Paperwork Burden Statement

According to the Paperwork Reduction Act, as amended, no persons are required to respond to a collection of information unless it displays a valid OMB Control Number. The valid OMB control number for this information collection is 4040-0014. Public reporting burden for this collection of information is estimated to average 1 hours per response, including time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. If you have comments concerning the accuracy of the time estimate(s) or suggestions for improving this form, please write to: US Department of Health & Human Services, OS/OCIO/PRA, 200 Independence Ave, SW, Suite 336-E, Washington DC 20201. Attention: PRA Reports Clearance Officer

10/01/2020	
6. Reporting Period End Date	
09/30/2021	

7. Describe in detail what happened during this reporting period and explain how you implemented the approved grant activities in accordance with your State Plan/Program Narrative. (*Note: Your activities should align with your Grant Cost*

The State Election Board made the following expenditures of Title I, Section 101, funds during the period of October 1, 2020

through September 30, 2021. There were no unliquidated obligations at the end of this reporting period.

Chickasaw Telecom Inc. – Provide secure teleconferencing software licensing and maintenance, secure server nodes, and licensing for two-factor authentication software. \$165,436.21

Oklahoma Office of Management and Enterprise Services (OMES) – Monthly server co-location lease and connectivity. \$19.998.00

Maxim Consulting – Provides various security enhancements to Modern Election Support Application (MESA) database and various applications. \$415,248.50

SHI International Corporation – Provides server VMware and security monitoring, software and licensing. \$27,837.18 Total grant expenditures for the reporting period - \$703.622.33

Analysis and description of Activities Funded

All expenditures made during the period covered by this report are related to cyber and physical security upgrades, server storage and monitoring support, support for application hosting, two factor authentication implementation, and cyber awareness training.

Secure Hosting and Monitoring

The State Election Board transferred application hosting to DoubleHorn Cloud Solutions in April, 2018 with the assistance of state cyber command. DoubleHorn ended our hosting and support contract on January 31, 2020. With the help of state cyber command, we identified Carahsoft as an interim supplier of secure hosting and support services. In January 2021, Petabloc was chosen as the new supplier of secure hosting and support, with the help of state cyber command and Maxim Consulting. Petabloc hosts the following State Election Board applications:

- 1. Military and overseas Absentee Ballot (MOAB) the secure internet ballot delivery for absentee voters covered by UOCAVA.
- 2. Voter Information Request System (VIRS) the publicly available, downloadable voter registration database.
- 3. OK Voter Portal (OVP) our "one-stop shop" for voters to update their addresses and political affiliation within the same county, request an absentee ballot, view sample ballots, and locate their polling place information. Additionally, citizens can access our new voter registration wizard from the OVP, which was launched in May 2020.
- 4. Oklahoma Election Results (OKER) the robust and more secure election results reporting application launched in August 2018.

During this reporting period, Maxim Consulting completed the work necessary for migration of our hosting from Carahsoft to Petabloc on the Amazon GovCloud. These costs are reflected in payments made to Maxim during this reporting period. In 2018, the State Election Board relocated its servers to the Office of Management and Enterprise Services (OMES) secure data center. The secure location offers a climate-controlled environment that can withstand up to an F4 rated tornado. The secure location positions the servers behind the State's Albert Sensor which allows 24-hour monitoring by OMES of all traffic and intrusion attempts. Payments made to OMES were related to server storage and monitoring fees.

Chickasaw Communications Inc. completed work from the previous reporting period on VPN firewall upgrades. Chickasaw Communications also had to re-configure Border Gateway Protocol (BGP) for the firewall when the secure hosting was moved. Payments associated with this work were made to Chickasaw in this reporting period.

SHI International Corp provided VMware licenses and security monitoring software during this reporting period.

Modern Election Support Application (MESA) OK Voter Portal Upgrades and Development

Maxim Consulting is a longtime vendor and partner of the Oklahoma State Election Board. Maxim Consulting designed and developed the custom voter registration and election definition software known as MESA. Payments to Maxim Consulting during this reporting period related to deployment of six version updates to improve application security and functionality. Additionally, Maxim provides updates, monitoring, and troubleshooting for the secure interface with Department of Public Safety for updates to voters' addresses and voter registration information received as a result of DPS Real ID system upgrade.

