paying poll workers to attend
training dramatically increases the people who turn out for your training programs.

I am going to read this because I think it is important: "The most important theme is--" You're supposed to read from your power point." That is one of the things that we learned when we were just developing our conflict chapter in the manual. You're not supposed to read from your manual but it is a good quote you are allowed to. "The most important thing to arise from the discussions of all the state holders is there is no magic bullet. There is not a one size fits all solutions for every jurisdiction or for reaching out to every population. Election officials must experiment to find the right balance for their jurisdictions needs." I am sure that does not surprise any of you. We all know everybody has had different site jurisdictions, different demographics, different support from your bosses, different size staffs. And so because this is a kind of a theme of our project.

Our guidebook has become what we call a recipe book. Let me share with you this is what I call my Betty Crocker Cookbook. And in our guidebook we actually do have practices that are the very basic, boiling an egg. And you know the hamburger version of recipe books. And in our guidebook we have some very...
21 basic practices such as word of mouth, or putting up a
22 poster at the polling place. And this is the diet

cookbook it's an Oprah cookbook. This is an analogy
for the smaller jurisdictions that needed a different
kind of recipe because they are trying to stretch their
calories further sort of speak. Then you have the
connoisseurs cookbook. So there are pieces of the
guidebook that are a little bit more for a jurisdiction
that is really trying to be cutting edge and wants to
do all sorts of fancy new things, new ways of
recruiting, new ways of training, fancy power points.
All of, you know, more hands on training. They have
more money to pay for more in-depth training for some
of their poll workers, some of their trouble shooters
type of thing. And then we also have-- I have my
little New York cookbook. This is to show that we were
really ambitious in trying to get models from as many
jurisdictions of different sizes and different
resources as possible around the country. I promise you
this is the end of my little cookbook schmeel.

So if you look at our table of contents you
will see that we hope to have covered the whole realm
of practices that are out there. We have called our
book successful practices. We didn't say they were best
practices and what we tried to do as we talked to practitioners across the country, as we were gathering their thoughts on their programs and their practices and their tools we asked them. Okay, that's great, but is this sustainable? Is this something you can keep doing for years to come? Or is this a one-time thing where you had a bunch of money and you have a fabulous employee who can champion it? Is it measurable? Is it something you can say okay, this actually did have an impact of getting better poll workers or having people retain the training pieces better. And we also asked them is it replicable? Is it something that could only happen in your county? Or is it something that really can be shared with other counties, and they won't have to reinvent the wheel? Then what we did is when we found out, we got the responses, their nuance responses about their practices, and so in our book we also talk--for each practice we have, we discuss the benefits of the practice, the pitfalls and challenges because we don't want other people to reinvent the wheel. Some tips for in making it happen in your jurisdiction. And we are also providing a methodology
of whether it can work long term for you.

That's what the guidebook is. What the guidebook is not is it is not magic bullet. Obviously you're not going to read this guidebook and say: "okay, if I do all this good stuff I am going to have no problems getting fabulous poll workers. We are going to do the training and be brilliant on election day. What we hope is that you will pick and choose and really come out with some good stuff to chew on.

It is not a poll worker management program. We really had to step back from doing some of the management pieces because that's going to be in the EAC Management Guidelines for one thing. It wasn't part of our contract. Although we did cheat a little bit, we couldn't help ourselves we put in a chapter on Poll trouble shooters because although we are not technically poll workers we all know that they can be a fantastic saving grace on election day.

What we really hope is that this is not a static document. We are really hoping that all of you will think about ways that once this guidebook hits the streets, maybe at the end of this year, early next
year, that it will be, you know, disseminated as much as possible. Think about maybe having it discussed at lunches and conferences, on IACREAT conferences. Think about maybe at your state associations summer meetings. We are hoping that some of our workers can be on a speaker circuit to get out there and introduce them to folks that can't come to meetings like this. And if you can think about that we would ask you to do that in your feedback form.

We also have not yet, if any of you got the electronic copy of this, we haven't yet put in some of the models we have gotten because people are still getting us electronic models. We really would like to have as many models as possible. So if you can send us things electronically we really appreciate it. We haven't it in the book yet because then if becomes difficult to share it. And it would have blown out your systems, you know, if we sent it to you that way. But we are looking for more models. And we are going to be testing-- I am going to wrap this up because Karen just stood up. That is my sign to wrap this up.

We are going to be testing this guidebook in three pilot jurisdictions this summer. We are going to
be going to be going to Hamilton County, Ohio, to Santa Fe New Mexico and to Milwaukee, Wisconsin. So we will be seeing if this guidebook really works. As as we go through changing or updating the guidebook to fit the realities of the jurisdictions that we are working with we definitely will be very happy to have more ideas more models from you all. So please look at that feedback form and provide us with, you know, some good stuff to put in here.

MS. HORN: I am Abergail Horn with the Center for Election Integrity from Cleveland State University. Thank you very much for having me today. It has been a real pleasure working with the EAC and an honor getting to speak to you all of you today.

I came to this not as a poll worker junkie or geek, I believe Jennifer said. But I have to admit that since working on this since October I guess I have to describe myself as a poll worker geek as well. But it is a proud term and we had a lot of fun with it.

Again, the Center for Election Integrity pulls expertise from the law school as well as the Urban Affairs College that has a focus on public administration so we really have a nice (inaudible) going. College students are in the learning mold. They
are tech savvy. They tend to be young and more energetic. They are generally physically fit and can set up heavy equipment, carry things around. They tend to have more flexible schedules and this is my favorite, but no proven over time, but this is a hypothesis that if you hook them now you have them for the future. Not necessarily as a poll worker. But if you get them engaged now in a real way within the democratic process, within the electoral process they will see the value of it and they will become physically engaged individuals throughout their lifetime. So that is part of it and that's why I became part of the program. But it is not a panacea, it is not a solution for every jurisdiction for the entire nations shortage of poll workers. There are a bunch of hurdles and I am going to go into them in more detail both legal hurdles as well as structural and circumstantial.

The three main ones are students are often not registered to vote in the same state or in the county or sometimes were necessary in the precinct where they are living and where the college is. And that can be a problem. They generally do not want to work, nor do they want to commit to work for more than one election. " I know what my schedule is
semester and I am not signing up for anything that says I have to work more than this one". And indeed although they are flexible classes and assignments can get in the way and they can get in the way at the last minute about working on a full day schedule. That is why we put an emphasis in our guidebook in trying to get a university wide policy of excused absences for anyone who is going to be working as a poll worker. And that is something to work on as they get going.

Our project is set up in the same way that Jennifer's is in terms of having a project working group and having focus groups. We have a seven person team; three elections officials, three professors and indeed college students who are all providing us really wonderful feedback on the work as we move along.

We set out to collect what began from initial work to be best practices but we quickly included that to become effective strategies. We were really lucky. We had a wonderful pool of things to start looking at which was in 2004 the EAC provided grants to 15 different colleges and non-profits to run college poll worker programs. So we looked at those really carefully, talked to most of them and got a really good sense of what worked for them and what didn't. We went
on and looked at lots of different surveys and other materials. In fact Jennifer was a wonderful resource for us and fed us whenever she heard about college poll worker programs in different shapes and forms. And we have been following up in collecting lots of different examples. And please if you have any send them my way. My email will be at the end of this presentation. You may have it in your packet already, I'm not sure it already.

But, surprisingly, there are very few structured programs. And a lot of people look to colleges and Universities in getting students to be poll workers but they don't have ongoing relationship with a particular college or university with a structured program in place. Not a lot of overtime programs. And that's what we really focused on in our guidebook which is to develop a long term relationship between the election jurisdiction and the college or university.

We had four things for the focus groups and most of them we did. One with students who had worked as poll workers and one who did not. Overall their findings reiterated what we had already found through our research so that was great. We mainly talked to the students about incentives for being a poll worker and
hurdles. And we pulled that all together.

The next part of the project was pulling together the state statutes requirements. We looked at the statutory law in all 50 states territories etcetera related case law, anything pertaining to college poll workers popped us as well as where applicable in some states that we had to also look at the administrative code and the state constitution and of course at times they were in conflict with each other. But that is just to be expected.

We then really-- it took a long time to

confirm all the data that we had. And send out to all of the states their particular information trying to get confirmation. We're just about there. And if you happen to notice any errors in there let us know. We are in an ongoing cleaning up process of the data.

And then there is always this issue of the fact that sometimes practice at the local level is not quite equal with what the policies say. And that is true in many, many cases. And sometimes, quite frankly, that is a good thing because the policies were pretty new and if practiced exactly as they are written often times it would be really hard to get college students to work. And I will go into those later.
The state statues. We collected all the information and several more but I thought these were the more interesting ones so I stuck them up there. Each state, we have a three or four page information sheet and that all will be available on the EAC website when this project is all done. You can click on the page and see various requirements for poll workers. We have synthesized that into a chart that is in our guidebook, and I believe you have a copy of the guidebook.

This leads me to the actual guidebook which some of you may have. I have a few color versions with me so if you're really excited about college poll workers and want to see the color version let me know and I will give you one of those.

One issue that we struggled with in writing is that we are writing for two different audiences. And I would love feedback from any of you on that in that we are writing for both elections officials who want to figure out to develop a program with college students. As well as for college and university representatives who want to get their students more integrated. So they are really two very different audiences. And at times that can be challenging.

We have three different sort of call out
boxes that you will notice in the handbook. We suggest handing these out prior to election day. And to consider using the students they make really great temporary election workers as things get hectic.

A how to box for example we have one on how to develop a course reading, a big emphasis in the book is incorporating poll work into a class curriculum either has a service learning assignment or as extra credit. Or developing a whole course around the idea of citizenship. We have suggested reading that you might use to build a course around.

Ignore at your own risk for example one of the color boxes is designing equipment materials for college students be careful not to inadvertently insult your older veteran poll workers. You don't want to say we really need young smart people.

And there is a table of contents for the guidebook is a campus champion that is something we have put emphasis on. You really need to find somebody at the college or university who is going to be that champion a person who is really going to get out there put the word out and make it happen. At the same point you also need to have a strong liaison with the Election office.
Now I want to talk about retention and sustainability in college poll worker programs. We see that we are not able to retain these students. At most you're going to get a student for four years. And most likely you're not going to get the same student for their four years of college. But the emphasis is really on having sustainable programs. What you want to know is that you have this ongoing relationship that you work on and instruct with the local college or university. So that you can count on having 200 students every year. They may be different faces and have to go through the training and so on. But you know that you have those bodies and that your partner at the college is going to come through for you. And indeed they are going to be quality poll workers.

There are examples of various programs that we talk about in the guidebook. They really come in different shapes and sizes. Professor Ken built it into the curriculum as a service assignment. As I explained that is great. It might pull in 25 to 30 students in the class that way.

Campus wide recruiting campaign posts a lot of information. A lot of the EAC grantees followed this model they might have gotten 150 students by just getting the word out.
22 provides five extra credits. At large universities them

1 have ten political science classes each one with 200
2 students. It's a pool of 2000 potential students all
3 offered five extra credit points. They bring in 250
4 students easily to be poll workers. I just added this
5 one the university sent out a mass email. That is not
6 really a program that is an ongoing relationship but in
7 fact it can work because in Cleveland in a recent
8 primary I ended up contacting the President of
9 Cleveland State and a community college and a four year
10 college and they all sent out massive emails to their
11 students. Faculty and staff saying they needed people
12 who could come and work at the elections. And they got
13 a huge turnout despite the fact it was the week of
14 finals.

15 We are going to be running three pilot
16 projects that are basically designed to field test our
17 guide book. The criteria there is having strong
18 interest from the election official and from the
19 school. We are really excited in conducting this
20 project.

21 Some major findings just a few of them. The
22 emphasis in these programs is developing that
relationship. We are talking about having sustainable program you want to have the time for relationships building. And on the colleges side if you want to incorporate it into curriculum and into classes you have to get your faculty at least a semester before. They are going to be tweaking their curriculum and they need that time ahead to make that a reality. It is really important to start early to get everyone on board because if you're going to have a university wide policy of excused absences on election days of poll workers you better get working nine or ten months ahead of time in order for it to go through the university system.

Let's see, Jennifer mentioned you don't want to see Uncle Sam needs you but with college students really stressing the important in your message that they play that this is not just some boring game but that in fact explaining the importance of poll workers which is in the democratic process students find interesting and indeed motivates them. That said skip down to my last point which are the two best incentives which by far blew out every other incentive you could
possibly think of.

First one is money and the second one is extra credit. So if you can work it through a college or university and professors to build it into their curriculum, fabulous. The students eat that up. And again students are cash starved.

Training on campus indeed should be very hands on, roll playing, lots of questions. In our focus groups students complained about not being-- feeling intimidated to ask questions. So lots of question and answers. And emphasis on the etiquette and intergenerational communication.

Again off year elections are not sexy, it's going to be easiest to get college students engaged for the Presidential elections. But that said, indeed there are many examples of students working primary. And other students working in between presidential elections. It is not impossible but you need to recognize that.

In getting students you will be surprised how often or an assignment will pop up just a week before when you thought you had everybody signed up and they
can't work on election days. So getting that commitment from the University or college is really important.

Quickly on the legal impediments. Indeed most states require poll workers to be registered voters of the state, usually of the county and in fact usually a resident of the precinct that they are going to be working in. Now again that policy practice issue comes into play there a lot. That can be a big problem for a poor college student. Sometimes they don't want to change their registration from their home town to where they are at college. And then on the flip side some states restrict college students from registering to vote in their college town. That can also be a big legal impediment.

Political affiliation: Only six states don't provide require some sort of political affiliation. Now at the county level they are not necessarily relying on political party lists to get their poll workers. And the time requirements as I mentioned students really don't want to commit to more than one election so if they are required to sign on the line to work for two straight years every election they are going to balk.

And please sent me your ides if you know of any projects out there I would love to hear about them.
And as you read through it any comments about format or language I would be more than happy to receive them any questions?

MR. BERNARD: Louie Bernard, Louisiana.

I wanted to ask Jennifer did you find somewhere that a split shift program that was really working. And B., was it the responsibility for the poll worker to find the partner or the election official?

MS. COLLINS-FOLEY: Interestingly enough we really tried to find a split shift program that really worked and we haven't found one. We found that most jurisdictions have tried it and given it up entirely. I talked to five different jurisdictions in Virginia last week. They said try this city or try Arlington I finally gave up. And then there are some that keep it just for the sake of showing that they are flexible. For example in Los Angeles County we found that poll workers don't want to do it. They don't want to find their own partner and they don't want to split the stipend. But we had to keep offering it just so we could say that we do. So we have a contract, you know and especially we found is that election officials are very reluctant to do this because you compromise the integrity of the process. What happens if the other
person doesn't show up? That is the key thing for
elections officials is that integrity issue. And we
found that even the jurisdictions that had tried it and
given it up would never allow the lead poll worker to
split a shift. That was one thing that was constant.
So we had in our guidebook that was a big chapter and
we moved it into a one pager. It is out there and
people do it with limited success. We kept it in there
and there is a whole big section of the pitfalls and
challenges so that nobody had any doubt that it was not
the most successful practice.

MS. MARKOWITZ: Deborah Markowitz, Vermont.
In Vermont we only use split shifts. The
chief election official is there all day. And one of
the things we recommend is that the people who count
the votes, we hand count, except in eighty precincts
and we recommend that the people who count are never
the same people who sat there all day because it is
hard to be precise at the end of the day. And we
recommend for that late shift starting at three or four
in the afternoon to school teachers. And that maybe
useful for you for LA of some of these hard to places.
Or they are people who work as bank tellers. They are
very good at counting and are very precise. It is
interesting although our chief election official in
every polling place stays the same because you need continuity. But that is the only person that we recommend be there all day. 

MS. FOLEY: I will definitely look into that because we are about to do a case study on your program.

MS. MARKOWITZ: You should also look at the fact that our polls open up at five in the morning. So it is a long day.

MS. JOHNSON: Carol Johnson, New Hampshire. We also do split shifts in our community in Manchester. And we do it quite successfully as well. We also have an interesting problem with people showing up for training sessions. We do a two hour training session before every single election. We have had as many eight elections in an 18 month period. What we found was as an incentive showing up we changed the ordinance that provides payment. So if they show up at the training session they get more money than if they don't show up at the training.

MS. FOLEY: I definitely will come up there as well. One of the things that is going to be in our guidebook is a discussion of the money and how there is this trend for add on's people had their base
stipends. And then you can have all these little add
on's seem to be a trend. And we are hoping this could
be used by election officials in their budgeting
process. They have to go to their bosses and say hey we
are at the low end of the spectrum we need to give our
poll workers a raise for picking up supplies extra.

MS. BOWERS: Marilyn Bowers, South Carolina.

We were almost successful this year in
getting legislation past to allow registered voters
within the state to expand to the use of college
students but got it knocked down. We will try again.

I don't know if anyone has thought about
doing online training for poll workers I got the idea

because I had do a course because I was with the EAC
during activation. And we did online training. We went
through the training chapter by chapter, took the test
and received notice that you were certified.

When I checked into some programs that were
out there they are very expensive initial cost plus
yearly cost and the logistics of training large numbers
prior to every election which our law requires it takes
a lot of classes to do all those elections. You could
reach a larger number of people by certifying them
through a computer course.

MS. FOLEY: In the guidebook we have a whole
Page 174
chapter on online training. And we are adding models of
training that is bringing in a vendor. And also we are
doing home grown versions. We are also doing-- in the
jurisdictions that are doing their normal training
classes and using the online training as a refresher.
And we are also focusing on jurisdictions that are
doing their entire training online with some heavy
emphasis on evaluating, whether this is effective or
not. Are they getting their teenage sons go through and
answer the questions. There is some good stuff in

And again if anybody has models we are looking
for them. But we have some good stuff already.

MS. KIFFMEYER: Mary Kiffmyer from Minnesota.
First of all I just wanted to mention that
National Associations of Secretary's of State
regularly send out surveys. Our national association
can reach immediately into many states and within the
states. This is something that may make it a little
easier to find out where some of this things are. It
could be a good resource for you. Only because even in
Minnesota we have election training program and video
brochures. I have not see the references here but I
just wanted to suggest that maybe before you add on's
or something to use our national association. We could
be a resource to help you gather some information and
data. Maybe make some of those contacts you will be
hearing about.

MS. FOLEY: Thank you.

MS. BARTHOLOMEW: Tonni Bartholomew, State of
Michigan.
We as well pay the part time workers. We
choose to pay them a high rate. And we find that by
doing that we can not only get housewives but we can
get high school students. We use a lot of high school
students that come in at 3 o'clock. We also do the add
on pay for cell phone usage.

MS. LYNN-DYSON: One of the things I have not
circled, Jennifer is you gave folks your contact
information.

MS. FOLEY: One contact that you can use is I
am at CollinsFoley@Yahoo.com but more importantly IFES
has set up an email address that is: Guidebook-feedback
@ IFES. Org .

And it is also on your feedback form at the
table of contents that was a hand out.

MS. LYNN-DYSON: I think as the Election
Assistance Commission moves forward through the summer
on these pilot projects it will be-- and we actually
get to the Fall get to the point with these manuals and
the college and the general poll worker manuals and
also with our materials that you have heard about this
afternoon with our ballot design and polling place
signage it will be extremely helpful to our agency and
to me to have feedback on marketing and distribution

We are very proud of them. We are pleased
that we have them. They also represent a good deal of
investment on the part of our agency and your federal
government. So these documents will do no one no good
if they are just sitting on our website and we are not
going-- and people are not downloading them. Even in
terms of actual production the old fashioned way and
sitting on peoples book shelves collecting dust. So it
would be very helpful to me to hear from you all about
marketing and distribution of these products.

My email address is: Klynndyson@EAC.com so
let me hear from you about our venues, setting, Mary
mentioned mass. We certainly anticipate this summer
through IACREAT and NASED and NEC meetings getting the
word out. But I'd like to hear if you have any other
ideas for us.

MR. MARTINEZ: Thank you very much for a very
successful session. We are done for the afternoon. I
am going to turn the mic over to MS. Nighswonger and let her any final remarks. Tomorrow we have a continental breakfast that starts at 8 a.m., I am told they should be set up at 7:35. We will start our first session promptly at 8:30. Tomorrow's topics are very important. We start with a presentation on management guidelines and we go throughout the morning until 4:30 on important subjects that we are doing research on. And I can't think of any other announcements to end our day. Madam Chair?

MR. NIGHSWONGER: All right. I just want to thank all off the staff for their help, the interpreters we appreciate their long day. And also our court reporter. And I think if there are no objections we will adjourn for the evening.

(Thereupon, the above meeting was adjourned for the evening at approximately 5:35 o'clock, p.m.)

* * * * *
CERTIFICATE OF COURT REPORTER

I, Pauline Jansen, court reporter in and for the District of Columbia, before whom the foregoing meeting was taken, do hereby certify that the meeting was taken by me at the time and place mentioned in the caption hereof and thereafter transcribed by me; that said transcript is a true record of the meeting.

QUESTIONS RAISED BY THE EAC

1. How did states prepare for HAVA’s provisional voting requirements?

2. How did preparation and performance vary between states that had previously had some form of Provisional Ballot and those did not?

3. How did litigation affect the implementation of Provisional Voting?

4. How effective was provisional voting in enfranchising qualified voters?

5. Did State and local processes provide for consistent counting of provisional ballots?

6. Did local election officials have a clear understanding of how to implement provisional voting?
TO ANSWER THOSE QUESTIONS

Surveyed 400 local election officials
Reviewed the EAC's Election Day Survey
Analyzed states' experience with provisional voting:
  --use of statewide registration database
  --treatment of out-of-precinct ballots
  --use of different approaches to voter ID
  --consistency
  --time period allowed for ballot evaluation
Collected provisional voting statutes and regulations
Analyzed litigation
Variation among the states

- In 2004 nationwide about 1.9 million provisional ballots cast, 1.2 million, or just over 63%, were counted.

- The percentage of provisional ballots in the total vote varied by a factor of 1,000 -- from a high of 7% in Alaska to Vermont's 0.006%.

- The portion of provisional ballots cast that were counted ranged from 96% in Alaska to 6% in Delaware.
Some sources of variation among states

Experience
Share of provisional ballots in the total vote was 6 times greater in states that had used provisional ballots before than in states where the provisional ballot was new.

Administrative Arrangements
Time to evaluate ballots
--States that provided less than one week counted an average of 35.4% of their ballots.
--States that permitted more than 2 weeks counted 60.8%.

Voter registration data bases
-- States with voter registration databases counted an average of 20% of the provisional ballots cast.
-- States without databases counted 44%.[]
**Variation within states**

Rate of counting provisional ballots varied by as much as 90% to 100% among counties in the same state.

Resources available to administer provisional voting varied.

--The Election Day Study found that staffing problems appeared to be particularly acute for jurisdictions in the lowest income and education categories.

--Small, rural jurisdictions and large, urban jurisdictions reported higher rates of an inadequate number of poll workers.

--Jurisdictions in poor areas reported more inactive voter registrations and more provisional ballots cast.

--Richer areas had more poll workers per polling place and reported lower rates of staffing problems per precinct.
1. How did states prepare for HAVA’s provisional voting requirements?

Most election officials received provisional voting instructions from state government. The type and amount of instruction received varied widely across the states.

Almost all provided training or written instruction to precinct-level poll workers on how to administer provisional ballots.

• Only about 1 in 10 made available to poll workers a voter registration database.

• Almost equally rare were training and written procedures for poll workers on the counting of provisional ballots.
2. How did preparation and performance vary between states that had previously had some form of provisional ballot and those that did not?

Local election officials in the "old" states felt more confident.

18 states were new to provisional voting; 25 others had experience.

"New" state officials felt:
-- Voters did not receive enough information about where to cast a provisional ballot in order to be counted.
-- More funding was needed to educate voters about their rights to cast a provisional ballot.

Provisional ballots in "old states": more than 2% of the total vote, 4 times the proportion in "new" states.

Counting provisional ballots in the final vote, the "old" states averaged 58% nearly double the average (33%) in "new" states.
Question 3: How did litigation affect the implementation of Provisional Voting?

Pre-election litigation clarified voters' rights to:

- Sue in federal court to remedy violations of HAVA
- Receive provisional ballots, even though they would not be counted
- Be directed to the correct precinct
- Most pre-election litigation occurred too late to influence how states implemented provisional voting.
4. How effective was provisional voting in enfranchising qualified voters?

Provisional ballots enfranchised 1.2 million voters, or 1.01% of turnout, who otherwise would have been turned away.

The number of voters who could be helped by provisional voting may be about 2.5 – 3 million. Provisional voting might be about 50% effective.

There is room for improvement.

Legislative activity gives evidence that states were not satisfied with the effectiveness of their provisional voting systems.

Those voting with provisional ballots in states with experience were enfranchised more frequently than those in the “new” states.
Question 5: Did State and local processes provide for consistent counting of provisional ballots?

Little consistency existed among and within states. The use of provisional ballots was not distributed evenly across the country. A few states accounted for most of the ballots cast.

Share of provisional ballots in the total vote was six times greater in experienced states than in new states.