During this reporting period, Maxim Consulting has regularly monitored and has completed security updates to the voter registration wizard, which is accessed from the State Election Board website, or the OK Voter Portal. The wizard allows for completion of a voter registration application online, which must then be printed, signed and mailed to the appropriate County Election Board for processing. Citizens can be certain that their personal information is safe and secure when using the State Election Board's wizard as opposed to a voter registration website from a third-party organization. Voter registration applicants who choose to use the wizard can also track the progress and status of their application with the County Election Board, using the transaction code provided by the wizard.

Post-Election Audit

In November of 2019, The Oklahoma Legislature gave the Secretary of the State Election Board the authority to direct the secretary of a county election board to conduct a post-election audit of election results, for the purpose of maintaining the security of the election system by ensuring that voting devices and software used in a particular election correctly tabulated

votes. The legislation passed defines a "post-election audit" as a manual or electronic examination of a limited number of ballots by a secretary of a county election board or other authorized election officials following an election. A post-election audit shall be conducted only at the direction of the Secretary of the State Election Board and only subject to the Secretary's previously promulgated policies, rules or procedures.

Discussions began on a direction and design in November 2019, however the COVID-19 pandemic halted production as the State Election Board staff devoted its entire focus to the conduct of the 2020 Primary, Primary Runoff, and General Elections. Maxim Consulting began work in earnest on a post-election audit application which would be incorporated into the MESA application at the request of the State Election Board Secretary in December of 2020.

The State Election Board user can choose the percentage of total precincts to be audited and the percentage of hand counted precincts. The user may also choose the races to be audited. The post-election audit application will then randomly choose precincts to be audited, either by machine count or hand count, based upon the criteria entered. The post-election audit application will provide reports for public review that will inform election officials of any possible bugs or errors in the system, and can act as a deterrent against fraud.

Significant time and effort by Maxim Consulting toward the implementation of the post-election audit application during this reporting period will be reflected in the payments to Maxim Consulting. The tabulation audit was tested in April of 2021 and further development is ongoing from the Alpha test.

County Election Board Communications

In May 2021 the Oklahoma State Election Board purchased scanners for each of the 77 County Election Board offices from Business Image Systems. These scanners will be used to scan documents directly into the MESA application over the secure network. This should allow more ease and accuracy when transmitting data from the County to the State Election Board. Additionally, the data will be transmitted over the VPN which will enhance security. Maxim Consulting will begin work on the interface once the new precinct lines have been drawn and adopted. Payments to Maxim Consulting will be included in FY22 expenditures.

Voting Equipment and Processes

In April, 2021 the State Election Board purchased peripherals loaded with firmware from Hart Intercivic which are used in the eScan A/T voting devices. This firmware allows the devices to accept the voting database and plays an integral part in the continuity of the election database security. Additional MBBs (Mobile Ballot Boxes) will replace those peripheral units that have been damaged or fallen into disrepair. Payments to Hart Intercivic in this time period reflect this purchase.

8. Describe any significant changes to your program during the project, including changes to your original State Plan/Program Narrative or favorable developments that improved program efficiency and/or service delivery.

N/A

9. Issues Encountered:

Describe all major issues that arose during the implementation of the project and the reasons why established goals were not met, if applicable. Address each issue separately and describe whether and how the issues were resolved. Also, briefly discuss the implications of any unresolved issues or concerns.

The COVID-19 pandemic created issues in all areas of State Election Board operations, however with the help of all of our partners we have continued to ensure that election security is a top priority.

10. Provide a description of any training conducted, including security training.

Each Oklahoma State Election Board Staff member completed the Security Education and Awareness Training (SEAT) provided by OMES through the Learning Management System in March 2021. Seat Training consists of 16 modules that cover areas of cyber security and physical device security.

During this reporting period, planning meetings have been held to design the statutorily required training sessions for all County Election Board Secretaries and Assistant Secretaries in the state. Maxim Consulting again presented training to all attendees, for which the preparation was started during this reporting period. In addition, representatives from Homeland Security and CISA presented cyber and physical security training. In September, 2021, statutory training was conducted via WebEx conference due to the uncertainty of the status of the COVID-19 pandemic. Ongoing security training with County Election Board Secretaries, Regional Coordinators and security meetings with partners have also been conducted both in-person and via

WebEx during this reporting period. Payments made to Chickasaw Communications during this time reflect the VTC and WebEx software licensing needed to support the training.

11. Subgrants:

Did your office provide subawards to local jurisdictions during this reporting period?

No

12. Match:

Describe how you are meeting or have met the matching requirement.

All of the required state matching amount has been secured by the State Election Board from appropriated funds and from state revolving funds.

13. Report on the number and type of articles of voting equipment obtained with the funds. Include the amount expended on the expenditure table.