More rigorous the state’s Voter ID requirements the smaller the percentage of provisional ballots that were counted.

“New” states with registration databases counted 20% of the ballots cast. Those without databases counted more than double that rate (44%).
Question 5: Did State and local processes provide for consistent counting of provisional ballots?

In-precinct versus out-of-precinct states had different outcomes.
States that allowed out-of-precinct ballots counted 56% of the provisional ballots.

States that recognized only ballots cast in the proper precinct counted an average of 42% of provisional ballots cast.

In "old" states, this difference was greater.
52% of ballots cast were counted in states requiring in-district ballots, 70% were counted in those allowing out-of-precinct ballots.
**Question 5: Did State and local processes provide for consistent counting of provisional ballots?**

States that provide a longer the time to evaluate provisional ballots counted a higher proportion of those ballots.

<table>
<thead>
<tr>
<th>Time Allowed</th>
<th>Proportion of Provisional Ballots Counted</th>
</tr>
</thead>
<tbody>
<tr>
<td>Less than 1 week</td>
<td>35.4%</td>
</tr>
<tr>
<td>1 – 2 weeks</td>
<td>47.1%</td>
</tr>
<tr>
<td>More than 2 weeks</td>
<td>60.8%</td>
</tr>
</tbody>
</table>

Effect felt most strongly in states where more than 1% of the overall turnout was of provisional ballots.

<table>
<thead>
<tr>
<th>Time Allowed</th>
<th>Proportion of Provisional Ballots Counted</th>
</tr>
</thead>
<tbody>
<tr>
<td>Less than 1 week</td>
<td>58.6%</td>
</tr>
<tr>
<td>1 – 2 weeks</td>
<td>65.0%</td>
</tr>
<tr>
<td>More than 2 weeks</td>
<td>73.8%</td>
</tr>
</tbody>
</table>
Question 5: Did State and local processes provide for consistent counting of provisional ballots?

Conclusions

States have latitude in how they meet HAVA requirements. A considerable degree of variation among the states is to be expected. If that variation stems from differences in political culture among the states, it is likely to persist. If it reflects a learning curve for "new" states, consistency may increase more quickly.
Question 6: Did local election officials have a clear understanding of how to implement provisional voting?

8 out of 10 county-level elections officials reported receiving instructions from their state government.

4 out of 10 local election officials felt poll workers needed more training to understand their responsibilities.

Objectively, how well did the process appear to be managed?

Lack of consistency among and within states indicates wide differences in understanding by election officials.

The number of states that have amended statutes on provisional voting to include poll worker training is a sign of dissatisfaction with the level of understanding in 2004.
RECOMMENDATIONS TO THE EAC

BEST PRACTICES
The importance of clarity

EAC should emphasize the importance of clarity in the rules by which each state governs provisional voting. Does the provisional ballot system:

1. Distribute, collect, record, and tally provisional ballots with sufficient accuracy to be seen as procedurally legitimate by both supporters and opponents of the winning candidate?

2. Place administrative demands on local jurisdictions that are realistically related to the staff and other resources available?

3. Display variation within the state great enough to cause concern that the system may not be administered uniformly from county to county?
Lessons of litigation for achieving clarity

Look to litigation from the 2004 election to shape new statutes or regulations that will increase the clarity of provisional voting procedures, increase predictability, and bolster confidence in the system.

1. Litigation clarified the right of voters to receive provisional ballots, even though the election officials were certain they would not be counted.

2. Lawsuits prompted election officials to take better care in instructing precinct officials on how to notify voters about the need to go to the correct precinct in order to cast a countable ballot.
EAC should recommend to the states that they:

- Promulgate clear standards for evaluating provisional ballots, and provide training for the officials who will apply those standards.

- Provide materials for local jurisdictions to train poll workers on such procedures as how to locate polling places for potential voters who show up at the wrong place.

- Make clear that the only permissible requirement to obtain a provisional ballot is an affirmation that the voter is registered in the jurisdiction and eligible to vote in an election for federal office.

  -- Provide poll workers the training they need to understand their duty to give those voters a provisional ballot.
EAC should recommend quality improvement

Begin a systematic quality improvement program by collecting data on the provisional voting process. Data collected should include:

- Specific reasons why provisional ballots were not counted
- Measures of variance among jurisdiction
- Time required to evaluate ballots by jurisdiction
- Provisional votes cast and counted by jurisdiction
Assess each stage of the provisional voting process

Before the election
• Clear information for voters on websites and in sample ballots.
• Training materials in every jurisdiction make poll workers familiar with the options available to voters.

At the polling place
• Design of provisional ballot
• Estimate supply of provisional ballots needed at polling places

Evaluating provisional ballots
• Define and adopt a reasonable period for voters who lack ID or other eligibility information bearing to provide it.
• A voter’s provisional ballot should count so long as the voter cast that ballot at the correct polling site even if at the wrong precinct within that location.
• Follow written procedure or checklist to record why a provisional ballot is rejected.
Assess each stage of the provisional voting process

Post-election

Best practice is for states to consider how to complete all steps in the evaluation of ballots and challenges to those determinations within the five weeks available in presidential elections.

Provide timely information to voters about the disposition of their provisional ballot.

-- Are they now registered for future elections?
-- If not, what they need to do to become registered?

Tom/Karen:

Here is an email from Dan Lowenstein (presenter in LaJolla and co-editor of Election Law Journal) who made some suggestions on names for the voter fraud work we are trying to do. Perhaps a call to Bruce Cain at Berkeley would be appropriate.

Karen, what do you think?

Subject RE: Follow-up

Ray,

Before I read Rick's message, Steve Ansolabehere was the first name that came to my mind. This assumes you are looking for part-time, not full-time consultants. I would categorize Steve as very moderate left. I am not certain he is Democrat but would be very surprised to learn he is not. But the main thing about him is that he calls things as he sees them. So if you found a Republican with the same characteristics, that would be ideal. Charles Bullock of the University of Georgia would be a possibility. (Actually, I'm not sure of his party either, but I think he may be a Republican.)

I would also suggest you talk to Bruce Cain in the Institute of Governmental Studies at Berkeley. He is very savvy and knows more political scientists than Rick and I do.
When I have questions about the political science profession, he's usually the person I go to. His phone number is 510-642-1739. He is also going to be running a UC office in Washington, so he will be more or less living there for the indefinite future. He is someone you ought to get to get to know.

Best,

Daniel Lowenstein

Subject: Re: Follow-up

We are now editing articles for our next issue, which is due out in October. We need to get everything to the printer for this issue in mid-July. So we'd need something from you by early July if it were to make it into that issue. Our deadlines after that are about three months later for each issue.

As far as researchers, I give my highest recommendation to Steve Ansolabehere of MIT, who has already done a bit of research on this issue. He is truly one of the top political scientists in the country working in this field, and he is careful and very fair (I don't know whether I'd count him as "left" or "right").

Dan may have other ideas.

Rick

rmartinez@eac.gov wrote:

Rick / Dan:

Thanks for the follow-up. As I mentioned to Dan in La Jolla, I do want to commit to doing a paper for ELJ. Aside from my own interest in election law and election administration, I think it is important for your readers to gain a better understanding of the role of the EAC and all that we are doing, particularly in the area of voting system standards and certification. Please tell me what the new deadline is and I will make sure to get you an outline of my intended submission, and of course, a timely draft for your consideration. Thanks again to both of you for the continued
opportunity.

On a related note, in Section 241 of HAVA, Congress gives the EAC a laundry list of possible research topics related to improving the process of election administration. Among the suggested topics are the following:

"(6) Nationwide statistics and methods of identifying, deterring, and investigating voting fraud in elections for Federal office;
(7) Identifying, deterring, and investigating methods of voter intimidation."

In order to get this research project started, the EAC would like to engage two research consultants who could bring some level of knowledge and expertise to the table and help the commissioners to come to an agreement on the framework and/or scope of such a research project. Rather than sending something out on the listserv, I thought I would directly solicit your opinions about any names in the academic field that you think we ought to consider. The reason we are looking to employ two consultants is because we would like to achieve a political balance -- one from the left, and one from the right, so to speak. Any thoughts you have on this would be greatly appreciated.

In his note regarding the Eagleton contract, Hans has raised some of the same concerns I raised from the beginning of any discussions I had regarding this contract with our staff, and at our first formal meeting with Eagleton. In reviewing their work product from time to time, I continue to have concerns about a lack of balanced input and have repeatedly voiced them with staff and with Eagleton. I did this when the initial peer review group was proposed and again during their presentation at our meeting in Pasadena (the outreach slide in their public presentation showed outreach to seven groups, of which only one could be considered conservative-leaning). Now, as I have just had the opportunity to read their July progress report, it appears that Eagleton seems to be going into a larger analysis of the voter fraud issue than was authorized in the contract. My suspicion is that Dan Tokaji is injecting his views into this to dismiss or diminish the concerns some people may have about voter fraud. I could be wrong, but his previous writings lead me to believe otherwise.

I only found one mention of voter fraud in the contract with Eagleton. It is in Section 3.5 regarding provisional voting, where it discusses "minimizing opportunity for voter fraud." Yet, on page 4 of the July progress report from Eagleton, in describing their work plan for the next month it states: "we will expand upon vote fraud research and examine further the relationship between instances of vote fraud and ensuing election reforms." This clearly seems to be going beyond the mandate we gave them as I thought they were going to be looking at voter fraud relating to provisional voting (as the contract calls for), not voter fraud as it relates to election reforms. While voter fraud was never mentioned in the contract regarding the voter ID issue, page 5 of their July report indicates that their narratives "will include an appraisal of the prevalence and nature of vote fraud." In addition to this, page 6 describes a look into the "relationship between voter ID regime and vote fraud."

Voter fraud is clearly an issue that is perceived differently from the Right and from the Left. I have struggled with determining what a clear definition of voter fraud is myself, and therefore want to obtain various perspectives and good analysis on this issue before I formulate a solid conclusion in my mind. It has been my understanding all along that the whole voter fraud/voter intimidation issue is going to studied by the EAC using a balanced group of consultants—not Eagleton and Moritz, who are likely to focus on just the number of prosecutions of voter fraud, rather than the complaints made or the fact that many election officials are frustrated that some prosecutors don't take their complaints about voter fraud seriously. I am not convinced at this point that we will get a balanced and objective study from Eagleton/Moritz on voter fraud. I am puzzled on why they seem to be expending a significant portion of their time on this and would want to know if we somehow authorized them to do more research into the voter fraud issue.

On page 7 of their July report Eagleton indicates that communications with the EAC on the Peer Review Group "were not clear or timely." I would like to know what this refers to. Also, I may have missed it, but do not recall seeing the final list of who is serving as the Peer Review group.

The August 15th copy of the July report that I received from Karen did not include the attachment of the financial report of expenses incurred. I would like to see that attachment.

Outside of our NIST work, this contract represents our largest single outside expenditure of our operational funds. Any single expenditure of $500,000+ needs to be closely monitored. I, for one, am not going to sign off on any report that appears to have been written from a biased viewpoint, especially one that doesn't appear to be interested in hearing from conservative organizations or right-leaning researchers, or seems to minimize any input from them. I've already had questions from congressional
staff and others on why we picked Eagleton and Moritz, as they are perceived by some as biased against Republicans. I assured the critics that we have insisted all along on an objective study from Eagleton. An unbalanced or biased study from them will not only hurt my credibility, but also that of the EAC. I'm not suggesting that we stop their work, but I do want Tom and Julie to inform them in no uncertain terms that we will not accept a report that does not seriously consider all viewpoints on provisional voting and the voter ID issue, and that any study or interpretations they present to us reflect a diversity of opinions on these subjects. We also need for staff to determine whether their considerable work into the voter fraud area is authorized in the contract. We should not be paying for and receiving work we did not authorize.

The contract clearly calls for "alternative approaches" on voter ID requirements and "alternatives" on provisional voting. I agreed to support this contract to Eagleton because I was assured that we would receive a variety of approaches from their work, and not just those from a liberal perspective.

Paul:

I am directing this email only to the commissioners, because I don't think we should air our disagreements among staff until we have at least had a chance to discuss controversial issues with each other in person. It appears from Gracia's email that we will have a chance do so next week in Denver.

In the meantime, I feel compelled to respond to your email regarding Eagleton.

(1) As I stated last night in my email to Hans, we have an on-going responsibility to monitor the expenditure of all our federal funds, including to government contractors who are contractually obligated to provide a compilation of state laws and procedures. However, I will remind you that we did not contract with Eagleton merely to provide a compilation of state laws and procedures. Rather, we contracted with Eagleton (and indirectly with Moritz through Eagleton) to provide both research AND analysis of provisional voting and voter ID. Invariably, the analysis portion of their final product will be from a professional (and institutional) perspective, and will NOT represent any one researcher's personal point of view. If it does, then Eagleton and Moritz risk damaging their credibility not just with the EAC, but with other federal government agencies which undoubtedly contract with their respective institutions on other projects. I doubt seriously that either institution would risk such damage and allow one team member to inject bias into the work. Moreover, the peer review group that is (or has) been assembled by Eagleton is designed to cure any lingering concerns about potential institutional or personal bias...Eagleton has been responsive to your feedback on this issue, to the point where they have removed all perspective representatives of the advocacy community on the peer review group (because they felt they could not achieve political "balance" from the advocacy groups). If there is some person (or persons) which you would like to see Eagleton include in the review group, it is my understanding that such inclusion is but a mere phone call away.

(2) You will recall that at our meeting last week, I raised the exact same concern about the Eagleton progress report, and asked for clarification from staff regarding the details of this particular work (i.e., fraud) on the part of Eagleton. I expect staff (or us directly) to ask questions of Eagleton (as we would any contractor) and determine if their work in this area is within the scope of work (and contract) we all agreed to. If it isn't then we re-direct them, just as we have done, for example with Kim Brace and EDS.

(3) Finally, I must express my disappointment, Paul, regarding your comments on Professor Tokagi that you chose to include in your email. While I may disagree with Hans on his particular analysis of the perceived personal bias of this contract, at least his allegations regarding Professor Tokagi's potential bias are grounded in fact (and he recited them as such in his email). You, on the other hand, have chosen to accuse Professor Tokagi of manipulating the work on this project based on your "suspicion." With all due respect, that unfortunate accusation borders, in my view, on a breach of professional decorum and I cannot let it go without response.

We clearly have some political issues that are increasingly being injected into nearly every discussion at the EAC table. I have stated both to you and Gracia individually that I believe this trend in part represents a "maturating" of the EAC and I am not uncomfortable with it. However, if we are going to bring accusations of subjectivity and bias to the table, then I will expect that such a filter will be applied across the board to ALL projects undertaken by the EAC, and that such a filter will be based solidly on fact, and not on innuendo, personal hunches or suspicions.
I send this email, as always, with the highest degree of respect and friendship toward you. And yet, my disappointment is evident in your comments regarding an esteemed and respected member of the legal academic community (and someone whom I regard as a personal friend.)

I look forward to our continued discussion on this matter. And as for the substance of Hans' concern regarding Moritz, I stand by my email which I sent to everyone last night.

Since we are about to hire Tova Wang (and two others) to be our consultants/researchers on the voter fraud study, I thought I would give you a heads-up about a well-written commentary that Tova just published. It is attached below. Paul’s newfound political “fervor” still has me riled-up, needless to say. Hope your travels are going well.

ID and Voting Rights

Laws requiring voters to present very specific forms of ID are becoming the voting rights barrier of the 21st Century.

Tova Andrea Wang
August 29, 2005

Laws requiring all voters to present very specific forms of identification before exercising their right to vote are rapidly becoming the voting rights barrier of the 21st Century. Last Friday, the Department of Justice approved a new Georgia law requiring every voter to show a government-issued photo ID. The Department of Justice was required to review the measure and “preclear” it because that state is covered by Section 5 of the Voting Rights Act. Although many legal scholars and voting rights advocates had argued the Department should deny its implementation because it would lead to disenfranchisement of minority voters, the Department evidently did not agree. Indiana passed similar legislation this year, and several groups have sued the state on the grounds that it violates the Voting Rights Act.

Next up is Arizona. Last week, after months of resisting, the governor of Arizona signed off on a plan for implementing Proposition 200, which required identification from all voters. Arizona’s new rule is that all voters must show government issued photo identification or a tribal identification to vote. Alternatively, the voter may present two current pieces of identification from a narrow list of potential documents that show the voter’s name and current address, such as a utility and phone bills.

The most problematic provision is this: if the voter is not able to present a government issued photo ID or these two documents to the satisfaction of the poll worker, that voter is simply disenfranchised, asked to leave the polling place without casting a ballot. The voter may not even cast a provisional ballot. For example, if the voter brings a gas bill and a water bill, but the poll worker decides the water bill is not “dated within ninety days of the election,” that person will be absolutely denied the right to vote. In addition to being a violation of the Help America Vote Act’s mandate that any voter who shows up at the polls and believes he or she is registered and eligible to vote must be given a provisional ballot, this raises serious voting rights issues.
As a group of preeminent voting rights scholars have argued in Georgia, under Section 5 of the Voting Rights Act, a covered jurisdiction may not implement a change in its election laws or practices unless the jurisdiction demonstrates the change will be free of any racially discriminatory purpose or effect. The objective of Section 5 “has always been to insure that no voting-procedure changes would be made that would lead to a retrogression in the position of racial minorities with respect to their effective exercise of the electoral franchise.”

As in Georgia, Arizona—especially given the possibility of a complete denial of the vote—has not met that burden of proof. It is up to the state to demonstrate that the ID requirement, which contemplates complete disenfranchisement of certain voters, will not have a discriminatory impact. So, for example, has the state examined whether most voters have or have easy access to the necessary documents? Have state officials investigated what groups are likely to lack the kinds of identification required? Since the law puts the burden on the state, the state must undertake these types of inquiries before it is permitted to go forward with this scheme—for there is a great deal of evidence indicating that it is indeed minorities who lack even one form let alone two forms of the types of identification contemplated.

The difficulty is that the poor and minorities are least likely to own motor vehicles and possess a driver’s license—the most commonly accepted form of identification. Indeed, in 1994, the U.S. Department of Justice found that African-Americans in Louisiana were 4 to 5 times less likely to have government-sanctioned photo ID than white residents. As a result, the Department denied pre-clearance for that state’s proposed photo ID requirement because it “would lead to retrogression in the position of racial minorities with respect to their effective exercise of the electoral franchise.”

The evidence continues to mount. A June 2005 study by the University of Wisconsin found that less than half (47 percent) of Milwaukee County African American adults and 43 percent of Hispanic adults have a valid drivers license compared to 85 percent of white adults outside Milwaukee. One Arizona county reported in February that it was forced to reject nearly 75 percent of new voter registration forms for failure to provide adequate proof of citizenship.

Furthermore, for those who do not have the kinds of up-to-date non-photo ID necessary—and many minority and urban voters, for example those who live in multiple family dwellings simply will not—getting identification from the government will present costs and burdens for voters who simply want to exercise their constitutional right to vote. A certified copy of a birth certificate costs from $10.00 to $45.00, depending on the state; a passport costs $85.00; and certified naturalization papers cost $19.95. It may not be so very easy for people who work more than one job or have small children to take the time during business hours, drive to a Department of Drivers Services, and wait on line to get necessary identification. Indeed, most of the state’s offices are open 8:00 a.m. to 5:00 p.m. Monday through Friday. Has the state researched the potential disparate impacts on getting non-photo ID? If not, it has not met its burden under the Act.
There has been a great deal of controversial discussion over the Voting Rights Act recently because some sections—including Section 5—are due to expire. The Act was passed in order to eliminate procedures aimed at the disenfranchisement of particular groups. That it is still necessary is being demonstrated today in Arizona and Georgia.

Tova Andrea Wang is a senior program officer and Democracy Fellow at The Century Foundation, where this article first appeared.
I took a telephone call this morning from Paul Vinovich. He had attempted to reach Gracia, but since she was not here, he asked Sheila if I was in the office so he spoke to me.

Paul was very upset with comments that Tova Wang had made at yesterday's AEI's meeting in which she basically indicated that voter fraud did not exist in the USA. He asked how a person who believes that voter fraud does not exist—or not seem at least willing to listen to both sides—can be hired by the EAC to do a study on voter fraud/voter intimidation. I explained to Paul (as I have now had to explain to many others) that Tova was "balanced" on the study with Job Severbrov. He did not know Job but was well-aware of Tova's positions and was concerned that her public comments indicate that she will not be fair in looking at this issue. I explained to Paul that we were monitoring the work of our consultants on this study and no report would be issued publicly without the support of at least three commissioners. I sent him some background information on Job. I think this study will need close monitoring.
What Paul V said is NOT at all an accurate statement of what Tova said. I was there. This is very disappointing to read. I may call Mr. V myself.

I watched and heard what was said and by whom. I will be glad to brief you tomorrow morning.

I am suggesting that we have our 9:30 discussion tomorrow to cover a couple of things:

1. The four of us need to spend some "quality" time together. Tomorrow will be a good time to pin down the earliest date when we will all be in DC and can devote a 1/2 day or so to discuss election of officers, etc. Perhaps on tomorrow we can develop an agenda for those discussions.

2. Defining balance for the make-up of the Working Group for our Voter Fraud/Intimidation project.
For our private time discussions, I propose that we add the composition of the Voter Fraud/Voter Intimidation Working Group to our list of topics to discuss.

As you will recall, we did not complete the discussion because Paul was not able to participate.
Peg:

Following is the guidance that the commissioners are providing with respect to the composition of the working group for the Voter Fraud/Voter Intimidation project and the selection process.

8 Member Working Group

Participants to be chosen by the two consultants in consultation with you. There are two slots that will require consensus. If consensus can’t be reached, then you should make the decision. If there is real disagreement among the three of you, then the commissioners will make the selection.

The participation process prescribed below provides for political balance. As always, we ask that the group be diverse with respect to participation of men, women and minorities.

4 people from the Academic, Legal and Advocacy sectors - 2 to be chosen by Tova and 2 to be chosen by Job. We support your recommendation that there be at least one academic in the working group to help advise and comment on the construct of the database and you should provide that guidance to Tova and Job.

2 State Level Election Officials - 1 selected by Tova and 1 selected by Job

1 Nonpartisan local election official (selected by you or by consensus among the 3 of you)

1 Representative from DOJ - you had recommended a man who was retired from the Voting Section or perhaps someone else with similar credentials to be selected by you or by consensus among the three of you. We assume that Craig Dosantos (?)sp) will participate in this project as an "advisor" and therefore would not take up a slot on the working group.

I will be on travel on Friday (tomorrow), however please feel free to call me on my cell should you have questions or need additional clarification.

Many thanks for your terrific work.

Paul:

I've taken a shot at a draft agenda, but we have much work to do on this item. As you will see, my current vision, at least with regard to the Standards Board, is to have a series of presentations regarding all of our research projects, particularly those in which written draft reports will be ready for consideration, such as the provisional voting study and the voter ID study. However, there are too many research projects on the plate right now, and not enough time in a day and a half to be able to present all of them to both the Standards Board and BOA (not to mention "fatigue factor" if we overload these folks during this meeting). So, I've had to prioritize.

Anyway, attached is what I have come up with, and at the very bottom of the draft agenda, you will see the research projects that I left off the list. Next steps are for you to develop a similar draft agenda for the BOA, and I would suggest that you do something similar for the BOA, such that we will have concurrent session going on (Standards Board in one room, BOA in another)...for example, when the briefing for provisional voting is taking place for the SB members, you can be having a concurrent session for the BOA in another room on voter ID. Then we switch. (Same type of format for Day 2). This will allow us to have concurrent sessions going on simultaneously but we'll have to coordinate the schedule of these sessions. In the current draft agenda, I have the two boards coming together in the afternoon of the second day, but we may want them to start with a joint plenary session and end with a joint plenary session (though that is tough because they each have group-specific business to conduct when they first arrive -- at least the Standards Board does, such as adoption of permanent bylaws).

Anyway, this is still VERY MUCH a work in progress, so I welcome your feedback. Also, I think we need to get Tom and Karen involved in this discussion very soon, and then kick it over to the other commissioners for their input once you and I have agreement on a rough draft. After that, I will then want to send it to Peggy Nighswonger so that she can share it with the Executive Board to get their input before it goes final.

I'll wait to hear back from you.

MEMORANDUM

TO: MEMBERS OF EAC STANDARDS BOARD
FROM: PEGGY NIGHSWONGER, CHAIR, EXECUTIVE BOARD
       RAY MARTINEZ, EAC COMMISSIONER
DATE: APRIL 10, 2006
SUBJECT: UPCOMING MEETING OF STANDARDS BOARD, MAY 23-24, 2006

The next meeting of the EAC Standards Board (to be held jointly with the EAC Board of Advisors) will be held in Washington, D.C. on Tuesday, May 23 and Wednesday, May 24, 2006 at the Hamilton Crown Plaza hotel. We hope you will be able to attend this important meeting, which will focus on consideration and discussion of a number of ongoing election administration research projects currently underway by the EAC. Additionally, there will also be a discussion regarding recent work conducted by the National Institute of Standards and Technology (NIST) regarding voter verifiable audit trail. (Please see the draft agenda attached for additional information.)

As was the case with our previous meetings of the EAC Standards Board, the EAC will pay the cost of travel, hotel and a Federal per diem for any member of the Standards Board wishing to attend the May 2006 meeting. Upon receipt of this memorandum, please contact the EAC’s travel agent, Adventure Travel, at (877) 472-6718 to make your travel arrangements. Additionally, if you have any questions or need assistance in making your travel plans, please call ___________________ (email address is ___________________).

Thank you in advance for you willingness to join us in Washington, D.C. We look forward to seeing you soon.
U.S. ELECTION ASSISTANCE COMMISSION
Standards Board Meeting Agenda
Washington, D.C.
May 23 – 24, 2006

Tuesday, May 23, 2006

1:00 – 2:30 a.m.  PLENARY SESSION
Session Chaired by Peggy Nighswonger
Chair, Executive Board

Appointment of Parliamentarian

Adoption of Agenda

Review of Meeting Book Materials

Presentation of Proposed Permanent Bylaws
Juliet Thompson, EAC General Counsel
Kevin Kennedy, Executive Director, State Elections Board, Wisconsin
Joanne Armbruster, Atlantic County Superintendent of Elections, New Jersey
William Campbell, City Clerk, City of Woburn, MA.

2:30 – 2:45 a.m.  BREAK

2:45 – 4:00 p.m.  PRESENTATION AND CONSIDERATION OF DRAFT REPORT ON PROVISIONAL VOTING

Presentors:
Thomas O’Neil: Project Manager, EAC Provisional Voting
Ingrid Reed: Director, Eagleton Institute New Jersey Project
Dan Tokaji: Associate Director, Election Law@Moritz

Resource Person: Juliet Thompson, EAC General Counsel

4:00 – 4:15 p.m.  BREAK

4:15 – 5:30 p.m.  PRESENTATION AND CONSIDERATION OF DRAFT REPORT ON VOTER IDENTIFICATION
Presentors:
Thomas O'Neil: Project Manager, EAC Provisional Voting
Ingrid Reed: Director, Eagleton New Jersey Project
Dan Tokaji: Associate Director, Election Law@Moritz
Resource Person: Juliet Thompson, EAC General Counsel

NOTE: Attendees on their own for dinner.

Wednesday, May 24, 2006

8:00 a.m. CONTINENTAL BREAKFAST

8:30 – 9:30 a.m. PRESENTATION AND CONSIDERATION OF DRAFT REPORT ON POLL WORKER RECRUITMENT, TRAINING AND RETENTION (INCLUDING COLLEGE POLL WORKERS)

Presentors:
Tracy Warren, Poll Worker Institute
Jeannette Senecal, League of Women Voters
Dora Rose, Center for Election Integrity, Cleveland State University
Resource Person: Karen Lynn-Dyson, EAC Research Manager

9:30 – 10:30 a.m. PRESENTATION AND CONSIDERATION OF DRAFT REPORT ON VOTE COUNT/RECOUNT

Presentors:
Dr. Thad Hall, Assistant Professor of Political Science, University of Utah
Dr. Michael Alvarez, Professor of Political Science, California Institute of Technology
Resource Person: Juliet Thompson, EAC General Counsel

10:30 – 10:45 a.m. BREAK

10:45 – 11:30 a.m. PRESENTATION AND CONSIDERATION OF DRAFT REPORT ON IMPROVING DATA COLLECTION

Presentors:
Karen Lynn-Dyson, Research Director, Election Assistance Commission
Laiza Otero, Research Associate, Election Assistance Commission
Resource Person: Brian Hancock, Research Associate

11:30 – 12:15 p.m. PRESENTATION AND CONSIDERATION OF DRAFT REPORT ON VOTER FRAUD/VOTER INTIMIDATION

Presentors:
12: 15- 1:30 p.m.  LUNCH

PRESENTATION REGARDING PROPOSED MODULE FOR VOTER VERIFIABLE PAPER AUDIT TRAIL (VVPAT) OF THE VOLUNTARY VOTING SYSTEM GUIDELINES (VVSG)

Presentors:
Mark Skall, NIST
John Wack, NIST

1:30 – 3:15 p.m.  JOINT PLENARY SESSION
Session Jointly Chaired by Peggy Nighswonger, Chair, Executive Board and Beverly Kaufman, Chair, Board of Advisors
Discussion and deliberation.

3:15– 3:30 p.m.  BREAK

3:30 – 5:00 p.m.  JOINT PLENARY SESSION (CONTINUED)
Session Jointly Chaired by Peggy Nighswonger, Chair, Executive Board and Beverly Kaufman, Chair, Board of Advisors
Discussion and deliberation.

5:00 p.m.  ADJOURN

* Not included in the current list of projects briefed:

- Design for Democracy updates and improvements to ballot design and polling-place signage.
- Public Access Portal research.
- Katrina Voting Assistance Relief research.
- Legal Online clearinghouse of election law materials.
I see only 2 consultants on the Tally Vote for the Voter Fraud/Voter Intimidation project. What happened to the third consultant?

Remind me how it is that EAC can sole source a contract to NASED? I don't have an objection; I am merely seeking information.

Thank you,
Gracia M. Hillman

Tamar:

Don't worry about responding to this email, as I know you have to pay attention in class.

I questioned the length of the search term list and also thought that there would be ways to combine some of the search terms. It has been awhile since I have done a Westlaw search, however, which is why I need your input during the teleconference. Yes, I recognize that going through the list of search terms and printing off or saving the resulting references will take time. I'll need you to provide that feedback to our consultants so that we all are on the same page.

Devon has not done a Nexis search before; but, if EAC has access to that database, she is willing to conduct that search. The work would go along with other help she is providing. She will be sorting through my huge files of press clippings on voting fraud, will PDF the sorted clippings, and drop the PDF files onto CDs for our consultants' review.

Peg,

Correct me if I'm wrong, but I think I omitted sending you these specific summaries that are based on complex cases that could not be adequately described within the confines of the nexis article excel spreadsheets. If we can, these should be included, probably on the disc. Sorry.

Wisconsin FINAL.doc  South Dakota FINAL.doc  Washington FINAL.doc
Summary of Wisconsin Voting Irregularities November 2004

Instances of Illegal Voting, Milwaukee:
A probe led by U.S. Attorney Steve Biskupic and Milwaukee County District Attorney Michael McCann found about 200 cases of illegal felon voting and at least 100 cases of other forms of illegal voting in the city of Milwaukee. Of these, 14 were prosecuted:

10 were instances of felons voting while on probation or parole:
5 are awaiting trial. (one of them is DeShawn Brooks) ¹
1 has been acquitted ²
1 has been found guilty in trial (Kimberly Prude) ²
3 have reached plea agreements (Milo Ocasio³)
[names: Ethel M. Anderson, Correan F. Edwards, Jiyto L. Cox, Joseph J. Gooden⁴]

4 were instances of double voting:
1 produced a hung jury (Enrique Sanders) ²
1 was found incompetent to stand trial and his case was dismissed
1 initially pleaded guilty but now wants a trial. ⁵
1 is awaiting trial.

Two of those accused of double voting were driven to multiple polling places in a van, but the identity of the driver of the vehicle is not known, and the DA does not suspect conspiracy. ⁶

In addition to these, four people were charged with felonies in the Milwaukee County Circuit Court; two cases were filed against people accused of sending in false registration cards under the auspices of the Association of Community Organizations for Reform Now; the other two were felons who voted illegally.⁷

Instances of Illegal Voting, Statewide:
The Legislative Audit Bureau, a nonpartisan research agency, released its analysis of state-wide 2004 election results in September 2005. The agency reviewed the names, addresses, and birthdates of over 348,000 individuals credited with having voted in November 2004, from the electronic voter registration records of 6 cooperating municipalities, and compared them to lists from the Department of Corrections of felons serving sentences on election day, and to lists from the municipalities (to check up on

¹ Barton, Gina. “Man acquitted in voter fraud trial; Felon had been under supervision at time.” Milwaukee Journal-Sentinel. October 6, 2005.
⁵ Milwaukee J-S. December 5, 2005.
double-voting) and to lists from the US Social Security Administration. LAB’s search revealed 105 “questionable” votes:

- 98 ballots cast by ineligible felons, 57 of which were in Madison, 2 in Waukesha, 15 in Eau Claire, 16 in Appleton, 1 in the Village of Ashwaubenon
- 2 instances of double-voting (one in Madison, one in Waukesha).
- 4 votes counted despite the voter’s having died two weeks or less before the election.
- 1 case in which a 17-year-old voted in Madison.8

The LAB referred the names of these people to the appropriate District Attorney for prosecution, and several cases are awaiting trial.

It should be noted that this study is not a complete survey of election returns state-wide in Wisconsin; the LAB’s analysis is based on the voting records of the six municipalities that provided the LAB with sufficient information to conduct this study.

It should also be noted that the LAB discovered significant error in the data provided them by these municipalities, including:

- 91 records in which the individual’s birthdate was incorrectly recorded as later than November 2, 1986
- 97 cases in which a person was mistakenly recorded as having voted twice
- More than 15,000 records were missing birthdates, making it more difficult to determine voter eligibility by comparing these records to lists of felons and deceased persons.9

General Findings
Both reports (the Legislative Audit Bureau’s and the report of the Joint Task Force on Election Reform convened in Milwaukee) that did in-depth studies of the Wisconsin election returns in 2004 found that there was no evidence of systematic, wide-spread fraud.10 As the above statistics indicate, there are very few cases in which an individual intentionally voted illegally, and the majority of the discovered instances of fraudulent voting involved felons who were unaware that they were committing a crime. Certainly the number of fraudulent votes, intentional and unintentional, is dwarfed by the amount of administrative error – and the amount of potential there was for fraud.

Registration Irregularities

8 Borowski, Greg J. “State audit digs up wider vote problems; Thousands of voters on rolls more than once.” Milwaukee Journal-Sentinel. September 17, 2005
Duplicate Registrations: In the data from the six participating municipalities, LAB found 3116 records for individuals who appear to be registered more than once in the same municipality (0.9% of the records they reviewed). These duplications were primarily the result of name changes, in which the registrar neglected to remove the old name from the registration list, previous addresses that were not deleted, and misspellings and other typographical errors.

Deceased Voters: the LAB study found 783 persons who were deceased, but whose records had not been eliminated from the registration lists. Most of the municipalities participating in the survey rely on obituaries and notifications from family members to purge their voter registration lists of deceased voters.

Felons: Comparing a list of felons from the Department of Corrections to their voter registration data lists, LAB found 453 felons who were registered to vote. This is largely because, although municipal clerks are informed of federal felony convictions, they have no way of obtaining records on state felony convictions. 11

11 Legislative Audit Bureau Report: pg 43-47.
Summary of South Dakota Election Irregularities in 2002 and 2004

2002
In fall 2002, one of South Dakota’s Senators, Democrat Tim Johnson, was up for re-election, and was engaged in a very close race with his Republican challenger, John Thune. Both parties were engaged in a massive voter registration effort, and registered over 24,000 new voters in the five months between the June primary and the November election, increasing the number of registered voters in the state from around 452,000 to 476,000.1

A month before the election, several counties reported irregularities in some of the voter registration documents they’d received. In response to these reports, South Dakota Attorney General, Mark Barnett, with the state US Attorney and the FBI, launched an investigation.2 Because of the importance of the race in determining the partisan balance of power in the Senate, the voter registration discrepancies got a good deal of national press, including a number of editorials accusing American Indians of stuffing ballot boxes.3 The following allegations were also picked up by out-of-state newssources, including Fox News and the Wall Street Journal:

- Supporters of Thune, who lost the election by 524 votes, collected 47 affidavits from poll watchers claiming voting irregularities.
- Allegations were made that three individuals were offered money by Johnson supporters to vote.

Barnett, who was alerted to the affidavits when he read an early media report that referred to them, stated that these allegations were either false or didn’t warrant concern. “Most of the stuff that’s in those other 47 affidavits are the kind of problems that we see in every election. People parking too close to the polling place with a sign in their window, people shooting their mouths off at the polling place. The kind of things that local election officials generally do a pretty good job of policing.”4 The allegations of voter bribery were false.

Though most of the allegations of fraud that were filed turned out to be false, Attorney General Barnett’s investigation did uncover two cases of voter registration fraud:

- The most high-profile case was that of Becky Red Earth-Villeda. Ms. Red Earth-Villeda was hired by the state Democratic party to register voters on the American Indian reservations. She was charged with 19 counts of forgery. No fraudulent voting was associated with Ms. Red Earth-Villeda, nor was there any evidence

---

that fraudulent voting occurred in the state.\textsuperscript{5} All charges were dropped in January 2004, when, in court, it was determined by the state handwriting specialist that Ms. Red Earth-Villeda had not forged the signatures.\textsuperscript{6}

Lyle Nichols. Mr. Nichols was arrested for submitting five forged voter registration cards to his county office. He was working for an organization called the Native American Voter Registration Project, and was paid $3 for each registration. The five charges were dropped after Mr. Nichols pleaded guilty to possession of a forgery, and was sentenced with 54 days in jail, which is how much time he’d already spent there because of the charges.\textsuperscript{7}

2004

In October 2004, just before the general election, eight people working for a campus GOP Get-out-the-Vote organization resigned their positions after they were accused of submitting absentee ballot requests that had not been notorized properly. Because many of these ballot requests had already been processed and the ballots themselves had been cast, county auditors decided not to pursue the issue.\textsuperscript{8}

Besides this incident, there were no reports of voter registration or voting irregularities in the run-up to the November 2004 election, as there were in 2002.\textsuperscript{9} However, as with the primary and special elections in June 2004, there were complaints about voter intimidation from American Indians attempting to vote, as well as difficulties with the adoption of the state’s new photo identification regulations (after the 2002 election, the state legislature passed more stringent requirements about the kind of identification voters would need to provide at the polls.)

Incidents:

Voter Intimidation: The Four Directions Committee, an organization dedicated to helping American Indians register to vote and get to the polls, got a temporary restraining order on several Republican supporters who, they alleged, had been setting up video equipment outside of polling places on American Indian reservations and following around American Indians who voted early and recording their license plates.\textsuperscript{10}

Vote Buying: A Republican election monitor from Virginia, Paul Brenner, claimed that Senator Tom Daschle’s campaign was paying people to vote. Local county auditors

\textsuperscript{7} “Rapid City man arrested for voter fraud.” \textit{Associated Press State and Local Wire}. Rapid City, South Dakota. October 18, 2002.
believe Brenner started the rumor himself. As there was no evidence for either side, the claims were not taken seriously.\textsuperscript{11}

Summary of Election Irregularities in Washington State 2004

The 2004 Washington state gubernatorial election was decided by one of the narrowest margins in American electoral history; 261 votes – less than a millionth of the 2.8 million votes cast statewide - separated the leading candidate, Republican Dino Rossi, from his competitor, Democrat Christine Gregoire. The state law-mandated recount that followed brought the margin down to 42 votes, and the subsequent hand recount ordered by the state Democratic Party gave Gregoire the lead, with 129 more votes than Rossi.

The race was so close that the parties decided to go to court to dispute the tally – the Republicans wanted the election results set aside and to have a revote; the Democrats sought a court-legitimated win. Each side set out into the field to find a way to swing the election in their favor. The trial and accompanying investigation, which lasted through the spring of 2005, revealed a litany of problems with the state's election system:

- The process by which absentee ballots are matched to the voters who requested them led to discrepancies between the number of absentee ballots received and the number of votes counted.¹
- After the final certification of the election results, King County discovered 96 uncounted absentee ballots, Pierce county found 64, and Spokane County found eight; all had been misplaced following the election, but there was no mechanism for reconciling the number of absentee ballots received with the number counted.²
- Hundreds of felons who were ineligible to vote were able to cast ballots because they were not aware that they needed to apply to have their voting rights re-instated.³
- The system for verifying the eligibility of voters who had cast provisional ballots was found to be questionable.⁴
- Due to poll worker error, about 100 provisional ballots were improperly cast, and a hundred more were counted, though they were not verified as having been cast by eligible voters.⁵

The trial also revealed that most of these problems were the result of understaffing and human error.⁶ In total, 1,678 ballots were proven to have been cast illegally, but none of these votes was subtracted from the candidates' totals because no evidence was produced in court as to how each individual voted.⁷ Further, despite the scrutiny that the election

⁴ Roberts, Gregory. "GOP contrasts elections offices; Chelan County's work better than King's, judge in gubernatorial case told." *The Seattle Post-Intelligencer*. May 25, 2005.
⁵ Ervin, Keith. "Prosecutors to challenge 110 voters; They are said to be felons – 2 counties discover uncounted ballots." *The Seattle Times*. April 29, 2005.
⁶ Ervin, Keith. "King County ballot numbers don't add up; 4000 discrepancies – Review of records finds flaws at each stage of the election; voting, processing, counting." *The Seattle Times*. May 25, 2005.
returns revealed, and the extensive discussion of voter fraud throughout the investigation, just eight cases of voter fraud were discovered:

- 4 people were accused of casting absentee ballots for their deceased spouses.  8
- A mother and daughter were charged with the absentee ballot of the mother’s husband who had died earlier in the year.
- 1 man cast the ballot of the deceased prior resident of his home.
- A homeless resident of Seattle cast two ballots, one in the name of Dustin Ocoilain.  9

Major Vote Buying Cases Summary

Between 2001 and 2006, allegations and convictions for vote buying and conspiracies to buy votes were concentrated in three states: Illinois, West Virginia and Kentucky.

In East St. Louis, Illinois, nine individuals, including a former city council member and the head of the local Democratic Party, Charles Powell, Jr., were convicted or pled guilty to vote buying and conspiracy to commit election fraud during the 2004 general election. The government’s conspiracy case was almost entirely based on taped conversations in which the defendants discussed buying votes for $5 and whether this would be adequate. Federal prosecutors alleged that the vote buying was financed with $79,000 transferred from the County Democratic Party shortly before the election, although county officials have not been charged. Four defendants were convicted of purchasing or offering to purchase at least one vote directly, while Democratic Party chairman was only convicted of conspiracy. Earlier, three precinct officials and one precinct worker pled guilty to buying votes for $5 or $10 in that same election.

Eastern Kentucky has witnessed a series of vote buying cases over the last several years. The most recent revolved around Ross Harris, a Pike County political fundraiser and coal executive, and his associate Loren Glenn Turner. Harris and Turner were convicted in September 2004 of vote buying, mail fraud, and several other counts. Prosecutors alleged Harris and Turner conspired to buy votes and provided the necessary funds in an unsuccessful 2002 bid for Pike County district judge by former State Senator Doug Hays. Harris supplied nearly $40,000, Turner laundered the money through straw contributors, and the cash was then disbursed in the form of $50 checks ostensibly for ‘vote hauling’, the legal practice of paying campaign workers to get voters to the polls which is notorious as a cover for buying votes. Harris attempted to influence the race on behalf of Hays in order to get revenge on Hays’ opponent for a personal matter.

A grand jury initially indicted 10 individuals in connection with the Harris and Turner case, including Hays and his wife, and six campaign workers. Of the remaining defendants, only one, Tom Varney, also a witness in the Hays case, pled guilty. The others were either acquitted of vote buying charges or had vote buying charges dropped. Prosecutors have announced that their investigation continues into others tied to Harris and may produce further indictments.

The Harris case follows a series of trials related to the 1998 Knott County Democratic primary. Between 2003 and 2004, 10 individuals were indicted on vote buying charges, including a winning candidate in those primaries, Knott County judge-executive Donnie Newsome, who was reelected in 2002. In 2004 Newsome and a supporter were sent to jail and fined. Five other

3 “2 found guilty in pike county vote-fraud case; Two-year sentences possible,” Lexington Herald Leader, September 17, 2004.
5 “Pike Election Trial Goes To Jury” Lexington Herald Leader, January 1, 2006.
defendants pled guilty to vote buying charges, and three were acquitted. The primary means of vote buying entailed purchasing absentee votes from elderly, infirm, illiterate or poor voters, usually for between $50 and $100. This resulted in an abnormally high number of absentee ballots in the primary. Indictments relating to that same 1998 primary were also brought in 1999, when 6 individuals were indicted for buying the votes of students at a small local college. Five of those indicted were convicted or pled guilty.

Absentee vote buying was also an issue in 2002, when federal prosecutors opened an investigation in Kentucky's Clay County after an abnormal number of absentee ballots were filed in the primary and the sheriff halted absentee voting twice over concerns. Officials received hundreds of complaints of vote-buying during the 2002 primary, and state investigators performed follow up investigations in a number of counties, including Knott, Bell, Floyd, Pike, and Maginoff. No indictments have been produced so far.

So far, relatively few incidents of vote-buying have been substantially identified or investigated in the 2004 election. Two instances of vote buying in local 2004 elections have been brought before a grand jury. In one, a Casey County man was indicted for purchasing votes in a local school board race with cash and whiskey. In the second, the grand jury chose not to indict an individual accused of offering to purchase a teenager's vote on a local proposal with beer.

An extensive vote buying conspiracy has also been uncovered in southern West Virginia. The federal probe, which handed down its first indictment in 2003, has yielded more than a dozen guilty pleas to charges of vote buying and conspiracy in elections since the late 1980s. As this area is almost exclusively dominated by the Democratic Party, vote-buying occurred largely during primary contests.

The first phase of the probe focused on Logan County residents, where vote buying charges were brought in relation to elections in 1996, 2000, 2002 and 2004. In an extraordinary tactic, the FBI planted the former mayor of Logan City, Tom Esposito, as a candidate in a state legislative race. Esposito's cooperation led to guilty pleas from the Logan County Clerk, who pled guilty to selling his vote to Esposito in 1996, and another man who took money from Esposito for the purpose of vote buying in 2004.

Guilty pleas were also obtained in connection with former county sheriff Johnny Mendez, who pled guilty to buying votes in two primary elections in order to elect candidates including...

himself. In 2000, with a large amount of funding from a prominent local lawyer seeking to influence a state delegate election for his wife, Mendez distributed around $10,000 in payments to voters of $10 to $100. Then, in the 2004 primary, Mendez distributed around $2,000 before his arrest.15 A deputy of Mendez', the former Logan police chief, also pled guilty to a count of vote buying in 2002.16

Prosecutors focusing on neighboring Lincoln County have alleged a long-standing vote-buying conspiracy extending back to the late 1980s. The probe identified Lincoln County Circuit Clerk Greg Stowers as head of a Democratic Party faction which routinely bought votes in order to maintain office. Stowers pled guilty in December 2005 to distributing around $7,000 to buy votes in the 2004 primary. The Lincoln County Assessor, and Stowers' longtime political ally, Jerry Allen Weaver, also pled guilty to conspiracy to buy votes.17 These were accompanied by four other guilty pleas from party workers for vote buying in primaries. While most specific charges focused on vote buying in the 2004 primary, defendants also admitted buying votes as far back as the 1988, 1990, and 1992 primaries.

The leading conspirators would give party workers candidate slates and cash, which workers would then take to the polling place and use to purchase votes for amounts between $10 and $40 and in one instance, for liquor. Voters would be handed the slate of chosen candidates, and would then be paid upon exiting the polling place. In other cases, the elected officials in question purchased votes in exchange for non-cash rewards, including patronage positions, fixed tickets, favorable tax assessments, and home improvements.18

The West Virginia probe is ongoing, as prosecutors are scrutinizing others implicated during the proceedings so far, including a sitting state delegate, who may be under scrutiny for vote buying in a 1990 election, and one of the Lincoln county defendants who previously had vote buying charges against him dropped.19

Nexis Search Articles Analysis

Note: The search terms used were ones agreed upon by both Job Serebrov and Tova Wang and are available upon request. A more systematic, numerical analysis of the data contained in the Nexis charts is currently being undertaken. What follows is an overview.

Recommendation: In phase 2, consultants should conduct a Nexis search that specifically attempts to follow up on the cases for which no resolution is evident from this particular initial search.

Overview of the Articles

Absentee Ballots

According to press reports, absentee ballots are abused in a variety of ways:

1. Campaign workers, candidates and others coerce the voting choices of vulnerable populations, usually elderly voters
2. Workers for groups and individuals have attempted to vote absentee in the names of the deceased
3. Workers for groups, campaign workers and individuals have attempted to forge the names of other voters on absentee ballot requests and absentee ballots and thus vote multiple times

It is unclear how often actual convictions result from these activities (a handful of articles indicate convictions and guilty pleas), but this is an area in which there have been a substantial number of official investigations and actual charges filed, according to news reports where such information is available. A few of the allegations became part of civil court proceedings contesting the outcome of the election.

While absentee fraud allegations turn up throughout the country, a few states have had several such cases. Especially of note are Indiana, New Jersey, South Dakota, and most particularly, Texas. Interestingly, there were no articles regarding Oregon, where the entire system is vote by mail.

Voter Registration Fraud

According to press reports, the following types of allegations of voter registration fraud are most common:

1. Registering in the name of dead people
2. Fake names and other information on voter registration forms
3. Illegitimate addresses used on voter registration forms
4. Voters being tricked into registering for a particular party under false pretenses
5. Destruction of voter registration forms depending on the party the voter registered with

There was only one self-evident instance of a noncitizen registering to vote. Many of the instances reported on included official investigations and charges filed, but few actual convictions, at least from the news reporting. There have been multiple reports of registration fraud in California, Colorado, Florida, Missouri, New York, North Carolina, Ohio, South Dakota and Wisconsin.

_Voter Intimidation and Suppression_

This is the area which had the most articles in part because there were so many allegations of intimidation and suppression during the 2004 election. Most of these remained allegations and no criminal investigation or prosecution ensued. Some of the cases did end up in civil litigation.

This is not to say that these alleged activities were confined to 2004 – there were several allegations made during every year studied. Most notable were the high number of allegations of voter intimidation and harassment reported during the 2003 Philadelphia mayoral race.

A very high number of the articles were about the issue of challenges to voters’ registration status and challengers at the polling places. There were many allegations that planned challenge activities were targeted at minority communities. Some of the challenges were concentrated in immigrant communities.

However, the tactics alleged varied greatly. The types of activities discussed also include the following:

- Photographing or videotaping voters coming out of polling places.
- Improper demands for identification
- Poll watchers harassing voters
- Poll workers being hostile to or aggressively challenging voters
- Disproportionate police presence
- Poll watchers wearing clothes with messages that seemed intended to intimidate
- Insufficient voting machines and unmanageably long lines

Although the incidents reported on occurred everywhere, not surprisingly, many came from “battleground” states. There were several such reports out of Florida, Ohio and Pennsylvania.

_“Dead Voters and Multiple Voting”_

There were a high number of articles about people voting in the names of the dead and voting more than once. Many of these articles were marked by allegations of big numbers of people committing these frauds, and relatively few of these allegations
turning out to be accurate according to investigations by the newspapers themselves, elections officials and criminal investigators. Often the problem turned out to be a result of administrative error, poll workers mis-marking of voter lists, a flawed registration list and/or errors made in the attempt to match names of voters on the list with the names of the people who voted. In a good number of cases, there were allegations that charges of double voting by political leaders were an effort to scare people away from the voting process.

Nonetheless there were a few cases of people actually being charged and/or convicted for these kinds of activities. Most of the cases involved a person voting both by absentee ballot and in person. A few instances involved people voting both during early voting and on Election Day, which calls into question the proper marking and maintenance of the voting lists. In many instances, the person charged claimed not to have voted twice on purpose. A very small handful of cases involved a voter voting in more than one county and there was one substantiated case involving a person voting in more than one state. Other instances in which such efforts were alleged were disproved by officials.

In the case of voting in the name of a dead person, the problem lay in the voter registration list not being properly maintained, i.e. the person was still on the registration list as eligible to vote, and a person taking criminal advantage of that. In total, the San Francisco Chronicle found 5 such cases in March 2004; the AP cited a newspaper analysis of five such persons in an Indiana primary in May 2004; and a senate committee found two people to have voted in the names of the dead in 2005.

As usual, there were a disproportionate number of such articles coming out of Florida. Notably, there were three articles out of Oregon, which has one hundred percent vote-by-mail.

*Vote Buying*

There were a surprising number of articles about vote buying cases. A few of these instances involved long-time investigations in three particular jurisdictions as detailed in the vote buying summary. There were more official investigations, indictments and convictions/pleas in this area. All of these cases are concentrated in the Midwest and South.

*Deceptive Practices*

In 2004 there were numerous reports of intentional disinformation about voting eligibility and the voting process meant to confuse voters about their rights and when and where to vote. Misinformation came in the form of flyers, phone calls, letters, and even people going door to door. Many of the efforts were reportedly targeted at minority communities. A disproportionate number of them came from key battleground states, particularly Florida, Ohio, and Pennsylvania. From the news reports found, only one of these instances was officially investigated, the case in Oregon involving the destruction
of voter registration forms. There were no reports of prosecutions or any other legal proceeding.

Non-citizen Voting

There were surprisingly few articles regarding noncitizen registration and voting – just seven all together, in seven different states across the country. They were also evenly split between allegations of noncitizens registering and noncitizens voting. In one case charges were filed against ten individuals. In one case a judge in a civil suit found there was illegal noncitizen voting. Three instances prompted official investigations. Two cases, from this nexis search, remained just allegations of noncitizen voting.

Felon Voting

Although there were only thirteen cases of felon voting, some of them involved large numbers of voters. Most notably, of course, are the cases that came to light in the Washington gubernatorial election contest (see Washington summary) and in Wisconsin (see Wisconsin summary). In several states, the main problem has the large number of ineligible felons that remained on the voting list.

Election Official Fraud

In most of the cases in which fraud by elections officials is suspected or alleged, it is difficult to determine whether it is incompetence or a crime. There are several cases of ballots gone missing, ballots unaccounted for and ballots ending up in a worker's possession. In two cases workers were said to have changed peoples’ votes. The one instance in which widespread ballot box stuffing by elections workers was alleged was in Washington State. The judge in the civil trial of that election contest did not find that elections workers had committed fraud. Four of the cases are from Texas.

Analysis of the September 15, 2005 Voter Fraud Report Submitted to the New Jersey Attorney General

By The Brennan Center for Justice at NYU School of Law and Dr. Michael McDonald of George Mason University

General

A September 15, 2005 Report submitted to the New Jersey Attorney General included lists of purportedly illegitimate votes in New Jersey in the 2004 general election, including lists of 10,969 individuals who purportedly voted twice and lists of 4,756 voters who were purportedly dead or incarcerated in November 2004. For the present Analysis of the Report, the lists of voters submitted to the New Jersey Attorney General, as well as a copy of the New Jersey county voter registration files were obtained, and an initial investigation of the report’s claims was conducted. The analysis shows that the lists submitted are substantially flawed.

The Analysis is based on methodology only: its authors did not gain access to original documents related to registration or original pollbook records; only recently were copies of the counties' original registration data files acquired and compiled, which contain some notable gaps; and the lists submitted to the Attorney General contain significant errors and little documentation, which complicated the analysis. Nonetheless, the analysts say that information collected is sufficient for generally assessing the quality of evidence presented to support the September 15 report. Analysis of the suspect lists reveals that the evidence submitted does not show what it purports to show: cause for concern that there is serious risk of widespread fraud given the state of the New Jersey voter registration rolls.

These suspect lists were compiled by attempting to match the first name, last name, and birth date of persons on county voter registration files. Entries that supposedly “matched” other entries were apparently deemed to represent the same individual, voting twice. This methodology was similar to the method used in compiling the notoriously inaccurate Florida “purge lists” of suspected ineligible felons in 2000 and 2004. As Florida’s experience shows, matching names and birth dates in the voter registration context can easily lead to false conclusions – as was almost certainly the case here.

This Analysis reveals several serious problems with the methodology used to compile the suspect lists that compromise the lists’ practical value. For example, the data used in the Report from one county appears to be particularly suspect and anomalous, and may have substantially skewed the overall results. In addition, middle initials were ignored throughout all counties, so that “J____ A. Smith” was presumed to be the same person as “J____ G. Smith.” Suffixes were also ignored, so that fathers and sons – like “B____ Johnson” and “B____ Johnson, Jr.” – were said to be the same person.

Underlying many of the entries on these lists, and similar lists compiled in Florida and elsewhere, is a presumption that two records with the same name and date of birth must
represent the same person. As explained in this analysis, this presumption is not consistent with basic statistical principles. Even when votes appear to have been cast in two different cities under the same name and birth date, statistics show that voter fraud is not necessarily to blame. With 3.6 million persons who voted in the 2004 election in New Jersey, the chance that some have the same name and birth date is not far-fetched.

Analysis of the Claim of Double Voting by 4,497 Individuals

Attempts to match data on one list to data on another list will often yield “false positives”: two records that at first appear to be a match but do not actually represent the same person. The natural incidence of “false positives” for a matching exercise of this scale – especially when, as here, conducted with relatively little attention to detail – readily explains the ostensible number of double votes.

1,803 of these 4,397 records of ostensibly illegal votes seem to be the product of a glitch in the compilation of the registration files. These records reflect two registration entries by the same person from the same address, with a notation next to each that the individual has voted. For example, 55-year-old W____ A. Connors, living at 253 B____ Ave. in a New York commuter suburb, is listed on the data files with an (erroneous) first registration date in 1901 and a second registration date in 1993; Mr. Connors is thus represented twice on the data files submitted. Each of these entries also indicates that W____ A. Connors at 253 B____ Ave voted in 2004. There is no credible indication, however, that Mr. Connors actually voted twice; indeed, given the clearly erroneous registration date on the files, it is far more likely that data error is to blame for the doubly logged vote as well.

More plausibly, the bulk of these 1,803 records may be traced to irregularities in the data processing and compilation process for one single county: the Middlesex County registration file accounts for only 10% of registered voters in the state but 78% of these alleged double votes. The suspect lists themselves contain an acknowledgment that the problem in Middlesex is probably not fraud: 99% of these Middlesex voters are labeled on the lists submitted to the Attorney General with a notation that the record is “less likely” to indicate an illegal double vote.

Another 1,257 entries of the 4,397 records probably represent similar data errors – also largely driven by a likely glitch in the Middlesex County file, which is also vastly over represented in this category. These records show ever-so-slight variations in records listed with the same date of birth at the same address: for example, the same first and last names, but different middle initials or suffixes (e.g., J____ T. Kearns, Sr., and J____ T. Kearns, Jr., both born the same day and living at the same address; or J____ E. Allen and J____ P. Allen, born the same day and living at the same address).

Approximately 800 of the entries on the list likely represent different people, with different addresses and different middle initials or suffixes. For example, W____ S. Smith, living in a northern New Jersey town, and W____ C. Smith, living in another town two hours away, share the same date of birth but are not the same person. Nor are
T. Brown, living in a New York commuter suburb, and T. H. Brown, Jr., living in a small town over an hour west, despite the fact that they also share the same birth date. About three-quarters of the entries in this category reveal data that affirmatively conflict – for example, a middle initial (“W. S.”) in one case, and a different middle initial (“W. C.”) in another, listed at different addresses. There is absolutely no good reason to conclude that these individuals are in fact the same, when the available evidence indicates the contrary.

For approximately 200 of the entries in this category, however, less information is available. These entries show a middle initial (“J. W. Davis”) in one case, and no middle initial (“J. Davis”) in another – again, at different addresses. The lack of the middle initial is ambiguous: it could mean that one of the J. Davis in question has no middle name, or it could mean that the middle initial was simply omitted in a particular registration entry. Although these entries involve less conclusive affirmative evidence of a false match than the entries noted above, there is still no good reason to believe that “J. W. Davis” and “J. Davis,” at different addresses, represent the same person.

Of the individuals remaining, there are serious concerns with the accuracy of the dates of birth. Seven voters were apparently born in January 1, 1880 – which is most likely a system default for registrations lacking date-of-birth information. For 227 voters, only the month and year of birth are listed: this means only that two voters with the same name were born in the same month and year, an unsurprising coincidence in a state of several million people.

That leaves approximately 289 votes cast under the same name and birth date – like votes cast by “P. S. Rosen,” born in the middle of the baby boom – but from two different addresses. It may appear strange, but there may be two P. S. Rosens, born on the same date in 1948 – and such coincidences are surprisingly common. For any one person, the odds of someone else having the same name and birth date is small. But because there are so many voters in New Jersey, a sizable number will have the same name and birth date simply by chance. In a group of just 23 people, it is more likely than not that two will share the same birthday. For 40 people, the probability is 90%. Many, if not most, of the 289 alleged double votes of persons registered at different addresses most likely reflect two separate individuals sharing a first name, last name, middle intial, and birth date.

The September 15 Report makes much of the raw potential for foul play based on the unsurprising fact that there are voters who appear on the New Jersey registration rolls more than once. As noted above, many of the names identified reflect two different individuals and not simply duplicate entries. But there is no doubt that there are duplicate entries on New Jersey’s registration rolls. It is well known that voter registration rolls contain “deadwood” – registration entries for individuals no longer living at a given address or deceased. There is no evidence, however, that these extra registrations are used for widespread illegal voting. Moreover, the problem of deadwood will soon be largely resolved: both the National Voter Registration Act of 1993 and the Help America
Vote Act of 2002 require states to implement several systems and procedures as of January 1, 2006, that will clean the voter rolls of duplicate or invalid entries while protecting eligible voters from unintended disfranchisement.
The Federal Crime of Election Fraud
By Craig Donsanto

In The Federal Crime of Election Fraud, Donsanto addresses the role of the United States Department of Justice in matters of election fraud. Specifically, it answers the most frequently asked questions concerning the federal law enforcement role in election matters. Particularly, what sort of election-related conduct is potentially actionable as a federal crime, what specific statutory theories apply to frauds occurring in elections lacking federal candidates on the ballot, what federalism, procedural, and policy considerations impact on the federalization of this type of case, and how Assistant United States Attorneys should respond to this type of complaint.

Donsanto indicates that as a general rule, the federal crime of voter fraud embraces only organized efforts to corrupt the election process itself: i.e., the registration of voters, the casting of ballots, and the tabulation and certification of election results. Moreover, this definition excludes all activities that occur in connection with the political campaigning process, unless those activities are themselves illegal under some other specific law or prosecutorial theory. This definition also excludes isolated acts of individual wrongdoing that are not part of an organized effort to corrupt the voting process. Finally, Donsanto points out that mistakes and other gaffs that inevitably occur are not included as voter fraud. Where mistakes occur on a significant enough level to potentially affect the outcome of an election, the appropriate remedy is an election contest brought by the loser seeking civil judicial redress through the appropriate state election contest process.

Along with the limits discussed above, prosecuting election fraud offenses in federal court is further complicated by the constitutional limits that are placed on federal power over the election process. The conduct of elections is primarily a state rather than a federal activity.

Donsanto lists four types of election fraud: schemes to purposely and corruptly register voters who either do not exist, or who are known by the putative defendant to be ineligible to vote under applicable state law; schemes to cast, record or fraudulently tabulate votes for voters who do not participate in the voting act at all; schemes to corrupt the voting act of voters who do participate in the voting act to a limited extent; and, schemes to knowingly prevent voters qualified voters from voting.

Donsanto lists four situations where federal prosecution is appropriate: Where the objective of the conduct is to corrupt the outcome of a federal elective contest, or where the consequential effect of the corrupt conduct impacts upon the vote count for federal office; Where the object of the scheme is to discriminate against racial, ethnic or language minority groups, the voting rights of which have been specifically protected by federal statues such as the Voting Rights Act, 42 U.S.C. section 1973 et seq.; Where federalization is required in order to redress longstanding patters of electoral fraud, either at the request of state or local authorities, or in the face of longstanding inaction by state authorities who appear to be unwilling or unable to respond under local law; and, Where
there is a factual basis to believe that fraudulent registration or voting activity is sufficiently connected to other forms of criminal activity that perusing the voter fraud angle will yield evidence useful in the prosecution of other categories of federal offense.

Donsanto lists four advantages to federal prosecution: voter fraud investigations are labor intensive. Local law enforcement agencies often lack the manpower and the financial resources to take these cases on; voter fraud matters are always politically sensitive and very high profile endeavors at the local level. Local prosecutors (who are usually themselves elected) often shy away from prosecuting them for that reason; the successful prosecution of voter fraud cases demands that critical witnesses be examined under oath before criminal charges based on their testimony are filed. Many states lack the broad grand jury process that exists in the federal system; and, the defendants in voter fraud cases are apt to be politicians - or agents of politicians - and it is often impossible for either the government or the defendant to obtain a fair trial in a case that is about politics and is tried to a locally-drawn jury. The federal court system provides for juries to be drawn from broader geographic base, thus often avoiding this problem.

Several prosecutorial theories used by United States Attorneys to federalize election frauds are discussed. These include: schemes by polling officers to violate their duty under state law to safeguard the integrity of the election process by purposefully allowing void ballots to be cast (stuffing the ballot box), or by intentionally rendering fraudulent vote tallies which can be prosecuted as civil rights violations under 18 U.S.C. sections 241 or 242; schemes to stimulate or reward voter registration by offering or giving voters things having monetary value violate the “payment for registering” clause of 42 U.S.C. section 19731(c); schemes to register voters fraudulently through providing election officials materially false information about the voter’s eligibility for the franchise; and, schemes to obtain and cast ballots that are materially defective in nonfederal elections can still be prosecuted under 18 U.S.C. section 1341. There are also some other federal statutes involved in election fraud cases such as 18 U.S.C. section 597 that prohibits making expenditures for the specific purpose of stimulating voters to cast ballots for candidates seeking the federal offices of Senator, Congressman or President and 42 U.S.C. section 1973i (e) that prohibits voting more than once in elections where federal candidates are on the ballot.

Donsanto lists four questions used by prosecutors in evaluating the credibility of election complaints: does the substance of the complaint assuming it can be proven through investigation - suggest a potential crime; is the complaint sufficiently fact-specific that it provides leads for investigators to pursue; is there a federal statute that can be used to federalize the criminal activity at issue; and, is there a special federal interest in the matter that warrants federalization rather than deferral to state law enforcement.

All federal election investigations must avoid the following: non-interference in elections unless absolutely necessary to preserve evidence; interviewing voters during active voting periods; seizing official election documentation; investigative activity inside open polls; and prosecutors must adhere to 18 U.S.C. section 592, prohibiting the stationing of armed men at places where voting activity is taking place.
Finally, Donsanto indicates that election crimes based on race or language minority status are treated as civil rights matters under the Voting Rights Act.
I did send you the Brennan piece, but not the other one.

I don't think I sent this to you either. Can we hand it out at the meeting as an addendum? It's another summary that would have gone in the news article section. I'm usually so organized, I'm very embarrassed. Too many things! Thanks

votebuyingsummary.doc
Major Vote Buying Cases Summary

Between 2001 and 2006, allegations and convictions for vote buying and conspiracies to buy votes were concentrated in three states: Illinois, West Virginia and Kentucky.

In East St. Louis, Illinois, nine individuals, including a former city council member and the head of the local Democratic Party, Charles Powell, Jr., were convicted or pled guilty to vote buying and conspiracy to commit election fraud during the 2004 general election. The government’s conspiracy case was almost entirely based on taped conversations in which the defendants discussed buying votes for $5 and whether this would be adequate. Federal prosecutors alleged that the vote buying was financed with $79,000 transferred from the County Democratic Party shortly before the election, although county officials have not been charged. Four defendants were convicted of purchasing or offering to purchase at least one vote directly, while Democratic Party chairman was only convicted of conspiracy. 

Eastern Kentucky has witnessed a series of vote buying cases over the last several years. The most recent revolved around Ross Harris, a Pike County political fundraiser and coal executive, and his associate Loren Glenn Turner. Harris and Turner were convicted in September 2004 of vote buying, mail fraud, and several other counts. Prosecutors alleged Harris and Turner conspired to buy votes and provided the necessary funds in an unsuccessful 2002 bid for Pike County district judge by former State Senator Doug Hays. Harris supplied nearly $40,000, Turner laundered the money through straw contributors, and the cash was then disbursed in the form of $50 checks ostensibly for ‘vote hauling’, the legal practice of paying campaign workers to get voters to the polls which is notorious as a cover for buying votes. Harris attempted to influence the race on behalf of Hays in order to get revenge on Hays’ opponent for a personal matter.

A grand jury initially indicted 10 individuals in connection with the Harris and Turner case, including Hays and his wife, and six campaign workers. Of the remaining defendants, only one, Tom Varney, also a witness in the Hays case, pled guilty. The others were either acquitted of vote buying charges or had vote buying charges dropped. Prosecutors have announced that their investigation continues into others tied to Harris and may produce further indictments.

The Harris case follows a series of trials related to the 1998 Knott County Democratic primary. Between 2003 and 2004, 10 individuals were indicted on vote buying charges, including a winning candidate in those primaries, Knott County judge-executive Donnie Newsome, who was reelected in 2002. In 2004 Newsome and a supporter were sent to jail and fined. Five other

3 “2 found guilty in pike county vote-fraud case; Two-year sentences possible,” Lexington Herald Leader, September 17, 2004.
5 “Pike Election Trial Goes To Jury” Lexington Herald Leader, January 1, 2006.
defendants pled guilty to vote buying charges, and three were acquitted. The primary means of vote buying entailed purchasing absentee votes from elderly, infirm, illiterate or poor voters, usually for between $50 and $100. This resulted in an abnormally high number of absentee ballots in the primary.\(^7\) Indictments relating to that same 1998 primary were also brought in 1999, when 6 individuals were indicted for buying the votes of students at a small local college. Five of those indicted were convicted or pled guilty.\(^8\)

Absentee vote buying was also an issue in 2002, when federal prosecutors opened an investigation in Kentucky's Clay County after an abnormal number of absentee ballots were filed in the primary and the sheriff halted absentee voting twice over concerns.\(^9\) Officials received hundreds of complaints of vote-buying during the 2002 primary, and state investigators performed follow up investigations in a number of counties, including Knott, Bell, Floyd, Pike, and Maginoff.\(^10\) No indictments have been produced so far.

So far, relatively few incidents of vote-buying have been substantially identified or investigated in the 2004 election. Two instances of vote buying in local 2004 elections have been brought before a grand jury. In one, a Casey County man was indicted for purchasing votes in a local school board race with cash and whiskey.\(^11\) In the second, the grand jury chose not to indict an individual accused of offering to purchase a teenager's vote on a local proposal with beer.\(^12\)

An extensive vote buying conspiracy has also been uncovered in southern West Virginia. The federal probe, which handed down its first indictment in 2003, has yielded more than a dozen guilty pleas to charges of vote buying and conspiracy in elections since the late 1980s. As this area is almost exclusively dominated by the Democratic Party, vote-buying occurred largely during primary contests.

The first phase of the probe focused on Logan County residents, where vote buying charges were brought in relation to elections in 1996, 2000, 2002 and 2004. In an extraordinary tactic, the FBI planted the former mayor of Logan City, Tom Esposito, as a candidate in a state legislative race. Esposito's cooperation led to guilty pleas from the Logan County Clerk, who pled guilty to selling his vote to Esposito in 1996,\(^13\) and another man who took money from Esposito for the purpose of vote buying in 2004.\(^14\)

Guilty pleas were also obtained in connection with former county sheriff Johnny Mendez, who pled guilty to buying votes in two primary elections in order to elect candidates including

himself. In 2000, with a large amount of funding from a prominent local lawyer seeking to influence a state delegate election for his wife, Mendez distributed around $10,000 in payments to voters of $10 to $100. Then, in the 2004 primary, Mendez distributed around $2,000 before his arrest. A deputy of Mendez', the former Logan police chief, also pled guilty to a count of vote buying in 2002.

Prosecutors focusing on neighboring Lincoln County have alleged a long-standing vote-buying conspiracy extending back to the late 1980s. The probe identified Lincoln County Circuit Clerk Greg Stowers as head of a Democratic Party faction which routinely bought votes in order to maintain office. Stowers pled guilty in December 2005 to distributing around $7,000 to buy votes in the 2004 primary. The Lincoln County Assessor, and Stowers' longtime political ally, Jerry Allen Weaver, also pled guilty to conspiracy to buy votes. These were accompanied by four other guilty pleas from party workers for vote buying in primaries. While most specific charges focused on vote buying in the 2004 primary, defendants also admitted buying votes as far back as the 1988, 1990, and 1992 primaries.

The leading conspirators would give party workers candidate slates and cash, which workers would then take to the polling place and use to purchase votes for amounts between $10 and $40 and in one instance, for liquor. Voters would be handed the slate of chosen candidates, and would then be paid upon exiting the polling place. In other cases, the elected officials in question purchased votes in exchange for non-cash rewards, including patronage positions, fixed tickets, favorable tax assessments, and home improvements.

The West Virginia probe is ongoing, as prosecutors are scrutinizing others implicated during the proceedings so far, including a sitting state delegate, who may be under scrutiny for vote buying in a 1990 election, and one of the Lincoln county defendants who previously had vote buying charges against him dropped.

18 “Lincoln clerk, two others plead guilty to election fraud” Charleston Daily Mail, December 30, 2005.
Great -- thanks so much and apologies for the false alarm.

Tova:
I think you did send this --- or is this a revised version of one you sent earlier? It should be on the CD in the packet you should receive today. (Can't check that right now as I am at the clinic.) If I put anything on the CD that you want to highlight at the meeting, let me know and we'll make copies for those attending.
Peggy

Hi Devon:

Judy said you had inquired about hotel reservations for J.R. Perez and Kathy Rogers. They are booked at the Sheraton College Park Hotel for arrival on May 17 and departure on May 18. J. R. Perez confirmation number is 51423 and Kathy Rogers confirmation number is 51424. I apologize for not getting them to you earlier.

Kind Regards,

Marvin

For some reason, I thought Job was not available next week. If we do set up a teleconference, I'll need to do it later in the week (Thursday afternoon or on Friday).

Peggy

Hi Peg,

I think I might have told you only that I am unavailable on the 5th. I'm actually unavailable on the 4th as well. Any news on this front? We should also arrange a conference call next week about preparing for the meeting, don't you think? Thanks Tova
